\* Less bullion and specie.

† Imports other than the produce of United Kingdom.

‡ Similar imports of United Kingdom origin are admitted free under preference tariff, or at a rate of duty lower than the general rate.

§ Dutiable at rates similar to those on goods of United Kingdom origin.

¶ For description of classes, see page 585.

In order to facilitate the interpretation of the foregoing tables, and also to deal further with the extension of preferential tariff treatment to the United Kingdom, the following synopsis of the changes made in rates of duty on the various classes of goods is appended. On pages 613 to 615 will be found a summary of the tariff changes as they affect the total imports and the imports of United Kingdom origin and the produce of "British Possessions" and "Foreign Countries" respectively.

## SYNOPSIS OF THE PRINCIPAL DIFFERENCES BETWEEN THE TARIFF OF 1914 AND THE TARIFF OF 1908-11 AS APPLIED TO THE CLASSES OF COMMODITIES IMPORTED INTO THE COMMONWEALTH DURING 1913.

### CLASS I.—FOODSTUFFS OF ANIMAL ORIGIN.

*General Comparisons.* The total value of imports in this class during 1913 was £947,697, of which the import of fish represented £718,036. The amount of *dutiable* goods would be the same under both tariffs, viz., £848,910, or 89.58 per cent. The average rate of duty on *dutiable* goods has been raised from an equivalent *ad valorem* rate of 17.23 per cent. to 20.30 per cent., thus increasing the average rate of duty on the total imports of the class from 15.43 per cent. to 18.19 per cent.

*Imports from the United Kingdom.* The value of foodstuffs of animal origin the produce of the United Kingdom imported during 1913 amounted to £301,025, of which 98.18 per cent. would be dutiable under both tariffs at an average *ad valorem* rate of 23.08 per cent.; including the small amount of free goods (sheet isinglass and sausage casings), the average rate of duty would be 22.66 per cent.

Under the earlier tariff, £9925 would have been favoured by preferential rates, whereas under the 1914 tariff, by the raising of the rates on similar imports from other countries, the United Kingdom would receive preferential treatment on goods to the value of £194,438. On these goods (£194,438) the United Kingdom would, under the existing tariff, pay duty to the amount of £46,088 (23.70 per cent.), while the same goods from other countries under the general tariff would pay £65,304 (33.58 per cent.), an advantage to the United Kingdom of £19,216, or 9.88 per cent. *ad valorem*. Under the 1908-11 tariff the margin of preference would have been £547 only, equal to 5.51 per cent. on the smaller value of imports affected.

### CLASS II.—FOODSTUFFS OF VEGETABLE ORIGIN AND SALT.

*General Comparisons.* During 1913 imports of this class amounted to £3,315,825, of which 94.32 per cent. would be dutiable under the 1908-11 tariff. By the removal of the duties on wheat and wheaten flour the proportion of dutiable goods under the tariff of 1914 would be reduced to 94.30 per cent. The average rate of duty on *dutiable* goods has been increased from the average equivalent *ad valorem* rate of 35.79 per cent. to 36.68 per cent., the average rate on all goods within the class rising from 33.76 per cent. to 34.59 per cent.

*Imports from United Kingdom.* The imports of vegetable foodstuffs of United Kingdom origin amounted to £789,600, of which 88.16 per cent. would have been dutiable under the 1908-11 tariff at an equivalent *ad valorem* rate of 22.58 per cent., while under the 1914 tariff the average rate would be 24.87 per cent., the value of dutiable goods being slightly reduced to 88.10 per cent. Including free goods (chiefly infants' and invalids' foods) the average rate on all goods of United Kingdom origin within the class would be under the respective tariffs 19.90 per cent. and 21.91 per cent.

Under the 1908-11 tariff, preferential treatment would apply to £526,613, or 66.69 per cent. of goods of United Kingdom origin, whereas under the 1914 tariff, £639,735, or 81.02 per cent. of the total imports from the United Kingdom, would be admitted under preferential rates (£7825 being free), the average preferential advantage being equal to 7.5 per cent. of the value of the goods, or £47,981 less than the same goods would have to pay if from other countries. Under the earlier tariff the margin of preference on goods of this class was £32,395, equal to 6.15 per cent. *ad valorem*.

## CLASS III.—BEVERAGES (NON-ALCOHOLIC) AND SUBSTANCES USED IN MAKING.

*General Comparisons.* The value of imports during 1913 in this class was £1,833,235, of which tea was responsible for £1,328,471. The tariff changes in the class were small. The amount of *dutiable* goods represents 25.73 per cent. under both tariffs. The equivalent average *ad valorem* rate on dutiable goods has been increased from 20.74 per cent. to 22.02 per cent., the rates on all goods within the class being raised from 5.34 per cent. to 5.67 per cent. Tea in bulk and cocoa beans are free.

*Imports from the United Kingdom.* This class contains a small proportion only of produce of the United Kingdom, the amount during 1913 being £173,775, all of which would be dutiable under both tariffs. Preference equal to 10 per cent. *ad valorem* has been extended to mineral waters, while the margin of  $\frac{3}{4}$ d. per lb. on cocoa and chocolate in powdered form has been increased to  $\frac{3}{4}$ d. per lb. The average rate of duty on produce of the United Kingdom has been raised from 18.92 per cent. to 19.55 per cent., although the goods favoured by preferential rates have been increased from £136,897 to £139,453, and the margin of preference from 1.98 per cent. to 3.25 per cent. *ad valorem*.

## CLASS IV.—SPIRITS AND ALCOHOLIC LIQUORS, INCLUDING INDUSTRIAL SPIRITS AND PHARMACEUTICAL PREPARATIONS DUTIABLE AS SPIRITS.

All imports under this class are dutiable. Prior to the 1914 tariff, goods of United Kingdom origin had no preferential tariff treatment. The present tariff has raised the general tariff rate on ale, beer and porter in bottle from 1s. 6d. to 2s. 6d. per gal. with a preferential rate of 2s. per gal.; the duty on ale, etc. in bulk has been raised from 1s. per gal. to 2s. per gal. under the general tariff, and 1s. 6d. per gal. under the preferential tariff; and the rates on cider and perry have been raised from 1s. 6d. per gal. in bottle and 1s. in bulk to 2s. 6d. per gal. under the general tariff, and 2s. per gal. under the preferential tariff, whether in bottle or bulk. The imports of beer and cider from the United Kingdom during 1913 were valued at £410,871. Under the 1914 tariff, this would pay duty to the amount of £257,936, whereas the same goods if from other countries would have to pay £323,984, representing a margin of preference equal to 16.08 per cent. *ad valorem*. It is true that while preference has been extended to British beers, the rates of duty now charged on them are 16 per cent. higher than formerly, but at the same time the excise duties on locally manufactured beers and spirits have also been increased. Duties on imported potable spirits have been increased by 3s. per gal. (14s. to 20s.), on sparkling wine by 8s. per gal. (12s. to 20s.), and on other wines by 4s. per gal. The result of these changes has been to raise the average equivalent *ad valorem* rate over the whole class from 136.94 per cent. to 195.86 per cent.

## CLASS V.—TOBACCO, AND PREPARATIONS THEREOF.

*General Comparisons.* All goods in this class are dutiable. Under the 1914 tariff the duties have been raised on all forms of tobacco except snuff, so that the equivalent *ad valorem* rate on the imports of all tobacco has been raised from 159.03 per cent. to 202.20 per cent. Under the 1914 tariff the preferences of 1s. 3d. per lb. on cut tobacco and 1s. on other manufactured tobacco, formerly given to produce of the South African Union, have been reduced to 9d. per lb.

*Imports from United Kingdom.* Under the tariff of 1914 cigars manufactured in the United Kingdom have a preference of 1s. per lb. and cigarettes of 6d. per lb. This represents a remission of duty as compared with the general tariff rates of £4302, or 7.46 per cent. on the value of imports affected. Formerly no preference was given to the United Kingdom in this class.

## CLASS VI.—ANIMALS, LIVING.

No alterations have been made in regard to this class. Most of the animals imported are for the improvement of stock, and are admitted free of duty. Of the total imports during 1913, 12.29 per cent. would now be dutiable at an equivalent average *ad valorem* rate of 0.59 per cent.

### CLASS VII.—ANIMAL SUBSTANCES, MAINLY UNMANUFACTURED, WHICH ARE NOT FOODSTUFFS.

*General Comparisons.* The only changes in this class have been made by the extension of preference to curled hair for upholstering, and to printers' roller composition. On the former, the duty under the general tariff has been raised 5 per cent. *ad valorem*, and on the latter, by 10 per cent. *ad valorem*, while the rates on produce of the United Kingdom remain as formerly. Of the total imports of this class during 1913, 26.14 per cent. would be dutiable at an average equivalent *ad valorem* rate of 17.78 per cent., while the average rate on all goods (dutiable and free) within the class would be 4.65 per cent.

*Imports from the United Kingdom.* The imports of the United Kingdom produce amounted to £73,746, of which 85.30 per cent. would be dutiable.

Under the tariff of 1908-11, £60,814 would be favoured by preferential rates, the margin of preference being 5.51 per cent., equal to £3350, whereas by the 1914 tariff, £62,375 would be favoured by a remission of £3484, or 5.58 per cent. of the value of the goods.

### CLASS VIII.—VEGETABLE SUBSTANCES AND NON-MANUFACTURED FIBRES.

*General Comparisons.* In this class the application of duties has been extended to 19.73 per cent. (£265,263) of imports, as compared with 17.24 per cent. dutiable under the former tariff. The equivalent average *ad valorem* rate on dutiable goods has been raised from 18.78 per cent. to 20.42 per cent. Including free goods, the average rate of duty would now be 4.03 per cent. instead of 3.24 per cent.

*Imports from the United Kingdom.* The imports of United Kingdom origin in this class amounted to £372,170, the principal items being yarns, cotton waste, starch, and seeds.

Under the tariff of 1908-11, goods to the value of £270,439 were favoured by a preference equal to 5.34 per cent. *ad valorem*; under the 1914 tariff, preferential treatment has been extended to embrace £290,868, while the margin of preference has been increased to 5.52 per cent.

### CLASS IX.—APPAREL AND TEXTILES, AND MANUFACTURED FIBRES.

*General Comparisons.* The value of the total imports of this class during 1913 was £19,705,768, representing 25.20 per cent. of the total imports of merchandise. Under the 1908-11 tariff, 58.35 per cent. of these goods would be dutiable at an average equivalent *ad valorem* rate of 22.44 per cent. Under the 1914 tariff, 61.95 per cent. would be dutiable at an average rate of 24.79 per cent. Including free goods, the average rate of duty on all goods within the class has been increased from 13.09 per cent. to 15.36 per cent.

*Imports from the United Kingdom.* The imports of this class from the United Kingdom during 1913 were valued at £12,057,643, equal to 29.44 per cent. of all imports of United Kingdom merchandise. Of these goods 55.71 per cent. would be dutiable under both tariffs, though the average rate would be increased from 23.38 per cent. under the 1908-11 tariff to 27.08 per cent. under the 1914 tariff, the corresponding rates on all goods within the class (dutiable and free) rising from 13.03 per cent. to 15.09 per cent.

Under the 1908-11 tariff, preferential rates applied to £10,594,158, with a margin of preference equal to 5.12 per cent. *ad valorem*, while under the 1914 tariff, preferential treatment has been extended to embrace £11,985,926 (98.99 per cent. of all goods within the class), on which an average preference equal to 5.36 per cent. of the goods (£639,765) is given.

### CLASS X.—OILS, FATS, AND WAXES.

*General Comparisons.* In this class the imposition of new duties brings 72.41 per cent. (£1,426,339) of the imports into the dutiable class, as compared with 67.37 per cent. under the 1908-11 tariff. The average rate of duty on *dutiable* goods has been raised

from 16.44 per cent. to 17.74 per cent., so raising the average rate on all goods within the class from 11.07 per cent. to 12.85 per cent.

*Imports from the United Kingdom.* No changes have been made in the duties on goods of United Kingdom origin in this class. The increased rates mentioned in the previous paragraph are due to higher rates on foreign goods. By reason of these higher duties, oils, etc., of United Kingdom manufacture, to the value of £281,864 (93.60 per cent.), have the advantage of preferential duties, as compared with £40,645 (13.50 per cent.) under the former tariff. The margin of preference has also been slightly increased from 5.23 per cent. to 5.37 per cent. on the value of the goods.

#### CLASS XI.—PAINTS AND VARNISHES.

*General Comparisons.* In this class the value of *dutiable* goods would be the same under both tariffs, but the average rate of duty on all *dutiable* goods within the class would be raised from 17.01 per cent. to 21.36 per cent., and the rates on all goods within the class would be raised from 16.25 per cent. to 20.42 per cent.

*Imports from the United Kingdom.* Of the imports of paints and varnish manufactured in the United Kingdom, 94.59 per cent. would be dutiable under both tariffs. The average *ad valorem* rate of duty on dutiable goods has, however, been raised from 16.34 per cent. to 20.79 per cent., so raising the rates on all goods within the class from 15.46 per cent. to 19.66 per cent.

Under the tariff of 1908-11, £452,539, or 91.56 per cent. of all paints and varnishes of United Kingdom origin, was favoured by preferential tariff rates, while under the 1914 tariff all goods within the class have the advantage of preferential rates, but, through this extension, the average margin has been slightly reduced from 5.06 per cent. to 4.93 per cent. of the value of the goods.

#### CLASS XII.—STONES AND MINERALS USED INDUSTRIALLY.

*General Comparisons.* Under the 1908-11 tariff, 83.46 per cent. of the imports under this class would be dutiable at an average equivalent *ad valorem* rate of 23.11 per cent. Under the present tariff, dutiable goods comprise 91.99 per cent. of the total, and the average rate has been raised to 24.38 per cent. On all goods within the class (*dutiable* and *free*) the average rate has been increased from 19.28 to 22.43 per cent.

*Imports from the United Kingdom.* Of the imports from the United Kingdom, 93.37 per cent. would be dutiable under both tariffs. Under the 1914 tariff the average rate is slightly higher than formerly, the rates being respectively:—On *dutiable* goods 22.28 per cent., increased to 23.08 per cent.; and on all goods 20.80 per cent., raised to 21.55 per cent.

Under the 1908-11 tariff, preferential rates affected 76.80 per cent. of the stones, etc., of United Kingdom origin, the margin of preference being 5 per cent.; under the present tariff, 96.84 per cent. is favoured by an average margin of 8.06 per cent.

#### CLASS XIII.—SPECIE.

All specie is exempt from duty.

#### CLASS XIV.—METALS (UNMANUFACTURED) AND ORES.

This class includes ore of all kinds and gold and silver bullion. The proportion of *dutiable* goods is small, representing £18,002, or 1.14 per cent. of the total. The average rate on these *dutiable* goods is now 17.59 per cent., as against 15.28 per cent. formerly. Under the 1914 tariff, duties have been imposed on imports of pig iron and steel; mixed metals—aluminium, bronze, britannia metal, etc.; and on platinum bars when not the produce of the United Kingdom. Consequently, under the present tariff, imports of this class to the value of £236,985 would have the advantage of preference equal to 6.21 per cent. *ad valorem*, whereas, under the 1908-11 tariff, the advantage was restricted to 5 per cent. on £16,969.

#### CLASS XV.—METALS PARTLY MANUFACTURED.

All metals in this class are exempt from duty.

## CLASS. XVI.—METALS MANUFACTURED, INCLUDING MACHINERY.

*General Comparisons.* The imports under this class during 1913 amounted to £16,623,135, representing 21.25 per cent. of the total imports of merchandise. Under the 1908-11 tariff, 61.85 per cent. was dutiable at an equivalent average *ad valorem* rate of 15.98 per cent. Under the 1914 tariff, 78.92 per cent. would be dutiable at an average rate of 17.07 per cent., thus raising the rate on all goods (dutiable and free) within the class from 9.88 per cent. to 13.48 per cent. The greater proportion of dutiable goods under the 1914 tariff is almost entirely due to the imposition of duties on goods not of United Kingdom origin.

*Imports from the United Kingdom.* The imports from the United Kingdom of metal manufactures and machinery during 1913 amounted to £10,855,417, or 26.51 per cent. of the total imports of merchandise of United Kingdom origin. Under the 1914 tariff a small amount of imports which were formerly free became dutiable, thus increasing the proportion of dutiable goods from 66.78 per cent. to 67.74 per cent. The average rate of duty on *dutiable* goods has been raised from 14.21 per cent. to 16.70 per cent., and the rates on all goods (dutiable and free) from 9.49 per cent. to 11.31 per cent. *ad valorem*.

Under the 1908-11 tariff, imports of metals and machinery of United Kingdom manufacture to the value of £7,645,503 were favoured by preferential tariff treatment equal to 4.50 per cent. *ad valorem*, while under the 1914 tariff, preferential rates apply to £10,818,350, or 99.66 per cent., the margin of preference being raised to 6.14 per cent. *ad valorem*. This represents a remission of £664,000 of duty as compared with what the same goods would have to pay if manufactured outside the United Kingdom.

## CLASS XVII.—LEATHER AND MANUFACTURES OF LEATHER AND SUBSTITUTES THEREFOR, ALSO INDIARUBBER AND INDIARUBBER MANUFACTURES.

*General Comparisons.* The total imports under this class amounted to £1,749,046, of which 74.30 per cent. (£1,299,603) would be dutiable under the 1914 tariff at an average rate equal to 29.14 per cent., as against 74.11 per cent. (£1,296,278) bearing an average rate of 21.59 per cent. under the 1908-11 tariff. The average rate of all goods in the class has been raised from 16 per cent. to 21.65 per cent.

*Imports from the United Kingdom.* The proportion of dutiable goods of United Kingdom origin would be the same under both tariffs (76.28 per cent.). The average rate on *dutiable* goods in this class has been raised from 20.26 per cent. to 24.79 per cent., and on all goods (dutiable and free) from 15.45 per cent. to 18.91 per cent.

Under the 1908-11 tariff, £342,991 was favoured by a preferential margin of duty equal to 5 per cent. Under the 1914 tariff, preferential treatment has been extended to £458,390 with a margin of 4.98 per cent. of the value of the goods. This slight decrease in the margin of preference is due to a new preference on patent and enamelled leather of  $\frac{3}{4}$ d. per lb., which is less than the 5 per cent. otherwise allowed throughout the class.

## CLASS XVIII.—WOOD AND WICKER, RAW AND MANUFACTURED.

*General Comparisons.* The total imports under this class amounted to £3,573,753. Under the 1908-11 tariff, 92.34 per cent. (£3,300,002) of the imports of this class was dutiable at an equivalent average *ad valorem* rate of 16.91 per cent. Under the 1914 tariff, 97.59 per cent. (£3,487,323) would become dutiable at an average rate of 22.33 per cent., thus raising the rate of duty on all goods (dutiable and free) within the class from 15.62 per cent. to 21.79 per cent. of the value of the imports.

*Imports from the United Kingdom:* The imports of this class from the United Kingdom are relatively small (£230,941), representing, in 1913, slightly more than 6 per cent. of all imports of wood, etc., and comprise chiefly furniture, picture frames, and miscellaneous manufactured articles of wood. Under the 1908-11 tariff, 72.40 per cent. of the imports of United Kingdom origin was dutiable at an average rate of 28.48 per cent., while under the 1914 tariff, 72.45 per cent. would become dutiable at an

average of 31.26 per cent. The average equivalent *ad valorem* rate on all imports of this class of United Kingdom origin was thus raised from 20.62 per cent. to 22.65 per cent.

Under the tariff of 1908-11, 68.34 per cent. of the imports from the United Kingdom was favoured by preferential treatment equal to 5.11 per cent. *ad valorem*, whereas, under the 1914 tariff, 95.93 per cent. would be favoured by a preferential margin of 5.02 per cent.

#### CLASS XIX.—EARTHENWARE, CEMENTS, CHINA, GLASS AND STONEWARE.

*General Comparisons.* The total imports under this class amounted to £1,580,615. Under the 1908-11 tariff, 92.91 per cent. was dutiable at an equivalent average *ad valorem* rate of 27.58 per cent. Under the 1914 tariff, 97.61 per cent. would be dutiable at an average of 32.95 per cent., the average rate on all goods within the class being raised from 25.63 per cent. to 32.16 per cent. The increased proportion of dutiable goods is due entirely to the imposition of duties of 5 per cent. on goods not of United Kingdom origin which were formerly free.

*Imports from the United Kingdom.* The dutiable imports of this class of United Kingdom origin would be the same under both tariffs (£618,147, or 94.27 per cent.), but the average rate of duty would be raised by the 1914 tariff from 23.35 per cent. to 26.94 per cent., so raising the rates on all goods within the class from 22.02 per cent. to 25.40 per cent.

Under the tariff of 1908-11, 86.11 per cent. of the imports from the United Kingdom was favoured by preferential treatment equal to 6.46 per cent. *ad valorem*, whereas, under the 1914 tariff, 92.66 per cent. would be favoured by a preferential margin of 8.98 per cent.

#### CLASS XX.—PAPER AND STATIONERY.

*General Comparisons.* The imports of paper and stationery during 1913 amounted to £3,134,750, of which £1,996,894 was paper, and £1,137,856 was stationery. Under the 1908-11 tariff, 29.82 per cent. was dutiable at an average equivalent *ad valorem* rate of 22.99 per cent. Under the 1914 tariff, 56.12 per cent. would be dutiable at an average rate of 20.30 per cent. Over all goods within the class (dutiable and free) the average rate would be raised, under the 1914 tariff, to 11.39 per cent., as against the former average rate of 6.85 per cent.

With regard to the imports of paper—apart from those of stationery—the proportion subject to duty has been raised from 28.26 per cent. to 65.96 per cent. The average rate of duty on dutiable paper has declined from 22.30 per cent. to 18.71 per cent., while the average rate on all imports of paper, dutiable and free, has increased from 6.30 per cent. to 12.34 per cent. The larger proportion of paper imports subject to duty, in conjunction with the lower average rate thereon, is due to the imposition of comparatively low rates on goods (formerly free) produced outside the United Kingdom. For instance, prior to the introduction of the 1914 tariff, printing paper was free, whereas now, when not made in the United Kingdom, it is subject to a duty of 10 per cent.

Of the imports of stationery—as distinct from paper, previously dealt with—the proportion subject to duty has been raised from 32.55 per cent. to 38.92 per cent., the average rate on these dutiable goods rising from 24.03 per cent. to 25.58 per cent., thus increasing the average rate on all imports of stationery from 7.82 per cent. to 9.93 per cent. Nearly 60 per cent. of the imports of stationery consist of printed books, which are entirely free from duty.

*Imports from the United Kingdom.* The imports of paper and stationery manufactured in the United Kingdom amounted to £1,789,577, of which £901,099 was paper, and £888,478 was stationery. Under the 1908-11 tariff, 22.82 per cent. was dutiable at an average rate of 23.37 per cent. Under the 1914 tariff, 27.65 per cent. would be dutiable at 24.76 per cent., thus increasing the average rate on all paper and stationery from 5.33 per cent. to 6.85 per cent. Under the 1908-11 tariff, preferential rates favoured £652,183 (36.45 per cent. of all imports), with a rebate of duty equal to 4.84 per cent. of

the value of the goods. Under the 1914 tariff, preferential treatment has been extended to embrace goods to the value of £1,192,111 (66.62 per cent.), the margin of preference at the same time being increased to 6.64 per cent. *ad valorem*.

Dealing with the imports of paper and of stationery separately, the tariff alterations affecting the trade of the United Kingdom would be as follows:—*Paper*. Of the imports of paper (£901,099), the proportion subject to duty under the 1908-11 tariff was 19.57 per cent., and under the 1914 tariff 24.60 per cent. The average *ad valorem* rate on these dutiable goods has been increased from 23.44 per cent. to 25.36 per cent., the rate on all paper (dutiable and free) rising from 4.59 per cent. to 6.24 per cent. *Stationery*. The imports of stationery of United Kingdom manufacture amounted to £888,478, of which 26.13 per cent. was dutiable under the 1908-11 tariff at an average rate of 23.33 per cent. Under the 1914 tariff, 30.74 per cent. would be dutiable at 25.13 per cent., so raising the average rate on all stationery (dutiable and free) from 6.09 per cent. to 7.73 per cent. *ad valorem*.

#### CLASS XXI.—JEWELLERY, TIMEPIECES, AND FANCY GOODS.

*General Comparisons*. The value of imports of this class during 1913 amounted to £1,410,555, of which £1,121,742, or 79.51 per cent., would be dutiable under both tariffs. Under the 1908-11 tariff, the average equivalent *ad valorem* rate on *dutiable* imports was 25.64 per cent., and under the 1914 tariff 28.05 per cent., the average rates on all imports of the class being raised from 20.39 per cent. to 22.31 per cent. *ad valorem*.

*Imports from the United Kingdom*. The imports of goods of this class produced in the United Kingdom amounted to £506,608, of which £481,594, or 95.05 per cent., would be dutiable under both tariffs, though the rate of *dutiable* goods has been raised from 22.62 per cent. to 24.18 per cent., and on all goods (dutiable and free) from 21.51 per cent. to 22.98 per cent.

Under the 1908-11 tariff, preferential treatment was given to 94.49 per cent. (£478,757) of imports of United Kingdom origin; the margin of preference being equal to 5.38 per cent. of the value of the goods. Under the 1914 tariff, 95.04 per cent. (£481,594) would be favoured by a margin of 9.12 per cent.

#### CLASS XXII.—OPTICAL, SURGICAL, AND SCIENTIFIC INSTRUMENTS.

*General Comparisons*. The imports of this class during 1913 amounted to £754,589. Under the 1908-11 tariff, 24.67 per cent. (£186,175) was dutiable at an average rate of 14.26 per cent., while under the 1914 tariff, 52.15 per cent. (£393,580) would be dutiable at an average rate of 25.62 per cent. The average rate on all goods within the class would thus be raised from 3.52 per cent. to 13.36 per cent.

*Imports from the United Kingdom*. The imports of goods of this class manufactured in the United Kingdom amounted to £333,179. Under the 1908-11 tariff, 18.27 per cent. (£60,861) was dutiable at an average rate equal to 19.63 per cent.; whereas, under the 1914 tariff, 31.02 per cent. (£103,340) would pay duty at the average rate of 25.95 per cent. The average rate on all goods, including free goods, has been raised from 3.59 per cent. to 8.05 per cent.

Under the 1908-11 tariff, 44.24 per cent. (£147,398) of the imports of United Kingdom manufacture was favoured by a preferential tariff margin equal to 5.09 per cent. *ad valorem*. Under the 1914 tariff, 59.15 per cent. (£197,061) would be favoured by a tariff margin increased to 6.55 per cent.

#### CLASS XXIII.—DRUGS, CHEMICALS, AND FERTILIZERS.

*General Comparisons*. The imports of this class during 1913 were valued at £2,493,192. Under the 1908-11 tariff, 22.69 per cent. (£565,569) was dutiable at an average rate of 20.08 per cent. Under the 1914 tariff, 47.98 per cent. (£1,196,301) would pay duty at an average rate of 12.85 per cent., the rate over all imports of the class being raised from 4.56 per cent. to 6.17 per cent. *ad valorem*. The smaller average rate of duty on dutiable imports is due to the imposition of 5 per cent. duties on goods manufactured outside the United Kingdom which were formerly free.

*Imports from the United Kingdom.* The imports of this class from the United Kingdom during 1913 amounted to £902,343, of which 34.45 per cent. would be dutiable under both tariffs, the average rate being slightly increased from 18.07 per cent. to 18.30 per cent., the average rate on all goods in the class rising from 6.23 per cent. to 6.30 per cent.

Under the 1908-11 tariff, 12.92 per cent. (£116,543) of the imports of drugs, etc., made in the United Kingdom was favoured by a tariff margin of 4.58 per cent. *ad valorem*, whereas, under the 1914 tariff, preferential rates have been extended to 94.94 per cent. of the class, and the margin of preference has been increased to 5.09 per cent.

#### CLASS XXIV.—MISCELLANEOUS.

*General Comparisons.*—The total value of imports under this class during 1913 amounted to £11,258,981, of which £2,495,000 was in respect of warships for the Commonwealth Government, and £1,662,300 was for mercantile ships. Under the 1908-11 tariff, £3,853,022 (34.22 per cent.) would be dutiable at an average rate of 21.23 per cent., and under the 1914 tariff, £3,937,906 (34.98 per cent.) would be dutiable at an average rate of 24.30 per cent. The rate of duty on all imports of the class would be raised from 7.27 per cent. to 8.50 per cent. *ad valorem*. If the value of imports for the Commonwealth Government be excluded from the figures, the proportion of dutiable goods in this class under the 1908-11 tariff would be 46.83 per cent., and the average rate of duty on all other goods of the class 9.95 per cent., and under the 1914 tariff, 47.91 per cent. would be dutiable at an average rate for all goods (dutiable and free) of 11.64 per cent.

*Imports from the United Kingdom.* The imports of manufactures of the United Kingdom of this class amounted to £7,892,845, of which £4,073,452, or 51.60 per cent., was in respect of ships. Dutiable goods would represent, under both tariffs, 14.22 per cent. (£1,122,667) of the total. Under the tariff of 1908-11, the average rate of duty on dutiable goods would be 23.43 per cent., and under the tariff of 1914 it would be 25.37 per cent. The average rate on all imports of the class (dutiable and free) of United Kingdom origin would be raised from 3.32 per cent. to 3.61 per cent. If the value of imports for the Commonwealth Government be eliminated, the proportion of dutiable goods would be 22.20 per cent. under both tariffs, the average rates on all goods being respectively 5.15 per cent. under the tariff of 1908-11 and 5.58 per cent. under the tariff of 1914.

Under the tariff of 1908-11 preferential tariff treatment was given to imports of this class from the United Kingdom to the value of £2,716,217, or 34.41 per cent. of such imports. Under the tariff of 1914, preference favoured £2,883,474, or 36.54 per cent., with an average tariff margin of 8.79 per cent., as against a former margin of 6.76 per cent.

#### TOTAL IMPORTS.

*General Comparisons.*—The total imports of merchandise (bullion and specie not included) into the Commonwealth during 1913 amounted to £78,196,109. Under the tariff of 1908-11, the dutiable goods would be £44,633,257, or 57.07 per cent. of the total imports of merchandise. Under the 1914 tariff, the dutiable goods would be increased to £50,956,824, or 65.16 per cent. of the total. Under the 1914 tariff, the average equivalent *ad valorem* rate of duty on dutiable goods would be 33.63 per cent., as compared with 29.93 per cent. under the tariff of 1908-11, the average rate on all imports (dutiable and free) being raised accordingly from 17.08 per cent. to 21.91 per cent. If the value of warships and other goods imported for the Commonwealth Government (£3,039,876) be excluded, the proportion of dutiable goods under the 1914 tariff would be 67.80 per cent., as compared with 59.38 per cent. under the former tariff, while the average rate on all other goods would now be 22.80 per cent., as against 17.77 per cent. under the 1908-11 tariff. The increased rates of duty represent on the basis of the 1913 imports an increase to revenue of £3,775,000.

**SUMMARISED COMPARISON OF THE TARIFFS OF 1908-11 and 1914, BASED UPON  
THEIR APPLICATION TO THE IMPORTS OF MERCHANDISE INTO THE  
COMMONWEALTH DURING 1913.**

On <i>dutiable</i> merchandise, less drink and tobacco ...	21.04	22.56

\* The surcharge on these imports as compared with similar imports from the United Kingdom would be at the average rate of 9.46 per cent.

*Imports from the United Kingdom.* The total imports of merchandise from the United Kingdom during 1913 amounted to £40,948,803. Under the tariff of 1908-11, the dutiable goods represented £21,053,786, or 51.41 per cent., the average equivalent *ad valorem* rate thereon being 27.62 per cent. Under the 1914 tariff, dutiable goods are increased slightly to £21,287,003 (51.98 per cent.), while the average rate on dutiable goods has been raised to 33.95 per cent. The average equivalent *ad valorem* rate on all imports from the United Kingdom would, under the 1914 tariff, be 17.65 per cent., compared with 14.20 per cent. under the former tariff. Omitting the value of imports for the Commonwealth Government (£2,786,430), the proportion of dutiable goods would now be 55.78 per cent., as against 55.16 per cent. formerly, and the average *ad valorem* rate on all goods (dutiable and free) would now be 18.14 per cent. instead of 15.24 per cent. The increased rates on imports of United Kingdom origin represent an additional import of £1,412,451 on the same trade. Of this increase £791,593, or 56.05 per cent., is due to increased duties on alcoholic liquors.

Under the tariff of 1908-11, imports of United Kingdom origin to the value of £24,986,308, representing 61.01 per cent. of the total imports of United Kingdom produce, were favoured by preferential tariff rates equal to 5.14 per cent. of the value of the goods. Under the 1914 tariff, preferential treatment is extended to £32,449,715, or 79.23 per

cent. of United Kingdom goods, the margin of preference being extended, at the same time, to 6.30 per cent. *ad valorem*. This means that if the same goods were imported from countries other than the United Kingdom, £2,044,000 additional duty would now be charged, whereas under the 1908-11 tariff the surcharge of duty would have been £1,284,000.

A comparison of the results given in the second and third tables of the series shows that while the average rate of duty on goods produced or manufactured in the United Kingdom has been increased by 3.45 per cent. of the value of the goods (from 14.20 per cent. to 17.65 per cent.), the rates on goods from other countries have been increased by 6.35 per cent. (from 20.25 per cent. to 26.60 per cent.). This is the combined result of an extension of duties to 79.66 per cent. (£29,669,821) of the imports as compared with 63.30 per cent. (£23,579,471) previously dutiable, in conjunction with an increase of the average rate on dutiable goods from 31.99 per cent. to 33.39 per cent.

Not only has the "preference" to the United Kingdom been increased by an extension of the principle to goods which did not formerly come within its scope, but in regard to many items, new duties have been imposed under the general tariff, or previous rates have been raised, while the rates on similar imports from the United Kingdom have not been altered. Thus many items which are still free if produced in the United Kingdom have become dutiable if produced elsewhere. The higher average rate of duty on United Kingdom goods is due to the increase of duties previously in force, rather than to any contraction of the free list. For example, the duty on potable spirits has been increased from 14s. to 20s. per proof gallon.

**SUMMARISED COMPARISON OF THE TARIFFS OF 1908-11 and 1914, BASED UPON THEIR APPLICATION TO THE PRODUCE OR MANUFACTURE OF THE UNITED KINGDOM IMPORTED INTO THE COMMONWEALTH DURING 1913.**

\* Includes tobacco to the value of £23,154 imported in competition with similar imports from South Africa, which is favoured by preferential rates under the South African Preference Act.

*Imports from British Countries other than the United Kingdom.*—With the exception of some imports from South Africa, which are admitted under special rates by virtue of the South African Preference Act, imports from "British Possessions" are subject to the same tariff as similar goods imported from "Foreign Countries." The rebate of duty on South African goods imported during 1913 amounted to £4296 under the tariff of 1908-11. Under the 1914 tariff the rebate, as compared with similar imports from the United Kingdom, would be £3345, and against similar imports from other countries the rebate would be £3517. The smaller rebate under the 1914 tariff is the effect of the reduction of the margin on cut tobacco from 1s. 3d. to 9d. per lb., and other manufactured tobacco from 1s. to 9d. per lb.

The imports of merchandise from "British Possessions" during 1913 were valued at £7,804,483. Under the tariff of 1908-11, 34.53 per cent. of this was dutiable at an average rate of 32.46 per cent., with the result that all imports from "British Possessions" would pay an average rate of 11.21 per cent. Under the 1914 tariff, £3,085,483 (39.52 per cent.) would become dutiable at an average rate of 34.77 per cent., the effect being to increase the average rate on all imports, dutiable and free, to 13.75 per cent. This means that under the 1914 tariff these imports would be required to pay £1,073,099 duty, whereas, formerly, the duty on the same goods would have been £874,905 only. The lower proportion of dutiable goods from "British Possessions," as compared with "Foreign Countries," is due to the fact that raw materials, and animals for breeding purposes, and tea, all of which are free, enter more largely into the trade of the former than that of the latter.

Of the imports from "British Possessions" (£7,804,483), £1,106,899 would be adversely affected by the preferential tariff in favour of the United Kingdom by a surcharge of £93,161, or 8.42 per cent. *ad valorem*.

A tabular presentation of the changes made by the tariff of 1914 as they affect imports from "British Possessions" and from "Foreign Countries" is appended:—

**IMPORTS OF MERCHANDISE FROM BRITISH POSSESSIONS AND FROM FOREIGN COUNTRIES, ANALYSED ACCORDING TO THE TARIFFS OF 1908-11 and 1914.**

All imports ... ..	11.21	13.75	22.65	30.00

### § 14.—Rates of Duty in Australia and other Countries.

The following table shows the proportion of the total imports of merchandise entered for "home consumption," free of duty, in the undermentioned countries, and also the equivalent *ad valorem* rates of duty charged:—

#### PROPORTION OF FREE GOODS AND RATES OF IMPORT DUTY.

Particulars.	Australia.			Canada.	New Zealand.	U.S. of America.
	31/12/06	30/6/17	Tariff of 1914 applied to Imports of 1913.	(a) 31/3/16	31/12/16	30/6/17
Year ended ... ..	...	...	...	...	...	...
Percentage of free merchandise ...	35.18	34.50	34.83	43.01	51.06	68.64
Equivalent <i>ad val.</i> rates of duty on	%	%	%	%	%	%
Spirits, wines, and malt liquors	153.23	120.88	169.98	161.26	83.14	94.32
Tobacco, and preparations thereof	168.65	155.00	202.20	13.73b	92.54	87.29d
Other dutiable merchandise ...	17.04	19.90	22.56	34.54	19.61	26.17
Other merchandise dutiable & free	10.75	12.80	14.37	19.01	8.92	7.83
Total dutiable merchandise ...	27.14	25.62	33.63	35.92	29.23	30.67
Total merchandise dutiable & free	17.59	16.78	21.91	20.47	13.60	9.62
Customs duty per head ...	£ s. d. 1 15 10	£ s. d. 2 12 9	£ s. d. —	£ s. d. 2 13 8	£ s. d. 3 5 2c	£ s. d. 0 8 6

(a) The rates of duty given in relation to imports are exclusive of war tax. £565,000, which however, is included in the duty per head of population. (b) Unmanufactured tobacco is admitted to Canada free of duty. (c) Exclusive of Maoris. (d) Tobacco is admitted free of Customs duty from the Philippine Islands.

The figures given for the year ended 30th June, 1906, represent the results of the last full year of operation of the tariff of 1902.

From the results given in the above table, it will be seen that the scheme of taxation, by means of import duties, varies materially between the countries named. In Australia and Canada, taxation is spread much more widely over imported commodities than in New Zealand or the United States of America. In the latter country, 68 per cent. of all imports are free of duty, whereas under the tariff at present in force in the Commonwealth, about 35 per cent. only of the total imports are exempt from taxation. A considerable restriction of the free list in this country was necessary to raise the revenue required by the exigencies of the war, though even prior to the war free goods represented only 42 per cent. of the total imports, while in New Zealand they comprised 52 per cent. The lower average rate of duty charged on imports into the Commonwealth during the year ended 30th June, 1917, as compared with the results obtained from the application of the same tariff to the imports of 1913, is due largely to increased prices reducing the equivalent *ad valorem* rates on goods subject to fixed rates of duty. This is particularly noticeable with regard to spirits, etc., and tobacco. Had the present tariff been in force during 1913 the imports of tobacco, cigars and cigarettes in that year would have paid an average *ad valorem* rate equivalent to 202.20 per cent., whereas on the imports of 1916-17, by reason of increased values, the same fixed rates represented an equivalent *ad valorem* rate of 155 per cent. only.

VALUE OF GOODS (EXCLUDING BULLION AND SPECIE) ENTERED FOR CONSUMPTION IN THE COMMONWEALTH, AND DUTY COLLECTED THEREON, 1916-17.

Classification of Imports.	Value Entered for Consumption.			Duty Collect'd, less Refunds.	Equivalent <i>ad valorem</i> Rate per cent. on—

## SECTION XVI.

### SHIPPING.

#### § 1. General.

1. **Record of Shipping before Federation.**—Prior to Federation it was customary for each State to regard the matter of shipping purely from the State standpoint, and vessels arriving from or departing to countries beyond Australia, via other Australian States, were recorded as if direct from or to the oversea country. Thus, a mail steamer from the United Kingdom, which made Fremantle her first port of call in Australia, would be recorded not only there, but again in Adelaide, Melbourne and Sydney, as an arrival from the United Kingdom. Consequently, any aggregation, especially of the recent shipping records of the different States, would repeatedly include a large proportion of the shipping visiting Australia. In earlier years, when many vessels sailed from the various State ports direct for their destination, the error of repeated inclusion was less serious, but as the commerce of Australia developed, more and more ports of call were included in the voyage of each vessel, and the mere aggregation of State records hence became correspondingly misleading. Failure to recognise this was at times responsible for erroneous deductions from the statistical records as then compiled.

2. **Shipping since Federation.**—With the inauguration of the Commonwealth, the statistics of its shipping, especially of its oversea shipping, became of greater intrinsic importance. As an index of the position of Australia among the trading countries of the world, such statistics had a constitutional importance commensurate with Commonwealth interests, and correspondingly greater than those of individual States, and the nationality of the shipping trading with Australia became also a matter of greater moment.

3. **Difficulties of Comparisons of Total Shipping.**—From what is said in subsection 1 above, it is obviously impossible to obtain results for Australia for pre-federal years not subject to the defect of repeated inclusions of the same vessels. Unfortunately, the statistical records of the first three years of Federal history are also subject to the same defect, and do not admit of direct comparison with those now kept. A careful estimate of the extent and effect of repeated inclusion has, however, been made and applied to the records of the earlier years, so as to extend the comparative results to those years. The error of such estimation will be negligible for comparative purposes.

4. **Present System of Record.**—The present system of record treats Australia as a unit, and counts, therefore, only one entry and one clearance for each visit to the Commonwealth. Repeated voyages of any vessel are, of course, included.

On arrival of every vessel at a port in the Commonwealth, whether from an oversea country or from another port within the Commonwealth, the master is required to deliver to the Customs officer a form giving all particulars necessary for statistical purposes in regard to the ship, passengers and crew. Similarly, on departure from a port, a form

containing corresponding information is lodged. These forms, which provide a complete record of the movements of every vessel in Commonwealth waters, are at the end of each month forwarded by the Customs officer at each port to the Commonwealth Bureau of Statistics, and furnish the material for the compilation of the Shipping and Migration Returns.

Under the system previously in force it was found that the estimates of population in so far as they were based on seaward movement, were very unsatisfactory, and it is believed that the method referred to above gives decidedly better results.

From the 1st July, 1914, the statistical year for the record of Trade and Shipping of the Commonwealth was altered from the calendar year to agree with the fiscal year.

In all instances the tonnage quoted is the net tonnage.

## § 2. Oversea Shipping.

1. **Total Oversea Shipping.**—In order to extend, as indicated, the comparison of the oversea shipping to the earliest years for which any records are available, an estimate of its probable amount has been made. This estimate is based on a comparison of the results obtained by merely aggregating State statistics, with the defect of multiple records, and the results obtained under the present system, which avoids the multiple record. From the nature of the case it is obvious that the ratio of repeated inclusion to the total traffic has been continually advancing, and this fact has been duly taken into account in deducing the results in the following table:—

### • TOTAL OVERSEA SHIPPING ENTERED AND CLEARED THE COMMONWEALTH, 1822 to 1916-17 (MULTIPLE RECORD EXCLUDED BY ESTIMATION PRIOR TO 1904).

Year.	Vessels.	Tons.	Year.	Vessels.	Tons.	Year.	Vessels.	Tons.

1842 ...	862	232,827	1874 ...	3,153	1,728,269	1906 ...	4,155	7,966,658
1843 ...	736	193,427	1875 ...	3,437	1,914,462	1907 ...	4,394	8,822,866
1844 ...	629	155,654	1876 ...	3,295	1,863,343	1908 ...	4,051	8,581,151
1845 ...	735	164,221	1877 ...	3,157	1,930,434	1909 ...	3,910	8,516,751
1846 ...	888	211,193	1878 ...	3,373	2,127,518	1910 ...	4,048	9,333,146
1847 ...	1,033	245,358	1879 ...	3,344	2,151,338	1911 ...	4,174	9,984,801
1848 ...	1,182	305,840	1880 ...	3,078	2,177,877	1912 ...	4,052	10,275,314
1849 ...	1,137	355,886	1881 ...	3,284	2,549,364	1913 ...	3,985	10,601,948
1850 ...	1,300	425,206	1882 ...	3,652	3,010,944	1914-15 ...	3,911	8,599,258
1851 ...	1,576	515,061	1883 ...	3,857	3,433,102	1915-16 ...	3,394	8,538,322
1852 ...	1,896	844,243	1884 ...	4,315	4,064,947	1916-17 ...	2,986	7,694,442
1853 ...	3,364	1,490,422	1885 ...	4,052	3,999,917			

It will be borne in mind that while the above figures in themselves have no absolute significance, nevertheless, on the assumption that the element of duplication has been in fairly constant ratio, they furnish the best available indication of the growth of Australian oversea shipping.

**2. Comparison with other Countries.**—The place of Australia among various countries in regard to oversea shipping, in normal times, is indicated in the following table, both absolutely and in respect of tonnage per head of population:—

### OVERSEA SHIPPING OF VARIOUS COUNTRIES.

Country.	Year.	Tonnage Entered and Cleared.		Country.	Year.	Tonnage Entered and Cleared.	
		Total.	Per Inhabitant.			Total.	Per Inhabitant.
Argentina Rep.	1912	23,372,714	3.2	Japan	1912	43,492,604	0.8
Belgium	1912	32,672,989	4.3	New Zealand	1916	2,940,110	2.7
Canada	1914	25,402,586	3.1	"	1913	3,438,792	3.2
Commonw'lth	1916-17	7,694,442	1.6	Norway	1912	10,806,050	4.4

Italy	1912	56,889,048	1.6				

\* Exclusive of Northern Border and Lake Ports.

**3. Shipping Communication with various Countries.**—Particulars of the number and tonnage of vessels recorded between Australia and various countries, distinguishing British from foreign countries, are given in the following tables—the next table shewing the tonnage of vessels which were recorded as having entered the Commonwealth from the particular countries mentioned; that on page 622 shews the tonnage of vessels which were recorded as having cleared the Commonwealth for the particular countries, while on page 623 is shewn the total tonnage of vessels recorded as entered and cleared from and to the countries named.

The smaller tonnage which entered and cleared Commonwealth ports during the last three years, together with its altered distribution among the various countries, was, of course, almost entirely due to the war. The principal factor in reducing shipping tonnage was the immediate withdrawal of ships of enemy countries. During 1913 German ships to and from the Commonwealth aggregated a tonnage of 1,211,404 tons, whereas the figures for 1914-15 include only 172,679 tons of German shipping. This latter tonnage represents vessels which arrived and departed between the 1st July, 1914, and the outbreak of war, together with a few vessels that arrived later in ignorance of the opening of hostilities. Any German ships now entering the Commonwealth are operated under the British or Allied flags, and are classified accordingly.

The control of shipping by the Imperial Government for war purposes materially lessened the number of voyages of mail boats to and from England, and the tonnage of the Messageries Maritimes line was reduced from similar causes, whereas the increase shewn in the tonnage to and from India and Ceylon and "Other British Countries" represents vessels engaged in war transport services.

The figures in the above table represent the tonnage of shipping recorded as having cleared the Commonwealth for the particular countries named. In the following sub-section countries have been grouped according to larger geographical divisions with the purpose of depicting more clearly the general trend of Australian shipping.

Beyond the immediate military control of shipping, tonnage was further affected by the prohibition by the Government of the export of certain commodities. For instance, the restrictions placed on the export of coal were mainly responsible for the relatively small tonnage between this country and Chile and Peru.

In respect of these tables it may be pointed out that the statistics for any country do not fully disclose the extent of its shipping communication with particular countries. The reason for this is that vessels are recorded as arriving from, or departing to, a particular country, whereas, as a matter of fact, many regular lines of steamers call and transact business at the ports of several countries in the course of a single voyage. The lines of steamers trading between Australia and Japan, for example, often call at New Guinea, the Philippine Islands, China, etc., but, being intermediate ports, these countries are not referred to in the statistical records. Similarly, in the case of the large mail steamers passing through the Suez Canal, a steamer may call at Colombo, Aden, Port Said, Genoa, Marseilles, London, and in ordinary times, Antwerp and Bremerhaven, yet obviously can only be credited as cleared for one of these ports, to the consequent exclusion of all the other ports from the records.

**4. General Trend of Shipping.**—A grouping of countries into larger geographical divisions, as in the following tables, shews more readily the general direction of Australian shipping, and, to some extent, avoids the limitations of the records in relation to particular countries, by covering more closely the main trade routes.

From these tables it would appear that the tonnage between Australia and Africa was greater during 1915-16 than in 1913. This, however, is merely the effect of the diversion of shipping from its usual occupation to military transport between this country and Egypt.

5. **Nationality of Oversea Shipping.**—As will be seen from the following table, the greater part of the shipping visiting the Commonwealth is of British nationality. The proportion which British shipping represented of the total tonnage which entered and cleared the Commonwealth rose from 72.83 per cent. during 1913 to 82.41 per cent. in 1914-15 and in 1916-17 represented 81.53 per cent. This increase was almost entirely due to the withdrawal of German ships.

The greatly reduced tonnage of French and Norwegian ships in the Australian trade has been replaced, to some extent, by United States and Dutch vessels.

The tonnage of Australian-owned vessels engaged in the oversea trade represents in normal times about 8 per cent. of the total, and the tonnage of New Zealand vessels about 12 per cent. Both are ordinarily engaged mainly in the trade with New Zealand and eastern countries. The increase shewn above in Australian tonnage during the years 1914-15 and 1915-16 was a consequence of the diversion of vessels from the interstate trade to military purposes in transporting troops, etc., abroad. Several of these vessels have since been lost by enemy operations, and others have been further diverted from the Australian trade.

The relative proportion of British and foreign tonnage which entered and cleared the Commonwealth during the last five years, apart from tonnage in ballast, is given below. From these figures, which may be considered to indicate more closely the proportion of the actual carrying trade done, than does the total tonnage, it will be seen that the proportion of British tonnage was lower during 1913 than in any other year shewn. In fact, since 1904, when the shipping statistics were first compiled in their present form, the proportion of British ships entered and cleared with cargo has never been so low as in 1913. From what has already been said it will be understood that the figures for 1914-15 and subsequent years are the result of abnormal conditions, and are, therefore, of little economic significance.

**PROPORTION OF TONNAGE OF BRITISH AND FOREIGN NATIONALITY ENTERED  
AND CLEARED THE COMMONWEALTH WITH CARGO, 1912 to 1916-17.**

The principal increases in foreign tonnage in the Australian trade have been German, Japanese, United States of America, Norwegian, and Dutch. The greater amount of German and Japanese tonnage has been due to the extension of services between those countries and the Commonwealth, while the revival of the service between this country and San Francisco, which was discontinued after the great earthquake in that city in 1906, accounts for the larger American tonnage in 1913, whereas the subsequent trade development between this country and the United States accounts for the large increase of American shipping during the last two years under review. The Norwegian tonnage, which was largely composed of sailing ships, was chiefly engaged under charter in the carriage of coal, wheat, ore, etc. The Norwegian shipping in the Australian trade has been, however, much affected by the war. The apparent increase in Dutch tonnage requires special explanation. During recent years the vessels of the Royal Dutch Packet Company, on their voyages between Java and the eastern Australian ports, have been frequently, but unavoidably, counted twice on what was practically the same voyage, first on arrival from Java and again on arrival from Papua. As in the case of the United States of America, the increase of Japanese shipping tonnage has been the corollary of increased Japanese trade with Australia.

The following table shews the direction of the activities of the principal foreign countries engaged in the oversea carrying trade of the Commonwealth. A similar analysis with regard to German and French ships will be found in previous issues.

**SHIPPING OF PRINCIPAL FOREIGN NATIONS BETWEEN AUSTRALIA AND OTHER COUNTRIES DURING 1916-17.**

The tonnage which entered each State of the Commonwealth, in ballast, during 1916-17, was as follows:—

**TONNAGE OF OVERSEA VESSELS IN BALLAST WHICH ENTERED EACH STATE AND THE NORTHERN TERRITORY DURING 1916-17.**

State ...	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Terr.	C'wealth.
Tonnage ...	276,263	86,777	9,818	82,134	414,932	...	1,844	871,768
Percentage of total ...	31.69	9.95	1.13	9.42	47.60	...	0.21	100.00

In normal times the large exports of coal from New South Wales afford special inducements to vessels in search of freights. During 1913, 600,050 tons, or 59.88 per cent. of all ballast tonnage arriving in Australia, entered in New South Wales, 463,134 tons having entered at the coal port of Newcastle. The tonnage in ballast into New South Wales is mainly for coal cargo, into South Australia for wheat and ore, and into Western Australia for timber and cattle. War conditions have, however, completely deranged the shipping of the Commonwealth, and the relatively large tonnage entering Western Australian ports in ballast represented vessels on military transport service.

### § 3. Shipping of Ports.

1. **Shipping of Ports.**—Appended is an abstract of the total shipping tonnage—over-sea and coastwise—which entered the more important ports of Australia during the year 1916-17, together with similar information in regard to some of the ports of New Zealand for the year 1916, and of the United Kingdom for the year 1913 :—

#### SHIPPING OF PORTS, AUSTRALIA, NEW ZEALAND, AND THE UNITED KINGDOM.

Port.	Tonnage Entered.	Port.	Tonnage Entered.
<b>AUSTRALIA—</b>		<b>ENGLAND AND WALES—</b>	
Sydney ... ..	6,725,828	London ... ..	20,088,071
Melbourne ... ..	5,892,661	Liverpool (inc. Birkenhead) ... ..	15,574,989
Newcastle ... ..	3,293,717	Cardiff ... ..	12,603,349

Albany ... ..	966,767	Newport ... ..	3,630,681
Rockhampton ... ..	689,498	Middlesbrough ... ..	3,416,582
Mackay ... ..	601,515	Swansea ... ..	3,374,439
Port Pirie ... ..	513,958	Sunderland ... ..	3,288,949
Cairns ... ..	475,972	Grimsby ... ..	3,056,578
Hobart ... ..	404,731	Bristol ... ..	2,732,832
Bowen ... ..	400,741	Manchester ... ..	2,685,184
Geelong ... ..	328,995	Dover ... ..	2,606,277
Burnie ... ..	270,811	<b>SCOTLAND—</b>	
Thursday Island ... ..	213,713	Glasgow ... ..	6,101,819
<b>NEW ZEALAND—</b>		Leith ... ..	2,344,195
Wellington ... ..	2,833,351	<b>IRELAND—</b>	
Auckland ... ..	1,813,711	Cork (inc. Queenstown) ... ..	4,317,966
Lyttelton ... ..	1,633,972	Belfast ... ..	3,345,779
Dunedin ... ..	814,216	Dublin ... ..	2,495,854

\* Exclusive of coastal shipping, particulars of which are not available.

From the figures above it may be seen that the shipping business of the port of Sydney is exceeded by that of five ports only in the United Kingdom, viz., London, Liverpool, Cardiff, the Tyne, and Southampton.

### § 4. Vessels Built and Registered.

1. **Vessels Registered.**—The following table shews the number and net tonnage of steam, sailing, and other vessels on the registers of the various States and of the Northern Territory of the Commonwealth of Australia :—

#### VESSELS ON THE REGISTER, 31st DECEMBER, 1917.

State.	Steam.				Sailing.				Barges, Hulks, Dredges, etc., not Self-propelled.		Total.

2. **Vessels Built.**—The following tables shew the number and tonnage of vessels built in the Commonwealth during each of the years 1901-1917, so far as such information can be ascertained from the Shipping Registers of the various States. The Merchant Shipping Act, under which vessels are registered in Australia, however, does not make it compulsory to register vessels under 15 tons burthen if engaged in river or coastal trade. Larger vessels are also exempt from registration if not engaged in trade. Yachts and small trading vessels may be, and frequently are, registered at the request of the owners. As the Shipping Registers have been, and are, the source of information, it follows that the figures given below will be subject to additions in the future, inasmuch as vessels already built may be added to the register at some future date.

## VESSELS BUILT IN THE COMMONWEALTH, 1901 to 1917.

## § 5. Interstate Shipping.

1. **Total Vessels and Tonnage.**—In the following tables are shewn the number and tonnage of vessels recorded as having entered each State of the Commonwealth from any other State therein, and similarly, the number and tonnage cleared from each State to other Commonwealth States. The table gives results since 1891 and for 1916-17. The shipping on the Murray River, between the States of New South Wales, Victoria and South Australia, is not included:—

## INTERSTATE SHIPPING, 1891 to 1916-17—NUMBER OF VESSELS.

\* Included with South Australia.

The figures presented in the above table include overseas vessels—largely mail boats—passing from one State to another. This renders the results somewhat unsatisfactory.

In the earlier part of this chapter attention was drawn to the custom in vogue prior to Federation of recording vessels from or to "oversea countries via other Commonwealth States" as *direct* from or to the oversea country. At each port in Australia these vessels were, on the inward voyage (to Australia), entered as from the oversea country, and

cleared to the next Australian port as "interstate"; on the return journey—the outward voyage—they were entered as "interstate," and cleared as for the oversea country. In order to preserve the continuity of the records of the shipping communication of the several States with oversea countries this method has been followed in continuation of the pre-existing practice, excepting that vessels arriving or departing via other Commonwealth States are now so recorded instead of as "direct."

From the above it will be seen that while certain movements of the vessels referred to are included in the interstate shipping, other movements of the same vessels, between the same ports, are not so included.

To ascertain the aggregate movement of shipping between the States during the year 1916-17, including the total interstate movements of oversea vessels, the figures in the following table must be added to those of the preceding one :—

**SHIPPING ENTERED AND CLEARED FROM AND TO OVERSEA COUNTRIES  
VIA OTHER COMMONWEALTH STATES, 1916-17.**

State.	Entered.		Cleared.		Total.		
	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.

Total ...	1916-17	949	3,577,794	933	3,484,335	1,882	7,062,129
	1906 ...	1,045	3,349,036	1,107	3,442,747	2,152	6,791,783

**2. Total Interstate Movement of Shipping.**—From the foregoing it is apparent that the interstate movement of shipping includes two very different elements, viz.:—(i.) Oversea ships moving from State to State, and (ii.) the movement of ships engaged solely in the interstate carrying trade. These two elements are approximately as follows :—

**TOTAL INTERSTATE MOVEMENT OF SHIPPING, 1911 to 1916-17.**

	1911.	1912.	1913.	1914-15.	1915-16.	1916-17.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Oversea vessels moving interstate	10,049,659	10,711,434	11,472,490	8,737,804	8,017,918	7,062,129
Vessels solely interstate ...	6,548,069	6,809,428	8,080,267	8,140,155	7,175,175	6,093,634
Total ...	16,597,728	17,520,862	19,552,757	16,877,959	15,193,093	13,155,763

The following table shews the number and tonnage of vessels which entered and cleared each State during 1916-17, including the coastal movements of oversea vessels :—

### INTERSTATE SHIPPING OF EACH STATE, 1916-17.

State.	Entered.		Cleared.		Total.	
	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.
New South Wales ...	1,955	4,473,686	1,916	4,307,373	3,871	8,781,059
Victoria ...	1,755	3,458,963	1,839	3,697,708	3,594	7,156,671
Queensland ...	610	1,333,688	597	1,301,513	1,207	2,635,201
South Australia ...	672	1,787,713	729	2,004,282	1,401	3,791,995
Western Australia ...	394	1,408,922	313	1,171,600	707	2,580,522
Tasmania ...	770	640,128	776	663,772	1,546	1,303,900
Northern Territory ...	29	52,663	23	43,607	52	96,270
Total ...	1916-17	6,185	13,155,763	6,193	13,189,855	...
	1906 ...	6,586	12,244,136	6,539	12,277,699	...

3. **Vessels Engaged Solely in Interstate Trade.**—The elimination of the element of oversea vessels, included in the interstate shipping returns, cannot be accurately effected ; nevertheless, a close approximation is furnished if it be assumed that vessels *entered* in the several States as from “oversea countries via other Commonwealth States” have really been *cleared* from other States as “interstate,” and further, that the vessels *cleared* to “oversea countries via other Commonwealth States” have likewise been *entered* as “interstate.” Applying this suggestion, and so eliminating all interstate movements of oversea vessels, the number and tonnage of vessels engaged solely in the interstate trade during the years 1911 to 1916-17 will be found to be as follows :—

### NUMBER AND TONNAGE OF VESSELS ENGAGED SOLELY IN INTERSTATE TRADE, 1911 to 1916-17.

Year.	Entered.		Cleared.	
	No.	Tons.	No.	Tons.
1911 ...	4,794	6,548,069	4,811	6,570,019
1912 ...	5,000	6,809,428	4,990	6,809,426
1913 ...	5,174	8,080,267	5,187	8,105,988
1914-15...	5,143	8,140,155	5,142	8,112,005
1915-16...	5,121	7,175,175	5,112	7,139,451
1916-17...	4,803	6,093,634	4,311	6,127,726

This treatment cannot be extended to the individual States, as the records do not disclose the particular relationship of the States concerned.

4. **Interstate and Coastal Services.**—The foundation of the coastal steamship services in Australia dates back to the year 1851, when a regular trade was established between Melbourne and Geelong by the small screw steamer *Express*. Early in the fifties a company was formed in Tasmania with a capital of £40,000 for the purpose of purchasing steamboats, and employing them in the carriage of passengers and goods between Hobart

and Melbourne. This service was commenced in 1852, and was thus the first regular interstate service in Australia. About this time the great influx of population and the increase in commerce, caused chiefly by the gold discoveries, emphasised the desirability of establishing more regular and quicker means of communication between the principal ports of Australia, and in 1862 the regular interstate service between New South Wales and Victoria was inaugurated by the s.s. *You Yangs*, which was put into commission in regular service between Melbourne, Sydney, and Newcastle. In 1875 a company was formed in Adelaide for the purpose of supplying suitable steamers for the requirements of the trade between Adelaide and Melbourne. The first two steamers of the company were named the *South Australian* and the *Victorian*, and were small vessels of only 400 tons burthen. From the start, success attended these enterprises, and the services thus initiated were rapidly extended and their operations broadened. Numerous other companies were formed to cope with the increasing trade between ports in the Commonwealth, and the companies engaged from time to time added to their fleets of steamers by the acquisition of more modern and faster vessels, until at the end of the year 1916 the total net tonnage owned by the twenty-three companies from whom returns have been received amounted to over 204,000 tons. A summary of the various mail services carried on during the year 1916 is given in Section XVIII. of this work.

The subjoined table gives particulars, so far as they are available, of all steamships engaged in regular interstate or coastal services at the end of each of the years 1901 and 1913 to 1917. The figures for 1913 and subsequent years include particulars relating to a number of smaller companies which did not supply returns for 1901, though they were, for the most part, carrying on business in that year.

**PARTICULARS OF STEAMSHIPS ENGAGED IN REGULAR INTERSTATE AND COASTAL SERVICES IN THE COMMONWEALTH, 1901 and 1913 to 1917.**

\* In some cases the vessels included in the above return were subsequently recovered. † Not including two dredges, particulars of whose tonnage are not available.

### § 7. Control of Commonwealth Shipping.

From the 16th February, 1917, the control of all Commonwealth shipping matters has been under the direction of the Commonwealth Shipping Board, of which Engineer Rear-Admiral Sir William Clarkson, K.B.E., C.M.G., the Controller of Shipping, is chairman.

The policy of the Board is administered by two Central Committees (1) the Overseas Central Committee, and (2) the Interstate Central Committee. The Overseas Committee, which meets in Sydney, with Sir Edward Owen Cox, K.B.E., Deputy-Controller of Oversea Shipping, as chairman, supervises all matters connected with the oversea trade of the Commonwealth, while the Interstate Central Committee, which meets in Melbourne, with the Controller of Shipping (*ex officio*) as chairman, controls the shipping engaged in the coastal trade.

The Controller of Shipping may requisition at schedule rates any vessels which are registered in Australia or engaged in the coasting trade, and may determine which vessels may be made available for the overseas service. The following summary (taken from a Parliamentary Paper, dated 6th June, 1918) shows the number and gross tonnage of vessels which have been diverted from their ordinary service in Australian waters since the beginning of the war, and also the vessels still retained in the interstate trade of the Commonwealth :—

#### VESSELS WITHDRAWN FROM SERVICE IN AUSTRALIAN WATERS.

	No. of Vessels.	Gross Tonnage.
Vessels which have been withdrawn from interstate services since war commenced ... ..	33	141,056
Vessels which have been temporarily withdrawn for special trips ... ..	3	9,479
Oversea vessels which carried cargo and passengers on the coast and have been withdrawn since commencement of war	6	21,559
Vessels which traded from Australia to New Zealand and/or Pacific Islands and have been withdrawn since commencement of war ... ..	15	74,323
Interstate vessels which have been withdrawn since war commenced ... ..	5	5,832
	62	252,249
Vessels now employed in the interstate trade ... ..	67	173,282

### § 8. Commonwealth Government Line of Steamers.

1. **Vessels Purchased.**—In October, 1916, the Right Honourable W. M. Hughes, P.C., Prime Minister, purchased at a total net cost of £2,047,900 the following vessels for the Commonwealth of Australia :—

## COMMONWEALTH VESSELS PURCHASED.

Class.	Old Name.	New Name.	D.W. Capacity.
*A1 ...	"Strathendrick" ...	"Australdale"† ...	7180
" ...	"Strathspey" ...	"Australpeak" ...	7180
" ...	"Strathdee" ...	"Australrange" ...	7180
†B.C. ...	"Strathbeg" ...	"Australmount" ...	7180
*A1 ...	"Strathleven" ...	"Australcrag" ...	7180
†B.C. ...	"Strathesk" ...	"Australbrook" ...	7180
*A1 ...	"Strathavon" ...	"Australford" ...	7180
" ...	"Strathgarry" ...	"Australbush"† ...	7180
" ...	"Strathairly" ...	"Australpool" ...	7180
" ...	"Strathord" ...	"Australglen" ...	7180
" ...	"Daltonhall" ...	"Australstream" ...	5723
" ...	"Kirkoswald" ...	"Australmead" ...	7740

" ...	"Ardanmhor" ...	"Australplain" ...	7180
" ...	"Vermont" ...	"Australfield" ...	6800

\* Classed at Lloyds.

† British Corporation.

‡ Lost through enemy action.

The sailing vessels "John Murray" (1600 tons), "Shandon" (2200 tons) and "Speedway" (1100 tons) were also acquired by the Commonwealth Government, but the former was totally wrecked on Malden Island on the 22nd May, 1918, her crew being saved.

**2. Voyages and Freights.**—The following is a return of voyages made and cargoes carried from Australia by the above vessels from October, 1916, to 1st August, 1918:—During the period from October, 1916, to October, 1917, twenty-three voyages were made, the cargo carried being principally wheat and/or flour to the United Kingdom or France. Included in the above are:—One cargo, copra to United Kingdom, concentrates (zinc), lead, shell; one cargo, wool and wheat to United Kingdom; one cargo, wheat and flour to South Africa, with some general cargo; two cargoes, wheat and flour to America.

From October, 1917, to 1st August, 1918, the number of voyages made was nineteen, of which fourteen were to the United Kingdom, and five were to the Pacific. The cargoes carried were wheat and/or flour.

In cases where any broken or bunker space has been available, such space has been utilised for the carriage of cordage, binder twine, honey, etc.

**3. Vessels Built in America.**—Fourteen vessels (four motors and ten steamers) of approximately 35,000 tons deadweight capacity were ordered to be built for the Commonwealth Government in America. The following is a list of the names of the ships built or being built in America:—(a) *Motors*—"Cethana," "Culburra," "Challamba," "Coolcha,"; (b) *Steamers*—"Bellata," "Bundarra," "Birriwa," "Berringa," "Bethanga," "Benowa," "Babinda," "Balcatta," "Boobyalla," "Boorika."

The "Cethana" arrived in Sydney on the 29th August, 1918.

**4. Control of Enemy Vessels.**—In addition to the above, the management of the Commonwealth Government line of steamers controls seventeen ex-enemy vessels of a deadweight capacity of approximately 130,000 tons.

**5. Managing Staff.**—The principal officers on the managing staff are as follows:—General manager, Mr. H. B. G. Larkin; assistant manager, Mr. G. H. Kneen; head office, Australia House, Strand, London, W.C. 2. Manager for Australia, Mr. E. A. Eva, 447 Collins Street, Melbourne.

## § 9. Commonwealth Shipbuilding Scheme.

1. **Building Programme.**—The present shipbuilding programme of the Commonwealth Government in Australia provides for the construction of 46 vessels as follows :—

### STEEL VESSELS.

Locality.	Number.	Builders.	Type.
Williamstown ...	6	Commonwealth Ship Construction Branch	Steel Cargo Steamers
Walsh Island ...	6	New South Wales Government ...	do.
Cockatoo Island	2	Commonwealth Navy Department ...	do.
Maryborough (Q)	4	Walkers Limited ...	do.
Adelaide ...	4	Poole and Steel ...	do.
Tasmania ...	2	Mersey Shipbuilding Company Ltd. ...	do.

### WOODEN VESSELS.

Sydney ...	6	Hughes, Martin and Washington Ltd....	Auxiliary Schooner
Fremantle ...	6	W.A. Shipbuilding Company ...	do.
Sydney ...	6	Wallace Power Boat Company ...	Auxiliary Barquentine
Sydney ...	6	Kidman and Mayoh ...	do.

The steel vessels, which are on the longitudinal system of framing invented by J. W. Isherwood, are 331 feet in length B.P., 48 feet beam and 26 feet 1 inch moulded depth, with a deadweight capacity of approximately 5500 tons on 21 feet 8 inches draft. Each vessel will be propelled by triple expansion three-cylinder engines (25-inch, 41-inch, 68-inch by 45-inch stroke) which, working at 180 lbs. pressure, will develop I.H.P. of 2300 at 75 revolutions, and will steam about 10½ knots.

The auxiliary schooners are each 232 feet long by 42 feet 8 inches breadth by 24 feet 4½ inches moulded depth, and have each a deadweight capacity of 2300 tons. They will be propelled by two sets of 250 h.p. engines of semi-Diesel pattern, estimated to drive the vessels at about seven knots.

The barquentines each measure 244 feet in length by 44 feet breadth by 24 feet 5 inches moulded depth, and have a deadweight capacity of 2600 tons. The engines will be similar to those to be installed in the schooners.

About 6000 tons of steel plates are required for the first six vessels, three of which are under construction at Walsh Island, two at Williamstown, and one at Cockatoo Island. As the whole of the plates could not be obtained in Australia a certain quantity was ordered in America. The remainder of the material for the vessels, including plates, sectional material, engines, auxiliaries and equipment is, as far as possible, being made or obtained in Australia.

To carry out their contracts Messrs. Walkers Ltd., Poole and Steel, Mersey Shipbuilding Company, Hughes, Martin and Washington, W.A. Shipbuilding Company, and Kidman and Mayoh have established entirely new yards.

Extensions and additions have been carried out at Walsh Island and Williamstown yards. The yard being used by the Wallace Power Boat Company, at Woolwich, is an old shipyard, and has been extended and improved by the company.

The following materials have been ordered in England:—Cables, wire ropes, compass outfit, signal lamps, joiners' hardware, side lights, steering chains, and electric wiring. Australian firms are supplying anchors, windlasses, winches, bakers' ovens, sanitary fittings, steering gear, wireless installations, steel derricks, iron and steel castings, wood blocks, stoves, cooking ranges, ships' boats, iron blocks, electric light installations, timber, canvas outfit, and Manilla hemp ropes.

The keel of the first vessel was laid at Williamstown in May last, and satisfactory progress has been made. Provided that deliveries of plates are satisfactory, it is expected that the first vessel will be launched at Williamstown in January, 1919. Under the contract with the New South Wales Government the six ships are to be delivered in three years. Messrs. Walkers Ltd. and Poole and Steel have contracted to deliver four vessels in three years. Preparations for the building of the wooden vessels are well advanced. The contracts call for the delivery of the twenty-four vessels within two years.

The engines for the two steel vessels being built at Williamstown, and the first vessel at Cockatoo Island, are being constructed at Messrs. Thompson and Company's works at Castlemaine, Victoria. The engines for the vessels being built at Walsh Island will be constructed in the engineering shops on the Island.

Reference to the vessels being built in America for the Commonwealth Government is made in § 8, 3, *ante*.

The whole of the merchant shipbuilding programme is under the Ministerial control of the Hon. A. Poynton, M.P., and under the supervision of Mr. H. W. Curchin (Chief Executive Officer), who arrived in Australia, from England, in December, 1917.

## SECTION XVII.

## ROADS AND RAILWAYS.

## § 1. Roads and Bridges.

1. **Introduction.**—In Year Books No. 1 (pages 541 to 551) and No. 2 (pages 675 to 685), a brief historical account was given of the construction and development of roads in Australia. It is not proposed to repeat that account in the present issue of the Year Book.

2. **Expenditure on Roads and Bridges.**—Figures shewing the total expenditure on roads and bridges in the States are not available. The subjoined statement, however, gives the amounts of total loan expenditures by the State Governments up to the 30th June, 1917:—

**ROADS AND BRIDGES.—TOTAL GOVERNMENT LOAN EXPENDITURE TO THE  
30th JUNE, 1917.**

State . . .	N.S.W.*	Victoria.	Q'land.†	S. Aust.	W. Aust.	Tasmania.‡	All States.
Expenditure	£1,820,546	£1,217,159	£931,775	£1,677,649	£369,401	£4,737,258	£10,753,788

\* Including punts. † Including amounts from surplus revenue on which no interest is payable.  
‡ Including harbours, rivers, and lighthouses.

The following table shews the annual expenditure from loans on roads and bridges by the central Governments in each State during the year 1901-2, and from 1912 to 1917:—

**ROADS AND BRIDGES.—LOAN EXPENDITURE BY STATE GOVERNMENTS,  
1901-2 and 1912-17.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	All States.
	£	£	£	£	£	£	£
1901-2 . . .	150,777	47,104	...	185	740	77,536*	276,342
1912-13 . . .	53,263	...	...	...	37,037	183,625†	273,925
1913-14 . . .	23,553	...	...	17,838	...	191,428†	232,819
1914-15 . . .	8,609	274,362	...	37,910	31,974	208,584	561,439
1915-16 . . .	421	495,062	...	102,226	18,450	165,701†	781,860
1916-17 . . .	5,428	252,836	...	54,939	5,878	148,698†	467,779

\* For the calendar year 1902. † See note † to previous table.

The two tables given above shew only a small proportion of the actual expenditure upon roads and bridges in the different States, for the reason that (a) there have been large expenditures from revenue, both by the central Governments and by local authorities, and (b) the State Governments have in many cases voted grants and subsidies on the amount of rates collected, and have issued loans to local authorities either for the express purpose of the construction of roads and bridges or for the general purpose of public works construction. Returns of expenditure, where available, are given below for

each State. Although no revenue is now derived directly from roads and bridges, they are indirectly of great value to the community, forming, next to railways and public lands, the most considerable item of national property.

**3. New South Wales.**—The control of all roads, bridges, and ferries in New South Wales is now regulated by the Local Government Act 1906, which came into force on the 1st January, 1907, and its subsequent amendments in 1908 and 1915. Under the provisions of this Act, the eastern and central divisions of the State are divided into shires and municipalities for the general purposes of local government, for the endowment of which a sum of not less than £150,000 is payable annually out of the consolidated revenue on the basis of a percentage subsidy on the proceeds of the general rates received by the local governing bodies concerned. The control of all roads, bridges, and ferries (except those proclaimed "National" and those in the unincorporated areas of the Western Division) has been transferred from the Roads Department to the respective shires and municipal councils, who are now responsible for their construction and maintenance. Up to December, 1915, 31 miles of roads, 275 bridges, 55 wharves, 99 jetties, and 16 ferries have been proclaimed as "National" works. Power is given to construct new roads, to widen or close existing roads, to make by-laws for the regulation of traffic, etc.; and in the case of the acquisition of land for the purpose of constructing new roads or of widening existing roads, the provisions of the Roads Act 1902 are incorporated. The Minister for Works is empowered to pay subsidies to the local authorities to maintain the roads. The roads leading to and within areas of lands which are made available for closer settlement will be constructed by the Government prior to transfer to the shires, as also will roads required mainly for tourists in districts not likely to produce revenue in rates to the local authorities.

(i.) *Principal Main Roads.* The four principal main roads in New South Wales run in the same direction as, and are roughly contiguous to, the four State-owned main railway lines. (a) *The Southern Road*, 385 miles in length, runs from Sydney to Albury, and before the days of railway construction formed part of the highway over which the interstate traffic between Melbourne and Sydney used to flow. (b) *The South Coast Road*, 250 miles long, runs from Campbelltown along the top of the coast range and across the Illawarra district as far as Bega, from which place it extends as a minor road to the southern limits of the State. (c) *The Western Road*, 513 miles long, runs through Bathurst, Orange, and many other important towns as far as Bourke, on the Darling River. (d) *The Northern Road*, 405 miles in length, runs from Morpeth, near Maitland, as far as Maryland, on the Queensland border.

(ii.) *Length and Classification of Roads and Bridges.* The length of roads in the State (exclusive of 31 miles proclaimed as "National" works) in 1915 was approximately 97,811 miles, of which 10,261 miles were controlled by municipalities, 81,075 by shires, and 6475 miles were in the unincorporated areas of the Western Division. The following table gives particulars for the year 1915 (the latest year for which figures are available), of roads classified according to whether metalled, etc., formed only, cleared only, or natural surface:—

**NEW SOUTH WALES.—APPROXIMATE LENGTH OF ROADS, 1915.**

Western Division (unincorporated) ... ..	100	196	2,752	3,427	6,475
<b>Total ... ..</b>	<b>18,518</b>	<b>12,568</b>	<b>29,626</b>	<b>37,099</b>	<b>97,811</b>

(iii.) *Bridges, Culverts, and Ferries.* The more important bridges have been proclaimed under the provisions of the Local Government Act as "National" works (see above), and these, together with the bridges, etc., in the Western Division, remain under the control of, and are maintained by, the Public Works Department. Particulars of bridges, culverts, and ferries in the State in 1915, the latest year for which figures are available, are given in the following table:—

**NEW SOUTH WALES.—BRIDGES, CULVERTS, AND FERRIES, 1915.**

Particulars.	Bridges.		Culverts.		Ferries.
	No.	Length.	No.	Length.	
		ft.		ft.

Total ... ..	4,657	370,256	39,206	496,198	126

(iv.) *Expenditure on Roads and Bridges.* Since the year 1857 the total expenditure by the Roads Department and Road Trusts on roads and bridges is £25,286,664. In this expenditure is included the cost of administering the Department, services for other Departments, and payments on account of punt approaches and similar works incidental to the road traffic of the country. The amount expended from 1857 to the 30th June, 1900, for the next decennium, and for each succeeding financial year up to 1917, is given below. Until recent years, the expenditure on these works increased at a much faster rate than the population.

**NEW SOUTH WALES.—EXPENDITURE BY ROADS DEPARTMENT AND ROAD TRUSTS, 1857 to 1917.**

Period.	Expenditure by Roads Department.	Expenditure by Trustees.	Total.
	£	£	£
1857 to 30th June, 1900 ... ..	18,714,078	1,258,027	19,972,105
1900-09 ... ..	4,605,766	30,664	4,636,430
1910-11 ... ..	125,326	...	125,326
1911-12 ... ..	126,111	...	126,111
1912-13 ... ..	120,719	...	120,719
1913-14 ... ..	73,192	...	73,192
1914-15 ... ..	92,729	...	92,729
1915-16 ... ..	65,928	...	65,928
1916-17 ... ..	74,124	...	74,124
Total ... ..	23,997,973	1,288,691	25,286,664

The expenditure by the Department is now limited to the construction of roads in closer settlement areas and to the construction and maintenance of national bridges and ferries, and of works in the unincorporated areas of the Western Division.

4. **Victoria.**—Under the Local Government Act 1915, the control, construction, and maintenance of all roads, streets, and bridges are in the hands of Municipal Councils, which are empowered to open new roads, and to close, divert, or increase the width of any existing street or road, provided that no new road less than one chain in width may be opened without the consent of the Minister. The councils are also authorised to make and repair streets, lanes, or passages on private property, or to form means of back access to private property, and may compel the owners of such property to pay the cost of so doing. Footways in front of houses or grounds may be kerbed, flagged, paved, or asphalted, and the owners of such houses or grounds must bear half the cost of so doing. The revenue of the councils is derived from rates, which may be either ordinary or special. The councils are empowered to raise loans for the purpose of making or opening new streets and roads, and for diverting, altering, or increasing the width of streets and roads, provided that the amount of such loan must not exceed ten times the average income of the council during the three years immediately preceding from general rates not exceeding 1s. 6d. in the pound of annual value.

(i.) *Country Roads Board.* With the object of improving the main roads of the State, an Act (No. 2415) was passed on 23rd December, 1912, which empowers the Governor-in-Council to appoint a board, to consist of three members.

The duties of the board are to ascertain by survey and investigation what roads are main roads; the nature and extent of the resources of Victoria in metals, minerals, and materials suitable for the purposes of road-making and maintenance, and the most effective and economical methods for dealing with the same, and for supplying and utilising the material in any part of Victoria; the most effective methods of road construction and maintenance; what deviations (if any) in existing roads or what new roads should be made so as to facilitate communication and improve the conditions of traffic; and to record, publish, and make available for general information the results of all such surveys and investigations. The duty of furnishing information that may be required is imposed on the municipal authorities.

The construction of permanent works and the maintenance of main roads are likewise to be carried out by the municipalities to the satisfaction of the board. The total cost of the works, in the first instance, is to be paid by the Treasury, but subsequently half the amount expended on permanent works and maintenance is to be refunded by the municipalities affected.

For the purpose of making permanent works, power is given to the Governor-in-Council to issue stock or debentures to the amount of £400,000 a year for five years, and the principal and interest are a charge upon the Consolidated Revenue of the State. The money so raised is to be placed to the credit of an account to be called "the Country Roads Board Loan Account," which will be debited with all payments made by the Treasurer towards the cost of permanent works. A sinking fund of 1 per cent. per annum on half the amount borrowed is authorised to be paid out of the Consolidated Revenue until half of the amount borrowed is redeemed. An annual payment to the Treasurer of 6 per cent. on the amount due by each municipality in respect of permanent works is provided for, and the cost of maintenance allocated to each municipality must be paid before the 1st July in each year. A special rate, not to exceed 6d. in the £1 on the net annual value of ratable property, to meet the cost of permanent works and maintenance, may be levied in any ward or riding of a municipality as the council may direct. In the

event of default of payment by a municipality, the board may levy a rate to meet the amount owing. All fees and fines paid under the Motor Car Act, all moneys standing to the credit of the Municipal Fees and Fines Trust Fund, all fees paid on the registration or renewal of the registration of traction engines, and all fees received by the Crown after the 30th June, 1912, under the Unused Roads and Water Frontages Act 1903, are to be credited to the Country Roads Board Fund.

Up to the 30th June, 1917, there were 6500 miles of declared main roads, agreed to by the councils, and gazetted. The total amount expended during 1916-17 for permanent works was £226,603, and for maintenance work £130,537, a total of £357,140, affecting 147 municipalities. The net receipts for the year were £96,707, of which amount the chief items were motor registration fees, £44,746, unused roads and water frontages license fees, £24,353, and contributions by municipalities for permanent works, £23,527.

(ii.) *General and Local Government Expenditure.* The gross amount expended directly by the State Government of Victoria on roads and bridges was £8,766,192 up to the end of June, 1917. The annual expenditure from ordinary revenue by municipalities is not returned separately, but is included in Public Works Construction and Maintenance (see Section xxvi., *Local Government*). The subjoined table shows the cost from general revenue of municipalities of private streets, roads, etc., and also shows the amounts of municipal loan expenditure in 1901 and from 1913 to 1917:—

**VICTORIA.—EXPENDITURE ON ROADS AND BRIDGES, 1901 and 1913 to 1917.**

Financial Year.*	Annual Expenditure by State Government.	Municipal Loan Expenditure.		Formation of Private Roads, Streets, Lanes, etc.†	
		Cities, Towns, and Boroughs.	Shires.	Cities, Towns, and Boroughs.	Shires.

1917 ... ..	16,514	†	†	†	†

\* The financial years of Melbourne and Geelong end on the 31st December and the 31st August respectively; those of all other municipalities on the 30th September.

† Including the cost of flagging, asphaltting footpaths, etc., but exclusive of loan expenditure.

‡ Not available.

5. *Queensland.*—In Queensland the construction and maintenance of public roads are controlled under a system of local self-government, for the purposes of which the whole State is divided into (a) cities, (b) towns and (c) shires. The duties, rights, and responsibilities of the local authorities with regard to roads, streets, and bridges are regulated by the Local Authorities Act of 1902 and subsequent amendments. The councils are invested with full powers to open, close, divert, or widen streets, roads, and bridges, and to make by-laws for the regulation of traffic, etc. The members of the councils are elected by the ratepayers, and with the aid of executive officers they undertake the supervision and control of all necessary constructions and improvements of roads and bridges within their district. The rates which the councils are empowered to levy are supplemented by Government grants. Separate returns as to the expenditure by towns and shires on roads and bridges are not available, the amounts being included in the returns of expenditure on public works, particulars as to which expenditure may be found in Section xxvi. *Local Government*, hereinafter.

6. **South Australia.**—Of the several Australian States, South Australia has by far the largest unincorporated area, no less than 88 per cent. of the whole area of the State being in this condition. This area is, however, very sparsely populated and much of it is entirely unoccupied. The remainder of the State is for purposes of local government under the control of Municipal Corporations and District Councils. Under the provisions of the District Councils Act 1914, the Municipal Corporations Acts 1890 to 1915, and of the Roads Acts 1884 to 1915, the councils are invested with full powers as to the opening and making of new streets and roads, and the diverting, altering, or increasing the width of existing roads; as to raising, lowering, or altering the ground or soil of any street or road; and as to the construction, purchase, and management of bridges, culverts, ferries, and jetties.

(i.) *Main Roads and District Roads.* All the roads in each district are classified either as main roads or as district roads. Both classes of roads are under the direct control either of Municipal Corporations or of District Councils, but in the case of main roads the expenditure on construction and maintenance is chiefly provided for by Government grants, which are paid into a Government grants account, while the expenditure on district roads is paid for out of general rates, and out of subsidies on the amount of such rates granted by the central Government. Under the Main Roads Act 1915, a number of roads were declared to be main roads.

The total estimated length of streets and roads in South Australia up to the 30th June, 1917, was as follows:—

**SOUTH AUSTRALIA.—ESTIMATED LENGTH OF ROADS AND STREETS, 1917.**

Particulars.				Woodblocked.	Macadamised.	Other.	Total.
Miles	...	...	...	10	10,465	33,261	43,736

(ii.) *Expenditure by Corporations on Main and District Roads.* The following table shows the expenditure by municipal corporations on both main and district roads during 1901, and each year from 1912 to 1917 inclusive:—

**SOUTH AUSTRALIA.—EXPENDITURE BY CORPORATIONS ON STREETS, ROADS AND BRIDGES, 1901 and 1912 to 1917.**

Year.*	District Roads.		Main Roads Fund.

1917 ... ..	47,337	79,377	109,044	111,567	18,809	72,644

**7. Western Australia.**—In Western Australia the construction, maintenance, and management of roads and bridges throughout the State are under the control of Municipalities, constituted by the Municipal Corporation Acts 1906-1915, and District Road Boards, constituted by the Roads Acts 1911-1915.

(i.) *District Roads and Bridges.* Under the provisions of the Roads Acts any part of the State, not within a municipality, may be constituted by the Governor-in-Council into a Road District, under the control of a board of not less than five nor more than eleven members elected by the ratepayers. The board is invested with full powers for controlling and managing all roads and bridges within the district, and is empowered to make by-laws for the general regulation of traffic, to control the weight of engines and machines permitted to cross any bridge or culvert, to regulate the speed limits of vehicles, lights to be carried by vehicles, the lighting of streets and roads, and the licensing of bicycles and motor cars. A District Road Board may not, however, construct any road or street less than sixty-six feet wide, nor any bridge or culvert at a greater cost than £100, without the consent of the Minister. The construction of the more important bridges and culverts is generally carried out by the Government, the work, after completion, being handed over to the Road Board for maintenance. In case of land being required for the purpose of constructing a new street or road, or for widening an existing street or road, the provisions of the Public Works Act of 1902 are incorporated in the Roads Act. A board may levy general rates within its district not exceeding two shillings and sixpence nor less than ninepence in the £ on the annual ratable value, and, if valued on the basis of unimproved values of lands, the general rate must not be over threepence nor under one penny in the £ on the capital unimproved value. Boards are also empowered to raise loans for works or undertakings or to liquidate existing loans, but the amount of such loans must not be greater than seven times the average ordinary revenue of the board. In the case, however, of boards already indebted, borrowing power to the extent of ten times the said average is given, less the amount of existing loan indebtedness at time of borrowing. For the purpose of paying the interest on money borrowed a board may levy a special rate. District Road Boards may also exercise the powers of Drainage Boards under the provisions of the Land Drainage Act of 1900.

(ii.) *Municipal Streets, Roads, and Bridges.* As regards roads, streets, and bridges within municipalities, these are under the control of local authorities elected under the provisions of the Municipal Corporations Acts 1906-15. The municipal councils are invested with full powers for making, maintaining, and managing all streets, roads, and bridges within the municipal area, and may request the Governor to declare any such land reserved, used, or by purchase or exchange acquired for a street or way, to be a public highway, and on such request the Governor may, by notice in the *Gazette*, proclaim such highway absolutely dedicated to the public.

(iii.) *Length of Roads, Number of Bridges, and Expenditure on Roads and Bridges.* The following table gives particulars of the operations of the Road Boards since the 1st January, 1912 :—

**WESTERN AUSTRALIA.—PARTICULARS OF ROADS UNDER CONTROL OF DISTRICT ROAD BOARDS, 1912 to 1916.**

**§ 2. Railways.****(A) General.**

1. *Introduction.*—In the issues of the Commonwealth Year Book, Nos. 1-7, the statistics of all Government railway systems were treated under the head of *Government Railways*. In the following issues, Nos. 8, 9 and 10, the greater part of those statistics relating to State-owned lines was dealt with separately from those under the control of the Commonwealth Government. This arrangement is continued in the present issue. The State railways are referred to throughout as "State" and the Commonwealth railways as "Federal" railways. There is, however, a summary of the working of the Federal and States' railways in part (E) of the present section.

2. *Railway Statistics.*—In some of the earlier issues of the Year Book will be found a condensation of the report issued in 1909 by the Commonwealth Statistician to the Minister for Home Affairs on the subject of *The Desirability of Improved Statistics of Government Railways in Australia* (see Year Book No. 7, page 598).

3. *Railway Communication in the Commonwealth.*—An account of the progress in railway construction in Australia since the opening of the first line in 1854 will be found in Year Book No. 6, p. 681. In the eastern, south-eastern, and southern parts of Australia there now exists a considerable network of railway lines converging from the various agricultural, pastoral and mining districts towards the principal ports, which are themselves connected by systems of lines roughly running parallel to the coast. These are shewn on the map on page 653. In the east, lines radiating from Townsville, Rockhampton, Brisbane, and Sydney extend inland in various directions for distances ranging up to over 600 miles; in the south-east there are numerous lines, those in Victoria converging towards Melbourne, while others in New South Wales have their terminus in Sydney; in the south there are four main lines,

with numerous branches, running from Melbourne, while from Adelaide one main line, with several branches to the coastal towns, runs inland in a northerly direction for a distance of nearly 700 miles, and another line runs in a south-easterly direction to various ports, meeting the main line from Melbourne on the border of South Australia and Victoria near Serviceton. The South Australian and Victorian railway systems also meet on the border at two other points, one near Pinnaroo, and the other at Rennick near Mount Gambier. By the opening, in 1917, of the Trans-Australian railway from Port Augusta to Kalgoorlie, through communication by rail has been established between the eastern States and the Western Australian railway system. The main interstate line (indicated by a heavier line in the map), which permits of direct communication between the five capital cities—Brisbane, Sydney, Melbourne, Adelaide, and Perth—covers a distance from end to end of 3471.25 miles, or 3476.27 miles via Newcastle. This journey occupies six days, three hours and forty minutes. In the opposite direction the journey occupies five days, twenty-three hours and forty minutes. Both of these are the times taken over all.

In the following tables particulars are given of the gauges of lines, changing stations and duration of stops thereat, arrival and departure times, distances and average speeds on the journey from Brisbane to Perth, and vice versa :—

\* Inclusive of stops between changing stations. † Runs via Newcastle. ‡ The days here given are for the purposes of time table interpretation. They are not the only days on which the service is provided.

The average speed inclusive of all stops is 23.54 miles per hour on the journey from Brisbane to Perth, and 24.20 miles per hour on the return journey.

The longest railway journey which can be undertaken in Australia, on one continuous line of railway, is from Longreach in Queensland to Meekatharra in Western Australia, a total distance of 4756.76 miles.

In Western Australia there is a connected system of main or trunk lines between the ports of the State and the agricultural, pastoral, and mining districts, while there are also two short lines, one on the north-west, the other on the south coast, which are unconnected with the main system. In the northern parts of Queensland and in the Northern Territory there are also several disconnected lines running inland from the more important ports. In Tasmania the principal towns are connected by a system of lines, and there are also, more especially in the western districts, several lines which have been constructed for the purpose of opening up mining districts.

**4. Non-conformity of Gauge.**—With but few exceptions, all the railway lines in the Commonwealth open for general traffic are now owned and managed by the respective States in whose territory they run, or by the Commonwealth Government, but, unfortunately for the purpose of interstate traffic, the construction of the various systems in different parts of Australia has proceeded without uniformity of gauge. In 1846 Mr. Gladstone, then Colonial Secretary, recommended in a despatch to the Governor of New South Wales that the 4-ft. 8½-in. gauge should be adopted. In 1850, however, the engineer to the Sydney Railroad and Tramway Company strongly advocated the adoption of the 5-ft. 3-in. gauge, and in 1852 an Act was passed making it compulsory that all railways in New South Wales should be constructed to the wider gauge, the Governors of Victoria and South Australia being duly advised of the step that had been taken. In 1852, however, the company mentioned having changed its engineer, also changed its views as to the gauge question, and in the following year succeeded in obtaining the repeal of the Act of 1852 and in securing the passing of another, under the provisions of which the narrower gauge was made imperative. This step was taken without the concurrence of the other States concerned, and a considerable amount of ill-feeling arose, especially in Victoria, where two private companies had already placed large orders for rolling stock to be constructed to the broad gauge originally chosen. The result was that it was decided in Victoria to adhere to the 5-ft. 3-in. gauge as the standard gauge for the State, while the Sydney Railroad and Tramway Company proceeded with the construction of its lines to the 4-ft. 8½-in. gauge, and these two gauges have since been adhered to as the standard gauges of the respective States. The Queensland Government had, at the outset, adopted a gauge of 3-ft. 6-in. as being best suited to the requirements of the colony, and has since adhered to that gauge throughout the State, so that all goods requiring conveyance into New South Wales or *vice versa* have to be transhipped at the boundary between the two States. In June, 1914, however, the Queensland Government purchased two short lengths of line laid on a 2-ft. gauge. In South Australia the broad gauge of Victoria was at first adopted, and the part of the interstate line between Adelaide and the Victorian boundary was constructed to that gauge, so that the line from Melbourne to Adelaide has a uniform gauge throughout. In 1870, however, on the grounds of economy, the 3-ft. 6-in. gauge was introduced and many of the lines in South Australia have been constructed with that gauge. At the 30th June, 1917, of the 2220.66 miles of State Government railways in that State 1209.59 miles were of 3-ft. 6-in. gauge, exclusive of 477.96 miles of the same gauge from Port Augusta to Oodnadatta belonging to the Federal Government. In the Northern Territory the line from Darwin to Katherine, 199.56 miles in length, is of 3-ft. 6-in. gauge. In Western Australia and Tasmania the 3-ft. 6-in. gauge was also adopted. It was recognised in both these States that the construction of railways was essential to their proper development, but as their financial resources would not bear a heavy initial

expenditure in connection with the establishment of railway lines, it was decided to adopt the narrow gauge. In Victoria, short lengths of light railways have been constructed in recent years to a gauge of 2-ft. 6-in., whilst in Tasmania short lengths have been laid down to a 2-ft. gauge.

5. **Interstate Communication.**—Until the railway systems of the eastern states were connected at the common boundaries, the inconvenience of non-conformity of gauge was not felt. Since then, however, the necessary transshipments of both passengers and goods have been a source of trouble, delay, and expense. On the 14th June, 1883, a railway bridge over the River Murray at Wodonga was opened for traffic, and railway communication was then established between Melbourne and Sydney. On the 19th January, 1887, the last section of the Victorian line to Serviceton, on the South Australian border, was completed, and a junction was thus effected with the South Australian line to Adelaide. On the 16th January, 1888, a junction was effected between the New South Wales and Queensland lines at Wallangarra, but there was still a break in the line from Sydney at the Hawkesbury River, thirty-six miles from Sydney. This last link was, however, completed on the 1st May, 1889, by the opening of the Hawkesbury River bridge, 2900 feet in length, and railway communication was thus established between the four capital cities, Brisbane, Sydney, Melbourne, and Adelaide.

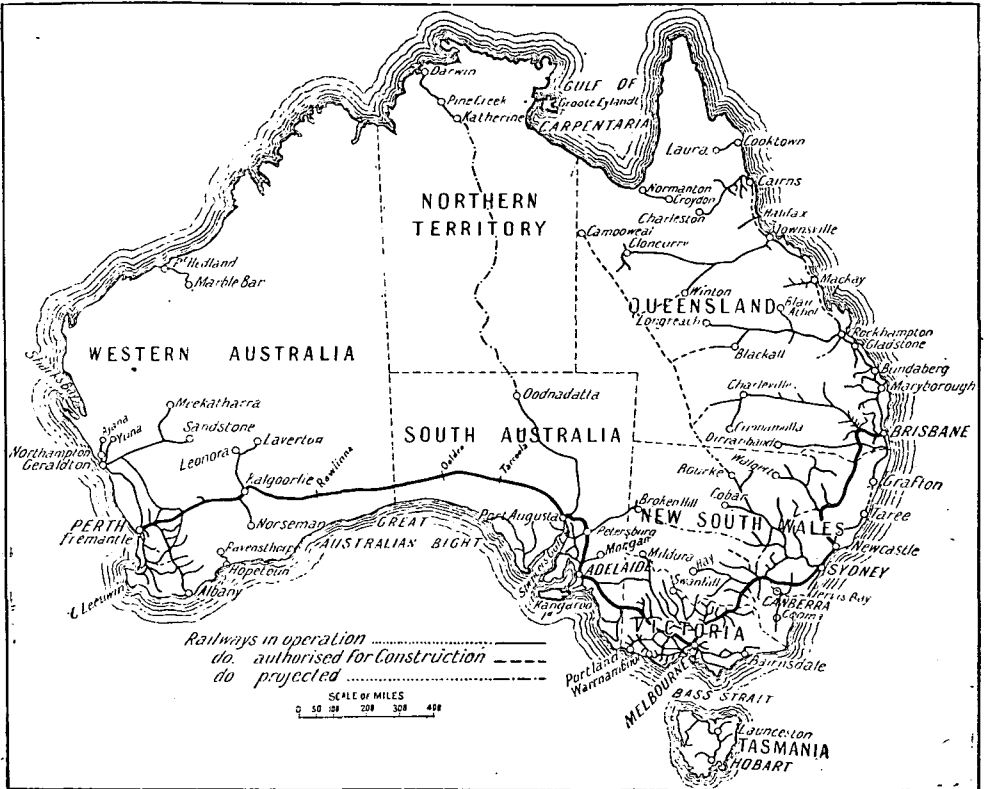

By the opening of the Trans-Australian railway, to which reference has already been made, Western Australia is now linked to the other States, and an unbroken line of communication established from one side of the continent to the other. The construction, moreover, of lines recently decided upon, connecting Victoria with the Riverina district in New South Wales and with the wheat-growing districts of South Australia, will undoubtedly facilitate interstate exchange and will allow the produce of inland areas to find its natural outlet at the nearest port.

6. **Unification of Gauge.**—The development of the railway systems of the Commonwealth has shewn that the adoption of different gauges on the main lines in the several States was a serious error. As already mentioned, the extra cost, delay, and inconvenience incurred by the necessity of transferring through-passengers and goods at places where there are breaks of gauge, are becoming more serious as the volume of business increases. As an indication of the extra cost thus involved, the junction charges on interstate traffic between New South Wales and Victoria range from 1s. 6d. to 2s. 6d. per ton.

Although the cost of alteration to a uniform gauge would be great, many propositions have from time to time been put forward with the object of securing such a gauge, and attention has been drawn to the importance of the unification of gauges before further expenditure on railway construction is incurred by the States. The problem is, however, one which is by no means easy of solution, and the difficulties are increased by the introduction of what may be called questions of local or State policy.

The first question that naturally arises in considering the problem is as to which gauge should be adopted as the universal gauge of the Commonwealth. As regards State Government railways, the 4-ft. 8½-in. gauge has a mileage of 4397, all in New South Wales; Victoria and South Australia have a combined mileage of 5012 of 5-ft. 3-in. gauge; while New South Wales, Queensland, South Australia, Western Australia have together 9859 miles of 3-ft. 6-in. gauge. In addition, the Commonwealth Government has (i.) of 4-ft. 8½-in. gauge 5 miles in New South Wales, 597½ miles in South Australia, and 454 miles in Western Australia, and (ii.) of 3-ft. 6-in. gauge 478 miles in South Australia, and 199½ miles in the Northern Territory. By far the greater part of the mileage of private railways open for general traffic has also been constructed to the 3-ft. 6-in. gauge. The mere question of preponderance of mileage, therefore, indicates the 3-ft. 6-in. gauge for adoption. But this question is obviously subordinate to those involving engineering and economic considerations. Thus, the relative efficiency from the widest

THE GOVERNMENT RAILWAY SYSTEMS OF THE COMMONWEALTH  
AS AT 30TH JUNE, 1917. \*

EXPLANATION OF MAP.—The continuous lines denote the existing railway lines of Australia, the heavier lines being the main routes.

Of the two transcontinental lines, viz., one joining the railways of South and Western Australia, thus connecting continuously by railway Queensland, New South Wales, Victoria, South Australia, and Western Australia, and one connecting Oodnadatta in South Australia with Katherine in the Northern Territory, the former has been constructed, and is shewn ————; while the latter, the construction of which is to be deferred for the present, is shewn — · — · —.

\* To 17th October, 1917, in the case of the Trans-Australian Railway from Port Augusta to Kalgoorlie.

GRAPH SHEWING THE FINANCIAL POSITION OF THE GOVERNMENT RAILWAYS OF THE COMMONWEALTH, 1860 TO 1917.

(See page 699.)

EXPLANATION OF GRAPH.—In the above diagram the base of each small square represents throughout one year. The significance of the vertical height of each square varies, however, according to the nature of the several curves.

In the heavy curve denoting the total capital cost of the railways of the Commonwealth, the vertical side of each square denotes £3,000,000.

In the three lighter curves, representing (i.) gross revenue, (ii.) working expenses, and (iii.) net revenue, the vertical height of each small square denotes £400,000. For the curve of average cost per mile open, the vertical side of the small square denotes £2000. The mileage open is shown by a dotted curve, the vertical side of each square representing 300 miles.

For the curves shewing the percentage of working expenses to gross revenue, and the percentage of net revenue to capital cost, see graphs on pages 655 and 656 respectively.

GRAPH SHEWING PERCENTAGES OF WORKING EXPENSES TO GROSS REVENUE FOR GOVERNMENT RAILWAYS FOR STATES AND COMMONWEALTH, 1855 TO 1917.

(See page 684.)

**EXPLANATION OF GRAPH.**—In the above diagram the base of each small square represents throughout one year. The vertical side of a small square denotes throughout 10 per cent., the heavy zero lines being different for each State and the Commonwealth, with, however, one exception, viz., that the zero line for South Australia and Western Australia is identical.

The curve for Victoria commences in 1859; that for Queensland in 1865; that for Tasmania in 1872; and that for Western Australia in 1879, these being the years in which the Government Railway systems of the several States were inaugurated.

GRAPH SHEWING PERCENTAGES OF NET REVENUE TO CAPITAL COST OF GOVERNMENT RAILWAYS FOR STATES AND COMMONWEALTH, 1855 to 1917.

(See page 686.)

**EXPLANATION OF GRAPH.**—In the above diagram the base of each small square represents throughout one year. The vertical side of a small square denotes 1 per cent., the thick zero lines, however, for each State and for the Commonwealth being different. This was necessary to avoid confusion of the curves.

Where the curve for any State falls below that State's zero line, loss is indicated, the working expenses having exceeded the gross revenue.

The curve for Victoria commences in 1859; that for Queensland in 1865; that for Tasmania in 1872; and that for Western Australia in 1879, these being the years in which the Government railway systems of the several States were inaugurated.

point of view, the relative costs of alterations of the permanent way and rolling stock, of carrying capacity and speed, that is to say, questions of a technical nature about which figures are not available, enter into the grounds for decision. As regards the unification of the New South Wales and Victorian gauges, the advantage of reducing the broad gauge to the 4-ft. 8½-in. gauge is that there would be no necessity for the alteration of tunnels, cuttings, bridges, or viaducts.

In 1897 a conference was held between the Railway Commissioners of New South Wales, Victoria, and South Australia to consider and report upon the unification of the railway gauges of the States. In their report the Commissioners estimated the cost of converting all the lines in the three States to a 5-ft. 3-in. gauge at £4,260,000, and to one of 4-ft. 8½-in. at £2,360,500. In 1903 the question was again brought up, more particularly with regard to the proposed transcontinental line, and the Engineers-in-Chief reported in favour of a gauge of 4-ft. 8½-in. At the Premiers' Conference, held in January, 1912, the subject was again under consideration, but no decision was come to.

In November 1912, another conference of railway engineers, representing the six States and the Federal Government, was held, and the question of unification of gauge was again discussed. The necessity for such a step was emphasised, and a conclusion was come to that the relative advantages of the 5-ft. 3-in. and 4-ft. 8½-in. gauges, from the point of view of efficiency and economy of working, were approximately equal, and that the determination of the most suitable gauge should be made on the basis of cost. Owing, however, to the fact that track mileage, ton mileage, and wages, had at the time increased 90, 200, and 50 per cent. respectively since 1897, together with a correspondingly large increase in the cost of material, the Conference estimated the cost of converting all lines to a 5-ft. 3-in. gauge at £51,659,000 and to a 4-ft. 8½-in. gauge at £37,164,000. It recommended that the latter gauge should be adopted, and pointed out that the longer the work of conversion was delayed, the greater the cost would become. An alternative scheme by which the main trunk lines and the more important branches should be converted was also proposed, as possibly meeting immediate requirements, and being, from a Federal point of view, perhaps a more attractive proposition than any other which could be suggested at the present time. The estimated cost of this limited scheme was £12,142,000. The subject was again under discussion at the Premiers' Conference, held in Melbourne in April 1914, when it was decided to refer the matter to the Interstate Commission, that the latter body might furnish a report as to the benefits of unification, its cost, and the apportionment of such cost.

In May 1915, another Premiers' Conference took place at Sydney, and the uniform gauge question again received consideration, with the result that the following resolution was carried without dissent:—"That . . . two leading railway experts, preferably from outside Australia, should be forthwith appointed by the Government of the Commonwealth and the mainland States to . . . report on—(1) the need of a uniform gauge, (2) the most suitable gauge, (3) the best method of carrying out uniformity, (4) what benefits would result to the Commonwealth and to the States, and (5) the probable cost."

In May 1916 a Premiers' Conference took place at Adelaide, when the question of the adoption of a third rail was discussed, with the result that a motion was carried in the following terms:—"That this Conference agrees to the appointment of a committee of experts, one from each State and the Commonwealth, to investigate the whole question of the laying of a third rail." A further motion was carried to the effect—"That on the receipt of the report of the committee of experts there should be an early meeting of Commonwealth and State Ministers controlling railways to consider the advisability of an early practical application of the third rail system on some selected section." This subject engaged attention at the Premier's Conference at Sydney in May, 1918, when it was urged that an early test of the third rail system should be arranged for.

Early in August, 1918, a conference took place at Melbourne, at which the engineers of the Commonwealth and States' railways were present. The gauge question was fully discussed and a report was drawn up for presentation to the various Governments. Up to the time of going to press this report had not been published.

7. **Loading Gauges.**—Allied to the question of the gauges of the railways of Australia is that of the loading gauges which are in use, the loading gauge being the maximum dimensions to which the rolling stock may be constructed. In the following table will be found particulars of the loading gauges at present in use on the Government railways, State and Federal:—

### LOADING GAUGES IN USE ON STATE AND FEDERAL GOVERNMENT RAILWAYS, 1917.

In the above tables the dimensions given are not necessarily those of one particular vehicle, but are the greatest employed on any vehicle.

**8. Mileage Open for Traffic.**—In all the States of the Commonwealth the principle that the control, construction, and maintenance of the railways should be in the hands of the Government has long been adhered to, excepting in cases presenting unusual circumstances. In various parts of the Commonwealth, lines have been constructed and managed by private companies, but at the present time nearly the whole of the railway traffic in the Commonwealth is in the hands of the various State Governments. A large proportion of the private lines which are at present running have been laid down for the purpose of opening up forest lands, mining districts or sugar areas, and are not generally used for the conveyance of passengers or the public conveyance of goods. (See *F. Private Railways*, hereinafter.)

*Mileage of Government and Private Lines, 1855 to 1917.* The subjoined table shews the mileage of Commonwealth Government, State Government, and private lines open for traffic (exclusive of sidings and cross-overs) in each State at different periods since the inauguration of railways in Australia in 1854 up to the year 1917. The railway mileage given for each State includes both Commonwealth and State Government railways in that State, and in this table and in those on the following page, is estimated from the geographic point of view and not from that of ownership. The figures from 1855 to 1881 are given to the end of the calendar year; later figures are to the end of the financial year ended on the 30th June, unless otherwise stated, excepting the mileages for private lines, which are in most cases taken for the calendar year:—

**GOVERNMENT AND PRIVATE RAILWAYS.—MILEAGE OPEN, 1855 to 1917.**

1916-17	4,786½	4,176½	6,702½	3,241½	4,878½	783½	199½	24,769—

\* The line between Goolwa and Port Elliot was opened in 1854 as a horse tramway, but now forms part of the railway system. † To the 31st December, 1891. ‡ To the 31st December, 1901.

It will be seen from the above table that the rate of construction up to the year 1871 was very slow, the average annual length of lines opened from 1861 to 1871 being only 80 miles for the whole Commonwealth. By the middle of the following decade, however, the principal mountain ranges had been crossed, and the work of construction could be proceeded with at a greater rate, and at a less cost per mile. A great period of activity was from 1881 to 1891, when the average annual length opened for traffic was 593 miles for the whole Commonwealth; the corresponding figures for the following periods from June 1891 to June 1901, and from June 1901 to June 1911, were 343 and 446 miles respectively. Since June, 1911, the average annual length opened for traffic has been 1126 miles.

**9. Comparative Mileage of Government and Private Lines, 1917.**—The subjoined table shews for each State (a) the length of lines owned by the State Government, and by the Commonwealth Government in that State, all of which lines are open for general use by the public, (b) the length of private lines available for general use by the public, and (c) the length not so available. The mileages specified in the case of Government lines are to the 30th June, 1917; those given for private lines are as nearly as possible to the 31st December, 1916:—

**GOVERNMENT AND PRIVATE RAILWAYS.—COMPARATIVE MILEAGE OF GOVERNMENT LINES, OF PRIVATE LINES AVAILABLE FOR GENERAL TRAFFIC, AND OF PRIVATE LINES NOT SO AVAILABLE, 1916-17.**

State or Territory.	Government Lines.	Private Lines available for General Traffic.	Total Open for General Traffic.	Private Lines used for Special Purposes only.	Grand Total.

\* Including 27 miles of 1-ft. 8-in. gauge.

**(B) Federal Railways.**

1. **General.**—On the 1st January, 1911, the Commonwealth Government took over the Northern Territory from the South Australian Government, and at the same time the railways from Darwin to Pine Creek, in the Northern Territory, and from Port Augusta to Oodnadatta, in South Australia, came under its control. Subsequently, the construction of a transcontinental line from Port Augusta, in South Australia, to Kalgoorlie, in Western Australia, was undertaken by the Commonwealth Government, while a line has been constructed in the Federal Territory, connecting Canberra with the New South Wales railway system at Queanbeyan. In 1917 an Act was passed by which all the Commonwealth railways are vested in a Commissioner.

2. **Northern Territory Railway (Darwin to Katherine).**—The line from Darwin to Pine Creek at first came under the jurisdiction of the Department of External Affairs, and was worked under the Administrator of the Northern Territory. As mentioned above, the management of this railway is now vested in the Commissioner.

Particulars as to the working of this line for the year 1901-2 prior to its passing under the control of the Commonwealth Government will be found in sub-section C, State Government Railways.

In the Northern Territory Acceptance Act, the construction of a transcontinental line from South Australia is provided for. The extension of the line from Pine Creek to Katherine River has been completed, and the first train ran through to Katherine on 13th May, 1917.

3. **Oodnadatta Line.**—This line was taken over by the Commonwealth Government from 1st January, 1911, but was held under lease by the South Australian Government until 31st December, 1913. From the 1st January, 1914, the line has been worked by the South Australian Government for and on behalf of the Commonwealth. It is provided in the Northern Territory Acceptance Act that the Commonwealth shall annually reimburse the State with the interest payable on the amount of loans raised by the State for the purpose of constructing the railway, and the agreement for working the line prescribes that the Commonwealth is responsible to the State for any financial loss incurred by the State in the working and management of the railway, but is entitled to receive from the State any profit made in such working and management.

4. **Trans-Australian Railway (Kalgoorlie to Port Augusta).**—A Federal Act passed in 1907 provided for the expenditure of a sum of £20,000 for a preliminary survey of a railway line connecting Western Australia with the eastern States. This survey was commenced in 1908, and was completed in March, 1909. The route *via* Tarcoola was, for several reasons, chosen in preference to that *via* Gawler Range and Fowler's Bay. The estimated cost of construction and equipment of the line on the basis of a 4-ft. 8½-in. gauge, from Port Augusta in South Australia to Kalgoorlie in the Western Australian goldfields, a distance of 1063 miles, was £4,045,000. In September, 1911, a Bill was introduced into the Commonwealth Parliament to authorise the construction of the line, and it became law in December following. In South Australia an Act was passed enabling the Commonwealth to acquire lands for the railway in South Australia not exceeding one-eighth of a mile wide on either side of the line, but no town lands are to be included at any time. In Western Australia, an Act was also passed by which all necessary lands are to be granted to the Commonwealth for railway purposes. A Railway Construction Department was created by the Federal Government to carry out the work, which was commenced at Port Augusta in September, 1912. On 12th September the ceremony of cutting the first sod was performed at Port Augusta by the Governor-General, Lord Denman, in the presence

of a representative gathering, and on the 12th February, 1918, a like ceremony was performed at Kalgoorlie by the Prime Minister of the Commonwealth (the Right Hon. Andrew Fisher), and the line was thus commenced at both ends.

The country traversed by the new line may be roughly divided into four sections from Kalgoorlie eastward.

The first section comprises the granite plateau extending for 167 miles out from Kalgoorlie. Much of the country on this section is fairly well timbered with salmon gums and other eucalypts, running up to 50 or 60 feet in height. Kurrajong and sandalwood are also fairly abundant. Throughout there is a luxuriant growth of wild flowers.

The second section is "the limestone plain," which runs for 450 miles to the east from the edge of the granite country. In this section the eucalypts suddenly disappear, and are not seen again until the mallee gums of the bolder sandhills on the eastern edge of the plain are reached. The open plain comes into view 207 miles out, and thence forward the only signs of growth to be observed are the saltbush and blue bush.

About 290 miles out the line runs on to the Nullarbor Plain. One feature of this part of the line should be mentioned, viz., that it runs straight for no less than 309 miles. This is believed to be the longest section of straight-line railway in the world.

Near Loongana, 336 miles out, certain caves are situated, the principal of which is Lynch's.

The South Australian border is reached at a point 453.94 miles out, a small stone cairn marking the boundary. At 605 miles trees are again met with, but they are small and do not grow more than ten to twelve feet high. The limestone plain is left at about 624 miles out.

The third section is the belt of sandhills on the eastern edge of the limestone region, through which the line runs for about 50 miles. In a state of nature, there are no shifting sandhills about this part of the line, as there is a fairly thick growth of small trees, Mallee gums and others, but when the surface is cleared, the soil is easily removed by the wind, and the bigger cuttings for the line have had to be faced with stone.

The fourth section comprises the stretch of country extending for nearly 400 miles from the eastern edge of the sandhills to Port Augusta. For about 100 miles the line runs over red soil plains and undulating country, which give promise of pastoral and possibly agricultural uses.

At Wynbring, 730 miles out, the granite again comes to the surface. One of the most important places on this section is Tarcoola, at which gold mining has been carried on for some time past. East of Tarcoola the "Lake" country is entered. The lakes in this district are merely vast shallow pans, which are beds of salt in dry seasons and contain water only after rains. It may be mentioned that the line does not cross a single permanent stream of water at any part of its length of 1051.73 miles.

At first preparatory work at each end of the line had to be done, and it was not until March, 1913, that any platelaying had been carried out.

By 30th June, 1913,  $3\frac{1}{2}$  miles of line on the 3-ft. 6-in. gauge, and 1 mile on the 4-ft. 8 $\frac{1}{2}$ -in. gauge, had been laid in the depôt at Kalgoorlie, the corresponding lengths at Port Augusta being  $4\frac{1}{2}$  and  $2\frac{1}{2}$  miles respectively.

Platelaying on the main line was commenced on the eastern division on April, 1913, and on the western division in May, 1913.

The rate of progress in the construction of both ends of the line will be seen on reference to the following table:—

## RATE OF CONSTRUCTION OF LINE.

Oct. 17	621 58	430 00	1051 58

\* Exclusive of 2½ miles from Kalgoorlie to the Depôt, which was completed in November, 1913.

In the above table it will be seen that between 1st September, 1913, and 17th October, 1917, the date on which the eastern and western divisions met at 621 miles 58 chains ex Kalgoorlie, a total mileage of 1036 miles 35 chains was completed. Including Sundays and holidays this gave an average of 0.69 mile of line per day; omitting Sundays the average was 0.8 mile of line per day. As there was in the course of the work a certain amount of broken time owing to lack of materials, and also labour difficulties, the last average is not unsatisfactory, more especially when the conditions which had to be encountered owing to the nature of the country traversed by the line are taken into consideration.

The permanent way consists of rails weighing 80 lbs. to the yard and is a single line throughout, with the exception of the lines at the terminal stations. The rails vary in length, some being 33 feet and others 45 feet, the latter having been adopted to reduce the number of rail joints. The sleepers were at first 9 feet long, 10 inches wide by 5 inches in depth. Subsequently they were standardised at 8 feet 6 inches long, 9 inches wide and 5 inches in depth, thus effecting a material saving in timber.

Ballasting has been effected over a limited length of line so far, but is being carried on regularly, though not on a very extensive scale at present.

The stations at the terminal points are of the usual pattern with raised platforms and verandah roofs. That at Kalgoorlie is a continuation of the station belonging to the Western Australian Government railways, the trains on the respective systems being run on opposite sides of the same platform in order to facilitate a rapid exchange of traffic.

At Port Augusta it was necessary to erect a new station on a fresh site, the original station site being entirely unsuitable for the purpose of the new line. The station buildings have been constructed so as to accommodate the officials of the various departments connected with the railway. Engineering and other shops are in operation to carry out the erection and repair of the locomotives and other rolling stock. It is the intention of the Railway Department to undertake the construction of all the rolling stock required for its lines when the conditions for such construction become favourable.

Provision has also been made at Kalgoorlie for the repairs to rolling stock and other railway material.

The intermediate stations on the line have no platforms, the passenger rolling stock being designed so that passengers can get on or off the train without any difficulty at the rail level.

With regard to water supply, the following table will give information as to the reservoirs which have been constructed, and their capacity:—

### RESERVOIRS ON TRANS-AUSTRALIAN RAILWAY.

Distance.		Locality.			Capacity in Gallons.

Miles. Chains.	Miles. Chains.				
69 0	...	Karonie ...	...	...	7,000,000
104 40	...	— ...	...	...	7,000,000
132 40	...	— ...	...	...	3,000,000
...	53 0	Bookaloo ...	...	...	6,000,000
...	94 0	Wirappa ...	...	...	5,000,000
...	130 0	Burando ...	...	...	5,000,000
...	190 0	Kultanaby...	...	...	8,000,000
...	250 0	Wilgena ...	...	...	5,000,000

Borings for water have been made at many points along the line. In certain cases the daily supply from some of the bores is but small, and the water obtained not satisfactory for locomotive purposes. In other cases the results have been more satisfactory. In this connection it may be mentioned that at one stage of the line, 337 miles in length, there was not any local water to be obtained, and all the water required for locomotives, machinery, men, and animals on that stage had to be conveyed by rail.

Owing to the natural difficulties on the route, which have already been referred to, the Railway Department had to cater and provide for the staff entirely, such operations necessarily entailing a large amount of extra work other than that of the actual construction of the line. These duties have still to be performed for the permanent staff employed along the line, and a mixed train is being run once a week in order to carry the necessary supplies. This train is known as the "Bread and Butter" train.

The passenger rolling stock in use is mounted on two four-wheel bogies, the cars having a length of 65 feet. There are two classes, first and second, both of which have sleeping accommodation. In addition there are dining and lounge cars (the latter for the first-class only). This stock runs very easily notwithstanding the absence of ballast for the major portion of the line. It is, however, the intention to introduce much larger cars when the conditions for their construction become more favorable.

The passenger locomotives are of a type similar to those which have done good service on the New South Wales Government railways. They are of the 4.6.0 type, with driving wheels 5 ft. in diameter, and cylinders 20 in. x 26 in., the working pressure of the boiler being 160 lbs. These are known as the "G" class. The goods or freight engines are also of a type which has been in use on the New South Wales Government railways for some years. They are known as the "K" class, and are of the 4.8.0. type, with driving wheels 4 ft. 3 in. in diameter, and cylinders 22 in. x 26 in. The boilers have superheaters.

The time allowed for the journey from Port Augusta to Kalgoorlie has been fixed at 37 hours 20 minutes (actual), which gives an average speed of 28.16 miles per hour throughout, inclusive of stoppages. Exclusive of stoppages, which aggregate slightly under three hours, the average is about 30.5 miles per hour. In the opposite direction the gross time is 37 hours 30 minutes (actual), which gives an average speed of 28.03 miles per hour. Exclusive of stoppages, which aggregate about 3 hours 10 minutes, the average is 30.6 miles per hour.

The greatest elevation of the line above sea level is at a point 101 miles east of Kalgoorlie, where it is 1326 feet. This is a rise of 86 feet above Kalgoorlie. Port Augusta is only 21 feet above sea level. With the exception of a short distance of 1 in 80, the ruling grade is 1 in 100.

On the 22nd October, 1917, the first through train left Port Augusta with an official party on board for Kalgoorlie. It should be mentioned that owing to deviations from the original route, the length of this line was reduced from 1063.39 miles to 1051.73 miles, a saving of 11.66 miles.

**5. Federal Territory Railway—Queanbeyan-Canberra.**—This line was built by the Railway Construction Branch of the Public Works Department, New South Wales, and was completed and taken over by the Chief Commissioner of Railways for that State, who has since worked the line for and on behalf of the Commonwealth Government. The line was opened for departmental goods traffic on 25th May, 1914. It connects with the New South Wales railway system at Queanbeyan, and is 4.94 miles in length, in addition to which the sidings cover 2.75 miles.

**6. Summary of Federal Railways.**—The following table shews the railway lines open for traffic under the control of the Commonwealth at 30th June, 1917, together with the lines under construction and those which have been or are being surveyed:—

#### FEDERAL GOVERNMENT RAILWAYS, 30th JUNE, 1917.

Terminals.					Miles.

\* To the 31st December, 1902.

† Including the mileage (478) of the Oodnadatta line.

‡ Taken over by Commonwealth Government, 1st January, 1911.

The following statement shows the actual mileage opened for traffic in the year 1916-17, and also the annual average increase in mileage opened since 1907 in each State:—

**STATE RAILWAYS.—MILEAGE OPENED ANNUALLY.**

Mileage.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	Total all States.
Mileage opened during 1916-17 ...	249	22½	247	34½	93	19½	665
Average annual mileage increase in 10 years to 30th June, 1917 ...	98½	72½	207½	86½	166	12	643

(i.) *New South Wales.* During the year ended 30th June, 1917, the following lines were opened for traffic:—Extension at Boorowa ( $\frac{3}{4}$  mile); Barellan to Griffith ( $32\frac{1}{2}$  miles); Wollongong to sidings near Port Kembla ( $2\frac{1}{2}$  miles); Stockinbingal to Caragabal (51 miles); Tullamore to Tottenham ( $33\frac{3}{4}$  miles); Gosford Racecourse line ( $1\frac{1}{4}$  miles); Dunedoo to Coonabarabran ( $74\frac{1}{2}$  miles); and Wagga Wagga to Humula ( $52\frac{1}{2}$  miles); making a total of 249 miles.

(ii.) *Victoria.* The following lines were opened for traffic during 1916-17:—Neerim South to Nayook (8 miles); and Rushworth to Gigarre (late Stanhope North)  $14\frac{1}{2}$  miles; a total of  $22\frac{1}{2}$  miles.

(iii.) *Queensland.* The increase of 247 miles in the mileage opened for traffic in 1916-17 was due to the opening of the following lines:—Roma to Orallo (28.54 miles); Cheepie to Quilpie (47.46 miles); Archer Park to Ridgeland (17.50 miles); Kunwarara to Marlborough (18.41 miles); Emmet to Yaraka (32.10 miles); Koolamarra to Mount Cuthbert (27.76 miles); Butru to Dajarra (20.41 miles); Rollingstone to Moongobulla (6.08 miles); Oona to Dobbyn (20.48 miles); Jaggan to Tarzali (3.63 miles); Tumoulin to Ravenshoe (4.50 miles); and by purchase Bibbohra to Mount Molloy (20.00 miles).

(iv.) *South Australia.* The only line opened for traffic in this State during the year 1916-17 was on the 5-ft. 3-in. gauge, from Salisbury to Long Plains, a distance of  $34\frac{1}{2}$  miles.

By the transfer on 1st January, 1911, to the Commonwealth Government of the line from Port Augusta to Oodnadatta, the railways of the State have undergone a reduction to the extent of 478 miles. This line, however, was leased to the State by the Commonwealth Government until 31st December, 1913, since which date it has been worked on behalf of the Commonwealth under agreement. (See page 662.)

(v.) *Western Australia.* In the year 1916-17 the following new lines were opened for traffic:—Kukerin to Lake Grace ( $25\frac{1}{2}$  miles); Wyalkatchem to Bencubbin ( $52\frac{1}{2}$  miles); Bolgart to Calingiri ( $15\frac{1}{2}$  miles); and an extension of the Coolgardie Racecourse line ( $\frac{1}{4}$  mile); making a total of 93 miles.

(vi.) *Tasmania.* During the year 1916-17 the following lines were opened for traffic:—Russell to Maydena (National Park) ( $4\frac{1}{2}$  miles), and Flowerdale to Preolenna ( $15\frac{1}{2}$  miles), a total of  $19\frac{1}{2}$  miles.

**2. Average Mileage Worked, Train Miles Run, Number of Passenger Journeys, and Tonnage of Goods and Live Stock Carried, on State Government Railways.**—The table on page 669 gives the actual mileage open for traffic at the end of each financial year, but, in considering the returns relating to revenue and expenditure, and other matters, it is desirable to know the average number of miles actually worked during each year. The next table shews the average number of miles worked, the total number of train miles run, the number of passenger journeys, and the tonnage of goods and live stock carried by the Government railways of each State during the years 1901-2 and 1912-17 inclusive:—

**STATE RAILWAYS.—AVERAGE MILEAGE WORKED, TRAIN MILES RUN, NUMBER OF PASSENGER JOURNEYS, AND TONNAGE OF GOODS AND LIVE STOCK CARRIED, 1901-2 AND 1912-17.**

Year.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	West. Aust.	Tasmania.	N. Ter. **	All States.

\* These figures are partly estimated, the actual returns excluding journeys by season ticket holders. † Exclusive of the Oodnadatta line (478 miles) as from the 1st January, 1911. ‡ Including the Etheridge railway 143 miles in length. § Exclusive of live stock returns for Tasmania. || For the calendar year 1902. The average mileage worked in some cases is greater than the actual mileage open, owing to the fact that the Government railways have running powers over certain private lines. ¶ Exclusive of live stock. \*\* Taken over by Commonwealth Government, 1st January, 1911.

**3. Length and Gauge of Railway Systems in each State.**—A map shewing the State railway lines, and also some private lines open to the public for general traffic, in the different States of the Commonwealth is given on page 653 hereinbefore. In all the States the Government railways are grouped, for the convenience of administration and management, into several divisions or systems, some of which have already been briefly referred to in dealing with the history of construction of the railways. The subjoined summary shews concisely the gauge and length of the main and branch lines included in each division or system of the different States of the Commonwealth for the year ended the 30th June, 1917:—

## STATE RAILWAYS, 1916-17.

GRAND TOTAL OF STATE RAILWAYS, 20,000.92 MILES.

4. **Administration and Control of State Railways.**—In each State of the Commonwealth the policy has been established that the railways should be under the control of the Government. This policy, as has been shewn, was actualised early in the railway history of Australia, and, excepting in cases presenting unusual circumstances, may be regarded as the settled policy of the country. In earlier issues of the Year Books (see No. 6, p. 693) will be found a description of the methods adopted by the various State Governments in the control and management of their railways.

5. **Lines under Construction, and Authorised Lines, 1917.**—The following statement gives particulars up to the 30th June, 1917, of the mileage of State railways (a) under construction, and (b) authorised for construction but not commenced:—

**STATE RAILWAYS.—MILEAGE UNDER CONSTRUCTION AND AUTHORISED,  
30th JUNE, 1917.\***

\* For similar statistics of Federal Railways see page 666. † Exclusive of 223.46 miles on which work was suspended. ‡ Exclusive of 128.00 miles on which work was suspended.

(i.) **Lines under Construction.** In spite of the great extension of State railways which has taken place since the year 1875 throughout the Commonwealth, there are still, in some of the States, tracts of country of immense area which are as yet practically undeveloped, and in which little in the nature of permanent settlement has been accomplished; the general policy in the States is to extend the existing lines inland, in the form of light railways, as settlement increases, and although it is true that lines which were not likely to be commercially successful in the immediate future have been constructed from time to time, for the purpose of encouraging settlement, the general principle that the railways should be self-supporting is kept in view. (a) In *New South Wales* the lines under construction are chiefly of the "pioneer" class, and are made with a view to affording railway communication over level country to districts in which the

traffic would not warrant the expenditure necessary to provide thoroughly equipped lines. As the traffic increases, the permanent way is strengthened in order to allow the heavy types of engines to run over it. It is probable that railway extension in New South Wales, in the near future, will be mainly confined to lines of the "pioneer" class. The lines under construction on 30th June, 1917, were those from Wauchope to Kempsey (30.30 miles), and Kempsey to Macksville (29.79 miles). These lines, when completed, will form part of an alternative main route between Newcastle and Brisbane. Other lines under construction are as follow:—Wyalong to Cudgellico (70.44 miles), Humula to Tumberumba (28 miles), Dubbo to Merrygoen (59.40 miles), Forbes to Caragabal (37.62 miles), Cobarto C.S.A. Mines (7.25 miles), Condobolin to Menindie (285.70 miles), Broken Hill to Menindie (73.70 miles), Denman to Merriwa (34.92 miles), and the City and Suburban Electric Railways (11.09 miles), a total distance of 668.21 miles. The following lines have also been under construction, but further work thereon has been suspended for the present:—Nimitabel to Bombala (37.85 miles), Sydenham to Botany (6.20 miles), Werris Creek to Binnaway (88.11 miles), Macksville to Raleigh (20.68 miles), Coff's Harbour to Glenreagh (26.37 miles), and Glenreagh to Dorrego (44.25 miles), a total distance of 223.46 miles. (b) *Victoria*. In this State the following lines were under construction by the Board of Land and Works on the 30th June, 1917:—5-ft. 3-in. gauge: Dartmoor to Mumbannar (13.48 miles), Shelley to Cudgewa (19.64 miles), Cavendish to Toolondo (44 miles), Neerim South to Toorenga River (5.98 miles), Koo-wee-rup to McDonald's Track (30.75 miles), and North Geelong to Fyansford (2.87 miles), making in all 116.72 miles. An electric tramway of 4ft. 8½ in. gauge is also under construction from Sandringham to Black Rock, a distance of 2.38 miles. (c) *Queensland*. In December, 1910, the North Coast Railway Act was passed. Under this Act a series of lines, when constructed, will link up a number of existing lines in such a way that a through line will be obtained from Rockhampton to Cairns, *via* Mackay and Townsville, a total distance of 569 miles. By the completion of this line it will be possible to travel from Cairns to the southern border of the State at Wallangarra, a total distance of about 1189 miles. At the same time the Great Western Railway Act was passed. Under this Act provision is made for the extension in a westerly or south-westerly direction of the lines already constructed to Quilpie, Yaraka, Winton, and Dajarra, in such a manner that they will form junctions with a line to be made running north-westerly from Eromanga to Camooweal. These extensions, together with the north-westerly line, will make an aggregate distance of 990 miles to be constructed. With the completion of both these schemes, the railways of this State will be brought into direct communication with each other on both their east and west boundaries. On the 30th June, 1917, the following lines, of an aggregate length of 323 miles, were under construction:—Enoggera to Terror's Creek (24 miles), Murgon to Proston (26 miles), Branch to Winder (12 miles), Orallo to Injune Creek (33 miles), and Dawson Valley line, Rannes to Baralaba (23 miles). Of the Great Western Railway the following part has been under construction but operations have been suspended:—Section C: From Winton to Elderslie (37 miles). The following parts of the North Coast Railway are under construction:—Section A: Marlborough towards St. Lawrence (59 miles); Section B: Koumala to Carmila Creek (25 miles); Mackay northwards to Midge Point (31 miles); Section D: From Moongobulla to Ingham (28 miles); Section E: From Mooliba to Innisfail (12 miles). In the northern division the line from Merinda to Bowen coalfields, 50 miles long, is also under construction. The following lines were under construction during the year, but work was suspended:—Goondoon to Kalliwa (31 miles), Kalbar to Mount Edwards (10 miles), and Tara to Surat (50 miles). (d) *South Australia*. In this State the lines under construction on the 30th June, 1917, were as follow:—Mount Gambier to the Victorian boundary (12 miles), Riverton to Spalding (51.25 miles), Paringa to Renmark (2.5 miles), Balhannah to Mount Pleasant (22 miles), New Palmer to Sedan (20 miles), Nuriootpa to Truro (9.88 miles), and Palmer to Monarto (28.77 miles), 5-ft. 3-in. gauge; and Kielpa to Mangalo Hall (26.25 miles), 3-ft. 6-in. gauge—an aggregate distance of 172.65 miles. (e) In *Western Australia* the following lines were in course of construction by the Public Works Department on the 30th June, 1917:—Wagin to

Bowelling (62½ miles), Bolgart Extension to Piawaning (34½ miles), Esperance northward (60 miles), and Kardinin to Merredin (85 miles), a total distance of 242½ miles. (f) *Tasmania*. At 30th June, 1917, the following lines were under construction, Branhholm to Moorina (13.63 miles), Stanley to Trowutta (25.50 miles), National Park to Maydena (6.60 miles), a total distance of 45.73 miles.

(ii.) *Lines Authorised for Construction.* (a) *New South Wales*. At the 30th June, 1917, the following lines had been authorised for construction:—Mirrool to Hillston (62.18 miles), Barmedman to Rankin Springs (70.91 miles), Coonabarabran to Burren Junction (95.36 miles), Craboon to Coolah (23.95 miles), Gilgandra to Collie (24 miles), Canowindra to Eugowra (26.70 miles), Grafton to South Grafton (2.34 miles), Roslyn to Taralga (15.82 miles), and Molong to Dubbo (76.84 miles), a total distance of 398.10 miles. (b) In *Victoria* the following lines were authorised, but their construction had not been commenced up to the end of June, 1917:—5-ft. 3-in. gauge: White Cliffs to Yelta (10 miles), Alberton to Won Wron (12.25 miles), Nandaly to Kulwin (19.75 miles), and Bittern to Red Hill (10 miles)—a total of 52 miles. (c) *Queensland*. In addition to the new lines upon which work has been commenced, Parliament has also authorised the construction of the following parts of the Great Western Railway: Section A, from Quilpie to Eromanga (120 miles); Section B, from Yarakka (251 miles); Section C, 37 miles to Springvale (324 miles); and Section D, from Dajarra (258 miles); and on the North Coast Railway, Section B, from Carmila Creek to St. Lawrence (17 miles), Mackay northwards to Midge Point (24 miles); Section C, from Midge Point to Proserpine (21 miles); Section D, from Ingham to Cardwell (25 miles); Section E, from Innisfail southwards to Cardwell (66 miles). The following lines were also authorised for construction: Inglewood to Texas and Silverspur (44 miles), Mount Edwards to Maryvale (28 miles), Lanefield to Rosevale (17 miles), Gatton to Mount Sylvia (11 miles), Juandah to Taroom (42 miles), Dirranbandi extension (52 miles), Mundubbera to the Northern Burnett (32 miles), Malanda to Millaa Millaa—second section—(8 miles), Evanslea to Cecil Plains (19 miles), Longreach to Winton (110 miles)—a total of 1469 miles. (d) In *South Australia*, Parliament has authorised the construction of a line on the 5-ft. 3-in. gauge from Paringa to Renmark, a distance of 2.50 miles. (e) In *Western Australia* the following lines were authorised for construction up to the 30th June, 1917:—Busselton-Margaret River (37½ miles), Dwarda-Narrogin (33 miles), and Nyabing-Pingerup (21½ miles), a distance of 92½ miles.

6. **Cost of Construction and Equipment of State Railways.**—The total cost of construction and equipment of the State railways of Australia at the 30th June, 1917, amounted to £204,202,437, or to an average of £10,210 per mile open for traffic. Particulars as to the capital expenditure incurred in each State on lines open for traffic are given in the following table:—

**STATE RAILWAYS.—MILEAGE AND COST TO 30th JUNE, 1917.**

State.	Length of Line Open. (Route).	Total Cost of Construction and Equipment.	Average Cost per Mile Open.	Cost per Head of Population.	Mileage per 1000 of Population.
	Miles.	£	£	£	Miles.
New South Wales*	4,437.08	72,006,621	16,229	38.54	2.37
Victoria...	4,122.64	55,652,275	13,498	39.68	2.94
Queensland...	5,213.79	36,476,000	6,996	53.54	7.65
South Australia*	2,220.66	17,687,344	7,964	41.14	5.17
Western Australia*	3,425.10	17,466,802	5,100	56.61	11.10
Tasmania...	581.65	4,913,395	8,447	24.90	2.95
All States...	20,000.92	204,202,437	10,210	41.77	4.09

\* Exclusive of Federal Railways.

It will be seen that the lowest average cost per mile open is in Western Australia, and is only £5100, which is slightly less than one-third of the highest average cost, namely, £16,229 in New South Wales, compared with an average of £10,210 for all the State Government railways. In Western Australia there have been comparatively few engineering difficulties to contend with; moreover, the system was adopted in several instances in that State of giving contractors the right to carry traffic during the period of their contracts, with the result that, at least in all goldfields railway contracts, the cost of construction was considerably lessened.

In the above table the figures relating to cost of construction and equipment do not include the discounts and flotation charges on loans allocated to the railways. This will explain the reason for the differences between the amounts shewn above for Queensland and South Australia and those shewn in the railway reports for these States.

(i.) *Reduction of Cost per Mile in Recent Years.* The average cost per mile of the lines constructed lately in the Commonwealth is very much less than the figure given in the above table, in consequence of the construction of light "pioneer" lines, which have already been referred to, and which it was originally considered in New South Wales could be laid down at a cost of £1750 per mile (exclusive of stations and bridges). It should also be remembered that in the early days of railway construction there were considerable engineering difficulties to overcome, and that labour was scarce and dear. Since 1892 over one thousand six hundred miles of the "pioneer" lines have been opened in New South Wales, the average cost ranging from about £2000 to £7500 per mile, according to the difficulties met in the country traversed. The lowest cost per mile for any line previously constructed had been that of the line from Nyngan to Cobar and the Peak, the average cost of which, to the end of June, 1917, was £3786. In Victoria also the cost of construction has been greatly reduced in recent years. The total cost to the 30th June, 1917, of the narrow gauge (2 ft. 6 in.) lines, having a length of one hundred and twenty-two miles, was only £341,160, which gives an average cost per mile of only £2796. In the other States the cost of construction per mile has been similarly reduced by building light railways as cheaply as possible. Fairly substantial permanent way is laid down with reduced ballast, and, as settlement progresses and traffic increases, the road is strengthened, and the stations and siding accommodation enlarged. The subjoined table gives examples of some of the more expensive lines, most of which were built in the early days of railway construction in Australia:—

**STATE RAILWAYS.—EXAMPLES OF LINES CONSTRUCTED AT LARGE CAPITAL EXPENDITURE PER MILE OPEN.**

Line.	Gauge.	Length.			Total Cost.	Average Cost per Mile.	Date of Opening.
		Double Lines and over.	Single Line.	Total.			
	ft. in.	Miles.	Miles.	Miles.	£	£	
NEW SOUTH WALES—							
Pearlth to Bathurst ...	4 8½	88.50	22.55	111.05	4,100,776	36,928	1876
Sydney to Kiama ...	4 8½	39.90	57.79	97.69	4,195,138	42,943	1887
Homebush to Waratah ...	4 8½	95.71	...	95.71	3,547,954	37,069	1899
VICTORIA—							
Melbourne to Bendigo ...	5 3	100.89	...	100.89	4,944,829	49,012	1862
N. Geelong to Ballarat ...	5 3	41.45	11.98	53.43	1,955,816	36,605	1862

The next table gives instances of lines which have been constructed in more recent years at a comparatively small cost per mile.

The average cost per mile of the 458.77 miles comprised in the above table was £40,858, whereas the average cost of the 360.06 miles referred to in the next table was £1911.

**STATE RAILWAYS.—EXAMPLES OF LINES CONSTRUCTED AT SMALL CAPITAL EXPENDITURE PER MILE OPEN.**

Line.	Gauge.	Length.	Total Cost.	Average Cost per Mile.	Date of Opening.
	ft. in.	Miles.	£	£	
<b>NEW SOUTH WALES—</b>					
Parkes to Condobolin ...	4 8½	62.75	132,780	2,116	1898
Burren Junction to Collarenebri	4 8½	42.55	104,506	2,456	1906
<b>VICTORIA—</b>					
Wangaratta to Whitfield ...	2 6	30.49	40,147	1,317	1899

Tailem Bend to Pinnaroo ...	5 3	86.55	163,955	1,883	1906

The comparisons afforded in the two preceding tables are subject to certain limitations, inasmuch as the cost is naturally greater in the case of the older lines. Further, the figures given represent the cost of construction only (i.e., are exclusive of cost of equipment), and cannot therefore be directly compared with the average cost per mile open given in the table on page 677.

(ii.) *Capital Cost of Construction and Equipment, Total and per Mile Open.*

The increase in the total capital cost of construction and equipment of Government railways in each State for 1901-2 and for each year from 1912 to 1917 is shewn in the following table:—

**STATE RAILWAYS.—CAPITAL COST OF CONSTRUCTION AND EQUIPMENT, 1901-2 and 1912-17.**

Year.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	West. Aust.	Tas.	N. Ter. †	All States.

† Federal Railway since 1st January, 1911.

8. Coaching, Goods, and Miscellaneous Receipts.—The gross revenue is composed of (a) receipts from coaching traffic, including the carriage of mails, horses, parcels, etc., by passenger trains; (b) receipts from the carriage of goods and live stock, and (c) rents

and miscellaneous items. The subjoined table shews the gross revenue for 1901-2 and 1912-17, classified according to the three chief sources of receipts. The total of the three items specified has already been given in the preceding paragraph.

\* Tasmanian figures for 1902 are for year ended the 31st December. † Exclusive of Oodnadatta line as from 1st January, 1911. ‡ Federal Railway since 1st January, 1911.

(i.) *New South Wales.* The total earnings for the year 1916-17 amounted to £8,380,084, an increase of £374,006 as compared with the previous year. Increases of £63,593, £212,648, and £97,765 took place in the coaching traffic, goods and live stock traffic, and miscellaneous respectively.

(ii.) *Victoria.* In Victoria, traffic receipts shewed an increase of £247,556 as compared with the previous year. This was due to an increase of £324,049 and £8213 in the receipts from goods and live stock traffic and miscellaneous respectively, and a decrease of £84,706 in coaching traffic receipts.

(iii.) *Queensland.* In Queensland, there was an increase of £86,617 in 1916-17 relatively to 1915-16. There were increases of £33,778 and £69,504 in respect of coaching and goods and live stock receipts respectively, but miscellaneous receipts were lower by £16,665.

(iv.) *South Australia.* In this State there were increases of £17,928 and £290,898 in coaching, and goods and live stock receipts respectively, and a slight decrease of £706 in miscellaneous receipts, the net increase being £308,120 in excess of that for previous year.

(v.) *Western Australia.* In this State the earnings in 1916-17 shewed a decrease of £210,728 as compared with 1915-16. There was an increase of £8695 in miscellaneous receipts, but decreases of £39,029 and £180,394 in the coaching, and goods and live stock receipts respectively.

(vi.) *Tasmania*. The gross revenue in 1916-17 shewed a decrease of £7523 as compared with the previous year. In the goods and live stock receipts there was an increase of £1302, but there were decreases of £8564 and £261 in the coaching and miscellaneous receipts respectively.

The following table shews for the two years 1915-16 and 1916-17 the percentage which each class of receipts bears to the total gross revenue:—

**STATE RAILWAYS.—PERCENTAGE OF REVENUES FROM VARIOUS SOURCES

**9. Coaching Traffic Receipts per Average Mile Worked, per Passenger-train Mile, and per Passenger Journey.**—The subjoined table shews the receipts from coaching traffic per average mile of line worked, per passenger-train mile, and per passenger journey in each State and for all States for the year ended the 30th June, 1917:—

**STATE RAILWAYS.—COACHING TRAFFIC RECEIPTS PER MILE WORKED, PER  
PASSENGER TRAIN MILE, AND PER PASSENGER JOURNEY, 1916-17.**

State.	Number of Passenger- Train Miles.*	Number of Passenger Journeys.	Coaching Traffic Receipts.			
			Gross.	Per Average Mile Worked.	Per Pas- senger- Train Mile.	Per Pas- senger Journey.
	No.	No.	£	£.	d.	d.
New South Wales ...	10,434,819	96,709,846	3,637,656	843	83.67	9.03
Victoria ...	7,363,454	108,341,540	2,918,557	711	95.13	6.47
Queensland ...	3,581,156	24,837,714	1,373,531	271	92.05	13.27
South Australia ...	2,635,047	18,107,015	739,483	337	67.35	9.80
Western Australia ...	1,981,637	17,466,744	607,537	180	73.58	8.35
Tasmania ...	470,984	1,971,888	171,220	297	87.25	20.84
Total ...	26,467,097	267,434,747	9,447,984	481	85.67	8.48

\* The returns include the undermentioned mixed-train mileage, which has been divided between passenger-train miles and goods-train miles in the proportion of one-third and two-thirds respectively in the case of the following States:—

New South Wales ...	1,556,599	Western Australia ...	1,043,125
Victoria ...	2,578,948	Tasmania ...	655,664

The preceding table shews that, amongst the States, there is a considerable difference in the amount of the average receipts per passenger journey. This amount ranges from 6.47 pence in Victoria, where there is a large metropolitan suburban traffic, to 20.84 pence in Tasmania. The difference in these amounts cannot be accounted for by the amounts of rates charged, which are fairly uniform in the several States (see sub-section 17), but is largely due to the different traffic conditions which prevail on various lines in the Commonwealth (see sub-section 14). In order to analyse these figures adequately it would be necessary to have particulars regarding the number of passenger-miles, *i.e.*, the total distance travelled by passengers, in each State, but these particulars are not generally available (see sub-section 15.)

The preponderance in the number of passenger journeys in Victoria is accounted for, to a great extent, by the large number of metropolitan suburban passengers in that State. Of the total number of passengers carried in Victoria, 100,138,586 were metropolitan suburban passengers, *i.e.*, were carried between stations within twenty miles of Melbourne, while in New South Wales the number of suburban passenger journeys between stations within thirty-four miles of Sydney, including the Richmond line, and of Newcastle, including Greta, was 86,755,110. In Sydney a large proportion of the metropolitan suburban traffic is carried on the electric and steam tramways, the number of passenger journeys during the year 1916-17 being 278,477,372. In Melbourne, on the other hand, the number of passengers carried on the cable tramways systems during the same period was 103,118,377; and the number carried on the St. Kilda-Brighton, Prahran-Malvern Trust, Melbourne-Brunswick-Coburg Trust, Hawthorn Trust, and the North Melbourne tramways, 45,565,707, making a total of 148,684,084. This matter is referred to herein after. (See sub-section 14.)

**10. Goods and Live-Stock Traffic Receipts per Mile Worked, per Goods-train Mile, and per Ton Carried.**—The following table shews the gross receipts from goods and live-stock traffic per mile worked, per goods-train mile, and per ton carried, for the year ended the 30th June, 1917:—

**STATE RAILWAYS.—GOODS AND LIVE-STOCK TRAFFIC RECEIPTS PER MILE WORKED, PER GOODS-TRAIN MILE, AND PER TON CARRIED, 1916-17.**

State.	Number of Goods-Train Miles.*	Goods and Live-Stock Tonnage.	Goods and Live-Stock Traffic Receipts.			
			Gross.	Per Average Mile Worked.	Per Goods-Train Mile.	Per Ton Carried.
	No.	Tons.	£	£	d.	d.
New South Wales ...	9,865,898	11,732,864	4,542,619	1,053	110.50	92.92
Victoria ...	6,658,586	5,962,602	2,934,259	715	105.76	118.11
Queensland ...	7,148,031	4,035,379	2,433,868	480	81.72	144.75
South Australia ...	3,095,492	2,822,401	1,502,363	685	116.48	127.75
Western Australia ...	2,518,574	2,400,246	1,176,058	349	112.07	117.59
Tasmania...	609,475	401,076	158,162	274	62.28	94.64
Total...	29,896,056	27,354,568	12,747,329	650	102.33	111.84

\* The returns include the undermentioned mixed-train mileage, which has been divided between passenger-train miles and goods-train miles in the proportion of one-third and two-thirds respectively in the case of the following States:—

New South Wales ...	1,556,599	Western Australia ...	1,043,125
Victoria ...	2,578,948	Tasmania ...	655,664

From the preceding table it will be seen that the average cost of freight per ton ranges from 92.92 pence in New South Wales to 144.75 pence in Queensland. The remarks made in the preceding sub-section hereof with regard to the average fare paid per passenger and to passenger-miles, apply equally to the average amount of freight paid per ton and to ton-miles.

11. **Working Expenses.**—In order to make an adequate comparison of the working expenses of the Government railways in the several States, allowance should be made for the variation of gauges and of physical and traffic conditions, not only on the railways of the different States, but also on different portions of the same system. Where traffic is light, the percentage of working expenses is naturally greater than where traffic is heavy; and this is especially true in Australia, where ton-mile rates are in many cases based on a tapering principle—i.e., a lower rate per ton-mile is charged upon merchandise from remote interior districts—and where on many of the lines there is but little back-loading. Further, though efforts have been made from time to time to obtain a uniform system of accounts in the several States, the annual reports of the Commissioners do not yet comprise fully comparable data of railway expenditure.

The following table shews the total annual expenditure, comprising expenses on (a) maintenance of way, works, and buildings; (b) locomotive power—repairs and renewals; (c) carriages and wagons—repairs and renewals; (d) traffic expenses; (e) compensation; and (f) general and miscellaneous charges; and also the percentage of the total of these expenses upon the corresponding gross revenues in each State for 1901-2 and for each year 1912-17:—

\* Including amounts paid for pensions and gratuities, and also special expenditures and charges for belated repairs and in reduction of deficiencies. † For the calendar year 1902.  
 ‡ Federal railway, since 1st January, 1911. § Exclusive of the Oodnadatta line as from 1st January, 1911.

(i.) *New South Wales.* In this State the total working expenses in 1916-17 amounted to £5,915,360, an increase of £254,192 as compared with the previous year. This increase was owing to a variety of causes, among which the principal were the increase of wages by awards of wages boards, and the higher cost of coal and materials.

(ii.) *Victoria.* In Victoria the increase in working expenses was owing mainly to increments to staff and to the higher price of coal.

(iii.) *Queensland.* In this State the working expenses increased £249,126 from £2,745,061 in 1915-16 to £2,994,187 in 1916-17. The increase was mainly due to the additions to the wages of the staff, the extra cost of materials, and the opening of new lines 247 miles in length.

(iv.) *South Australia.* In South Australia the working expenses in 1916-17 shewed an increase of £179,852 over 1915-16, viz., from £1,545,489 to £1,725,341. This was owing to an increase in the train mileage, coupled with the advance in the price of fuel, the raising of wages under awards, and the adoption of the eight-hours principle at many stations.

(v.) *Western Australia.* In this case the expenditure was £63,204 lower than in the previous year. This was mainly due to the falling-off of the train mileage, which was 649,078 less than in the year 1915-16. During the year 93 miles of new railway came into operation.

(vi.) *Tasmania.* The working expenses in 1915-16 were £289,186 as compared with £248,651 in the previous year, being an increase of £40,535. Increases to staff and higher prices for coal and materials are mainly responsible for this, coupled with an increase in the mileage worked.

In the preceding table it will be observed that with the exception of the year 1915-16 the percentages of the total working expenses to the total gross earnings of the States railways, have increased each year during the period 1912-13 to 1916-17.

(vii.) *Working Expenses per Average Mile Worked and per Train Mile Run.* The following table shews the working expenses per average mile worked and per train mile run in each State for the years 1901-2 and 1912-17:—

**14. Traffic Conditions.**—Reference has already been made to the difference in the traffic conditions on many of the lines of the Commonwealth (see sub-sections 9, 10, and 11 hereof). These conditions differ not only in the several States, but also on different lines in the same State, and this is true with regard to both passenger and goods traffic. By far the greater part of the population of Australia is confined to a fringe of country near the coast, more especially in the eastern and southern districts. A large proportion of the railway traffic between the chief centres of population is therefore carried over lines in the neighbourhood of the coast, and is thus, in some cases, open to sea-borne competition. On most of the lines extending into the more remote interior districts, traffic is light; the density of population diminishes rapidly as the coastal regions are left behind; and there is a corresponding diminution in the volume of traffic, while, in comparison with other more settled countries, there is but little back-loading.

As an indication of the different traffic conditions prevailing in the several States, the following table is given shewing the numbers of passenger journeys and the tons of goods carried (a) per 100 of the mean population; and (b) per average mile worked in each State during the financial year 1916-17:—

**STATE RAILWAYS.—PASSENGER JOURNEYS AND TONNAGE OF GOODS  
AND LIVE STOCK, 1916-17.**

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	All States.
<b>(a) PER 100 OF MEAN POPULATION.</b>							
Passenger journeys ... No.	5,180	7,688	3,665	4,183	5,550	995	5,458
Goods and live stock ... Tons	628	423	596	652	763	202	558
<b>(b) PER AVERAGE MILE OF LINE WORKED.</b>							
Passenger journeys ... No.	22,423	26,399	4,902	8,257	5,183	3,417	13,628
Goods and live stock ... Tons	2,720	1,453	796	1,287	712	695	1,394

Particulars of the actual numbers of passengers and tons of goods and live stock carried have already been given (see sub-section 2 hereof).

(i.) *Metropolitan and Country Passenger Traffic.* A further indication of the difference in passenger traffic conditions might be obtained from a comparison of the volume of metropolitan, suburban, and country traffic in each State. Particulars are, however, available only for the States of New South Wales and Victoria. The subjoined table shews the number of metropolitan and country passengers carried in each of the States mentioned and the revenue derived therefrom during the year 1916-17:—

**STATE RAILWAYS.—METROPOLITAN, SUBURBAN, AND COUNTRY PASSENGER TRAFFIC, 1916-17.**

Particulars.	Number of Passenger Journeys.			Revenue.		
	Metropolitan.	Country.	Total.	Metropolitan.	Country.	Total.
N.S.W. ...	*86,755,110	9,954,736	96,709,846	*1,043,453	2,158,714	3,202,167
Victoria ...	†100,138,586	8,202,954	108,341,540	†1,113,050	1,465,429	2,578,479

\* Within 34 miles of Sydney and Newcastle, and including the Richmond line.

† Within 20 miles of Melbourne.

From this table it will be seen that the number of passenger-journeys in country districts in Victoria was less than the corresponding number in New South Wales, while the number of metropolitan passenger-journeys in Victoria was greater than in New South Wales, although in the latter State both Sydney and Newcastle are included. In Sydney a larger proportion of the suburban traffic is carried by the tramway systems than in Melbourne. The Sydney ferries also carry a large number of suburban passengers (see § 3., Tramways).

For several years it has been recognised that the suburban passenger transport, both in Sydney and in Melbourne, was increasing so rapidly that it must eventually become impossible to cope with it under the existing systems. A scheme for the electrification of the Melbourne suburban lines was under the consideration of the Victorian Government in 1908, but owing chiefly to a doubt as to its success from a financial standpoint, its adoption was for a time deferred. In November, 1912, however, a Commission was appointed by Parliament to again consider the 1908 scheme, and, acting on its report, the Government decided to at once proceed with the electrification of the suburban lines. Contracts for the construction of power-houses and the necessary equipment were put in hand at an estimated cost of £2,250,299. It was anticipated that a portion of the suburban railway system would be electrically operated by the end of 1915, but, owing to delays in the delivery of plant, due to the war, the date of opening had to be postponed. It is now expected that electrically-propelled trains will be in operation early in the year 1919. In Sydney, a Metropolitan Railway Construction Branch of the Railway Department has been created to deal specially with this matter. The Minister has approved of the construction of an underground city railway, the plans have been prepared, and a commencement has been made with the preliminary works. The preliminary work in the location of a system of electric railways for the eastern, western and northern suburbs is also in hand.

(ii.) *Goods Traffic.* The differing conditions of the traffic in each State might also, to some extent, be analysed by an examination of the tonnage of various classes of commodities carried and of the revenue derived therefrom. Comparative particulars regarding the quantities of some of the leading classes of commodities carried on the Government railways are available for all the States; corresponding information regarding the revenue derived from each class of commodity is not, however, generally available in

a comparable form. In this connection it may be stated that the following resolution was passed at the Interstate Conference of Railway Commissioners held in Melbourne in May, 1909:—"That in view of the variations in the character and classification of the goods traffic in the different States, the subdivisions of tonnage carried and revenue in each State shall be those which best suit local conditions."

The following table shows the number of tons of various representative commodities carried, and the percentage of each class on the total tonnage carried during the financial year 1916-17:—

**STATE RAILWAYS.—CLASSIFICATION OF COMMODITIES CARRIED, 1916-17.**

1. Exclusive of 264,564 tons of coal, on which only shunting and haulage were collected.  
 2. Coal, stone, gravel, and sand. 3. Up journey only. 4. Flour only. 5. Sugar cane.  
 6. Included in all other commodities.

**15. Passenger-Mileage and Ton-Mileage.**—In earlier issues of the Year Book reference has been made to the resolution on the subject of passenger mileage and ton-mileage statistics, passed at the Interstate Conference of Railway Commissioners held in Melbourne, in May, 1909; and to the Report [Cd. 4697] on the same subject by a Committee appointed by the President of the Board of Trade in the United Kingdom (see Year Book No. 10, p. 654).

In the Commonwealth, information regarding "passenger-miles" and "ton-miles" is available, either wholly or in part, for three of the States only, viz., New South Wales, South Australia, and Tasmania, but is not available at all for either Victoria, Queensland, or Western Australia. Of the three States which give particulars of the nature indicated, New South Wales furnishes the information in a classified form according to class of passengers and nature of commodities carried. South Australia supplies particulars for all classes of passengers and goods together, and Tasmania supplies particulars for all classes of passengers together and a classification of nature of commodities carried. Western Australia furnished particulars as to ton-miles for the years 1907-12, but has since discontinued to record them.

(i.) *Passenger-Miles.* Particulars for the whole of the Commonwealth period regarding total "passenger-miles" are available for one State only, namely, Tasmania. For New South Wales to the end of 1909-10, particulars are available for suburban and extended suburban traffic only—i.e., including all stations within 34 miles of Sydney (including

the Richmond line), and of Newcastle (including Greta), but since that date all passenger traffic is included. For South Australia particulars are available for each year since 1904. No particulars are available for other States. In the tables given below the average number of passengers carried per "train," etc., is obtained by dividing the number of "passenger-miles" by the number of "passenger-train-miles." Similarly the "density of traffic" is obtained by dividing the number of "passenger-miles" by the "average miles worked."

1. Exclusive of the returns of the Oodnadatta line on and after 1st January, 1911.

2. To 31st December, 1902.

(ii.) *Ton-Miles.* Particulars regarding total "ton-miles" are available for each year since 1901 for the States of New South Wales, South Australia, and Tasmania. Corresponding particulars for Western Australia are available for the years 1907 to 1912, but not for subsequent years. The average freight-paying load carried per "train" is obtained by dividing the total "ton-miles" in the fourth column by the goods-train mileage in the second column. In New South Wales the tonnage carried is exclusive of coal, on which only shunting and haulage charges are collected, and the amount of earnings specified excludes terminals. In South Australia and Tasmania they include terminals, while in Western Australia they exclude wharfage and jetty dues, but include all other charges.

## STATE RAILWAYS.—SUMMARY OF "TON MILES," 1901-2 and 1913-17.

1. Exclusive of tonnage on which only shunting and haulage charges are collected. 2. Exclusive of the returns of the Oodnadatta line on and after 1st January, 1911. 3. Particulars for years prior to 1907 and for years subsequent to 1912 are not available. 4. Exclusive of live stock. 5. To 31st December.

(iii.) *Classification of Commodity Ton-Mileage.* As previously mentioned New South Wales and Tasmania are the only States for which particulars, specifying the ton-mileage and the earnings per ton-mile for various classes of commodities, are available.

The subjoined statement gives particulars for the last financial year in respect of New South Wales. Miscellaneous traffic consists of timber, bark, bricks, drain-pipes in six-ton lots, and cement in full truck loads, agricultural and vegetable seeds in five-ton lots, and traffic of a similar nature. A and B classes consist of lime, vegetables, tobacco leaf, caustic soda and potash, copper ingots, fat and tallow, water and mining plant in six-ton lots, leather in one and three-ton lots, agricultural implements in five-ton lots,

and other traffic of a similar nature. The table does not include 264,564 tons of coal on which only shunting and haulage charges were collected, nor does it include £62,523 for haulage, tonnage dues, etc.

16. **Interest Returned on Capital Expenditure.**—In the table in sub-section 13 hereof, it will be seen that the State Government railways in the year 1901-2 made a profit of 2.81 per cent. on the capital expenditure at that time. In the subsequent years up to and including the year 1910-11, the percentages were 2.48, 3.04, 3.28, 3.91, 4.37, 4.23, 4.13, 4.18 and 4.56 respectively, rates which shew substantial increases with one exception on that for the first-named year. Since 1910-11, the rates have fallen each year with the exception of the year 1913-14, the rate for the year 1916-17 being 2.94, or 1.62 lower than that for 1910-11. The reasons for this reduction are to be found in the increases of the charges in respect of working expenses, brought about by the opening of new lines, the higher cost of materials, and the raising of the rate of wages, while in the last three years additional expenses have been incurred in consequence of the war. The return on the capital invested as at the 30th June, 1917, was not equal to the interest payable for that year, the rate of which was 3.83 per cent. This average, however, does not accurately express the position. At an early period the necessity for the construction of railways to open up undeveloped districts was recognised, and the money had to be raised at a very high rate of interest. It may be noted, however, that although the loans made for expenditure on railway construction and equipment very largely increase the amount of the public debt of the States, forming, in fact, three-fifths of the total debt, the money borrowed has not been sunk in undertakings which give no return, but has been expended on works which are increasingly reproductive, yielding in most cases a direct return on the capital expended, and representing a greater value than their original cost. In Europe the national debts of various countries have been incurred principally through the expenses of prolonged wars, and the money has gone beyond recovery, but in Australia the expenditure by the States up to a recent period is represented to a large extent by public works which pay a direct return. In addition to the purely commercial aspect of the figures relating to the revenue and expenditure of the State railways, it is of great importance that the object with which many of the lines were constructed should be kept clearly in view; the anticipated advantage in building these lines has been the ultimate settlement of the country rather than the direct returns from the railways themselves, and the policy of the State Governments has been to use their railway systems for the development of the country's resources to the maximum extent consistent with the direct payment by the customers of the railways of the cost of working and interest charges.

(i.) *Profit or Loss after Payment of Working Expenses and Interest.*—The net revenue of the Government railways of each State after payment of working expenses is shewn in sub-section 13 hereof. The following table shews the amount of interest payable on expenditure from loans on the construction and equipment of the railways of each State, the actual profit or loss after deducting working expenses and interest and all other charges from the gross revenue, and the percentage of such profit or loss on the total capital cost of construction and equipment.

It will be seen that during the two years ended 30th June, 1914, all the States, with the exception of Queensland in 1913, and Tasmania for both years, shew a net profit after paying working expenses and interest. In the year ended 30th June, 1915, only two States, New South Wales and Queensland, shew a profit, all the other States a loss, while in the two years ended 30th June, 1917, all the States shew a loss.

The losses during the last two years for all the States are due to the causes to which allusion has already been made in the remarks as to increases in the working expenses of the railways (see pp. 684 and 685 *ante*). It will be observed in the following table that the interest charges in 1917 were £1,166,278 higher than they were in 1915.

1. Inclusive of Oodnadatta line to 31st December, 1910. 2. + Indicates a profit; - indicates a loss. 3. Allowing for payment of special expenditure and charges (see sub-section 11 above).

**17. Passenger Fares and Goods Rates.**—Fares and rates are changed from time to time to suit the convenience and varying necessities of the railways, but, as traffic is developed and revenue increases, they are in many cases reduced to an extent consistent with the direct payment by the customers of the railways of the cost of working and interest charges.

(i.) *Passenger Fares.* On the Australian Government railways two classes are provided for passenger traffic. The fares charged may be classified as follows:—(a) Fares between specified stations (including suburban fares). (b) Fares computed according to mileage rates. (c) Return, periodical, and excursion fares. (d) Special fares for workmen, school pupils, and others. Fares in class (a) are issued at rates lower than the ordinary mileage rates. Fares in class (b) are charged between stations not included in class (a). On the average, mileage-rate fares run about 1.8 pence per mile for first-class and about 1.2 pence per mile for second-class single tickets. In New South Wales, Victoria, and Queensland the mileage rates are based upon a tapering principle, i.e., a lower charge per mile is made for a long journey than for a short journey. In Victoria and Western Australia, return fares are generally about  $1\frac{1}{2}$  to  $1\frac{3}{4}$  times the single fare, and the second-class are about 30 to 45 per cent. lower than the first-class fares. In New South Wales, Queensland, South Australia, and Tasmania the issue of ordinary return tickets outside the suburban areas has now been discontinued. Special excursion return tickets are, however, issued at certain times of the year, subject to restrictions as to break of journey and trains available for such tickets.

The following table shows the passenger fares for different distances charged in each State, between stations for which specific fares are not fixed :—

### ORDINARY PASSENGER MILEAGE RATES ON STATE RAILWAYS, 1917.

1. Inclusive of suburban rates up to 34 miles.

(ii.) *Parcel Rates.* In all the States parcels may be transmitted by passenger train upon payment of the prescribed rates, which are based upon weight and distance carried. The rates vary slightly in the different States. In New South Wales they range from threepence for a parcel not exceeding 3 lbs. for any distance up to 25 miles, to twelve shillings and fivepence for a parcel weighing from 85 lbs. to 112 lbs., for a distance of 500 miles. In Victoria the charge for a parcel weighing from 84 lbs. to 112 lbs. for a distance over 450 miles is twelve shillings and fivepence. The rate in Queensland for a parcel weighing from 85 to 112 lbs. for 500 miles is thirteen shillings; in South Australia for 550 miles thirteen shillings and sixpence; in Western Australia for 500 miles fourteen shillings; and in Tasmania for a distance of 250 miles the rate is five shillings and sixpence.

(iii.) *Goods Rates.* The rates charged for the conveyance of goods and merchandise may generally be divided into three classes, viz.:—(a) Mileage rates, (b) District or "development" rates, and (c) Commodity rates. In each of the States there is a number—ranging from 8 in Victoria to 15 in Tasmania—of different classes of freight. Most of the mileage rates are based upon a tapering principle, i.e., a lower charge per ton-mile is made for a long haul than for a short haul; but for some classes of freight there is a fixed rate per mile irrespective of distance. District rates are charged between specified stations and are somewhat lower than the mileage rates. In addition to the ordinary classification of freights under class (a), certain commodities, such as wool, grain, agricultural produce, and crude ores, are given under class (c) special rates, lower than the mileage rates.

Space will not permit of exhibiting a complete analysis of goods rates in the several States. As an indication of the range and amount of such rates the subjoined tables are given. The first table shews for each State the truck-load rates charged for hauls of different distances in respect of agricultural produce not otherwise specified; these special rates are here given for this class of produce, since it is generally forwarded in truck-loads.

### RATES FOR AGRICULTURAL PRODUCE IN TRUCK-LOADS ON STATE RAILWAYS, 1917.

1. Maximum freight on highest class goods to Western stations is 200 shillings per ton.

The classification of commodities varies in the several States. Generally, the highest-class freight includes expensive, bulky, or fragile articles, while the lowest-class comprises many ordinary articles of merchandise, such as are particularly identified or connected with the primary industries of each State.

In New South Wales, for example, the highest-class freight comprises such articles as boots, drapery, drugs, groceries, furniture, liquors, crockery and glassware, cutlery, ironmongery, confectionery, and carpets. In the same State the lowest-class freight includes agricultural produce, ores, manures, coal, coke, shale, firewood, limestone, stone, slates, bricks, screenings, rabbit-proof netting, timber in logs, and posts and rails.

18. **Numbers and Description of Rolling Stock, 1916-17.**—The following table shews the rolling stock in use on the State Government railways in each State, classified according to gauge:—

**ROLLING STOCK ON STATE GOVERNMENT RAILWAYS IN EACH STATE,  
CLASSIFIED ACCORDING TO GAUGE, 1916-17.**

1. Including three motor coaches, one steam and two gasoline. 2. Including one gasoline motor coach. 3. Including seven rail and two road motors. 4. Including three motor coaches, two steam and one gasoline.

19. **Number of Railway Employees.**—The following table shews the number of employees in the Railway Departments of each State in the year 1901 and in each year from 1912 to 1917 inclusive, classified according to (a) salaried staff, and (b) wages staff.

From these figures it will be seen that there has been a steady increase in the number of persons engaged in the Railway Departments of the several States. During the period from 1901 to 1917, the total has increased from 42,270 to 86,860—an increase of 44,590, or over 105 per cent. The largest numerical increase for the individual States was that of New South Wales, viz., 22,197. It will be observed, however, that the numbers of employes in 1916-17 were less in all the States, excepting Queensland, than they were in the previous year, the difference amounting to 6716.

Separate returns for salaried and wages staff are not available for South Australia prior to 1916-17; the number of salaried staff is therefore included in the wages staff.

**STATE RAILWAYS.—NUMBER OF EMPLOYEES IN RAILWAY DEPARTMENTS,  
1901 and 1912-17.**

State.	1900-1.		1912-13.		1913-14.		1914-15.		1915-16.		1916-17.

1. Not available. 2. Including all accidents which occurred on railway premises as well as those caused through train accidents and movement of rolling stock.

**(D) Graphical Representation of Government Railway Development.**

**1. General.**—Its railways are so important a factor in the development of Australia that it has been deemed desirable to graphically represent the main facts of their progress from 1860 onwards. To this end the graphs shewn on pages 654 to 656 have been prepared. The distribution of the railways is shewn on the map on page 653.

2. **Capital Cost and Mileage Open** (page 654).—The graph shows that the ratio between these elements was, naturally enough, very variable from 1860 to 1870, consequent upon progressive decrease in cost of construction. It then became subject to a more regular change, implying reduction of average cost, though in recent years a slight increase has been in evidence.

3. **Cost per Mile Open**.—The fluctuations in cost per mile open from 1860 are clearly indicated by the graph on page 654. In 1855 the cost per mile open was no less than £28,430; by 1858 it had fallen to £17,752, when it rose again to a maximum of £35,958 in 1862. It then diminished rapidly till 1885—when it reached £10,074 per mile—rose to £10,244 in 1886, then fell slowly till 1888, when it amounted to £10,092 per mile. Again rising, this rate attained to £10,481 in 1892, since when it has, on the whole, been declining, reaching its lowest value, £9465, in 1911. In 1912, 1913, and 1914 it rose to £9544, £9665, and £9820 respectively, but fell in 1915 to £9632. In 1916 it rose to £9895, and in 1917 was £9901.

4. **Gross Revenue**.—This graph (page 654) exhibits considerable irregularities, the most striking of which are the maxima at 1892, 1902, 1914 and 1916. The fall commencing in 1892 was in consequence partly of the commercial crisis and partly of the then droughty conditions of several of the States, while that of 1902-3 was due to drought. In the latter case the recovery was very rapid, and there has been a continuous rise up to the year 1914. In 1915, there was a fall amounting to £1,016,421. In 1916, the increase over 1915 was £1,260,646, while in 1917 there was an increase of £813,479 over the previous year.

5. **Working Expenses**.—In this case the graph (page 654) has the same characteristics as those of gross revenue. It should be noted, however, that working expenses have been increasing during the last three years at a greater rate than gross revenue, owing to increases in wages and the higher cost of materials.

6. **Net Revenue**.—This graph (page 654) shews a fairly constant rate of increase up to 1900. Thence to 1903 there was a continuous fall, which was followed by a rapid rise to 1907. In 1911 and 1914 there were maxima, followed by a fall in 1915 and a rise in 1916. In 1917 there was a slight fall.

7. **Percentage of Working Expenses on Gross Revenue**.—This is shewn for each State and for the Commonwealth, from the year 1855, on page 655. The curve for the Commonwealth shews considerable fluctuations, but points also to the fact that, although a slight rise occurred in 1908, there was from 1903 to 1907 a rapid, and therefore very satisfactory, decline in the percentage of working expenses to gross revenue; since 1907, however, there has been a steady increase up to 1915. In 1916 the percentage slightly declined, but rose again in 1917. In the case of the individual States it will be seen that the curves shew considerable fluctuations, particularly in the early years of the period under review.

8. **Percentage of Net Revenue on Capital Cost**.—For the Commonwealth and States, from the year 1855, this graph is shewn on page 656. After exhibiting somewhat remarkable oscillations in the earlier years, and less marked ones between 1885 and 1900, and also a rapid fall to 1903, the curve for the Commonwealth from that year shews a well-marked increase until the year 1908, a slight fall occurring in that year and in 1909. Maxima were reached in 1865, 1877, 1881, 1907, and 1911—viz., 3.44, 3.71, 4.12, 4.37 and 4.46 per cent. Since 1911 there has been, with one exception in 1914, a continuous fall.

For the individual States the results are in general very satisfactory up to 1911. The greatest maximum percentage attained by each of the States in any year during the period under review is as follows:—New South Wales 5.31 in 1881, Victoria 4.18, Queensland 4.51, and South Australia 6.47 in 1911, Western Australia 11.48 in 1896, and Tasmania 2.49 in 1913. Since 1911 (1913 in the case of Tasmania) the States have shewn varying and declining rates. The effect of the drought of 1915 is discernible, also the rise of wages and higher cost of materials, to which allusion has already been made.

The remarkable maximum for Western Australia in 1896 is consequent upon the large use made of the railways at the time of the development of the Western Australian goldfields.

9. **General Indications of Graphs.**—Reviewing the cost of railways, as a whole, it may be noted that at the undermentioned dates the average cost per mile open was as follows:—

**STATE RAILWAYS.—AVERAGE COST PER MILE OF LINE OPEN, 1857 to 1917.**

**COMMONWEALTH.**

Date ... ..	1857.	1867.	1877.	1887.	1897.	1907.	1917.
	£	£	£	£	£	£	£
Cost per mile ...	18,462	21,775	13,244	10,106	9,818	9,620	9,901

While the sinister influence of the drought of 1902 is strikingly shewn in the curves (a) by the fall in the gross and net revenue in 1902-3, (b) by the fall in the percentage of net revenue on capital cost, and (c) by the increase of working expenses on gross revenue, the rapidity of recovery is even more striking, and goes to indicate the great elasticity of the economic condition of the Commonwealth. Although the percentage of net revenue on capital cost during the year 1916-17 has been exceeded in previous years, nevertheless it is satisfactory that the State Government railways, necessarily constructed largely in accordance with a policy of widespread development of Australia's resources rather than as mere commercial enterprises, and costing so large a sum as £204,202,437 for construction and equipment up to the 30th June, 1917, should yield a return of no less than 2.94 per cent. It should be mentioned that the graphs for the Commonwealth include the Federal railways.

**(E.)—Government Railways Generally.**

1. **Rolling Stock.**—In the following table particulars of the numbers of the rolling stock employed on both the Federal and State Government railways are set out, classified according to gauge, as at the 30th June in the years 1901, 1906, 1911, and 1917 respectively, together with the percentage of the numbers for each gauge on the total for the mainland. For geographical reasons the figures for Tasmania are shewn separately from those for the mainland.

In the sixteen years under review the percentages of the numbers of locomotives for each gauge on the total number of locomotives on all Government railways on the

mainland have undergone the following changes: on the 5-ft. 3-in. gauge the percentage has fallen by 7.37 per cent., the 4-ft. 8½-in. gauge increased by 10.19, and the 3-ft. 6-in. gauge fallen by 3.13 per cent.

As regards passenger vehicles the alterations are as follow: on the 5-ft. 3-in. gauge the percentage has fallen by 10.19 per cent., the 4-ft. 8½-in. gauge increased by 11.54 and the 3-ft. 6-in. gauge fallen by 1.77 per cent.

In the case of vehicles other than passenger the changes have been small, the 5-ft. 3-in. gauge percentage having fallen 0.03, the 4-ft. 8½-in. gauge risen by 0.53 and the 3-ft. 6-in. gauge fallen by 0.77 per cent.

**2. Railway Mileage Open for Traffic.**—The Government railway mileages open for traffic, classified according to gauge, as at the 30th June in each of the years 1901, 1906, 1911, and 1917, are set out in the following table, which gives as well the percentages of each mileage on the total on the mainland, the figures for Tasmania being shewn separately, as in the case of the preceding table relating to rolling stock:—

**RAILWAY (ROUTE) MILEAGE OF THE STATE AND FEDERAL RAILWAYS, CLASSIFIED  
ACCORDING TO GAUGE, AS AT 30th JUNE, IN EACH OF THE YEARS 1901,  
1906, 1911, and 1917, WITH PERCENTAGES ON TOTAL FOR MAINLAND.**

Gauge.	1901.		1906.		1911.		1917.	
	Miles.	%	Miles.	%	Miles.	%	Miles.	%
<b>Mainland—</b>

## (F.)—Private Railways.

1. **Total Mileage Open, 1916-17.**—As has been stated in a previous part of this Section (see A. 8) a number of private railway lines have from time to time been constructed in the Commonwealth. By far the greater proportion of such lines, however, has been laid down for the purpose of hauling timber, sugar cane, coal, or other minerals, and is not generally used for the conveyance of passengers or for public traffic; in many cases the lines are often practically unballasted and are easily removable, running through bush and forest country in connection with the timber and sugar-milling industries, and for conveying firewood for mining purposes. Many of these lines may perhaps be said to be rather of the nature of tramways than of railways. Private railways referred to herein include (a) lines open to the public for general passenger and goods traffic; and (b) branch lines from Government railways and other lines which are used for special purposes and which are of a permanent description. Other lines are referred to in the part of this Section dealing with Tramways (see § 3, *Tramways*).

The following table gives particulars of private railways in the Commonwealth open for traffic during 1916-17. A classification of these lines according to their gauge has already been given (see page 661).

## MILEAGE OF PRIVATE RAILWAYS OPEN, 1916-17.

Particulars.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	C'wealth.

3. New South Wales.—In this State the mileage of private railways open to the public for general traffic at the end of 1916 was 183.08, and of lines used for special purposes, 161.65 miles. Most of these lines were constructed primarily for the purpose of conveying coal from the mines to the Government railway systems. Particulars for the year 1916 of the operations of lines open for general traffic are given, so far as available, in the table on page 712.

(i.) *Private Railways Open for General Traffic.* The most important of the lines open for general traffic are as follows:—(a) *The Deniliquin-Moama Line.* In 1874 permission was granted by the New South Wales Government to the Deniliquin and Moama Railway Company to construct a line forty-five miles long from Deniliquin, in the Riverina district, to Moama, connecting with the Victorian Railway system at the Murray Bridge, near Echuca. The line was opened in 1876, the land required being granted by the Government. (b) *The Cockburn-Broken Hill Line.* This line is owned by the Silverton Tramway Company. It was opened in 1888, and connects Broken Hill with the South Australian railway system, having a total length of 35.60 miles. (c) *East Greta Lines.* These lines, belonging to the East Greta Coal Mining Company, run from East Greta Junction, on the Northern line of the Government railways, to Stanford Merthyr, a distance of 7.32 miles, and from Aberdare Junction to Cessnock, 12.08 miles—a total of 19.40 miles. (d) *The New Redhead Coal Company's Railway.* The lines owned by this company branch from the Northern line of the Government railways, and run from Adamstown to Burwood Extended Colliery, thence to Belmont, and from Burwood Junction to Dudley Boundary and branches, a total distance of 12.00 miles. The lines are worked by the Railway Department, coal wagons being supplied in part by the coal companies using the line. The colliery companies using the line pay a way-leave for right to run their coal over the line, and the Railway Commissioners allow the New Redhead Company a proportion of the revenue from the passenger and goods traffic. (e) *The Seaham Coal Company's Railway.* This line runs from Cockle Creek to West Wallsend and Seaham Collieries, and has a total length of 5.75 miles. (f) *Hexham-Minmi Railway.* This line branches from the Northern line of the Government railways at Hexham, and has a length of 6.08 miles. (g) *The Commonwealth Oil*

*Corporation's Railway.* This line runs from Newnes Junction on the Great Western line of the Government railways to the company's refinery, a distance of 33 miles. The Shay geared type of locomotive is in use on this line. (h) *The Warwick Farm Line* is a short line, three-quarters of a mile in length, connecting the Government line near Liverpool with the Warwick Farm Racecourse. Government rolling-stock is used. (i) *The Goondah-Burrinjuck Line* is a line 26.25 miles in length built and worked by the Public Works department in connection with the dam in course of construction at Burrinjuck.

In addition to the lines referred to above, legislative sanction was obtained in 1890 for the construction of a private line from the flux quarries at Tarrawingee to the Broken Hill line, a distance of 40.09 miles. The line was purchased by the Government in 1901, and is operated by the Silverton Tramway Company under lease from the Chief Commissioner, who pays the working expenses and receives the ordinary earnings and one-half the net receipts on special and holiday traffic. The mileage of this line is included in that of the Government Railways.

4. **Victoria.**—In Victoria there are two private railways open for general traffic. (a) Kerang-Koondrook tramway, opened in 1889. The cost of construction of this line to the end of September, 1917, was £39,429, paid out of a loan advanced by the Victorian Government. The total length is 13.94 miles. The line is at present controlled by the Kerang Shire Council, but proposals have recently been made for its transfer to the Railway Department. (b) Yarra Junction to Powelltown. This line has a length of 11 miles, and is worked mainly for timber purposes.

A line running from Elsternwick to Oakleigh, a distance of about 5 miles, was constructed by a private company many years ago. It was never in general use, having only an occasional train running over it on special occasions, and has since been partially dismantled.

5. **Queensland.**—In this State private railways open for general traffic may be grouped under two heads:—(i.) Lines constructed primarily for mining purposes or for the transport of sugar-cane, and (ii.) Shire tramways.

(i.) *Mining Railways.* (a) *The Chillagoe Railway.* The most important of these is the Chillagoe railway, constructed under the Mareeba to Chillagoe Railway Act 1897, and opened in 1901. This line runs from Mareeba, on the Cairns railway, to Mungana, a distance of 102.73 miles. (b) *The Stannary Hills Line.* This line branches from the Chillagoe railway at Boonmoo and runs to Rocky Bluff, via Stannary Hills, a total distance of 21 miles. The gradients on this line, which has a gauge of 2 feet, range as high as 1 in 27, while the radius of some of the curves is as low as  $1\frac{1}{4}$  chains. An additional length of 8 miles has been surveyed with a view to extending the line.

(ii.) *Shire Tramways.* Under Part XV. of the Local Authorities Act of 1902 provision is made whereby not less than one-third of the ratepayers in any district may petition the local authority to apply to the Governor for the constitution of a tramway area. The Governor may define the area and may also approve of the plans and specifications of the proposed tramway. The amount which may be advanced by the Government for the construction or purchase of a tramway may not exceed a sum equal to £3000 for every mile of its length. As regards repayment of loans, no sum need be paid during the first three years, but after the expiration of that period the principal and interest must be repaid by half-yearly instalments on the basis provided for by the "Local Works Loans Act 1880 to 1899." For the purpose of raising the money to pay these instalments the local authority may levy a rate upon all ratable property within the tramway area. The money required for the tramway may be raised by the local authorities by the issue of debentures.

6. **South Australia.**—In this State there are no private railways open for general traffic. There is a private line owned by the Broken Hill Proprietary Company, running from Iron Knob to the seaboard near the head of Spencer's Gulf, a distance of 34 miles. The line is utilised for the carriage of ore for use in connection with the smelting works at Port Pirie and the steel works at Newcastle. There is also a line from Marion Bay, having a length of 5 miles, used for mining purposes.

7. **Western Australia.**—Owing to the Government's past difficulty in constructing lines urgently required for the development of the country, private enterprise was encouraged to undertake the work of construction on the land-grant principle, and two trunk lines were thus constructed. The greater part of the private lines now open, however, have been constructed in connection with the timber industry. (i.) *The Midland Railway.* This line is 277 miles in length, and runs from the Midland Junction, ten miles from Perth, to Walkaway, where it joins the Government line running to Geraldton. It was constructed under a concession of 12,000 acres of land per mile of line constructed, to be selected along the entire route of the railway. (ii.) *The Great Southern Railway.* This line, which was built by private enterprise under the land-grant system, is 242 miles in length, and was acquired by the Government by purchase on the 1st January, 1897. The total price paid, with all the interests of the private company and of the original concessionaire, was £1,100,000, which was divided by the Government for book-keeping purposes into £300,000 for the land and £800,000 for the railway. (iii.) *Millar's Timber Trading Company's Lines.* These lines have mostly been built under special timber concessions and leases. There were, at latest date available, in all eight lines situate in various parts of the State extending into the bush, whence logs are brought to the mills. The total length of these lines was approximately 265.95 miles. (iv.) *Other Lines.* There are also several other lines in various parts of the State used chiefly in connection with the timber industry. These are specified in the tabular statement on page 708.

8. **Tasmania.**—In this State there are three private lines open for general traffic, all of which are situated in the western part of the island.

(i.) *The Emu Bay Railway Company.* The lines owned by this company run from Burnie to Waratah, from Guildford to Zeehan, and from Rayna to Dundas, and have a total length of 102.94 miles.

(ii.) *The Mount Lyell Mining and Railway Company.* The Mount Lyell railway runs from Regatta Point, Strahan, to Queenstown, and the North Mount Lyell line from Kelly Basin to Linda. The former line, 21.45 miles in length, was constructed in 1895-6, while the latter line, 27.80 miles long, was taken over from the North Mount Lyell Copper Company on the amalgamation of the two companies in 1903. The line from Kelly Basin to Linda is now run only intermittently.

(iii.) *The Magnet Silver Mining Company's Railway.* This line runs from Magnet Junction, near Waratah, on the Emu Bay Company's line, to Magnet, a distance of 10 miles.

9. **Operations of Private Railways, 1916-17.**—The tabular statement given below shews particulars, so far as returns are available, for the year 1916-17, of all private railways open to the public for general traffic in the Commonwealth:—

10. **Comparative Railway Statistics.**—On page 660 *ante* a table is given shewing the railway facilities in 1917 in the States, in the Northern Territory, and in the Commonwealth, the railway mileage open for traffic being compared both with the area and population.

In the table below the comparative railway statistics of a like character are given in respect of the principal countries of the world at certain dates. The latter have been taken so that the latest accurate figures for both population and railway mileage could be brought into relation.

**COMPARATIVE RAILWAY STATISTICS IN RESPECT OF CERTAIN COUNTRIES IN EUROPE, ASIA, AFRICA, NORTH AND SOUTH AMERICA, AND AUSTRALASIA, AT THE UNDERMENTIONED DATES.**

Country.	Year.	Miles of Railway.	Population.	Area in Square Miles.	Miles of Railway.	
					Per 1000 of Popu- lation.	Per 1000 Sq. Miles of Territory.

1. Including lines of "local" interest. 2. Exclusive of Balearic and Canary Islands.

It will be seen from the above table that per 1000 of population the Commonwealth of Australia had the greatest mileage (in 1917), 5.06 miles; the next in magnitude being Canada (1914) with 3.81 miles, New Zealand (1916) with 2.72 miles, Argentina (1914) with 2.70 miles, and the United States (1915) with 2.53 miles.

The least mileage per 1000 of population is shown in the case of India (1911) with 0.10 mile, followed by Egypt (1917) with 0.23 mile of railway.

With regard to the mileage per 1000 square miles of territory, Belgium (1912) with 474.90 miles was easily first, followed by Switzerland (in 1915) with 221.40 miles, the

United Kingdom (in 1915) with 194.93 miles, Germany (in 1914) with 188.90 miles, and the Netherlands (in 1915) with 183.83 miles.

The least mileage open per 1000 square miles is that of Asiatic Russia (in 1913) with 1.59 miles, the next being 4.95 miles in the case of Brazil (1915).

The mileages in the Commonwealth of Australia and the Dominion of Canada per 1000 square miles of territory are very close to each other, being 8.33 miles (1917) and 8.26 miles (1914) respectively, the latter being slightly less than a tenth of the United States, 85.34 miles (in 1915).

### § 3. Tramways.

1. **General.**—Tramway systems are in operation in all the States of the Commonwealth, and in recent years considerable progress has been made in the adoption of electrical traction, the benefit of which is now enjoyed by a number of the principal towns of the Commonwealth.

There are also in many parts of Australia private lines which are used for special purposes, usually in connection with the timber, mining, or milling industries. These lines are usually termed tramways, but they are really private railways, the traffic on which has nothing in common with that of a street tramway used for the conveyance of passengers. Though efforts have been made to collect particulars of these lines, the returns are generally too incomplete for publication.

(i.) *Total Mileage Open and Classification of Lines.* The following table shews the total mileage of tramway lines open for general passenger traffic in each State and in the Commonwealth for the year 1916-17, classified (a) according to the motive power utilised and (b) according to the nature of the authority by which the lines are controlled:—

#### TRAMWAYS.—CLASSIFICATION OF MILEAGE OPEN FOR PASSENGER TRAFFIC, 1916-17.

Total	...	...	227.48	136.88	47.58	85.69	78.18	50.29	626.10

1. 16.36 miles included in South Australian Government railway mileage.

2. **New South Wales.**—In this State the tramways, with but few comparatively unimportant exceptions, are the property of the Government, and are under the control of the Railway Commissioners.

(i.) *Government Tramways.* In Sydney and suburbs the Government tramways are divided into distinct systems. There were in June, 1917, seven such systems in operation within the metropolitan area, the most important being the city and suburban lines, 112.16 miles in length (204.95 miles single track); the North Shore line, 20.38 miles in length

(34.95 miles single track); the Ashfield to Mortlake line, 8.47 miles in length (15.11 miles single track); Manly to the Spit, Brookvale, and Narrabeen, 10.73 miles (14.58 miles single track); and Rockdale to Brighton-le-Sands, 1.25 miles (single track). The last-mentioned line was purchased from a private company and opened for traffic on 7th June, 1914. All of these systems are now operated by electricity. There are two systems on which the motive power used is steam, namely—(a) from Kogarah to Sans Souci, 5.56 miles in length (6.98 miles single track), and (b) from Arncliffe to Bexley, 2.63 miles long (single track).

There are also Government steam tramways in operation at Newcastle, Broken Hill, Parramatta, from East to West Maitland, and from Sutherland to Cronulla. The gauge of line on all the Government tramways is 4 feet 8½ inches.

(a) *Sydney Tramways.* In October, 1862, a horse tramway, 1½ miles long, was opened for traffic in Sydney. Owing to the rails being laid higher than the road surface, the inconvenience thus caused to other traffic necessitated its removal under the authority of an Act passed in November 1865, and it was not until the 15th September, 1879, that the first steam tramway was opened, running from Bridge-street to Hay-street via Elizabeth-street. In the following few years the steam tramways were considerably extended. The electric system was commenced by the opening of a section of the North Sydney lines on the 20th September, 1893. This was followed by the opening of the Ocean-street-Rose Bay line on the 4th October, 1898, and by the opening of the George-street-Pyrmont line on the 8th September, 1899, which introduced the electric system into the city. The tramways in the heart of the city, running along King-street to the suburb of Woollahra, as well as those in North Sydney, were originally worked by underground cables, and have since been converted into electric lines on the overhead trolley system. As already stated the whole of the steam tramways in Sydney and suburbs, with the exception of the Kogarah-Sans Souci and the Arncliffe-Bexley lines, have now been converted into electric lines, and provision for the extra power required for the electrification of the former of these lines has been made at the central power station.

(b) *Other Tramway Systems.* In Newcastle the first section of the tramways, from Perkins-street to Plattsburg, was opened on 31st December, 1887; the total length open on the 30th June, 1917, was 34.07 miles (44.42 miles single track). At Broken Hill and Parramatta the first sections of the tramways were opened in 1902. On the 30th June, 1917, the mileage open at Broken Hill amounted to 10.05 miles (11.44 miles single track), and at Parramatta to 6.69 miles (single track). The line from East to West Maitland, 4.59 miles long (single track), was opened in February, 1909. Further particulars are given below.

(c) *Particulars of all Government Tramways.* The following table shews the total length, the capital cost, the gross revenue, working expenses, net earnings, and the percentages of working expenses on gross revenue, and of net earnings on capital cost, for the financial years 1901-2 and 1912-17:—

**NEW SOUTH WALES.—PARTICULARS OF WORKING OF GOVERNMENT TRAMWAYS,  
1901-2 and 1912-17.**

Year ended the 30th June.	Total Length of Lines Open (Route).	Capital Expended on Lines Open.	Gross Revenue.	Working Expenses.	Net Earnings.	Percentage of Working Expenses on Gross Revenue.	Percentage of Net Earnings on Capital Cost.
	Miles.	£	£	£	£	per cent.	per cent.
1901-2	103.94	2,829,363	631,757	541,984	89,773	85.79	3.19
1912-13	207.88	6,699,305 <sup>1</sup>	1,754,566	1,572,190	182,376	89.61	2.94
1913-14	212.16	7,628,653 <sup>1</sup>	1,934,164	1,669,033	265,131	86.29	3.66
1914-15	219.81	7,970,293 <sup>1</sup>	1,986,060	1,611,287	374,773	81.13	4.70
1915-16	220.83	8,166,423 <sup>1</sup>	1,991,628	1,602,650	388,978	80.47	4.76
1916-17	223.98	8,309,629 <sup>1</sup>	2,008,539	1,691,367	317,172	84.21	3.82

<sup>1</sup> £47,455 of this sum has been paid from the Consolidated Revenue, and no interest is payable thereon.

The net result, after providing for all working expenses and £335,361 for interest on the capital invested, was a deficit of £18,189 in 1916-17, as compared with a surplus of £86,292 in the preceding year. During the year 1916-17, 295,303,714 passengers were carried, an increase of 3,281,940 as compared with the previous year.

(d) *Particulars of Different Systems of Government Tramways.* In the subjoined statement particulars are given of the working of the electric and steam tramways in Sydney, and of other tramways under Government control :—

**NEW SOUTH WALES.—PARTICULARS OF WORKING OF VARIOUS GOVERNMENT TRAMWAYS, 1916-17,**

1. + indicates a profit; — indicates a loss.

The total capital cost shewn in the preceding table was made up as follows :—

**CAPITAL COST OF NEW SOUTH WALES GOVERNMENT TRAMWAYS AS AT 30th JUNE, 1917.**

Permanent Way.	Rolling Stock.	Power-house, Sub-stations, and Plant.	Machinery.	Work-shops.	Furniture.	Store Advances Account.	Total.
£	£	£	£	£	£	£	£
4,140,616	1,816,822	1,808,218	130,007	215,574	2,392	196,000	8,309,629

The average cost per mile open was £18,486 for permanent way and £18,613 for all other charges, making a total of £37,099 per mile.

During the year 1916-17, four new extensions, amounting in all to a length of 3.20 miles, were opened for traffic. On the 30th June, 1917, two extensions, having a total length of 1.88 miles, were under construction.

(e) *Sydney Electric Tramways.* The current for the operation of the city and sub-urban tramways is generated at the power-houses at Ultimo and White Horse Bay, which have been erected at a total cost of £1,808,218, including the cost of the sub-stations and plant. The total output of the power-houses, for both lighting and traction purposes, during the year 1916-17, was 94,326,199 kilowatt-hours, of which the direct-current supply was 352,481, and the alternating current 93,973,718 kilowatt-hours. The following table gives particulars of the working of the electric tramways for the financial years 1912-13 to 1916-17 :—

**NEW SOUTH WALES.—PARTICULARS OF SYDNEY ELECTRIC TRAMWAYS,  
1912-13 to 1916-17.**

1917 ...	1,853,399	1,535,423	317,976	82.84	1,398	9,295

(ii.) *Private Tramways.* A private steam tramway passes through the township of Parramatta. Commencing at the park gates, it runs as far as the Duck River, a distance of 3½ miles, where it connects with the Parramatta River steamers, conveying passengers and goods to and from Sydney. This line, the gauge of which is 4 ft. 8½ in., was opened for traffic in 1883. In 1916 the number of tram miles run was 18,200, and the number of passengers conveyed 75,640.

(iii.) *Sydney Harbour Ferries.* As the ferry services on the waters of Port Jackson are mainly subsidiary to the suburban railway and tramway systems, it has been thought advisable to include them here rather than under Shipping. Returns for the year 1916-17 were received from four companies, and shew that these companies had 68 boats in commission, which were licensed to carry a total of 45,996 passengers, or an average of 676 per boat and per trip. The total number of passengers carried during the year is stated as 36,112,767, an average of 98,937 per day. In addition to the ordinary passenger traffic there are two lines providing for vehicular traffic, which afford the only rapid means of transit for such traffic between the city and the northern suburbs. The four companies employed during the year a total of 971 persons. The gross revenue during 1916-17 amounted to £377,463, and the expenditure to £313,135, thus giving a net revenue of £64,328. The services are well managed, and the boats constructed during recent years—double-ended screwboats—are claimed to be superior in size and equipment to boats employed on similar service in any part of the world.

3. *Victoria.*—In Melbourne there are several tramway systems carried on under the control of various authorities, the most important being the cable system worked by the Melbourne Tramway and Omnibus Company up to the 1st July, 1916, and since that date by the Melbourne Tramway Board, to which reference will be made further on. There are also five lines of electric tramways, viz.:—(a) St. Kilda to Brighton, belonging

to the Government and under the control of the Railway Commissioners; (b) Flemington Bridge to the Saltwater River and Keilor Road, owned by a private company; (c) lines connecting Prahran, Windsor, St. Kilda and Elsternwick with Glen Huntly, Caulfield, Malvern, Glenferrie and Kew, controlled by the Prahran and Malvern Tramways Trust; (d) lines from Queensberry Street, Melbourne, to Bell Street, Coburg, and Moreland Road to Baker's Road, Fawkner, owned by the Melbourne, Brunswick and Coburg Tramways Trust, and (e) Princes Bridge to Burwood; Burke Road to Boundary Road, Wattle Park; and Bridge Road, Richmond to Power Street, owned by the Hawthorn Tramways Trust. There is also a cable tramway, two and a-quarter miles in length, between Clifton Hill and Preston, owned by the Northcote municipality. There is a short steam tramway, about one mile long, at Sorrento, and there are also systems of electric tramways at Ballarat, Bendigo, and Geelong, constructed and run by private companies. A number of tramways has been constructed for special purposes in various parts of the State under the provisions of the Tramway Act 1890. These tramways correspond to the description of private railways referred to in sub-section 1 hereof. An electric tramway between Sandringham and Black Rock, 2.38 miles in length, is under construction by the Railway Department. A tramway to the Zoological Gardens, with horse traction, is operated by the Melbourne Tramway Trust.

(i.) *Melbourne Cable Tramways.* A short account of the formation of the Melbourne Tramway and Omnibus Company, and of the Tramway Trust, will be found in previous issues of this book. (See Year Books No. 7, page 652, and No. 9, page 679.) The company was required by the original Act, as amended in 1892, to complete the tramways by the end of the year 1893, and in return a thirty-two years' lease of the tramways was granted to it, dating from the 1st July, 1884—when the liability for interest on the loans commenced—and expiring on the 1st July, 1916. The total amount the Trust was empowered to borrow was £1,650,000, which was raised in London by means of debentures bearing interest at  $4\frac{1}{2}$  per cent. The premiums received amounted to £55,794, making a total of £1,705,794. This amount had been expended by the end of the year 1893, when further loan expenditure ceased. Up to the 30th June, 1917, the total cost of construction and equipment of the tramways amounted to £1,975,314. The first line—that to Richmond—was opened to traffic on the 11th November, 1885, and the work being rapidly pushed on, the other lines were opened at short intervals, and the whole system was completed in 1891. The complete system consists of 43.68 miles of double-track cable lines, using constantly over ninety miles of wire rope, and 0.62 mile of horse tramway at Royal Park. The gauge of track is 4 feet 8 $\frac{1}{2}$  inches.

(a) *Particulars of Working.* The subjoined statement shows the tram mileage, the number of passengers carried, and the revenue and expenditure for the years 1901-2 and 1913 to 1917:—

**MELBOURNE CABLE TRAMWAYS.—PARTICULARS OF WORKING,  
1901-2 and 1913 to 1917.**

Year ended the 30th June.	Train Mileage.	Number of Passengers Carried.	Revenue.	Working Expenses.	Percentage of Working Expenses on Revenue
	No.	No.	£	£	%
1902 ... ..	9,226,883	47,261,572	474,835	269,554	56.7
1913 ... ..	11,889,473	89,359,248	795,091	386,603	48.6
1914 ... ..	12,056,510	91,438,777	823,567	400,202	48.5
1915 ... ..	11,887,462	87,707,934	736,154	404,056	54.9
1916 ... ..	11,977,916	96,702,943	805,636	411,426	51.1
1917 ... ..	12,423,929	103,118,377	843,300	462,132	54.8

On the 30th December, 1915, the Victorian Government appointed a Tramway Board of five members to take over the tramways as from 1st July, 1916, and in due course the Board entered into possession of the tramway properties. The amount of compensation to be paid to the company has been the subject of arbitration, but has not yet been settled owing to an appeal as to the amount awarded, which is still under consideration.

(ii.) *Electric Tramways.* As already mentioned, there are in Melbourne five electric tramway systems, namely (a) the St. Kilda-Brighton line, (b) the North Melbourne tramways, (c) the Prahran-Malvern Tramway Trust system, (d) the Melbourne, Brunswick and Coburg Tramway Trust system, and (e) the Hawthorn Tramway Trust system.

(a) *The St. Kilda-Brighton Line.* Under the St. Kilda and Brighton Electric Street Railway Act 1904, the Board of Land and Works was authorised to construct a tramway from St. Kilda to Brighton. The amount of interest payable on the cost of the land acquired for the tramway was guaranteed by the municipalities of St. Kilda and Brighton for a period of twenty years, and authority was given by the Act to the municipalities to levy either a general or special rate not exceeding one shilling in the pound for the purpose of paying the guarantee. The profit, if any, during the first twenty years is to be set off in reduction of the guarantee. The line was opened for traffic between St. Kilda and Park-street, Middle Brighton, on the 7th of May, 1906, and the extension to Brighton Beach was opened on the 22nd of December, following. The capital cost to the 30th June, 1917, exclusive of rolling-stock, was £107,731, and of rolling-stock £48,511, making a total of £156,242. The gauge of track is 5 ft. 3 in. The subjoined statement gives particulars of the working of this line for the financial years ended the 30th June, 1913 to 1917:—

#### ST. KILDA-BRIGHTON ELECTRIC STREET TRAMWAY, 1913-17.

Year ended 30th June.	Mileage Open (Route).	Capital Cost.	Car Mileage.	Passengers Carried.	Gross Revenue.	Working Expenses.	Interest.	Net Profit or Loss. <sup>1</sup>
		£			£	£	£	£
1913	5.13	88,133	413,939	1,916,618	16,829	15,808	3,093	—2,072
1914	5.16	95,494	541,449	2,390,949	20,516	20,850	3,333	—3,667
1915	5.16	101,726	577,468	2,718,972	22,614	19,905	3,428	— 719
1916	5.16	132,300	597,819	3,126,984	25,580	22,844	4,697	—1,961
1917	5.16	156,242	572,735	3,450,442	27,919	20,502	6,250	+1,167

1. Profit is indicated by +, loss by —.

The average fare paid per passenger was 1.93 pence in 1916-17 as against 1.95 pence in 1915-16. The gross revenue in 1916-17 was 11.70 pence per passenger car mile and £2705 per mile of single track open.

(b) *The North Melbourne Tramways*, extending through the northern suburbs to the Saltwater River and to Keilor Road, were constructed by a private company, and were opened for traffic on the 11th October, 1906. The route and track mileage for year ended 30th September, 1917, were 7.51 and 11.43 miles respectively, the gauge of line being 4 feet 8½ inches. The number of passengers carried during the same period was 3,389,329. The current used during the year for traction purposes was 768,597 kilowatt hours, while the number of persons employed was 111.

(c) *The Prahran-Malvern Tramway.* The lines have been constructed under the control of a trust, which now consists of seven members appointed from the councils of Prahran, Malvern, St. Kilda, Caulfield, Hawthorn, Kew, and Camberwell. At the 30th September, 1917, the total route mileage open was 32.06 miles, the total track mileage being 59.62 miles, and the total capital cost £740,034. The gauge of the track is 4 ft. 8½ in. The current is supplied by the Melbourne Electric Supply Company Limited at a price varying according to the consumption of current and the price of fuel. Any surplus revenue, after providing for operating expenses, interest, sinking fund and renewal reserve, is to be paid to the municipal councils interested in proportion to the car mileage run in their respective districts. The first section of the lines was opened for traffic on 31st May, 1910. During the year ended 30th September, 1917, the current used for traction purposes was 6,088,038 kilowatt hours, and the number of tram miles run was 2,804,952, the number of passengers carried 26,209,178, the gross revenue £172,306, and the working expenses £121,463. The number of cars in use was 85, and the number of persons employed 458.

(d) *The Melbourne, Brunswick and Coburg Tramways Trust.* The first section of these tramways, that between Moreland Road and Bell Street, was opened for traffic on 27th April, 1916. At the 30th September, 1917, the route and track mileages open for traffic were 7.03 and 12.29 miles respectively. During the year ended 30th September, 1917, the current used for traction purposes was 904,070 kilowatt hours, the tram miles run 538,457, the number of passengers carried 4,364,593, the gross revenue £28,674 and the working expenses £18,754. Eighteen cars were in use, and the number of persons employed was 89.

(e) *The Hawthorn Tramway Trust.* The first section of these tramways, that from Princes Bridge to Power Street, Hawthorn, was opened for traffic on 6th April, 1916, and on 30th September, 1917, the route and track mileages in operation were 11.17 and 18.00 miles respectively. During the year ended 30th September, 1917, the current used for traction purposes was 1,876,521 kilowatt hours, the tram miles run 905,275, number of passengers carried 8,152,165, the gross revenue £60,379, and the working expenses £43,844. The number of cars in use was 26 and the number of persons employed 156.

(f) *The Ballarat and Bendigo Electric Tramways* are under the control of a private company, and run along the main streets and to and from the outlying suburbs of the two cities. The total length of lines open for traffic is 21.25 route miles and 25.86 track miles, the gauge being 4 ft. 8½ in. During the year ended 31st December, 1917, 4,804,378 passengers were carried, the gross revenue being £43,884, and the working expenses £34,267. The number of cars in use was 55, and the number of persons employed was 134.

(g) *The Geelong Electric Tramways.* This line, which is privately owned, was opened for traffic on the 14th March, 1912, and up to the 31st August, 1917, the cost of construction and equipment, exclusive of generating plant, was £60,073. The system has a route and track mileage of 4.90 and 5.67 miles respectively, the gauge being 4 ft. 8½ in. The car mileage for the year ending on the last-mentioned date was 229,137 miles, and the number of passengers carried 1,216,491. For the same period the revenue was £15,055, and the expenditure £12,200.

(h) *Particulars of Working of all Electric Tramways.* The following table gives particulars of the working of all electric tramways in Victoria for each year from 1913 to 1917 inclusive:—

## VICTORIA.—PARTICULARS OF WORKING OF ELECTRIC TRAMWAYS, 1913-17.

Year.	Mileage Open for Traffic (Route).	Total Cost of Construction and Equipment.	Current Generated at Central Stations for Traction Purposes.	Tram Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	Number of Cars in Use.	Number of Employees.
	Miles.	£	Kilowatt-hrs.	No.	No.	£	£	No.	No.
1913	53.40	1,009,347	4,551,022	3,182,916	20,181,350	158,954	116,669	169	593
1914	61.85	1,082,824	6,591,628	4,110,787	28,071,661	212,036	156,404	181	735
1915	69.47	1,299,786	7,445,978	4,358,030	30,150,912	223,056	164,313	193	811
1916	83.91	1,765,854	9,553,034	5,327,895	39,928,454	288,206	206,367	235	1,009
1917	89.08	1,861,771	11,910,707	6,462,318	51,596,576	373,594	271,315	255	1,074

(iii.) *Private Tramways for Special Purposes.* There are in Victoria several tramways, or more strictly light private railways, used for special purposes, chiefly in connection with the timber, mining, and milling industries. These lines have been constructed either under authority of the Department of Public Works, pursuant to Section 36 of the Tramway Act 1890, or under leases or licenses issued by the Department of Lands and Survey, pursuant to Sections 144 and 145 of the Land Act 1901. Particulars of these lines are too incomplete for publication.

4. *Queensland.*—In this State there is a system of electric tramways running through the streets of the city and suburbs of Brisbane and controlled by a private company which has its head office in London. The total length of the Brisbane system was 41.58 route miles at the end of the year 1917. There is also a steam tramway in operation at Rockhampton having a length of 6 route miles. Particulars of Shire tramways have been given in the part of this section dealing with private railways (see p. 704).

(i.) *Brisbane Electric Tramways.* These tramways are run on the overhead trolley system, the voltage of the line current being 550. The total cost of construction and equipment to the end of the year 1916 was £1,468,906, the gauge of line being 4 ft. 8½ in. The following table gives particulars of these tramways for the calendar years 1901 and 1913-17.

## QUEENSLAND.—BRISBANE ELECTRIC TRAMWAYS, PARTICULARS OF WORKING, 1901 and 1913-17.

Year.	Mileage Open for Traffic (Route).	Cost of Construction and Equipment.	Current Generated.	Tram Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	No. of Cars in Use.	Number of Persons Employed.
	Miles.	£	Kilowatt-hrs.	No.	No.	£	£	No.	No.
1901	25.00	1...	3,192,955	2,756,443	16,183,801	111,483	64,710	79	375
1913	34.55	1,288,518	7,013,962	3,979,443	44,690,950	316,244	191,936	149	803
1914	38.20	1,437,550	10,002,034	4,111,903	48,162,065	348,406	194,960	154	825
1915	40.20	1,476,866	11,563,696	4,339,863	49,695,313	372,383	233,761	161	803
1916	40.45	1,468,906	9,272,709	4,286,802	51,029,668	364,745	216,607	172	921
1917	41.58	1,468,906	8,964,113	4,377,104	51,860,308	371,850	257,035	172	1,121

1. Not available. 2. Figures for 1916.

(ii.) *Rockhampton Municipal Tramways.* These tramways were opened for traffic in 1909, the motive power being steam. The length of track is 6 route miles, and the gauge 3 ft. 6 in. The capital cost to 31st December, 1917, was £42,000. During the year 1,432,329 passengers were carried, the revenue being £10,850, and working expenses £8269. The number of the staff at end of year was 30.

(iii.) *Sugar-Mill Tramways.* In various parts of Queensland there are tramways used in connection with the sugar-milling industry, chiefly for the purpose of hauling cane to the mills. Some of these lines are of a permanent nature, running through sugar-cane plantations, while others are portable lines running to various farms.

5. **South Australia.**—Up to the year 1906 the tram service in the principal streets of Adelaide and suburbs was a horse system run by various private companies. Power to acquire these lines, and to provide for their extension and management by means of a Trust, was given to the Government by the Municipal Tramways Trust Act 1906. In accordance with the provisions of the Act, a Trust consisting of eight members, of whom two were nominated by the Governor, two elected by the City Corporation, and two each by the Suburban Corporations and the District Councils involved, was formed in 1907, and a length of forty-nine route miles of horse traction tramways was purchased from the private companies for a sum of £282,582. On the 10th March, 1909, the electric car system was inaugurated on the Kensington route. At the end of July, 1917, a length of 64.58 route miles had been electrified and opened for traffic, the corresponding length of track opened being 111.56 miles. The cost of construction and equipment on the 31st July, 1917, was £1,703,151. The following table gives particulars of the tramways for the years ended 31st July, 1913-17:—

**SOUTH AUSTRALIA.—ADELAIDE ELECTRIC TRAMWAYS, PARTICULARS OF WORKING, 1913-17.**

Year.	Mileage Open for Traffic (Route)	Capital Cost.	Current Used for Traction Purposes.	Car Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	No. of Cars in Use.	No. of Persons Employ'd
	Miles.	£	Kil'w'tt-hrs.	No.	No.	£	£	No.	No.
1913	49.69	1,350,710	9,169,269	5,140,706	41,576,483	310,241	207,319	170	1,113
1914	51.86	1,396,638	9,838,252	5,325,660	43,797,227	328,810	202,503	170	1,073
1915	54.42	1,451,989	9,428,315	4,914,357	42,287,503	309,915	191,070	170	1,045
1916	54.42	1,486,546	9,286,910	4,719,043	43,141,885	322,759	193,965	170	1,120
1917	64.58	1,703,151	10,392,667	4,954,848	45,431,691	338,361	211,662	170	1,200

There are also in South Australia nineteen and three-quarter miles of Government horse tramways in country districts, worked in connection with the railway system, and seven and one-half miles of private tramways used for passenger service. The subjoined statement gives various particulars of these lines:—

**SOUTH AUSTRALIA.—PARTICULARS OF HORSE TRAMWAYS, 1916-17:**

Particulars.	Length.	Gauge.	Nature of Traffic.
<b>GOVERNMENT TRAMWAYS.</b>			
Moonta, Moonta Bay, and Hamley Flat	Miles. 15.15	ft. in. 5 3	Passengers and goods.
Gawler ... ..	11.20	5 3	" "
Victor Harbour and Breakwater	1.00	5 3	" "
Dry Creek and Magazine	1.00	2 0	Explosives.
Magazine and Broad Creek	1.50	2 0	" "
Port Broughton and Mundoorra	110.01	3 6	Passengers and goods.
<b>MUNICIPAL TRAMWAY.</b>			
Port Adelaide and Alberton	3.50	5 3	Passengers.
<b>PRIVATE TRAMWAY.</b>			
Glenelg and Brighton <sup>2</sup>	4.00	4 8½	Passengers.

1. Included in mileage of Government railways.

2. Not in operation at present.

6. **Western Australia.**—In this State there are several tramways, amounting in all on the 30th June, 1916, to a length of  $24\frac{1}{2}$  miles, which are the property of the Government. Of these the most important is the line between Roebourne and Cossack, constructed on a 2-ft. gauge and under the control of the Colonial Secretary's Department. The length of this line is  $12\frac{1}{2}$  miles, and it is worked by steam. The remaining  $12\frac{1}{2}$  miles belonging to the Government are made up of four short lengths, varying from two and a quarter miles to four and a quarter miles long, worked by horses, in connection with the jetties at certain ports for the purpose of providing the necessary communication between such jetties and the goods sheds or warehouses. Most of these lines are leased at annual rentals, and are under the supervision of the Harbour Master. Their maintenance and improvement is in the hands of the Public Works Department. In addition to these Government lines there are electric tramway systems at Perth, under Government control; at Kalgoorlie and Boulder City, carried on by private companies; and at Fremantle, under municipal control.

(i.) *Steam and Horse Tramways.* Particulars as to the working of the Government horse tramways or as to the rents received therefrom are not generally available. The returns of the Roebourne-Cossack steam tramway for the year ended 30th June, 1916, shew that the capital cost of the line to that date was £60,101, the gross revenue for the year being £2551, and the working expenses £1736.

(ii.) *Electric Tramways.* There are now four towns in Western Australia which enjoy the benefits of electric tramway systems, namely, Perth, Fremantle, Kalgoorlie, and Boulder City.

(a) *The Perth Electric Tramways* were opened for traffic by a private company on the 24th September, 1899, and the system has since been extended to many of the outlying suburbs. This tramway system was taken over by the Government on 1st July, 1913, and is now running in conjunction with the Government railways. On the 30th June, 1917, the route and track miles open for traffic were 28.23 and 36.44 miles respectively, the total cost of construction and equipment to that date being £591,909. During the year, 12,095,661 passengers were carried, the gross revenue being £125,719 and the working expenses £94,196. Sixty-five motors were in use, and the number of employees was 331. The gauge of line is 3 ft. 6 in.

(b) *The Fremantle Tramways* were opened in November, 1905, under the control of the municipality. On the 31st August, 1917, there were 8.64 route and 11.55 track miles of line open for traffic, the cost of construction and equipment at that date being £117,531. This line has a gauge of 3 ft. 6 in. During the year 4,995,860 passengers were carried, the gross revenue being £39,552 and the working expenses £32,520. Twenty-five cars were in use, and the number of employees was 130.

(c) *The Kalgoorlie and Boulder City Tramways* are run by a private company, the first line being opened in 1902. At the beginning of 1904 legislative authority was given for the construction of lines in Boulder City and suburbs, and in November, 1904, the last section of the Boulder system was completed. At the end of the year 1917 the total mileage of the whole system—in Kalgoorlie and Boulder City—amounted to  $14\frac{1}{2}$  route or  $20\frac{1}{2}$  track miles, the total cost of construction and equipment being £452,038. During the year, 2,086,526 passengers were carried, the gross revenue being £32,609 and the working expenses £27,131. Twenty-five motors and seven trailers were in use, and the number of employees was 65. The gauge of this line is 3 ft. 6 in.

(d) *The Leonora-Gwalia Tramway*, two and a quarter route miles in length, was initially a steam tramway. It was opened for traffic by electrification under municipal control on 5th October, 1908, but is now worked with a petrol motor by a private syndicate. It has a gauge of 3 ft. 6 in.

(e) *Particulars of Working of all Electric Tramways.* The subjoined table shews, so far as returns are available, particulars of the working of all electric tramway systems in the State for the years 1901 and 1913-17.

## WESTERN AUSTRALIA.—PARTICULARS OF ELECTRIC TRAMWAYS, 1901 and 1913-17.

Year.	Mileage Open for Traffic (Route).	Total Cost of Construction and Equipment.	Current Generated.	Tram Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	No. of Cars in Use.	No. of Persons Employed.
	Miles.	£	Kilowatt-hrs.	No.	No.	£	£	No.	No.
1901	16.50	367,037	<sup>2</sup> ...	721,056	<sup>2</sup> ...	46,270	26,673	30	<sup>2</sup> ...
1913	48.02	1,042,584	4,728,809	2,602,321	16,164,928	174,803	103,387	109	425
1914	48.83	1,068,058	<sup>3</sup> 4,924,038	2,716,707	17,331,979	184,072	126,586	121	453
1915	50.75	1,092,289	<sup>3</sup> 5,045,163	2,793,519	17,568,161	182,935	130,868	121	471

1917 <sup>3</sup>	51.61	1,161,478	5,799,337	2,955,503	19,178,047	197,880	153,847	122	526

1. For the year 1901 the figures represent miles of single track.

2. Not available.

3. Exclusive of Leonora tramway.

(iii.) *Perth Ferries.* As the Perth ferry services are mainly subsidiary to the suburban tramway system, they are referred to in this section rather than under *Shipping*. Of the twelve boats in service, four are under the control of the Western Australian Government, the other eight belonging to a private company. The number of passengers carried during the year 1916-7 was 891,546, the revenue and expenditure for the same period were £10,358 and £10,417 respectively, and the number of persons employed 23.

7. *Tasmania.*—(i.) *Tramways.* In Hobart there is a system of electric tramways, opened for traffic in 1893, amounting in all to a length of 13 and 16½ route and track miles respectively. This was originally owned by a private company, but is now the property of the Hobart Municipal Council. Under the authority of the Launceston Tramway Act of 1906 the Launceston City Council entered into an agreement with a private company for the construction of a system of electric tramways in the city and suburbs of Launceston. The agreement provided that the company was to run the tramways for a period of twenty-five years, when the Council could purchase the lines and stock at cost price; the electric power required was to be supplied by the Council. This agreement, however, lapsed, and the Council has constructed the tramways, and is running them as a municipal undertaking. The system, which was opened on the 16th August, 1911, has a route and track mileage of 10.04 and 10.90 miles respectively. The gauge of track in both these systems is 3 ft. 6 in.

The following table gives particulars of the working of the two systems for the years 1901 and 1913-17:—

## TASMANIA.—PARTICULARS OF WORKING OF ELECTRIC TRAMWAYS, 1901 and 1913-17.

Year.	Mileage Open for Traffic (Route).	Total Cost of Construction and Equipment.	Current Generated.	Tram Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	Number of Cars in Use.	Number of Persons Employed.
	Miles.	£	Kilowatt-hrs.	No.	No.	£	£	No.	No.
1901 <sup>1</sup>	9.00	90,000	<sup>2</sup> ...	321,633	1,734,120	16,097	11,735	20	90
1913	16.71	280,871	1,555,053	836,508	6,344,566	55,875	37,058	47	235
1914	18.91	325,239	1,345,918	908,862	7,147,543	60,885	38,946	49	259
1915	21.43	347,214	2,171,968	999,315	7,462,782	68,170	46,568	60	314
1916	21.95	373,812	1,576,839	1,058,979	7,963,040	73,424	46,758	60	250
1917	23.04	383,219	1,687,407	1,115,090	8,349,789	79,693	49,930	60	259

1. Hobart tramways only.

2. Not available.

There is also a tramway from Smithton to Marrawah, 25½ miles in length, operated by the Government. Of this distance eight miles are worked as a horse tram, the rest being for steam traction. In the year ended 30th June, 1917, 1364 passengers and 23,212 tons of goods were conveyed, the number of employees being 11.

A private steam tram at Zeehan, 1.75 miles in length, is also in operation. In 1917, 1138 passengers and 7929 tons of goods were conveyed, the number of persons employed being three.

(ii.) *Ferries.* The Hobart ferry service, being of a suburban character, is referred to here rather than under *Shipping*. There is one company controlling a fleet of six boats, and also a ferry operated by the Public Works Department with two boats. In the year 1916-17 the number of passengers carried was 751,463, the revenue £10,609, the working expenses £9546, and the number of persons employed 37.

8. *Electrical Traction in Commonwealth, 1916-17.*—The subjoined table gives particulars of electric tramways for each State and the Commonwealth. The returns for the Hobart tramways in Tasmania, for the Ballarat and Bendigo tramways in Victoria, for the Kalgoorlie tramways in Western Australia, and for the Brisbane tramways, are for the calendar year 1917; and for other tramways the returns are, generally, for the financial year 1916-17:—

#### ELECTRIC TRAMWAYS IN THE COMMONWEALTH, 1916-17.

## SECTION XVIII.

## POSTS, TELEGRAPHS, AND TELEPHONES.

## § 1. Posts.

**1. The Commonwealth Postal Department.**—Under the provisions of section 51 of the Commonwealth Constitution Act the Commonwealth Parliament was empowered to make laws with respect to the control of the postal, telegraphic, and telephonic services in Australia, and by proclamation, made under section 69 of the same Act, the six separate State Post and Telegraph Departments were amalgamated and taken over by the Federal Executive on the 1st March, 1901. On the 1st December following, the Commonwealth Post and Telegraph Act 1901 came into operation, and the provisions of the various State Acts referring to the postal and telegraphic services thereby ceased to apply; it was, however, specially provided by the Act of 1901 that, until such provisions should be revoked by the Governor-General, all regulations in force, and all rates and charges levied under any State Act, should continue in force and be applied in the same manner as if such State Act were not affected by the Commonwealth Act. The administration of the Act of 1901 was placed in the hands of a Postmaster-General, a responsible Minister with Cabinet rank, and of a Secretary having chief control of the Department throughout the Commonwealth under the Postmaster-General, whilst a principal officer in each State was provided for under the style of Deputy Postmaster-General. The rates and charges levied in each State for the transmission of letters, telegrams, and postal articles at the date of Federation remained in force until the Post and Telegraph Rates Act came into operation on the 1st November, 1902. This Act secured uniformity throughout the Commonwealth in the rates charged for the conveyance of newspapers by post, and for the transmission of telegrams, but did not alter the charges made in the individual States for the transmission of letters, cards, parcels, and packets. Uniform postage rates now exist in all the States under the Postal Rates Act of 1910, which came into operation by proclamation on the 1st May, 1911. (See paragraph 6 hereof.)

For a brief description of the postal services in the earlier period of Australian history, see Year Book No. 5, page 754.

**2. Development of Postal Services.**—In 1841 the number of post offices open in Australia was 102, situated mainly in New South Wales and Tasmania. At the end of ten years 101 post offices were open in New South Wales, 44 in Victoria, 72 in South Australia, and 51 in Tasmania. From the year 1851 onwards a remarkable increase in the number of post offices in Australia took place, until, in 1891, the number open on the mainland and Tasmania totalled 4463, of which 1384 were situated in New South Wales, 1729 in Victoria, 307 in Queensland, 629 in South Australia, 86 in Western Australia, and 328 in Tasmania.

On the 30th June, 1917, the postal business had increased to such an extent that 5980 post offices were open for business, of which number 2040 were situated in New South Wales, 1782 in Victoria, 643 in Queensland, 705 in South Australia, 412 in Western Australia, and 398 in Tasmania.

3. State, Interstate, and Oversea Postages for whole Commonwealth.—In the following table the matter dealt with from 1911 to 1916-17 is divided into (i.) matter posted in the Commonwealth for delivery within the Commonwealth, (ii.) matter received from places outside the Commonwealth, (iii.) matter despatched to places outside the Commonwealth, and (iv.) total postal matter dealt with by the Commonwealth Postal Department but excluding interstate excess. The large increase in oversea mail matter despatched and received in 1916-17 is mainly attributable to postages in connection with the Australian troops abroad.

5. **Postal Facilities.**—The subjoined statement shews the number of post and receiving offices, the area in square miles and the number of inhabitants to each post office (including receiving offices) in each State and in the Commonwealth at the end of the year 1916-17. It will be observed that the most sparsely populated States have the greatest number of offices in comparison with their population, but in order to judge the relative extension of postal facilities the area of country to each office must also be taken into account.

**SQUARE MILES OF TERRITORY AND NUMBER OF INHABITANTS TO EACH POST

\* Including Federal Territory.

† Including Northern Territory.

6. Rates of Postage.—Prior to the operation of the Postal Rates Act of 1910, the charges made for the postage of newspapers and parcels, and of interstate and foreign letters, were the same in all the States of the Commonwealth. The rates for the transmission of letters within the borders of a State, however, were not uniform, the Post and Telegraph Act 1901 having specially provided that the rates and charges levied in any State should continue in force. The last-mentioned provision, however, was repealed by the Postal Rates Act of 1910, which came into force by proclamation on 1st May, 1911, and uniform rates are now applicable throughout the Commonwealth.

The following rates on letters, newspapers, and certain other postal articles posted in the Commonwealth for delivery therein came into force on the 1st May, 1911, the date of proclamation of the operation of the Postal Rates Act of 1910 :—

**POSTAL RATES ON CERTAIN ARTICLES POSTED IN THE COMMONWEALTH  
FOR DELIVERY THEREIN ON AND AFTER 1st MAY, 1911.**

Postal Articles.	Rates of Postage.
LETTERS ...	1d. per $\frac{1}{2}$ ounce.
LETTER-CARDS ...	{ Single, 1d. each. Reply, 1d. each half.
POST CARDS ...	{ Single, 1d. each. Reply, 1d. each half.
PRINTED PAPERS AS PRESCRIBED ...	$\frac{1}{2}$ d. per 2 ounces or part of 2 ounces.
BOOKS PRINTED OUTSIDE AUSTRALIA ...	$\frac{1}{2}$ d. per 4 ounces or part of 4 ounces.
BOOKS PRINTED IN AUSTRALIA ...	$\frac{1}{2}$ d. per 8 ounces or part of 8 ounces.
MAGAZINES.—Printed in Australia, for each magazine ...	$\frac{1}{2}$ d. per 8 ounces or part of 8 ounces.
MAGAZINES.—Printed outside Australia, for each magazine ...	$\frac{1}{2}$ d. per 4 ounces or part of 4 ounces.
HANSARD.—Reports of Parliamentary Debates	$\frac{1}{2}$ d. per 12 ounces or part of 12 ounces.
COMMERCIAL PAPERS, PATTERNS, SAMPLES, AND MERCHANDISE AS PRESCRIBED ...	1d. per 2 ounces or part of 2 ounces.
NEWSPAPERS (in bulk), posted by registered newspaper proprietors, or by newsvendors, or returned by an agent or newsvendor to the publishing office ...	1d. per 20 ounces on the aggregate weight of newspapers.
NEWSPAPERS.—Printed outside Australia ...	Magazine rates.
ALL OTHER NEWSPAPERS ...	For each newspaper, $\frac{1}{2}$ d. per 10 ounces or part of 10 ounces.

Whilst the bookkeeping sections of the Constitution Act were in force, each State had necessarily to use its own postage stamps, and stamps sold in one State were only allowed to be used on letters posted in that State. The necessity for this arrangement

disappeared with the change in the keeping of the Commonwealth accounts, and since the 14th October, 1910, stamps of any State can be affixed to letters, irrespective of the State in which they are posted. Stamps of a uniform design are now used throughout the Commonwealth.

(i.) *Letters.* Under the Postal Rates Act of 1910, the charge (1d. for every  $\frac{1}{2}$ -oz.) for letters posted for delivery within the Commonwealth is now uniform throughout all States. Previous to 1st May, 1911, various local and interstate rates were in operation within the States. The postage to the United Kingdom was reduced in January, 1891, from sixpence per half-ounce *via* the Red Sea, and fourpence *via* the Cape of Good Hope, to the uniform rate of twopence halfpenny. In 1891 the States were represented at the Congress of the Universal Postal Union held in Vienna, and on the 4th July a convention was signed on their behalf, by which they joined the Union from the 1st October of that year. On that date the rate of postage to all British possessions and to foreign countries included in the union was reduced to twopence halfpenny. The present charge for postage of interstate letters and of letters to the United Kingdom and to British possessions, including the captured (formerly German) islands in the Pacific, is uniformly one penny per half-ounce throughout the Commonwealth; the rate on letters to foreign countries (with the exception of New Hebrides, Banks and Torres Islands, where the rate is a penny per half-ounce) is twopence halfpenny for each half-ounce.

(ii.) *Newspapers.* The different rates charged for the carriage of newspapers in the various States, prior to Federation, continued after the control of the Postal Departments had been taken over by the Commonwealth, until the 1st November, 1902, when a uniform rate was imposed by the Post and Telegraph Rates Act 1902. At present the rates on all newspapers posted for delivery in the Commonwealth (without condition as to the number contained in each addressed wrapper posted) by registered newspaper proprietors, or by newsvendors, or returned by newsvendor or agent to the publishing office, is one penny per twenty ounces on the aggregate weight. On all other registered newspapers posted within the Commonwealth for delivery therein, the charge is a halfpenny per ten ounces for each newspaper. At the end of the year 1917 there were in all 1467 publications registered in the Commonwealth under section 29 of the Post and Telegraph Act 1901 for transmission by post as newspapers. The charge on postage of registered newspapers for transmission to the United Kingdom is one penny for each newspaper not exceeding eight ounces in weight by the ordinary route, and one penny for each newspaper not exceeding sixteen ounces in weight by the All-Sea route. To other parts of the world the rate is one penny up to four ounces, and a halfpenny for every additional two ounces. Newspapers which are not registered are charged at the same rates as other printed papers.

(iii.) *Parcels.* Parcels may not exceed 11 lbs. in weight, 3 ft. 6 in. in length, or 6 ft. in length and girth combined. The rate for the inland postage of parcels is sixpence up to 1 lb., and then threepence for every additional pound. For interstate transmission the rate is eightpence up to 1 lb., and then sixpence per lb., and for transmission to the United Kingdom the rate is one shilling up to 1 lb., and sixpence for every additional pound.

(iv.) *Packets.* The ordinary rate for the conveyance of packets is one penny for each two ounces. Packets must not as a rule exceed 2 ft. in length, 1 ft. in breadth or depth; or, if in a roll, 2 ft. 6 in. in length. Special rates are allowed for the conveyance of commercial papers, patterns, samples, etc.

**7. Registered Letters.**—Under section 38 of the Post and Telegraph Act 1901, provision is made for the registration of any letter, packet, or newspaper upon payment of a fee of threepence, and any person who sends a registered article by post may obtain an acknowledgment of its due receipt by the person to whom it is addressed by paying an additional fee of twopence halfpenny in advance at the time of registration.

*Number of Registered Articles Posted.* The subjoined table shows the number of registered articles posted in each State during the year 1916-17, classified according to the places to which they were despatched for delivery:—

#### NUMBER OF REGISTERED ARTICLES POSTED DURING 1916-17.

8. *Ocean Mail Services.*—Regular steamship communication between Australia and Europe was established in 1852 by a service run by the Peninsular and Oriental Company between Singapore and Sydney, *via* King George's Sound, Adelaide, and Melbourne. This service was inaugurated in September, 1852, by the arrival at Melbourne of the *Chusan*, and was continued until 1854, when it was stopped in consequence of the Crimean War; in 1856 a line of steamers was again started, and the service was carried on by the Peninsular and Oriental Company, in conjunction with the Royal Mail Company, for some years.

(i.) *Mail Route via San Francisco.* The service *via* the Red Sea did not at that time give much satisfaction to the public, and was looked upon with a certain amount of disfavour in New South Wales and New Zealand. The effect was to stimulate the colonists to agitate for an improved service, and proposals were made for the establishment of a line of mail packets from Sydney to Panama *via* Wellington, by rail across the isthmus, and thence to Great Britain. The result was that in 1866 the line was started, and continued in operation until the end of 1868, when it was terminated through the failure of the company by which it had been carried out. The completion of the railway across the American continent in 1869, with its western terminus at San Francisco, opened up a new and agreeable route, and in that year a monthly service was inaugurated by the Union Steamship Company, in conjunction with the Pacific Steamship Company, from Sydney to San Francisco *via* Auckland. This service was subsidised to the extent of £37,000 per annum, of which New South Wales paid £25,750 and New Zealand £11,250, and was continued until November, 1890, when a new contract was entered into and the amount of the subsidy largely reduced, the amount of the contribution being based upon the weight of mail matter carried. Various extensions of the contract were made, but the last agreement made between the New Zealand Government and the Oceanic Steamship Company of San Francisco expired on the 10th November, 1906, and has not since been renewed. From that date mails were carried at Postal Union rates until the 12th April, 1907, when the service was discontinued. At present mails to and from Europe are carried by the Union Steamship Company, which receives a subsidy from the New Zealand Government, with a four-weekly service;

and by the Oceanic Company, with a three-weekly service. Postal Union rates are charged in respect of Australian mails conveyed by the Union Company, and poundage rates in the case of the Oceanic Company.

(ii.) *Route via Suez Canal.* The establishment of a mail route *via* America had the effect of stimulating the steamship owners who were engaged in the service *via* Suez, and from that time there was a marked improvement in the steamers, as well as in the punctuality and speed with which the mails were delivered. The Peninsular and Oriental Company, and, at a little later date, the Orient-Pacific Company, have carried mails to and from Australia almost since the inception of ocean steam services. Postal matter was carried by contract until 1905, when the contract between the Peninsular and Oriental Company and the Commonwealth Government ceased, although that between the company and the Imperial Post Office is still in force. Until discontinued, owing to the war, mails were carried from Australia by the Peninsular and Oriental Company, but at Postal Union rates and not under contract with the Commonwealth. On the 25th April, 1905, the Orient-Pacific Company concluded a new contract with the Commonwealth Government for a fortnightly service between England and Australia. The subsidy was at the rate of £124,880 per annum. This contract has now been replaced by the present mail contract referred to in the next sub-section hereof. Fremantle has, since the year 1900, been the first and last port of call for European mail steamers, in lieu of Albany, the original port of call. The Peninsular and Oriental and Orient Steam Navigation Companies' steamers, before the outbreak of war in 1914, sailed alternately every week, both from London and Australia, conveying the outward and homeward mails. At the present time the P. & O. service is suspended, while the Orient service, though not actually discontinued, is very limited, and is carried on by the Cape route instead of *via* the Suez Canal.

(a) *Present Mail Contract.* On the 1st January, 1906, tenders were invited by the Commonwealth Postmaster-General for a fortnightly mail service between Adelaide and Brindisi, to alternate with a similar service to be provided by the Imperial Government, and a contract was entered into with Sir James Laing and Company Limited, providing for a service at an annual subsidy of £125,000. This contract, however, fell through, and new tenders were accordingly called for. On the 15th November, 1907, an agreement was entered into with the Orient Steam Navigation Company Limited providing for a fortnightly service for a period of ten years, commencing in February, 1910. The mail service was to be carried out by existing vessels belonging to the company and by five new mail ships, which have been specially built, and which are each over 12,000 tons gross registered tonnage and of not less than seventeen knots speed. An additional new vessel was to be added within eighteen months, and another within six years, from February, 1910, and the first of these—the *Orama*—entered into running during November, 1911. War conditions have, however, delayed the addition of the later vessel to the mail fleet. The vessels are to call at Fremantle, Adelaide, Melbourne, Sydney, and Brisbane, and at least six of them at Hobart, during the months of February to May inclusive. The voyage from Taranto to Adelaide is to be completed within twenty-six days, fourteen hours, and from Adelaide to Taranto within twenty-seven days, two hours, but the latter period may be exceeded by thirty-six hours during the prevalence of the south-west monsoon. The amount of the subsidy is fixed at £170,000 per annum; but, if the earnings of the company be decreased, or the expenses increased, by reason of any Commonwealth shipping legislation passed subsequently to the date of the agreement, to the extent of not less than £5000 a year, the contractors have the right to terminate the agreement unless the subsidy is increased. Insulated space of not less than 2000 tons of forty cubic feet is to be provided in each of the new vessels, and the freights are not to exceed one halfpenny per lb. for butter and sixty shillings per ton for fruit. White labour only is to be employed, and no discrimination is to be made between unionists and non-unionists. If before or during the sixth year of the period of the contract an accelerated service is provided by any competing line of mail ships, the contractors must, if so required by the Postmaster-General, provide a service equal to the

competing service, at an increased subsidy, to be determined by agreement or arbitration. With the expiration of the period in 1916, this clause in the agreement lapsed. The Commonwealth flag must be flown on the mail ships, which the Commonwealth has the right to purchase at a valuation at any time. Within six months of the Postmaster-General establishing a permanent wireless telegraphy station at Rottnest Island, or at any point on the coast between Fremantle and Brisbane, the company must fit the mail ships with wireless telegraphy installations. The new service was inaugurated on the 11th February, 1910.

(b) *French and German Subsidised Mail Services.* Vessels belonging to the Messageries Maritimes and the Norddeutscher Lloyd, which were under contract respectively with the French and German Governments to convey mails monthly between Marseilles and New Caledonia and between Bremen and Sydney, *via* Genoa, also carried mails for the Commonwealth Government from Australia to Europe at Postal Union rates. The Messageries Maritimes service commenced in November, 1882; the amount of the annual subsidy granted by the French Government being £120,000. The vessels have, however, for the time being, been withdrawn from the Australian service. The first contract for the establishment and maintenance of a mail steamship line between Germany and Australia was made between the Imperial German Government and the Norddeutscher Lloyd in 1885, and the service was inaugurated in July, 1886, with the steamer *Salier*. The service afforded by German vessels was, of course, interrupted by the outbreak of hostilities in Europe in 1914.

(iii.) *Route via Vancouver and Canadian-Pacific Railway.* During the year 1893 a direct monthly service was started between Sydney and Vancouver, in British Columbia, *via* Wellington, in New Zealand, and thence to Liverpool *via* the Canadian-Pacific Railway, the New South Wales Government paying an annual subsidy of £10,000 for the maintenance of this service for a period of three years. In 1896 the agreement was renewed for a further period of three years, and in 1899 was again renewed for four years, subject to the same terms and conditions, except that the route was *via* Brisbane instead of Wellington. The contract was further extended, at an increased subsidy, from time to time until the 31st July, 1911, at a subsidy of £26,626 per annum. This subsidised service has now been discontinued. Mails for Canada are forwarded *via* New Zealand through Sydney at poundage rates.

(iv.) *Other Ocean Mail Services.* In addition to the mails *via* the Suez Canal, a number of other services, both regular and irregular, are maintained between the Commonwealth and various parts of the world, and also between the principal ports in the various States and a number of small ports in the less settled parts of the Commonwealth which are inaccessible by rail. The following statement gives a summary, in so far as returns are available, of all mail services maintained between the Commonwealth and other countries and between ports in the Commonwealth. The amounts of subsidies specified are the amounts payable per annum unless otherwise stated:—

#### SUMMARY OF COMMONWEALTH MAIL SERVICES, 1918.

Description of Service.	Frequency of Service.	Ports between which Service is maintained.	Particulars regarding Subsidies.
1. <i>To and from Europe, via Suez—</i>			
Orient Steam Navigation Co.*	Irregular Intervals	Adelaide, Fremantle & London, <i>via</i> South Africa	Subsidised. Date of agreement, 15th Nov., 1907. Term, from Feb., 1910. Amt. of subsidy, £170,000.

\* Owing to the war, the steamers of this company temporarily travel *via* Capetown instead of Suez Canal.

## SUMMARY OF MAIL SERVICES—(Continued).

Description of Service.	Frequency of Service.	Ports between which Service is maintained.	Particulars regarding Subsidies.
2. <i>To and from Europe, via Vancouver</i> — Union Steamship Co. ...	Every four weeks	Sydney and Vancouver, B.C., via Auckland, Fiji, Honolulu, and once every four weeks to Fanning Island	Poundage rates.
3. <i>To and from Europe, via San Francisco</i> — (a) Union Steamship Company ...	..	Sydney, Wellington and San Francisco	Subsidised by New Zealand Govt. Mails from Aust. at Postal Union rates.
(b) Oceanic Steamship Co. ...	Every three weeks	Sydney, Apia, Honolulu, and San Francisco	Poundage rates.
4. <i>To and from New Zealand</i> — (a) Conjointly by Union S.S. Co. and Huddart, Parker Ltd.	Bi-weekly	Sydney and Wellington, Sydney and Auckland	.. ..
(b) Other Steamers ...	Irregularly, when convenient	Sydney, Wellington, Auckland, and Lyttelton	.. ..
5. <i>To and from ports in N.S. Wales</i> — (i.) NORTHERN PORTS— (a) North Coast S.N. Co. ...	Weekly Twice weekly	Sydney, Macleay River, Coff's Harbour, Clarence River, Byron Bay, and Richmond River	.. ..
(b) Cain's Co-Operative S.S. Co....	Twice a month	Sydney & Port Macquarie	.. ..
(ii.) SOUTH COAST PORTS— Illawarra and S. Coast S.N. Co....	Weekly	Sydney, Montague Island	.. ..
6. <i>To and from Northern Ports of Qld.</i> — (a) Australian Steamships Limited	Weekly	Gladstone, Mackay, Bowen, Townsville, Cairns, Cardwell, Mourilyan, Innisfail, Pt. Douglas & Cooktown	Subsidised by agreement dated 5th Dec., 1914, for three years. Extended two years from 5th Dec., 1917. Amount of subsidy, £17,950.
(b) Australian United Steam Navigation Co. Ltd.	Once every four weeks	Brisbane, Normanton & Burketown, via Townsville, Cooktown, and Thursday Island	Subsidised by agreement dated 16th Jan., 1915, for five years. Amount of subsidy, £6500. Frequency altered from once in three to once in four weeks from 4th Oct., 1917, and Subsidy reduced to £6000. Subsidies under 6 (a) and (b) paid by Queensland.
(c) Other steamers ...	Irregularly	Various...	Poundage rates.
7. <i>To and from Ports in S. Australia</i> — (a) Coast Steamship Co. Ltd. ...	Weekly	Pt. Adelaide & Kingscote	Subsidised to 31st December, 1919. Amount of subsidy, (a) £900; (b) £350; (c) £450; (d) £350. Subsidised for three years from 1st January, 1917. Amount of subsidy, £3000. Subsidised without agreement. Amount of subsidy, £120. Subsidies under 7 (a), (b), (c), (d), (e), (f), paid by South Australia.
(b) " " " ...	Twice a wk.	" Edithburgh	
(c) " " " ...	"	" Stansbury	
(d) " " " ...	"	" Pt. Vincent	
(e) Adelaide Steamship Co. ...	Weekly	" Pt. Lincoln	
(f) Adelaide Steam Tug Co. ...	As required	Port Pirie & Hummocks Hill	
8. <i>Western Australia</i> — (i) INTERSTATE— (a) Orient Line ...	In abeyance	Fremantle and Adelaide	Orient line subsidised. See above, 1.
(b) The Australian United Steam Navigation, Huddart Parker, Melbourne S.S. Co., and McIlwraith, McEacharn lines	Three times in four weeks.	Fremantle, Albany, and Adelaide	Poundage rates.

† Carries also mails to Canada and the United States.

## SUMMARY OF MAIL SERVICES—(Continued).

Description of Service.	Frequency of Service.	Ports between which Service is maintained.	Particulars regarding Subsidies.
<i>Western Australia—continued—</i>			
(ii.) To & FROM PORTS ON N.W. COAST			
(a) State Steamship Service ...	Monthly	Fremantle and Derby	Subsidised by agreement dated 28th February, 1913, for three years. Later extended to a date three months after expiration of war. Amount of subsidy, £5500. Subsidy paid by Western Australia.
(b) " " ...	Once each sixty days	Fremantle & Darwin	
(c) West Australian S.N. Co.	Fortnightly	Fremantle and Broome	
(d) Ausn. United S. Navigation and State S.S. Co. and Melbourne S.S. Coy. ...	Irregularly, during the cattle season	Fremantle, Derby, and Wyndham	" "
(iii.) To AND FROM PORTS ON S. COAST			
(a) State Steamship Service ...	Fortnightly	Albany and Esperance	Subsidised by agreement for three years, dating from 1st July, 1915. Amount of subsidy, £2000
(b) " " ...	Every four weeks	Albany & Israelite Bay	
(c) " " ...	Quarterly	Albany and Eucla	
9. Tasmania—			
(a) Union S.S. Co. and Huddart, Parker Proprietary	Three times a week	Melb'rne & Launceston	Subsidised by agreement dated 27th October, 1913, for five years. Amount of subsidy, £15,000, provided new steamer similar to <i>t.s. Loongana</i> is run on Launceston-Melbourne service. £13,000 only to be paid prior to running of new steamer.
(b) " " " ...	Twice a wk.	" Burnie	
(c) " " " ...	Weekly	Sydney, Hobart, and Wellington	Poundage rates.
(d) Union Steamship Co.	Fortnightly	Sydney, Eden, Launceston, and Devonport	" "

Various steamships ...	"	Sydney, Ocean and Pleasant Islands	" "

\* Frequency of services not maintained owing to exigencies of war.

9. **Amount of Mail Subsidies Paid.**—The following table shows the amounts of subsidies paid by the Commonwealth Postal Department for ocean and coastal mail services during the year ended 30th June, 1917 :—

**MAIL SUBSIDIES.—OCEAN AND POSTAL SUBSIDIES DURING YEAR 1916-17.**

Service...	Orient S.N. Co.	Queensl'd Ports.	South Australian Ports.	Western Australian Ports.	Tasmanian Ports.
Annual Subsidy	£ 26,154	£ 24,450	£ 5,050	£ 7,513	£ 13,485

During the year 1916-17 the amount paid by the Commonwealth for conveyance of mails at poundage rates by non-contract vessels was £41,428; by road services, £458,056; and by railway services, £373,667. The total expenditure in 1916-17 on the carriage of mails, including the items and subsidies specified and sundry other payments, was £1,247,763.

10. **Average and Fastest Time of Mails to and from London.**—Great progress has been made in regard to the means of postal communication with the United Kingdom and the continents of Europe and America. In 1857 there was an unsatisfactory ocean mail service, which nominally brought monthly mails, with news nearly sixty days old; before the outbreak of the war there were four lines of modern ocean steamships, which brought the mails in about twenty-nine days to Adelaide, in addition to services by way of New Zealand, *via* San Francisco and Vancouver. Upon the arrival of over-sea mails at Fremantle, letters for the eastern States and New Zealand are now landed, and the Australian letters are conveyed to their several destinations by rail. By landing at Fremantle instead of as formerly at Adelaide, a saving of approximately sixty-six hours is effected. It is probable that at the conclusion of the war all mails arriving by P. & O. and Orient steamers will be conveyed by rail from Fremantle. In consequence of the war in Europe, steamers belonging to the Orient S.N. Co. travel to and from England by way of South Africa. The subjoined table shews the average and the fastest times occupied in the conveyance of mails from London to Adelaide and *vice versa* during the year 1916-17 :—

**AVERAGE AND FASTEST TIME OCCUPIED IN CONVEYANCE OF MAILS VIA SOUTH AFRICA AND SUEZ CANAL BETWEEN LONDON AND ADELAIDE, AND VICE VERSA, DURING 1916-17.**

Service.	London to Adelaide.*				Adelaide to London.			
	Average Time.		Fastest Time.		Average Time.		Fastest Time.	
	Days.	Hours.	Days.	Hours.	Days.	Hours.	Days.	Hours.
Orient S. N. Co., <i>via</i> South Africa ...	44	20	40	6	49	19	41	7
Peninsular and Oriental S.N. Co., <i>via</i> Marseilles ...	41	15	33	14	41	11	33	22

\* Letters for Eastern States now landed at Fremantle.

At present a train departing from Perth for the eastern States at 5 p.m. on, say, Monday, arrives at Adelaide at 3.37 p.m. on Thursday, at Melbourne at 9.55 a.m. on Friday, at Sydney at 10.45 a.m. on Saturday, and at Brisbane at 6.40 p.m. on Sunday. The time over all between Perth and Brisbane is 143 hours 40 minutes, of which the stops at changing stations take 18 hours 31 minutes. The journey from Melbourne to Hobart occupies about 26 hours *via* Launceston, and about 32 hours direct.

The average time occupied in the conveyance of mails from London to Sydney *via* Vancouver is a little over 37 days, and from Sydney to London by the same route nearly 35. A table shewing the average and fastest times of this service was given in earlier issues (see Year Book No. 5, p. 766), but the discontinuance of the contract with the company operating between Australia and Vancouver renders the table no longer desirable.

**11. Money Orders and Postal Notes.**—The issue of money orders and postal notes in the Commonwealth is regulated by sections 74 to 79 of the Post and Telegraph Act 1901. A money order may be issued for payment of sums up to £20 within the Commonwealth and not exceeding £40 (in some cases £30, £20 or £10) in places abroad. A postal note, which is payable only within the Commonwealth, cannot be issued for a larger sum than twenty shillings. Money orders are sent direct from the Commonwealth to the United Kingdom, and to most of the British colonies and possessions; to the British Solomon Islands Protectorate and the Gilbert and Ellice Islands Protectorates; to Italy; and to the United States of America. Money orders, payable in Japan and China, are sent *via* Hong Kong; orders payable in all other countries are sent through the General Post Office in London, where new orders are issued and forwarded to the addresses of the payees, less threepence for every £5, or part thereof. In order that the full amount of the original order may be forwarded to the payee, this extra commission must be paid by the remitter.

(i.) *Value of Orders Issued and Paid and of Notes Sold.*—The following table shews the total value of money orders issued and paid, and of postal notes sold in each State and in the Commonwealth during the year 1916-17, together with the total amount of commission on money orders and poundage on postal notes received by the Postal Department. The number and value of money orders issued and paid within the Commonwealth shews a decrease as compared with 1915-16, accounted for by the discontinuance of the payment by money order of military allotments:—

**VALUE OF MONEY ORDERS ISSUED AND PAID AND OF POSTAL NOTES SOLD, AND TOTAL AMOUNTS OF COMMISSION AND POUNDAGE RECEIVED IN EACH STATE DURING 1916-17.**

State.	Value of Money Orders Issued.	Value of Money Orders Paid.	Net Money Order Commission Received.	Value of Postal Notes Sold.	Poundage Received on Postal Notes.
	£	£	£	£	£
New South Wales ...	4,527,557	4,389,944	27,866	1,443,113	28,127
Victoria ...	2,046,113	2,213,594	10,116	884,586	17,922
Queensland ...	1,478,943	1,236,758	10,612	385,950	7,634
South Australia ...	704,904	626,546	4,519	219,071	4,456
Western Australia ...	1,115,735	916,348	6,719	226,366	4,360
Tasmania ...	411,451	373,677	2,573	114,331	2,325
Commonwealth ...	10,284,703	9,756,867	62,405	3,273,417	64,824

(ii.) *Rates of Commission on Money Orders.* The rates of commission chargeable for the issue of money orders are as follows:—

**RATES OF COMMISSION, MONEY ORDERS.**

If Payable in—	For sums—								
	Not exceeding £2.	Exceeding £2, but not exceeding £5.	Exceeding £5, but not exceeding £7.	Exceeding £7, but not exceeding £10.	Exceeding £10, but not exceeding £12.	Exceeding £12, but not exceeding £15.	Exceeding £15, but not exceeding £17.	Exceeding £17, but not exceeding £20.	
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	
Commonwealth of Australia ...	0 6	0 6	1 0	1 0	1 6	1 6	2 0	2 0	
New Zealand and Fiji ...	0 6	1 0	1 6	2 0	2 6	3 0	3 6	4 0	
Papua ...	0 9	0 9	1 6	1 6	2 3	2 3	3 0	3 0	
U. Kingdom & other countries	Sixpence for any amount up to £2 and 3d. for each additional £1 or fraction thereof.								

Remittances may also be made by telegraph to and from money order offices in the Commonwealth which are also telegraph or telephone offices, and to New Zealand. The charge for a telegraph money order is the cost of the telegram of advice in addition

to the ordinary commission. Where payment is to be made within the Commonwealth the remitter must also send a telegram advising the transmission of the money, which telegram must be produced by the payee when applying for payment. In the case of New Zealand a second telegram is not required, but an additional charge of sixpence is made by the Department to cover the cost of notifying the payee.

(iii.) *Rates of Poundage on Postal Notes.* The values of the notes issued have been so arranged that any sum of shillings and sixpences up to £1 can be remitted by not more than two of these notes. The poundage or commission charged on notes of different denominations is as follows :—

#### POUNDAGE RATES, POSTAL NOTES.

Denomination of Note ...	6d. to 1s. 6d.	2s. to 4s. 6d.	5s.	7s. 6d.	10s. to 20s.
Poundage charged ...	$\frac{1}{2}$ d.	1d.	$1\frac{1}{2}$ d.	2d.	3d.

12. **Number and Value of Money Orders and Postal Notes Issued and Paid.**—The following table shows the total number and face value of money orders and postal notes issued and paid in the Commonwealth during 1901 and from 1911 to 1916-17 :—

#### NUMBER AND VALUE OF MONEY ORDERS AND POSTAL NOTES ISSUED AND PAID, 1901 and 1911 to 1916-17.

**15. The Value Payable Post.**—This is a system under which the Postal Department undertakes to deliver registered articles sent by parcel post within the Commonwealth, or between Papua and the Commonwealth, and to recover from the addressee on delivery a specified sum of money fixed by the sender, and to remit the sum to the sender by money order, for which the usual commission is charged. The object of the system is to meet the requirements of persons who wish to pay at the time of receipt for articles sent to them, and also to meet the requirements of traders and others who do not wish their goods to be delivered except on payment. In addition to the ordinary postage, commission on the value of the articles transmitted at the rate of twopence on sums not exceeding ten shillings, and one penny for each additional five shillings or part thereof, must be prepaid by postage stamps affixed to the articles, distinct from the postage, and marked "commission." The registration fee (threepence) and the proper postage must also be prepaid. If the addressee refuse delivery, the parcel is returned to the sender free of charge. Any article that can be sent by parcel post may be transmitted as a value-payable parcel. Letters may also be sent as value-payable parcels, if prepaid at the letter rate of postage and handed to the parcels clerk, in the same manner as in the case of parcels. The subjoined statement gives particulars of the number and value of parcels sent through the Value Payable Post in each State during the years 1910 to 1916-17. From these figures it will be seen that the business in Queensland is greatly in excess of the combined transactions of all the other States, owing to the fact that the system has been established in that State for some years, but was only extended to the whole Commonwealth with the advent of Federal control of the post office. Western Australia is the only other State to make use of this system to any extent, the business transacted by that State and Queensland in 1916-17 amounting to about 80 per cent. of the total for the Commonwealth in respect of number of parcels and also of value collected.

1916-17	2,154	190	6,779	39	3,060	4	12,226

In 1905, the first year for which complete figures for the Commonwealth are available, the number of value payable parcels posted was 24,920, of an aggregate value of £34,990. By 1916-17 the increase in number was 69,762 and in value £102,415. The States chiefly responsible for the increase are Queensland, Western Australia, and New South Wales. The average value collected on parcels in 1905 was £1 8s., and in 1916-17 £1 9s. These averages are fairly representative of the intervening years, the fluctuations throughout being inappreciable. The average value payable by the addressees in each State for the seven years 1910 to 1916-17 was highest in the case of Tasmania, viz., £2 9s., next in order being South Australia £2 1s., Victoria £1 17s., Western Australia, £1 12s., New South Wales £1 9s., and Queensland £1 6s. The average for the Commonwealth for the same period was £1 9s.

**16. Agricultural Produce Parcels Post.**—On the 1st July, 1914, the Postal Department, acting in conjunction with the Railway Department, inaugurated a system under which parcels of agricultural produce, fish, cut flowers, etc., might be transmitted at cheap rates from places in the country to persons living within six miles of the General Post Office, Melbourne. The service was introduced, by way of experiment, into the State of Victoria only, but as a loss of £3000 per annum was incurred, the service has been discontinued.

**17. Transactions of the Dead Letter Office.**—Under sections 45 to 53 of the Posts and Telegraph Act 1901, the Postmaster-General may cause to be opened all unclaimed and undelivered postal articles originally posted within the Commonwealth which have been returned from the places to which they were forwarded. Every

unclaimed letter and postal article must be kept for the prescribed period at the office to which it has been transmitted for delivery, and must then be sent to the General Post Office. Letters and packets originally posted elsewhere than in the Commonwealth are returned to the proper authorities in the country in which they were so posted, or, if originally posted in the Commonwealth are returned to the General Post Office in the State where posted; but unclaimed or undelivered newspapers may be forthwith sold, destroyed, or used for any public purpose. Opened postal articles not containing anything of value are returned to the writer or sender if his name and address can be ascertained, but may otherwise be destroyed forthwith. As regards opened letters and packets containing valuable or saleable enclosures, a list and memorandum of the contents are kept, and a notice is sent to the person to whom the letter or packet is addressed if he be known, or otherwise to the writer or sender thereof if he be known. Upon application within three months of the date of such notice the letter or packet may be claimed by the addressee, or, failing him, by the writer or sender. If unclaimed within three months, the letter and contents may be destroyed or sold, and the proceeds paid into the consolidated revenue fund. The following table shews the total number of letters, postcards, and packets dealt with by the Dead Letter Offices in the Commonwealth during the year 1916-17, together with the number of inland, interstate, and international letters either returned to writers, delivered, destroyed, or returned as unclaimed.

The greater part of the Australian Expeditionary Force mails undelivered, is dealt with by Military Dead Letter Offices attached to the Defence headquarters in the different States, and is not included herein.

The figures in the above table are exclusive of casual and exempt officers employed intermittently.

19. Gross Revenue of Postal Department.—The following table shews the gross revenue of the Postal Department for the years ended 30th June, 1902 and 1912 to 1917 inclusive, under three heads, viz., the Postal, the Telegraph, and the Telephone branches. In the Postal branch is included the revenue derived from money-order commissions, poundage on postal notes, private boxes and bags, and miscellaneous sources. The following figures and also those for expenditure are supplied by the Treasury and represent the actual collections and payments for the periods mentioned:—

## GROSS REVENUE OF POSTAL DEPARTMENT, 1901-2 and 1911-12 to 1916-17.

**20. Expenditure in respect of the Postal Department.**—The subjoined table shews the total expenditure in respect of the Postal Department in the Commonwealth for each of the years ended 30th June, 1902 and 1912 to 1917 inclusive. The figures given include certain items of expenditure, such as rent, repairs and maintenance of buildings, fittings and furniture, sanitation, water supply, new buildings and additions which are under the control of the Department of Home Affairs, and interest on transferred properties.

### TOTAL EXPENDITURE IN RESPECT OF POSTAL DEPARTMENT, 1901-2 AND 1911-12 TO 1916-17.

Year.	1901-2.	1911-12.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
Expenditure ... .. £	2,478,796	5,344,421	6,435,039	6,597,123	6,315,744	6,366,431	5,883,570

The following table shews, as far as possible, the distribution of expenditure on various items in each State during the year ended 30th June, 1917. The table is not to be regarded as a statement of the working expenses of the Department, since items relating to new works, interest, etc., are included therein.

### DISTRIBUTION OF EXPENDITURE OF POSTAL DEPARTMENT, 1916-17.

**21. Balance Sheet of the Postmaster-General's Department.**—The first complete balance sheet and profit and loss account of the Postmaster-General's Department was presented in November, 1913, for the year ending 30th June, 1913. The balance sheet for the year 1916-17 as shewn hereunder discloses the fact that the working of the Postmaster-General's Department for that year resulted in a surplus of £381,236, after providing for depreciation, pension and retiring allowances. From this amount must be deducted £558,382 for interest on capital, making a total deficit of £177,146.

Tables shewing the results of the working of the Department for the years 1913-14, to 1916-17 are appended :—

**GENERAL PROFIT AND LOSS ACCOUNT, POSTMASTER-GENERAL'S DEPARTMENT,  
1913-14 to 1916-17.**

Items.	1913-14.	1914-15.	1915-16.*	1916-17.*
Total earnings ...	£ 4,523,368	£ 4,620,061	£ 5,049,569	£ 5,515,769
Total working expenses	4,589,601	4,761,714	4,841,667	5,134,533
Deficit ...	66,233	141,653	*207,902	*381,236
Interest on capital ...	435,223	488,069	523,892	558,382
Total deficit ...	501,456	629,722	315,990	177,146

\* Profit. † Excluding Wireless Telegraphy Branch, which was transferred to the Department of the Navy as from 1st July, 1915.

It will be seen from the above that, despite the increasing revenue of the Department, the total deficit in 1914-15 was £629,722. The net result for 1915-16, however, shewed a marked improvement on the figures for the previous year, while in 1916-17 there was a further large decrease in the deficit, this being the best year since the issue of balance-sheets. In the annual report for the year 1913-14, the increased deficit of that year over 1912-13 was stated by the Department to be "due to several factors, chief amongst which are higher rates of salaries and wages resulting from statutory increments, and large increases under arbitration awards affecting postal electricians and linesmen, increased cost of contracts for the conveyance of inland mails, and increased prices for stores, fodder, horse-hire, printing, and increased debits for interest on additional capital expenditure." Effects of the drought and the war upon earnings, combined with increased charges to working expenses under the heading of depreciation (on account of assets dismantled during the year), are regarded by the Department as responsible for the deficit of £629,722 on the working for 1914-15. Increases of salaries under arbitration awards, increased amounts payable for mail contracts, and greatly enhanced prices for various items of stores, are responsible for the excess of working expenses in 1915-16 and 1916-17.

The following tables show the yearly results of the working of the various branches, and the Department as a whole, and in each State from 1913-14 to 1916-17 :—

**PROFIT OR LOSS OF THE VARIOUS BRANCHES OF THE POSTAL DEPARTMENT,  
1914-15 to 1916-17.**

Branch.	1914-15.	1915-16.		1916-17.	
	Loss.	Loss.	Profit.	Loss.	Profit.
	£	£	£	£	£
Postal ...	81,296	...	42,131	168,896	...
Telegraph ...	114,555	86,426	...	25,484	...
Telephone ...	390,704	271,695	...	...	17,234
Wireless Telegraph ...	43,167	*	*	*	*
	629,722	358,121	42,131	194,380	17,234

\* Wireless telegraphy transferred to Navy Department.

The Telephone branch shewed a profit for the first time on record in 1916-17. The loss in the same period on the working of the Postal branch is largely accounted for by the payment of £68,107 for the carriage of oversea mails in previous years, and an increased payment of £56,218 to the Railway Departments in 1916-17.

**PROFIT OR LOSS OF THE POSTAL DEPARTMENT IN THE VARIOUS STATES,  
1914-15 to 1916-17.**

**22. Royal Commission on Postal Services.**—In 1908 a Royal Commission was appointed to report on the Postal, Telegraphic, and Telephonic Services of the Commonwealth. An account of the work done by the Commission will be found in earlier issues of the Year Book. (See Year Book No. 6, p. 766.)

## § 2. Telegraphs.

**1. First Lines Constructed.**—The electric telegraph was first introduced into Australia for use by the public in the year 1854, when a line from Melbourne to Williamstown was opened. The first line in South Australia, from Adelaide to Port Adelaide, was opened in 1856, while the first line in New South Wales was brought into operation in 1858, when the line from Sydney to Liverpool, twenty-two miles in length, was opened. In Tasmania the first telegraphic line was completed in 1857, while in the following year communication was established between Sydney, Melbourne, and Adelaide. The first lines to be constructed in Queensland were those between Brisbane and Warwick, and Brisbane and Lytton, distances of 169 and 12 miles respectively. These lines were working in 1861. In Western Australia the first telegraph constructed was from Perth to Fremantle, a distance of twelve miles, which was brought into use in 1869, and in the same year the cable joining Tasmania with the continent of Australia was completed.

**2. Development of Services.**—During the period from 1871 to 1881 great progress was made throughout Australia in the way of telegraphic construction, over 14,000 miles of line, exclusive of railway telegraph lines, being opened for use, making the total length of the line open at the end of the year 1881, 25,470 miles. At the present time the systems of telegraph lines throughout Australia are well developed. The longest line extends from Thursday Island, in Torres Strait, by submarine cable to Paterson, on the mainland of Cape York Peninsula; from Paterson the line runs in a southerly direction as far as Brisbane, where it joins the main interstate line to Sydney, Melbourne, and Adelaide; from Adelaide it runs to Port Augusta, then on to Port Lincoln, on Eyre's Peninsula, and thence to Eucla, on the Western Australia boundary; from Eucla the line extends along the coast of the Great Australian Bight to Albany, and thence it runs adjacent to the west coast of Western

Australia as far as Onslow, via Perth, Geraldton, and Carnarvon. From Onslow connection extends to Broome, in Roebuck Bay. From Roebuck Bay the line crosses the Kimberley district in an easterly direction, and then runs north as far as the terminus at Wyndham. In Queensland a line runs to Burketown, near the coast of the Gulf of Carpentaria, via Normanton; another line extends to Cloncurry and Urandangi, in the extreme west of the State. Branch lines extend to all important coastal and inland towns, while considerable networks of lines converge from the country districts towards the centres of population. From Adelaide the transcontinental line runs in a northerly direction to Darwin, from which place communication is provided with Europe by submarine cable by way of Batavia, Singapore, and Madras. In Western Australia a line runs from Eucla to the Coolgardie goldfields via Balladonia and Dundas, and from Coolgardie communication is provided with Perth and with Sir Samuel, in the East Murchison district.

3. Number of Telegraph Offices and Length of Lines and Wire Open.—The following table shews the number of telegraph offices and the length of telegraphic lines and of telegraph wire available for use in the Commonwealth from 1914 to 1917 inclusive. It will be noticed that 73,663 miles of wire are available for both telegraph and telephone purposes:—

NUMBER OF TELEGRAPH OFFICES AND LENGTH OF LINE AVAILABLE  
FOR USE, 1914 to 1917.

Particulars.	1914.	1915.	1916.	1917.

Total ... ..	4,953	3,296	2,426	1,256	1,612	546	14,089

\* Including interstate cablegrams.

6. **Rates for Transmission of Telegrams.**—The present rates for the transmission of telegrams within the Commonwealth were fixed by section 7 of the Post and Telegraph Rates Act 1902, and came into force on the 1st November, 1902. Under this Act charges are made for telegrams according to whether they are "ordinary" or "press" telegrams. "Press" telegrams are defined to mean those the text of which consists of political, commercial, etc., information, and of news intended for publication in a newspaper. The telegram must be sent by an authorised correspondent, and must be addressed to a registered newspaper or recognised news agency. The subjoined tables shew the scales of charges:—

**SCALE OF CHARGES FOR ORDINARY TELEGRAMS.**

Particulars.	Town and Suburban, within Prescribed Limits, or within 15 Miles from the Sending Station.	Other Places within the State, except Town and Suburban.	Interstate.
	s. d.	s. d.	s. d.
Including address and signature—			
Not exceeding 16 words ... ..	0 6	0 9	1 0
Each additional word ... ..	0 1	0 1	0 1

Double the foregoing rates are imposed for the transmission of telegrams on Sunday, Christmas Day, and Good Friday, and between the hours of 8 p.m. and 9 a.m., and for telegrams sent on "urgent" forms.

### SCALE OF CHARGES FOR PRESS TELEGRAMS.

Particulars.	Within any State.	Interstate.	Relating to Parlia- mentary, Executive, Departmental, and other Common- wealth Proceedings as may be prescribed.*
	s. d.	s. d.	s. d.
Not exceeding 25 words ... ..	0 6	1 0	1 0
From 26 to 50 words ... ..	0 9	1 6	} 1 6
From 51 to 100 words ... ..	1 6	3 0	
Every additional 50 words ... ..	0 6	1 0	0 6

\* Within the Commonwealth.

7. **Letter-telegrams.**—Commencing in February, 1914, the Postal Department instituted a system of letter-telegrams between all telegraph offices which are open between 7 p.m. and midnight. The letter-telegrams are forwarded during the night by telegraph to the office of destination and are delivered as ordinary letters by the first letter delivery, or are despatched by mail to the address in the ordinary way. The rates charged throughout the Commonwealth are one shilling for the first 40 words, and one half-penny for each additional word, double these rates being charged on Sundays. At the end of 1917 the service applied to 109 offices throughout the Commonwealth.

8. **Wireless Telegraphy.**—The information dealing with wireless telegraphy, which appeared in previous issues of the Year Book, has, for the present, been discontinued.

## § 3. Submarine Cables.

1. **First Cable Communication with the Old World.**—In earlier issues of the Year Book (No. 6, p. 770) will be found a detailed account of the connection of Australia with the old world by means of submarine cables.

2. **The Tasmania - Victoria Cables.**—A submarine cable joining Tasmania to the continent of Australia was opened for use in 1869, the total length being 170 miles. The line was owned by the Eastern Extension Telegraph Company, and was subsidised by the Tasmanian Government until the year 1909. On the 28th February, 1908, the Postmaster-General entered into an agreement with Messrs. Siemens Brothers and Company Ltd., of London, for the manufacture and laying of two submarine cables between Tasmania and Victoria. The new cables were taken over on the 24th March, 1909, and opened to the public on the 1st May, 1909, the day following the expiration of the agreement with the Eastern Extension Company. Their aggregate length is approximately 350 nautical miles of main cable, and 20 nautical miles each of intermediate and shore-end cable, making a total of 390 nautical miles. The contract price was £52,447.

**3. The Eastern Extension Company's Cables.**—In addition to the first Victoria-Tasmania cable and the original cable from Darwin (see Year Book No. 6, p. 770), the Eastern Extension Company has constructed several other cables connecting with various places in the Commonwealth. (a) In 1879 the original cable *via* Banjoewangie was duplicated, the States of New South Wales, Victoria, South Australia, Western Australia and Tasmania having agreed to pay the above company a subsidy of £32,400 per annum for a period of twenty years, the amount to be divided between the States on a population basis. (b) In 1881 a cable was constructed connecting Broome, in Roebuck Bay, W.A., with Banjoewangie, and remained in operation until 1914, in which year it was taken up. (c) In July, 1899, the company offered to lay a cable direct to Great Britain *via* the Cape of Good Hope, and also offered reductions in the rates charged, if the States would agree to certain conditions giving the company the right of direct dealing with the public. The States of South Australia, Western Australia, and Tasmania accepted the terms offered, and New South Wales entered into the agreement in January, 1901. The cable was opened *via* Fremantle and Durban in October, 1901. (d) Another submarine cable from Fremantle to Adelaide forms an alternative line of communication between the eastern States and Western Australia. (e) There is an alternative route, partly belonging to the Eastern Extension Company and connecting the Port Darwin-Singapore cable with London, *via* Hong Kong, Shanghai, Possiet Bay (Pacific Russia), Libau (Russian Baltic), and Newbiggin (England). (f) In 1909 a cable was laid from Java to Cocos Island, thus affording another route from Australia to South Africa, whilst in April, 1911, a radio-telegraphic station was opened at Cocos Island, thus strengthening the line of communication between Australia and the East.

**4. The Pacific Cable.**—In July, 1898, a conference of representatives of Great Britain, Canada, New South Wales, Victoria, Queensland, South Australia, and New Zealand was held for the purpose of considering a project for a cable to be laid across the Pacific Ocean, touching only British territory on its way from Australia to Canada, thus providing an "All Red" route, as it is termed, for a cable system between England and Australia. In the following year it was agreed at a meeting held by representatives of the countries interested that the cable should be laid and that Great Britain and Canada should each pay five-eightieths of the cost, and the States of New South Wales, Victoria, Queensland, and the Dominion of New Zealand should each pay one-ninth. The construction and management of the cable were placed under the control of a board composed of seven members—two each from Great Britain, Canada, and Australia, and one from New Zealand—called the Pacific Cable Board. The Australian shore-end of the cable was landed at Southport, Queensland, in March, 1902, and the cable was completed on the 31st October, 1902, and opened for traffic on the 7th December of the same year. There are cable stations at Norfolk Island, Fiji, and Fanning Island, and a branch cable runs from Norfolk Island to New Zealand. In 1910 the Board leased a wire from Bamfield, British Columbia, to Montreal, thus extending the Pacific cable system from Queensland to Montreal. The traffic is then carried across the Atlantic to the United Kingdom by the cables of the Anglo-American and Commercial Companies. The receipts for the year ended 31st March, 1917, after providing for working expenses, interest, sinking fund, etc., shewed a surplus of £4231, of which the Commonwealth's share is £1410. The financial year 1916 resulted in a surplus of £17,924, but to enable an equitable comparison to be made, it is necessary to explain that in addition to the usual annual contribution to the renewal fund in 1917, a further sum of £60,000 was transferred to replace loss by depreciation of securities in which the fund is invested and to strengthen the position generally. As in 1916, the surplus must be applied in reduction of the outstanding balance of the original loan of £2,000,000 in accordance with the Pacific Cable Act of 1901. The following table shews particulars of the revenue, expenditure, total profit or loss, and the proportion of the loss payable by the Commonwealth for the financial years 1903 and 1910-17:—

**REVENUE, EXPENDITURE, AND PROFIT AND LOSS ON WORKING OF PACIFIC CABLE, 1903 and 1910-17.**

Year ended the 31st March.	Revenue.	Expenditure (including Annuities and Renewal Fund).	Profit or Loss.	Commonwealth Proportion of Loss, or Profit.
	£	£	£	£
1903 ...	...	...	Loss 90,518	Loss 30,514
1910 ...	111,724	171,312	„ 59,588	„ 19,862
1911 ...	138,678	186,888	„ 48,210	„ 16,071

1917 ...	336,774	332,543	„ 4,231	„ 1,410

\* To 30th June in each year.

**5. New Zealand Cables.**—A submarine cable joining New Zealand to the Australian Continent was laid in 1876. The line is 1191 miles in length. The Australian shore-end of the cable is at Botany Bay, while the New Zealand terminus is at Wakapuaka, near Nelson, in the Middle Island, from which place another cable, 109 miles in length, is laid to Wanganui, in the North Island. For a period of ten years after its opening the cable was subsidised by the New South Wales and New Zealand Governments, the total contributions amounting to £10,000 a year. The branch from Norfolk Island to New Zealand of the Pacific cable was opened on the 23rd April, 1902. The length of this cable is 597 miles, the New Zealand terminus being at Doubtless Bay in the north of the North Island. During 1911 a scheme to lay a second cable between New Zealand and Australia (Auckland to Sydney) was adopted by the various Governments concerned, and the laying of the new cable was completed on the 24th December, 1912, the cable being opened for traffic on the 31st December, 1912.

**6. The New Caledonian Cable.**—In April, 1892, a French company, known as the Compagnie Française des Câbles Télégraphiques, entered into an agreement with the French, the New South Wales, and the Queensland Governments to lay down a submarine cable between New Caledonia and Queensland in return for guarantees by the French Government to the extent of £8000, and by the Governments of New South Wales and Queensland to the amount of £2000 each annually for a period of thirty years. The cable was opened for use in October, 1893, the Australian shore-end being at Bundaberg. The guarantees of the Governments of New South Wales and Queensland have now been transferred to the Commonwealth Government.

**7. Number of Cablegrams Received and Despatched.**—The subjoined table shews the number of cablegrams received and despatched in the Commonwealth from 1914 to 1916-17:—

**CABLEGRAMS RECEIVED AND DESPATCHED, COMMONWEALTH, 1914 to 1916-17.**

Particulars.	Cablegrams Received.			Cablegrams Despatched.			Total Cablegrams Received and Despatched.

9. **Cable Rates.**—In 1872 the cable rate to England was nine guineas for twenty words, but when word rates were brought into general use in 1875, the rate between Great Britain and Australia was fixed at ten shillings and sixpence, subsequently altered to ten shillings and eightpence. In 1886 the Eastern Extension Telegraph Company reduced the rate to nine shillings and fourpence a word for ordinary messages, to seven shillings and a penny for Government messages, and to two shillings and eightpence a word for press messages. At a conference of the postal and telegraphic authorities held in March, 1891, the proposal to reduce the rates to four shillings a word for ordinary messages, three shillings and eightpence for Government, and one shilling and tenpence for press messages was agreed to, the States of New South Wales, Victoria, South Australia, Western Australia, and Tasmania undertaking to make good half the loss which the Eastern Company might suffer through such reductions. The States guaranteed to the company one-half of the amount of receipts short of the sum of £237,736—the amount received by the company in 1889 in respect of cable charges—the other half to be borne by the company. The Government of South Australia was also guaranteed by the other contracting States against any loss to the revenue which the lower cable rates might cause in the working of the overland lines. Queensland subsequently joined the other States in these guarantees. In 1893, however, owing to the heavy losses incurred,

the rates for ordinary messages were increased to four shillings and ninepence per word, and at the same time New Zealand joined the guarantees to the company and to South Australia.

(i.) *Present Rates to Great Britain.* On the acceptance by three of the States of the terms offered by the Eastern Extension Telegraph Company for the construction of a cable *via* South Africa, the rate for ordinary messages was reduced in May, 1900, to four shillings a word. It was further reduced to three shillings and sixpence in January, 1901, and to three shillings in January, 1902, at which amount the standard rate by all routes for cablegrams to Great Britain has since remained. The scale of reductions is governed by a revenue standard, and when the latter averages £330,000 per annum a further reduction to two shillings and sixpence will be made. In September, 1912, the "through" charge for press cables was reduced from ninepence to sevenpence-halfpenny per word.

(ii.) *Deferred Cablegrams.* With a view to affording additional cable facilities and to keeping the Pacific cable fully occupied during the whole twenty-four hours, proposals were made by the Postmaster-General's Department for the adoption of a system of deferred cablegrams. A meeting of representatives of the administrations and companies concerned was held in London in November, 1910, and the new rates came into force on the 1st January, 1912. Under this system a reduction of 50 % in the charges is made, providing the message is written in plain language, and conveys no other meaning than that which appears on the face of it. Messages can only be transmitted after non-urgent private cablegrams and press cablegrams. Those which have not reached their destination within a period of twenty-four hours from the time of handing in are transmitted in turn with cablegrams charged full rate. They may be sent *via* the Pacific or Eastern routes to all countries to which the ordinary rate exceeds tenpence per word. The arrangement, previous to the war, extended to some sixty countries, and became very popular. In 1916-17, 6,055,387 words were transmitted to and from Australia, the Commonwealth revenue from this source amounting to £63,373, an increase over the previous year of 772,916 words and of £8153 revenue. This service, together with that of the week-end cable letters, has to some extent affected the ordinary cable business. Deferred press cablegrams, subject to a delay of 18 hours, may be exchanged between the Commonwealth and the United Kingdom at the rate of 4½d. per word, and between the Commonwealth and Vancouver at the rate of 1½d. per word. Since the commencement of the war, it has been found necessary on several occasions, owing partly to the interruption to the Pacific cable from September to November, 1914, and partly to the pressure of other cable matter, to temporarily suspend the operation of the deferred cablegram service, as well as that of the week-end cable messages.

(iii.) *Week-End Cable Letters.* The service of the week-end cable letters between the Commonwealth and the United Kingdom was introduced on the 4th January, 1913. Under this arrangement, messages written in plain language might be lodged at any post office in the Commonwealth or the United Kingdom in time to reach the forwarding cable office by post or telegraph by midnight on Saturday. The messages, which were deliverable by post on Tuesday morning, were charged at the rate of ninepence per word, plus ordinary telegraph rates if required to be forwarded by land telegraph in either the country of despatch or destination.

The system has since been extended to apply to messages between the Commonwealth and the Union of South Africa, India, Ceylon, Burma, Canada, Portugal, and Newfoundland. A further benefit has been conferred on users, as week-end cables to the countries enumerated may now be transmitted by telegraph throughout without extra charge. The rates to these countries and to the United Kingdom are shewn hereunder :—

## RATES FOR WEEK-END CABLE LETTERS.

Country.	Rate per Word.	Minimum Charge per Telegram.
United Kingdom ...	9d.	15/-
Union of South Africa ...	7d. (plus ½d. for those lodged in Tasmania)	11/8
India, Ceylon, and Burma ...	7½d.	12/6
Canada (ordinary rate 2s. 4d.)	7d.	11/8
Other parts of Canada ...	8d. to 10d.	12/11 to 16/8
Newfoundland ...	8½d.	13/9
Portugal... ..	9d.	15/-

Week-end cable letters may also be sent to the United Kingdom or Canada for transmission by registered post to other countries at an extra charge of 5d. per message. As in the case of deferred cablegrams, the pressure on the cables during the war has, on several occasions, necessitated the temporary suspension of this service.

(iv.) *Rates to New Zealand.* As a result of the completion of the New Zealand branch of the Pacific cable in 1902, the rates charged for cablegrams between Australia and New Zealand, except to and from Tasmania, were uniformly reduced to fourpence-halfpenny per word. Between New Zealand and Tasmania the charge was fixed at fivepence-halfpenny a word, but it has since been reduced to fourpence-halfpenny. The charge for ordinary cablegrams from New Zealand to Great Britain was reduced from the 1st June, 1902, from five shillings and twopence to three shillings and fourpence a word, and has since been further reduced to three shillings a word.

**10. Subsidised Press Cable Service.**—In October, 1909, a Select Committee of the Commonwealth Senate was appointed to report upon the question of the supply, conditions of sale, and distribution, which control the Press Cable Service within and from outside the Commonwealth. A majority report of this Committee was issued in December, 1909, and recommended (a) the completion of an "All Red" cable route *via* Canada, (b) the conditional subsidisation of a press cable association, (c) the utilisation of the High Commissioner's office for the dissemination in Australia of Empire news, and (d) the amendment of the Copyright Act in regard to cables.

In accordance with the recommendations of this Committee the Commonwealth granted a total subsidy of £6000, extending over a period of three years, to the Independent Press Cable Service, on the conditions that at least 6000 cable words were supplied each week, to be sent *via* Pacific, and that any newspaper proprietary in the Commonwealth was permitted to become a subscriber at rates approved by the Government. This terminated on the 1st July, 1912, and a new arrangement was entered into under which the Commonwealth agrees to grant a subsidy of £2000 per annum, providing that not less than 26,000 words are sent each month. This agreement has been extended for a period of three years from 1st October, 1916, with an annual grant of £1500.

**11. Cable Subsidies paid.**—The agreement between the State Governments and the Eastern Extension Telegraph Company expired on the 30th April, 1900. From the year 1895 onwards the amounts guaranteed—£237,736 to the company and £37,552 to South Australia—were met by the receipts.

The following table shews the total amounts paid by way of cable subsidies for the years 1910-11 to 1916-17 :—

## TOTAL AMOUNT OF CABLE SUBSIDIES PAID, 1910-11 to 1916-17.

Year.	1910-11.	1911-12.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
Amount ... £	20,093	17,522	14,779	10,650	6,638	4,860	3,929

The total amount of cable subsidies paid prior to the year 1908-9 included the subsidy paid in respect of the Tasmania-Victoria cable service.

As the agreement in connection with the Tasmanian cable expired in 1909, and as new cables were laid by the Commonwealth Government, the guarantees were, in the course of the year 1910, reduced to those in connection with the New Caledonia and Pacific cables. The amount of cable subsidies paid by the Commonwealth in 1916-17 was £3929 in respect of the New Caledonian cable guarantee.

## § 4. Telephones.

**1. Development of Telephone Services.**—The Postal Department has established telephone services in all the capital towns and in many of the important centres of population throughout the Commonwealth. Particulars as to the revenue from telephone services in each State for the years 1902 and 1912-17 are given on page 744 *ante*.

**2. Telephone Rates.**—On the 10th December, 1915, revised charges for telephone services came into operation. Under the new scale, ground-rent for telephones is calculated on the number of subscribers connected with the exchange or network, instead of being based on the total population residing within the telephone network, as formerly. The smallest and greatest rental charges remain the same as under the old system, but between these a more gradual scale was introduced. Previously the charge for calls made by a subscriber was at the rate of two calls for one penny up to 2000 calls per half-year; above that number, three calls for one penny. This charge was increased to one penny per call, without any progressive reduction. At the same time, the public telephone charge per call was increased from one penny to twopence. The charges mentioned in the table hereunder are payable for the different classes of telephone services specified therein:—

### TELEPHONES.—RENTAL CHARGES, 30th JUNE, 1917.

Exchanges or Networks with Subscribers' Lines Connected, as shewn hereunder.	Radius of Network with Main Exchange as Centre.	Annual Ground Rent, within Two-mile Radius.		
		For an Exclusive Service.	For each Subscriber or Instrument on a Two-party Service.	For each Subscriber or Instrument on a Three or more party Service.
	Miles.	£ s. d.	£ s. d.	£ s. d.
From 1 to 300 ...	5	3 0 0	2 10 0	2 0 0
„ 301 to 600 ...	5	3 5 0	2 10 0	2 0 0
„ 601 to 1,500 ...	5	3 10 0	2 15 0	2 5 0
„ 1,501 to 4,000 ...	10	3 15 0	3 0 0	2 10 0
„ 4,001 and upwards ...	10	4 0 0	3 0 0	2 10 0

It is provided that for each effective call originating from a subscriber's instrument, the charge shall be one penny.

**3. Particulars of Telephone Services.**—On 30th June, 1917, there were in the Commonwealth 137,652 telephone lines connected to 2044 exchanges, as compared with 128,862 lines connected to 1882 exchanges a year previously. The following tables shew the mileage of lines, etc., for telephone purposes, shewing trunk lines separately, on 30th June, 1916 and 1917:—

**MILEAGE OF LINES, Etc., FOR TELEPHONE PURPOSES (EXCLUSIVE OF TRUNK LINES), 1916 and 1917.**

Note.—For 1905 the figures are shewn as on 31st December, and for the subsequent years on 30th June (the close of the financial year).

\* Approximate.

## SECTION XIX.

## COMMONWEALTH FINANCE.

## § 1. General.

**1. Financial Provisions of the Constitution.**—The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are those contained in Chapter IV., "Finance and Trade," being sections 81 to 105 of the Constitution Act. Two other sections which have a most important bearing on questions of Commonwealth finance are sections 69 and 51. For subsequent modification of, and addition to, the original clauses, the enquirer is referred to sub-sections 5 and 6 hereunder.

**2. Departments Transferred or Transferable under Constitution.**—In section 69 it is provided that the Departments of Customs and Excise in each State should become transferred to the Commonwealth on its establishment, and that on a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments should become transferred:—

- (i.) Posts, telegraphs, and telephones.
- (ii.) Naval and military defence.
- (iii.) Lighthouses, lightships, beacons and buoys.
- (iv.) Quarantine.

Under proclamation dated 12th February, 1901, and published in the Commonwealth *Gazette* of the 14th of that month, the Departments of Posts, Telegraphs, and Telephones in each State became transferred to the Commonwealth as from the 1st March, 1901, while under a similar proclamation dated 19th February, 1901, and gazetted on the 20th, the Departments of Naval and Military Defence in each State also became transferred to the Commonwealth as from 1st March, 1901. In the case of Quarantine, an Act (No. 3 of 1908) has been passed and control was assumed by the Commonwealth on 1st July, 1909.

The requisite proclamation of transfer in the case of departments dealing with "Lighthouses, lightships, beacons, and buoys," was made so as to effect the transfer on 1st July, 1915, although legislation relative thereto was passed by the Federal Parliament very much earlier (Act No. 14, 1911).

**3. Departments Transferable by Means of Commonwealth Legislation.**—In addition to the departments here mentioned which pass to the Commonwealth either automatically or by proclamation, there are several others whose duties the Commonwealth is empowered to undertake after the passing by the Commonwealth of the legislation

necessary to authorise the assumption of such duties. These are referred to in section 51 of the Constitution, which contains a statement of all matters respecting which power is (subject to the Constitution) conferred on Parliament "to make laws for the peace, order and good government of the Commonwealth." The matters contained in this section include those already mentioned as being covered by section 69. The principal matters involving for the due performance of the duties connected therewith the creation or transfer of departments of the Public Service are:—

- (i.) Trade and commerce.
- (ii.) Taxation.
- (iii.) Bounties on production or export of goods.
- (iv.) Postal, telegraphic, telephonic, and other like services.
- (v.) Naval and military defence.
- (vi.) Lighthouses, lightships, beacons, and buoys.
- (vii.) Astronomical and meteorological observations.
- (viii.) Quarantine.
- (ix.) Census and statistics.
- (x.) Bankruptcy and insolvency.
- (xi.) Copyrights, patents, and trade marks.
- (xii.) Naturalisation and aliens.
- (xiii.) Marriage.
- (xiv.) Divorce and matrimonial causes.
- (xv.) Invalid and old-age pensions.
- (xvi.) Immigration and emigration.
- (xvii.) Conciliation and arbitration.

**4. Commonwealth Departments.**—As a result of legislation passed from time to time in accordance with section 51, various departments and sub-departments have been transferred from the States to the Commonwealth, whilst other departments necessary for the due performance of the Commonwealth functions have been brought into existence. In the former class are such departments as those of Patents, Trade Marks, Copyrights, Designs, Naturalisation and Meteorology, while in the latter are the Ministerial Departments of Treasury, Trade and Customs, Defence, Attorney-General, Postmaster-General, Home and Territories, and Works and Railways, as well as such general departments as Public Service Commissioner's Office, Treasury, Audit Department, Crown Law Department, Bureau of Census and Statistics, Federal Taxation Office, Prime Minister's Office, and Interstate Commission. It may, therefore, be said that, so far as its financial aspect is concerned, the effect of Federation up to the present time has been the transfer from States to Commonwealth of the revenue obtainable from the great revenue-producing Departments of Customs and Excise, and of the expenditure connected with various departments, whose number is gradually increasing, and that, in addition, the various increasing functions of the Commonwealth have necessitated further new expenditure.

**5. Financial Relations between Commonwealth and States.**—For the first ten years after Federation the financial relations between the Commonwealth and State Governments were regulated by section 87 of the Constitution, known generally as the "Braddon Clause." This provided that the Commonwealth should, until 31st December, 1910—and thereafter so long as Parliament should decide—retain for its own use an amount not exceeding one-fourth of the net revenue from Customs and Excise duties, the balance being returned to the States. The framers of the Constitution only contemplated a moderate Federal expenditure, and doubtless considered that one-fourth of the Customs and Excise revenue would be sufficient, as, indeed, it was in the earlier years. It began to be realised, however, later on, that if the Commonwealth was to undertake large national duties such as Defence, a greatly increased expenditure must be faced. Consequently, on the expiry of the "Braddon Clause" in 1910, it was replaced by an agreement much more favourable to the Commonwealth. This agreement, known as the "Commonwealth Surplus Revenue Act 1910," was passed by the Fisher Administration for a period of ten years, after which time it would be subject to revision. It provided that the Commonwealth was to retain the whole of the Customs and Excise revenue, and to make to the Government of each State (by monthly instalments) an annual payment equal to 25s. per head of the population of the State. The population of a State in any financial year was considered, for the purposes of this Act, to be the number estimated by the Commonwealth Statistician as existing in the State on the 31st December falling in that financial year.

**6. Special Assistance.**—By the same Act provision was made that, during the period of ten years succeeding 1st July, 1910, a special payment should be made to Western Australia of an annual sum, starting at £250,000 for the first year, and progressively diminishing by £10,000 each subsequent year. One half of the amount was to be debited to all the States (including Western Australia) in proportion to population.

Assistance has also been granted to Tasmania, partly by means of the "Tasmania Grant Act of 1912," and partly by means of a special sum allocated by the Budget of 1913. According to the "Grant Act" a sum of £500,000 was set aside to be paid to Tasmania by ten annual instalments, starting at £95,000, and progressively diminishing by £10,000 until £5000 is reached. In the Budget of 1913 a further sum of £400,000 was allotted to Tasmania, to be paid in nine annual instalments, starting at £5000 and progressively increasing by £10,000 until the last payment, which will, however, be £80,000 instead of £85,000. As the result of these two grants Tasmania will have a first annual instalment of £95,000, then eight instalments of £90,000 each, and a final one of £85,000.

These concessions to Western Australia and Tasmania were granted in consideration of the sacrifices made by these States, when yielding control of their Customs revenue to the Commonwealth. The whole question of the financial relations between the Commonwealth and States since Federation has been fully treated in the chapters on Commonwealth Finance in previous issues of the Year Book, up to and including No. 6.

**7. Accounts of Commonwealth Government.**—The Commonwealth Government, like the States' Governments, operates nearly all its accounts by means of three funds, the Consolidated Revenue Fund, the Trust Fund, and the Loan Fund. The latter only came into existence in the financial year 1911-12, but on the outbreak of war became so important that it is now treated in two parts: a General Loan Fund mainly for purposes of Public Works, and a War Loan Fund for purely military

purposes. The accounts of these funds are now so interwoven, that a proper conspectus of the Commonwealth Accounts can hardly be obtained by an analysis of each of them singly. Two tables are therefore appended, shewing receipts and disbursements from all sources for the last five years. The different funds will then be treated in detail, in the subsequent sections.

## COMMONWEALTH RECEIPTS, 1912-13 to 1916-17.

## § 2. Consolidated Revenue Fund.

### (A) Nature of Fund.

The provisions made for the formation of a Commonwealth Consolidated Revenue Fund, and the means to be adopted for operating on that fund, are contained in sections 81, 82, and 83 of the Constitution. In section 81 it is provided that "All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution." A strictly literal interpretation of this section would appear to require all loan and trust moneys received by the Commonwealth Executive to be paid to Consolidated Revenue. It is, however, held by Quick and Garran, in their "Annotated Constitution," that the "generic word *moneys* must be controlled by the preceding specific word *revenues*, and limited to moneys in the nature of revenue." This is the view of the matter which has been adopted by the Commonwealth Treasury in the preparation of its accounts. At present certain moneys received by the Commonwealth, which are not of the nature of revenue, are paid to Trust Account. As regards expenditure from the Consolidated Revenue Fund, section 82 provides that the costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund should form the first charge thereon, while section 83 stipulates that "no money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law." Such appropriations are either special, and as such are provided for by means of a permanent Act, or are annual, and provided for in an annual Appropriation Act.

### (B) Revenue.

1. **Total Collections.**—The consolidated revenue of the Commonwealth, which in 1901-2, the first complete financial year under the new régime, amounted to £11,296,985, had, in 1916-17, reached a total of £34,067,434, an increase in the period of £22,770,449.

Particulars concerning the total amount of revenue collected by the Commonwealth Government from 1st July, 1912, to 30th June, 1917, are contained in the following table:—

**CONSOLIDATED REVENUE OF THE COMMONWEALTH, 1912-13 to 1916-17.**

	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
Commonwealth	£ 21,907,084	£ 21,741,775	£ 22,419,798	£ 30,762,216	£ 34,067,434

Since 1913-14 the revenue has increased steadily every year. In 1914-15 it was augmented by instalments, amounting to £14,100,000, of the War Loan from the British Government, and also by £371,118 Treasury Bills in aid of revenue. The great increase in the last two years is due to the large expansion in the direct taxation, which will be dealt with in detail in a later section.

2. **Collections per Head.**—In the table given hereunder particulars are furnished of the amount of revenue per head of population collected in respect of the Commonwealth for the last five years:—

**COMMONWEALTH REVENUE PER HEAD OF POPULATION, 1912-13 to 1916-17.**

	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
Commonwealth	£ s. d. 4 12 7	£ s. d. 4 9 3	£ s. d. 4 10 9	£ s. d. 6 4 9	£ s. d. 6 19 9

3. Sources of Revenue.—The following table furnishes particulars concerning the Commonwealth revenue derived from each source during the years 1912-13 to 1916-17 :—

SOURCES OF COMMONWEALTH REVENUE, 1912-13 to 1916-17.

Entertainments Tax	...	...	...	...	110,683
Northern Territory ... ..	40,084	54,777	53,026	64,780	40,650
Credit Balance Northern Territory Funds	24,456	...	...	...	...
Miscellaneous ... ..	257,403	270,179	393,476	781,968	3,080,618
Total ... ..	21,907,084	21,741,775	22,419,798	30,762,216	34,067,434

In addition to the new direct taxation, which has already been mentioned, there has been a fairly steady return from customs and excise. In 1916-17, however, there was a striking fall in the customs returns, due probably to the diminution of imports caused by a scarcity of tonnage. The postal revenue has also shewn a consistent upward tendency. The principal items included in the "Miscellaneous" are Lighthouses and Light Dues; receipts from Trans-Australian Railway; Interest; and Trading Vessels.

4. Customs Revenue for Past Five Years.—Particulars for the Commonwealth as a whole, for the five years 1912-13 to 1916-17, are furnished in the following table :—

COMMONWEALTH CUSTOMS REVENUE, 1912-13 to 1916-17.

Classes.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
Stimulants ... ..	2,777,492	2,810,222	2,899,540	2,500,606	1,986,321
Narcotics ... ..	1,206,782	1,175,404	1,257,223	1,333,516	1,300,683
Sugar ... ..	691,568	209,375	60,403	587,028	453,380
Agricultural products	1,072,203	1,002,363	1,087,133	1,310,437	862,227
Apparel and textiles	2,367,945	2,514,170	2,302,764	2,902,012	3,197,778
Metals and machinery	1,639,749	1,672,125	1,638,416	1,572,536	1,404,705
Oils, paints, etc.	313,348	310,847	311,545	386,994	338,202
Earthenware, etc.	490,983	426,134	338,095	368,300	249,525
Drugs and chemicals	109,619	122,960	131,764	160,997	163,027
Wood, wicker, and cane	535,576	555,843	455,860	365,969	277,396
Jewellery, etc.	281,631	272,214	253,290	335,147	325,718
Leather, etc.	435,801	470,382	428,106	505,652	498,874
Paper and stationery	237,943	234,504	269,443	346,158	419,323
Vehicles ... ..	328,001	343,633	303,868	499,140	429,077
Musical instruments	165,839	166,059	83,570	100,562	107,915
Miscellaneous articles	361,350	330,548	248,977	295,895	320,334
Other receipts ... ..	40,095	35,954	35,701	39,735	39,179
Total Customs ... ..	13,055,925	12,652,737	12,105,698	13,610,684	12,373,664

It will be seen that during the period here dealt with, the Customs revenue from stimulants and narcotics has represented, approximately, one third of the total Customs revenue, except in the last two years, when the proportion was somewhat less. The

other principal articles from which Customs revenue was derived were "apparel and textiles," "metals and machinery," and "agricultural products."

5. **Excise Collections, 1912-13 to 1916-17.**—Particulars concerning the amount of Excise collected under each head during each of the years ending 30th June, 1913 to 1917, are given hereunder:—

**COMMONWEALTH EXCISE REVENUE, 1912-13 to 1916-17.**

Particulars.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
Beer ... ..	718,869	792,243	1,205,001	1,485,543	1,387,115
Spirits ... ..	411,192	421,506	514,794	627,431	670,768
Sugar ... ..	518,508	179,149	1,508	(a) 170	...
Tobacco ... ..	840,012	927,293	1,043,885	1,204,556	1,172,787
Licenses ... ..	8,528	5,142	6,368	6,059	5,953
 Total Excise ...	 2,497,109	 2,325,333	 2,771,556	 3,323,419	 3,236,623

(a) Debit.

Comparing the Excise collections for 1916-17 with those for 1912-13, it will be seen that the increase in the revenue from tobacco was about 40 per cent., the yield from beer was nearly doubled, and that from spirits increased about 60 per cent., while the revenue from sugar has vanished, owing to the abolition of the excise duties, and a decrease was also experienced in the return from licenses.

6. **Commonwealth Direct Taxation.**—(a) *General.* Under section 51, sub-section (ii.) of the Constitution, power is given to the Commonwealth Parliament to make laws with respect to taxation, but so as not to discriminate between States or parts of States. Section 90 of the Constitution makes the power of the Commonwealth Parliament to impose Customs and Excise duties an exclusive one, but it would appear that as regards all other forms of taxation the States and Commonwealth possess concurrent powers. The question of the imposition by the Commonwealth Parliament of direct taxes such as land and income taxes is one which has been the subject of considerable discussion, and the opinion has been expressed that the intention of the framers of the Constitution was that of restricting the powers of taxation of the Commonwealth to the imposition of Customs and Excise duties except in case of great national peril. Whatever the intention of the framers may have been in this matter, the Constitution itself contains no such provision, and the Commonwealth Parliament is given an absolutely free hand in the imposition of taxation. Up to the end of the financial year 1909-10 the only taxes so levied were those of Customs and Excise, referred to in detail in the foregoing paragraphs. During the 1910 session of the Federal Parliament, however, an Act—assented to on 17th November, 1910—was passed, giving to the Commonwealth the power of levying a tax upon the unimproved value of all lands within the Commonwealth which were owned by taxpayers, and not specially exempted. Detailed reference to this Act will be found in Commonwealth Year Books Nos. 5 and 6.

(b) *Budget of 1914-15.* The fact stated in the previous paragraph, that there was nothing in the Constitution itself to restrain the Federal Government from entering the field of direct taxation, received further exemplification by the Budget of 1914-15. In the first place the Land Tax was raised by altering the graduation so that the increase in rate over the whole taxable value of the estate, for each succeeding pound of taxable value between £5000 and £75,000, was one eighteen-thousand seven-hundred and fiftieth of a penny, instead of one thirty-thousandth of a penny, as hitherto. The maximum rate for resident owners became 9d. in the £ on estates whose taxable value was more than £75,000. Corresponding increases in the

rates payable by absentee owners were made, rising to a maximum of 10d. in the £ on estates whose taxable value is more than £80,000. These advances were estimated as likely to increase the annual yield of the Land Tax by £1,000,000. In addition to this substantial increase in an already existing tax, the Federal Government, for the first time, introduced Succession Duties on estates of deceased persons, in addition to those already imposed by the State Governments. The Commonwealth scale of succession duty, after starting by the exemption of all estates of less than £1000, ranges from a minimum of 1 per cent. to a maximum of 15 per cent. on estates of a higher taxable value than £71,000. The rate of duty for any estate may be found by the following rule. Divide the number of thousands of pounds in the estate by five, and to the quotient thus obtained add  $\frac{3}{5}$  per cent. in the case of an exact thousand, and  $\frac{1}{5}$  per cent. in every other case. Thus for an estate of £43,000 the duty would be  $9\frac{3}{5}$  per cent. (i.e.  $\frac{43}{5} + \frac{3}{5}$ ), but for an estate of £43,001 the duty would be  $9\frac{4}{5}$  per cent. (i.e.  $\frac{43}{5} + \frac{4}{5}$ ). The succession duties thus outlined yielded £39,646 up to 30th June, 1915, an amount very much less than the estimate. It is possible, however, that sufficient account was not taken of the interval that frequently elapses between a person's death and the taking out of probate on the estate. This is borne out by the great increase in the yield for the years 1915-16 and 1916-17. The respective contributions of the several States are as follows:—

COMMONWEALTH PROBATE AND SUCCESSION DUTIES.

Year.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	Total.
	£	£	£	£	£	£	£
1914-15	18,474	9,216	4,774	1,900	1,912	3,370	39,646
1915-16	261,477	276,923	23,928	32,790(a)	8,530	22,567	626,215
1916-17	306,249	588,125	61,239	65,130	30,064	11,361	1,062,168

(a) Including Northern Territory, £164.

(c) *Commonwealth Income Tax.*—(i.) The first Commonwealth Income Tax was levied during the financial year 1915-16. The legislation on the subject comprised the Income Tax Assessment Act No. 34 of 1915, as amended by the Income Tax Assessment Acts Nos. 47 of 1915, 37 of 1916, 39 of 1916 and 18 of 1918. The rates are fixed for one year only, and in each financial year an Income Tax Act fixing the rate for that year is passed. That for the present year has not yet been introduced. Various estimates as to the probable yield were made, varying from £3,000,000 to £4,000,000, and the confidence of those who quoted the higher amount was justified by the result. The result of the first two years' collections was as follows:—

COMMONWEALTH INCOME TAX COLLECTIONS, 1915-16 and 1916-17.

States.			1915-16.	1916-17.
			£	£
New South Wales	...	...	1,462,418	1,670,829
Victoria	...	...	1,476,690	2,547,222
Queensland	...	...	497,059	545,475
South Australia	...	...	245,063	433,446
Western Australia	...	...	185,003	314,374
Tasmania	...	...	66,183	108,837
Northern Territory	...	...	359	1,767
Total			3,932,775	5,621,950

(ii.) The principal exemptions are as follows :—

- (a) The salaries of the Governor-General and the various State Governors.
- (b) Income derived from the different Commonwealth securities issued for the purposes of certain of the War Loan Acts 1915.
- (c) The revenue of a municipal corporation or other local governing body.
- (d) The income of religious, scientific or charitable institutions.
- (e) The income of friendly societies, trade unions, or any associations registered under an Act for the settlement of industrial disputes.

(iii.) *Deductions.* The following deductions, amongst others, are allowed :—

- (a) All rates and taxes paid in Australia, exclusive of those paid under this Act.
- (b) Life assurance premiums and fidelity guarantee payments not exceeding a total of £50.
- (c) Payments not exceeding £50 to a friendly society, sustentation fund, superannuation, widows or orphans fund.
- (d) Gifts exceeding £5 each to public charitable institutions, and contributions in cash or kind to a patriotic fund connected with the present war or to any public authority for repatriation purposes.
- (e) The sum of £26 in respect of each child under sixteen years at the beginning of the financial year, wholly maintained by any taxpayer who is not an absentee.

(iv.) *Special deduction to a person (other than a company, an absentee, or a person who is not married and has no dependents) :*

- (a) The sum of £156 less £1 for every £3 by which the income exceeds £156.  
*Special deduction to a person who is not married and has no dependants (not being a company or an absentee) :*
- (b) The sum of £100 less £1 for every £5 by which the income exceeds £100.

When the total taxable income consists partly of income from personal exertion and partly of income from property, the deduction is to be made in the first place from the income from property and any excess is to be deducted from the income from personal exertion.

(v.) It is worthy of note that in the taxation of companies there is deducted from the income not only all the deductions already allowed for, but also so much of the income as is distributed to the members, or shareholders.

(d) *Entertainments Tax.*—This tax was to amount to 1d. for a ticket costing between 6d. and one shilling, and  $\frac{1}{2}$ d. for each additional 6d., or part thereof.

(e) *War Time Profits Tax.*—This tax has recently been passed by Parliament. It provides for a tax on the amount by which the profits made in a war-time financial year (1st July to 30th June following), exceeds the pre-war standard of profits, which may be either :—(a) the average profits of two of the three years before 4th August, 1917, or (b) 10 per cent. on the capital employed in a business. The tax in respect of profits derived in the financial year 1st July, 1915, to 30th June, 1916, was 50 per cent., and in all subsequent years 75 per cent.

**7. Commonwealth Land Tax.**—Particulars as to the Land Tax assessment for each State for the year ending 30th June, 1917, the latest available return at the time of writing, will be found in the following table. Details in regard to rate of tax, etc., will be found in Year Books Nos. 5, 6.

(a) These figures are taken from the Auditor-General's Report, and differ slightly from those on page 745 owing to certain small adjustments.

9. Revenue from Patents.—Under the Commonwealth Patents Act 1903, which was assented to on 22nd October, 1903, and came into force on 1st June, 1904, the complete control of the Patents administration of Australia passed from the several State Governments to that of the Commonwealth, which, under section 19 (a) of the Act mentioned, was authorised to collect for each State the fees to which it was entitled under the State Act in respect of proceedings then pending.

The revenue collected since the financial year 1912-13 is shewn in the following table :—

**COMMONWEALTH PATENTS REVENUE, 1912-13 to 1916-17.**

	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
Revenue ...	18,355	22,393	17,165	15,487	15,167

10. Revenue from Trade Marks, etc.—Under the several Acts of the Commonwealth Legislature relating to trade marks, copyrights, and designs, the Commonwealth Government has assumed the exclusive administration of such matters, and now collects all revenue accruing therefrom. The following table gives particulars of the amounts received for the last five years :—

**COMMONWEALTH TRADE MARKS, COPYRIGHTS AND DESIGNS REVENUE,  
1912-13 to 1916-17.**

	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
Revenue ...	5,637	5,932	4,741	5,175	5,432

11. Defence Revenue.—The revenue appearing under the head of "Defence" comprises the receipts derived from the sale of stores and clothing, from fines, etc., and for 1916-17 amounted to £478,326.

12. Coinage.—The revenue for the Commonwealth under this head is derived from the profit on coin issued, and is made up of £334,338 from silver coin and £19,938 from bronze coin.

(C) Expenditure.

1. **Nature of Commonwealth Expenditure.**—The disbursements by the Commonwealth Government of the revenue collected by it fell naturally, under the "book-keeping"\* system, into three classes, viz.:—

- (a) Expenditure on transferred services.
- (b) Expenditure on new services.
- (c) Payment to States of surplus revenue.

Of these three, only the first two were actual expenditure, the last being merely a transfer, the actual expenditure being incurred by the States. In accordance with the provisions of the Constitution, the expenditure on transferred services was, under the "book-keeping" system, debited to the several States in respect of which such expenditure was incurred, while the expenditure on new services was distributed *per capita*. Surplus Commonwealth revenue was paid to the States monthly. During the earlier years of Federation, viz., until the end of the year 1903-4, new works, etc., for transferred departments were treated as transferred expenditure, and were charged to the States on whose behalf the expenditure had been incurred. In subsequent years all such expenditure was regarded as expenditure on new services, and was distributed amongst the States *per capita*. Under the new system of keeping the accounts there is no further debiting of expenditure to the several States.

2. **Total Expenditure.**—The expenditure by the Commonwealth Government during the period 1912-13 to 1916-17 is shewn in the following table:—

COMMONWEALTH EXPENDITURE, 1912-13 to 1916-17.

	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
Commonwealth ...	15,787,154	15,458,776	16,056,023	24,415,221	27,797,015

The largely increased expenditure of recent years is due partly to Old-age and Invalid Pensions, partly to fleet construction, and partly to such public works as the Trans-Australian Railway, Federal Capital, etc. In 1914-15 an additional amount of £14,471,118 was spent, made up of £14,100,000 war loan from the Imperial Government, and £371,118 Treasury Bills in aid of revenue. In 1915-16 the expenditure included £3,000,000 set aside for the purposes of Invalid and Old-age Pensions in subsequent years. These totals include amounts paid into Trust Funds, but exclude subsidy to States.

3. **Expenditure per Head.**—Particulars concerning the Commonwealth expenditure per head are furnished hereunder:—

COMMONWEALTH EXPENDITURE PER HEAD OF POPULATION, 1912-13 to 1916-17.

	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Commonwealth ...	3 6 8	3 3 5	3 5 0	4 19 0	5 14 0

4. **New Works, etc.**—As previously mentioned, the Commonwealth expenditure on new works, etc., for transferred departments was, prior to 1904-5, included under the head of "transferred" expenditure, but in that and subsequent years up to 1909-10 was treated as "other" expenditure, and debited to the States *per capita*. Particulars of the expenditure on new works, etc., during the last five years are given in the following table:—

\* For an exposition of the "book-keeping system" see Commonwealth Year Book No. 6, p. 780.

## COMMONWEALTH EXPENDITURE ON NEW WORKS FOR FIVE YEARS, 1913 to 1917.

Year ended 30th June.	Defence.	Trade and Customs.	Post- master General.	Home Affairs.	External Affairs.	Treasury.	Prime Minister's Depart- ment.	Home and Territories.	Works and Railways.	Total.
£	£	£	£	£	£	£	£	£	£	£
1913	1,258,277	51,372	1,088,022	186,345	65,290	4,076	...	...	...	2,653,282
1914	1,079,940	56,014	1,121,632	266,124	50,653	1,637	...	...	...	2,576,000
1915	1,520,684	56,338	831,828	217,784	30,647	6,396	...	...	...	2,673,939 <sup>a</sup>
1916	1,940,682	133,976	644,134	168,898	50,598	2,547	...	...	...	2,940,835
1917	1,765,253	291,419	590,770	(b)	(b)	2,085	120,591	293,836	1,314,793	4,288,747

(a) Including £262 for Attorney-General's Department. (b) Merged into other Departments.

It will be seen that the Commonwealth expenditure under this head has become very considerable in recent years. The main cause of this heavy increase is the large expenditure on fleet construction, but in the last year under review a very large expenditure was debited to the Works and Railways Department.

5. **Cost of Departments, etc.**—Arranged in such a manner as to shew under each Department the expenditure on behalf of that Department, the cost of the several branches of the Commonwealth service for the years 1912-13 to 1916-17 was as follows:—

## COST OF COMMONWEALTH DEPARTMENTS, Etc., 1912-13 to 1916-17.

Departments, etc.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.

Home and Territories ...	...	...	...	...	484,274
Works and Railways ...	...	...	...	...	886,661
All other Expenditure ...	3,510,256	2,576,000	2,673,939	2,940,835	11,949,441
<b>Total ...</b>	<b>15,787,154</b>	<b>15,458,776</b>	<b>16,056,023</b>	<b>24,415,221</b>	<b>27,797,015</b>

(a) Exclusive of £14,471,118 spent from loans in aid of Revenue. (b) Including £3,000,000 carried forward in respect of Old Age and Invalid Pensions in subsequent years. (c) Including £2,077,427 carried forward. (d) In addition £3,000,000 was spent on Invalid and Old Age Pensions from Trust Funds.

The expenditure in connection with the sugar bounties is mainly responsible for the variations which have taken place in the cost of the Department of Trade and Customs. The amount paid in Old-age and Invalid Pensions is included in Treasury expenditure for every year. In 1916-17 the large amount under the heading "all other expenditure" includes £8,421,654 for War Services, made up as follows:—Special appropriations £5,988,058; Treasury £1,186,488; Defence £550,377; Navy £686,701; and Trade and Customs £10,030. More detailed reference to the items included under the above general heads is furnished in the succeeding paragraphs.

6. **Governor-General.**—In section 3 of the Constitution it is enacted that, until the Commonwealth Parliament otherwise provides, there shall be payable out of the Consolidated Revenue Fund for the salary of the Governor-General an annual sum of ten thousand pounds, and a proviso is made that the salary of the Governor-General shall not be altered during his continuance in office. The total expenditure in connection with the Governor-General and establishment for the five years 1912-13 to 1916-17 is as follows:—

**EXPENDITURE, GOVERNOR-GENERAL AND ESTABLISHMENT, 1912-13 to 1916-17.**

In section 66 of the Constitution, provision is made that there shall be payable out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of Ministers of State, an annual sum which, until Parliament otherwise provides, shall not exceed £12,000. This was modified in 1915-16, when the Minister of the Navy was given separate Cabinet rank. Allowances to senators and members of the House of Representatives are also provided for in the Constitution, section 48 of which specifies that until Parliament otherwise provides, each such allowance shall consist of £400 a year, reckoned from the day on which the member takes his seat. During the second session of the Commonwealth Parliament in 1907 the question of allowances to members came under consideration, and an Act was passed raising the annual allowance from £400 to £600, such increase to date from 1st July, 1907. This provision is still in force.

**8. Prime Minister's Department.**—This is a new department created during the financial year 1911-12. In addition to the Prime Minister's Office it includes the Audit Office taken from the Treasury, the Executive Council taken from the External Affairs

Department, and the Public Service Commissioner's Office taken from the Home Affairs Department. In 1916-17 it assumed control of the High Commissioner's Office in London, which was detached from the old External Affairs Department, when the latter was merged in the Home and Territories Department. The expenditure for the last five years is shewn in the following table:—

**EXPENDITURE, PRIME MINISTER'S DEPARTMENT, 1912-13 to 1916-17.**

Details.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.

Northern Territory ...	293,183
Miscellaneous ...	64,325
Total ...	484,274

10. **Northern Territory.**—The Department of External Affairs assumed control of the administration of the Northern Territory from 1st January, 1911, and separate accounts were issued for the first time in the Treasurer's statement for the financial year ending 30th June, 1911. The chief sources of revenue for the year ending 30th June, 1917, were the Customs and Excise, amounting to £19,156, and railways. £32,605. The Postal revenue amounted to £8160, whilst the total revenue was £102,980. The chief items of expenditure were as follows:—Postal Department, £19,437; goldfields and mining, £31,837; and railways, £61,016. The total expenditure was £415,546. In addition to this expenditure the Commonwealth is liable for interest on loans and redemption, which for this financial year totalled £389,819. The deficiency for the year was £702,385.

11. **Papua.**—The sums shewn in the table on page 772 as expenditure in connection with Papua represent the Commonwealth grants towards the cost of administering that territory, as well as certain additional amounts. The ordinary revenue and expenditure of Papua are kept distinct from those of the Commonwealth. Apart from the Commonwealth contribution, the principal source of revenue is the Customs House. Details for the five years 1912-13 to 1916-17 are as follows :—

PAPUAN REVENUE, 1912-13 to 1916-17.

Details.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.

Total ...	100,335	84,704	81,961	79,311	93,568

(a) Including £18,000 for special purposes.

The expenditure for 1916-17 totalled £83,740, the main outlay being on the Government Secretary's Department and the Departments of Agriculture, Lands, and Public Works. The total expenditure for each of the five years 1912-13 to 1916-17 was as follows :—

PAPUAN EXPENDITURE, 1912-13 to 1916-17.

**12. Attorney-General's Department.**—The extra expenditure connected with this Department of late years has been brought about in large measure by the extension of the Federal High Court, the total cost of which, including the Court of Conciliation and Arbitration, for the year 1914-15, amounted to £34,623, in 1915-16 to £40,084, and in 1916-17 to £42,848. Details for the five years 1912-13 to 1916-17 are furnished hereunder:—

**EXPENDITURE, ATTORNEY-GENERAL'S DEPARTMENT, 1912-13 to 1916-17.**

**13. Works and Railways Department.**—The great extension of Commonwealth Works and Railways led, in 1916-17, to the separation of these functions from the old Home Affairs Department and the constitution of a separate office. This new office also administers the Railways, formerly under the control of the old External Affairs Department. The expenditure for the year 1916-17 is as follows:—

**EXPENDITURE, WORKS AND RAILWAYS DEPARTMENT, 1916-17.**

Port Augusta-Oodnadatta Railway and Northern Territory Railways ...	312,907
Miscellaneous ...	230,646
<b>Total ...</b>	<b>886,661</b>

The large sum under the heading "Miscellaneous" is due mainly to provision for interest and sinking fund.

**14. Treasurer's Department.**—The sub-departments under the control of the Commonwealth Treasurer are the Treasury, the Old-age Pensions Department, and the Taxation Office. The Audit Office was transferred to the Prime Minister's Department in 1911-12. The rather large item for "Miscellaneous" in 1914-15 includes the Belgian grant of £100,000. Details of the expenditure of this department for each of the five years 1912-13 to 1916-17 are furnished hereunder:—

EXPENDITURE, TREASURER'S DEPARTMENT, 1912-13 to 1916-17.

Details.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.

(a) In addition, £697,471 was spent from Trust Funds. (b) In addition, £1,224,347 was spent from Trust Funds. (c) In addition £3,000,000 was spent from Trust Funds, and the War Services include £1,149,242 for War Pensions, £37,090 for pensions administration, and £156 miscellaneous, all debited to this department.

15. **Trade and Customs.**—Under this head have been included the expenditure of all the sub-departments under the control of the Minister of Trade and Customs, as well as the amounts payable as sugar and other bounties and the expenses in connection therewith. The administration of Patents, Trade Marks, and Copyright is now entrusted to the Attorney-General's Department. The fluctuations in the total expenditure of this department in recent years have been mainly due to variations in the amount payable in respect of sugar bounties. Particulars for the five years 1912-13 to 1916-17 are given in the following table :—

EXPENDITURE, TRADE AND CUSTOMS DEPARTMENT, 1912-13 to 1916-17.

(a) In addition, £10,030 was spent as War Services.

16. **Defence.**—The Commonwealth expenditure in connection with Defence, which in 1901-2 amounted to £361,218, had by 1912-13 grown to £2,612,687. The largeness of the expenditure for recent years has been chiefly in connection with the new defence system and the war. Particulars for the five years 1912-13 to 1916-17 are as follows :—

## EXPENDITURE, DEFENCE, 1912-13 to 1916-17.

Details.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.

Total ... ..	2,612,687	2,950,722	3,545,086	4,518,534 (b)	2,095,152 (c)

(a) Now a separate department. (b) Including £3,005,994 war expenditure from revenue.  
(c) Including £550,377 war services, but excluding appropriations for Interest and Sinking Fund.

17. **Navy Office.**—During the financial year 1915-16, the Navy Office, owing to its increasing importance, was separated from the Defence Department and constituted an independent Department. Appended is the expenditure for the last two years, under similar headings to the Defence Department:—

## EXPENDITURE, NAVY DEPARTMENT, 1915-16 to 1916-17.

	1915-16.	1916-17.
	£	£
Chief Office ... ..	39,170	40,747
Naval ... ..	1,444,521	1,401,659
Audit (proportion) ... ..	1,166	1,272
Pensions and retiring allowances ... ..	899	899
Rents, repairs, etc. ... ..	17,402	15,969
Miscellaneous ... ..	49,160	54,115
Total ... ..	(a) 2,324,173	(b) 2,201,361

(a) Including £771,855 War Expenditure from Revenue. (b) Including War Expenditure from Revenue, £686,700.

18. **Postal.**—From a total of £4,781,524 in 1912-13, the cost of the Department under the control of the Postmaster-General advanced to £5,288,998 in 1916-17, an increase of £507,474. The large amount of "Miscellaneous" since 1912-13 is due, in the main, to the payment of interest on transferred properties, which is discussed in detail later on. Details for the five years 1912-13 to 1916-17 are furnished hereunder:—

## EXPENDITURE, POSTAL DEPARTMENT, 1912-13 to 1916-17.

Details.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
Chief Office ... ..	20,154	22,506	23,606	21,400	22,821
Postal Department (ordinary) ... ..	4,145,803	4,567,895	4,809,672	4,904,839	4,853,886
Audit (proportion) ... ..	3,184	3,340	3,955	3,670	2,981
Pensions and retiring allowances ... ..	42,757	48,400	48,073	53,358	55,877
Rents, repairs, etc. ... ..	84,883	88,884	84,044	92,083	67,494
Miscellaneous ... ..	484,743	425,997	251,924	283,021	285,939
Total ... ..	4,781,524	5,157,022	5,221,274	5,358,371	5,288,998

19. **Miscellaneous.**—In addition to the foregoing there are certain items which do not come under any of the heads enumerated. For 1916-17 the total expenditure under this heading was £11,949,441, made up mainly from War Services not allotted to Defence and Navy £7,184,577, and new works £4,288,747. Detailed expenditure on new works for the past five years has already been shewn in the table on page 770.

(D) **Subsidy Paid to States.**

1. **Net Revenue.**—As mentioned in sub-section 1 of this section, the Constitution provided under sections 87, 93 and 95 for the payment to the States of all surplus revenue of the Commonwealth, such payment to amount in the aggregate during the continuation of the Braddon clause to not less than three-fourths of the net revenue from Customs and Excise. The expression "net revenue" used in section 87 has been taken to mean the gross revenue less drawbacks and refunds, and less also cost of collection. This view, adopted by the Commonwealth Government, was that indicated by Quick and Garran in their "Annotated Constitution of the Australian Commonwealth," in which they say: "The net revenue from duties of Customs and Excise is the total receipts from these sources after deducting the cost of collection. No attempt was made in the Constitution to define the deductions which may be made in order to arrive at the net revenue; this is a matter of book-keeping, which is left wholly to the Executive Government." In actual practice the statutory three-fourths of net Customs and Excise revenue was ascertained by the Commonwealth Treasury by deducting from the total Customs and Excise revenue (less drawbacks and refunds) the "transferred" expenditure of the Department of Trade and Customs and the expenditure on new works for that department, and taking three-fourths of the result.

2. **Payments to the Several States.**—In the following table are furnished particulars relative to the amounts actually paid to the several States on account of each of the financial years 1912-13 to 1916-17:—

**COMMONWEALTH SUBSIDY PAID TO STATES, 1912-13 to 1916-17.**

State.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
New South Wales ...	2,178,683	2,248,241	2,287,295	2,297,872	2,286,913
Victoria ...	1,692,121	1,733,229	1,757,894	1,743,467	1,722,409
Queensland ...	780,051	810,274	831,486	836,743	823,771
South Australia ...	527,151	540,113	542,715	540,649	531,340

Tasmania ...	(a) 241,709	(b) 247,536	(b) 247,485	(b) 247,200	(b) 246,004
Total ...	(a) 6,024,930	(b) 6,192,999	(b) 6,273,775	(b) 6,256,995	(b) 6,180,419

(a) Not including special grant of £95,000 to Tasmania.  
(b) " " " £90,000 " "

In 1912-13, the amounts received by each State were the smallest for the period under review, the total increasing in 1913-14. The rate of increase was checked in 1914-15 owing to the departure of the troops, and in 1915-16 four of the States, from this cause, shewed a decrease. This was still more marked in 1916-17, but, owing to the return of invalided soldiers, an improvement will possibly be manifested in 1917-18. The amounts allotted to Tasmania in the last three years are exclusive of the first instalments of the special payment to which reference has already been made (see page 760).

3. **Commonwealth Subsidy per head of Population.**—The following table furnishes particulars concerning the amount of surplus Commonwealth revenue per head of population which the several States received during the financial years 1905-6 to 1909-10, and is of interest in connection with the present financial agreement, under which the Commonwealth pays 25s. per head of population to all the States for a period of ten years, subject to a special arrangement in favour of Western Australia (see page 760).

**COMMONWEALTH SUBSIDY PER HEAD OF POPULATION PAID TO STATES,  
1905-6 to 1909-10.**

State.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
New South Wales ...	1 16 10	1 19 9	2 6 4	2 2 0	2 3 1
Victoria ...	1 14 7	1 16 1	1 18 7	1 11 9	1 13 0

Commonwealth ...	1 16 8	1 18 4	2 2 7	1 17 6	1 19 3

4. **Proportion Actually Paid.**—For the period of nine and a-half years from the 1st January, 1901, to 30th June, 1910, the percentage of net revenue from Customs and Excise duties paid to the several States was as follows:—New South Wales, 84 per cent.; Victoria, 80 per cent.; Queensland, 74 per cent.; South Australia, 84 per cent.; Western Australia, 86 per cent.; Tasmania, 78 per cent.

### § 3. Trust Fund.

1. **Trust Accounts.**—The Trust Fund credit balance on 30th June, 1917, amounted to £60,154,961, as compared with £54,098,016 for the corresponding date in the year ending 30th June, 1916. These enormous amounts are due mainly to the Australian Notes Account referred to in detail in par. 3 hereunder. Details concerning the various trust accounts contributing to this amount are as follows:—

**COMMONWEALTH TRUST FUND, 30th JUNE, 1917.**

Trust Accounts.	Balance at 30th June, 1917.	Trust Accounts.	Balance at 30th June, 1917.
	£		£
Small Arms Ammunition ...	79,754	Officers' Assurance... ..	2,787

International Postal and Money		Miscellaneous ... ..	1,183,211
Order ... ..	13,273		
Invalid and Old-age Pensions...	2,114,289	Total ... ..	60,154,961

2. **Distribution.**—The amounts to credit of Trust Fund in the several States on 30th June, 1917, were as follows:—New South Wales, £1,154,383; Victoria, £57,596,627; Queensland, £446,002; South Australia, £389,176; Western Australia, £344,359; and Tasmania, £224,414.

3. **Australian Notes Account.**—After the passage of the Australian Notes Act, Australian notes began to appear in circulation in December, 1910. For the first half of the calendar year 1911, they circulated side by side with bank notes and Queensland Treasury notes. After 30th June, 1911, the penal clauses of the Notes Act came into operation, and the banks and the Queensland Government began to withdraw their notes from active circulation. By the end of the year the process was virtually complete.

On 30th June, 1917, the notes issued and unredeemed amounted to £47,201,362. Against this there was a reserve in gold coin of £15,418,391, or 32.67 per cent., and other assets, of which the most important were investments in Government Stock and fixed deposits, totalling £30,507,803, and returning an annual income of £1,215,996.

The position, according to a Treasury return issued at the end of May, 1918, was as follows:—

**COMMONWEALTH NOTES ISSUED AND UNREDEEMED AT 20th MAY, 1918.**

	£
10s. ... ..	1,799,786½
£1 ... ..	12,229,180
£5 ... ..	7,115,760
£10 ... ..	3,120,500
£20 ... ..	524,120
£50 ... ..	1,191,150
£100 ... ..	1,115,800
£1000 ... ..	26,546,000
	<hr/>
	53,642,296½

The amount of the gold reserve was £16,968,804½, representing 31.63 per cent. of the liability.

The subject is also dealt with at some length in Section XXI., Sub-section 2, *Banking*.

4. *Advances by Commonwealth Government to States.*—Reference has been made in the previous paragraph to the investments of the gold reserve from the Australian Notes Account. A large proportion has been advanced to the respective State Governments for short periods, sometimes as low as one year. This is a novel and interesting departure in Australian Public Finance, and in view of the new financial relations thus brought about between the Commonwealth and State Governments, the following table is appended, giving full particulars of the investments of £30,507,803, to which reference has already been made:—

**AUSTRALIAN NOTES ACCOUNT.—PARTICULARS OF INVESTMENT AS AT 30th JUNE, 1917.**

<b>Total ...</b>	<b>30,507,803</b>	<b>—</b>	<b>—</b>	<b>1,215,996</b>

(a) Not fixed. (b) Treasury Bills with currency of two years from date of loan instalment.

In the financial year 1913-14 the Commonwealth Government called in as far as possible its outstanding advances to the State Governments. The money lent on fixed deposit was taken up as the term expired; and furthermore, the Commonwealth Government, requiring additional money for the expenditure on public works, etc., induced some of the State Governments to discount a portion of their securities held by the Commonwealth. The money thus obtained was spent in the purchase of further Commonwealth Inscribed Stock, thus increasing the Loan Fund, to which reference is made in the next section. On the outbreak of war the Commonwealth Government agreed to lend to the States (Queensland standing out of the arrangement) the sum of £18,000,000 for the purpose of maintaining the expenditure on public works. The bulk of the money, lent to the States from the Note Account, was advanced in pursuance of that undertaking.

5. **London Flotations on behalf of States.**—Act No. 17 of 1916 authorised the Treasurer to borrow £8,940,000 in the United Kingdom, and Act No. 16 of 1917 to raise £8,000,000, and to lend the amount to the several States, other than that of New South Wales, and, pending the borrowing of the money to advance the amounts set forth in the Acts out of loans made by the Government of the United Kingdom to the Commonwealth. In pursuance of these Acts, £7,192,966 was distributed to the States up to 30th June, 1917, being the proceeds of a loan of £7,500,000 subscribed under Act No. 17 of 1916. In addition, a sum of £3,019,220 was advanced from loans received for war purposes. Flotation expenses and discount together amounted to £304,067, and these were debited to the States. Consequently the total charged to the States by the Commonwealth under this head at 30th June, 1917, was £10,516,253, allocated as follows:—

**COMMONWEALTH LOANS RAISED IN LONDON ON BEHALF OF STATES  
AS AT 30th JUNE, 1917.**

State.	£
Victoria... ..	1,845,356

### § 4. Commonwealth Public Debt.

Although it was not until 1915 that the Federal Government appeared before the public as a direct borrower, there had been a Commonwealth Public Debt for many years. It includes several items, such as the balance of the debt taken over from South Australia, the money owing to the States for transferred properties, the Commonwealth General Loan Fund, the loans for military purposes, etc. In view of the recent large expansion of the Public Debt, and its present importance in Commonwealth public finance, the different items are treated *seriatim* in the sub-sections that follow.

1. **Loans Taken Over from South Australia.**—The first portions of the debt were contracted at the beginning of 1911, when the Commonwealth assumed responsibility for the administration and the liabilities of the Northern Territory and the Port Augusta-Oodnadatta Railway. At 30th June, 1911, the debt on account of the former was £3,657,836, and on account of the latter, £2,274,486 a total of £5,932,322. As the securities fall in they are redeemed by the Commonwealth Government, the money required being taken from the Loan Fund, which was created for this reason, amongst others. This item is thus a constantly diminishing one, and on 30th June, 1917, stood at £4,531,519, of which £2,772,516 was on account of the Northern Territory, and £1,759,003 on account of the railway.

2. **Loan Fund.**—Up to 1911 the Commonwealth Government had met its Public Works expenditure out of revenue. In that year, however, the Commonwealth being faced with the heavy prospective cost of the Transcontinental Railway and the Federal Capital Territory, it was decided to initiate a Loan Fund similar to those of the States. The flotation of this Fund was greatly assisted by the fact that the Treasury at this time held a large quantity of gold, principally on behalf of the Australian Notes Account, at that time only just inaugurated. Up to 30th June, 1914, the money required for loan expenditure was taken mainly from this account at 3½ per cent., and inscribed stock of an equivalent value created. Since the outbreak of war the creation of inscribed stock has ceased, the money required for the Loan Fund being obtained by the issue of Treasury Bills. The relation between the magnitude of the Loan Fund and the expenditure therefrom is shewn for the last six years in the following table:—

#### SECURITIES CONSTITUTING COMMONWEALTH LOAN FUND AND EXPENDITURE THEREFROM, 1912 to 1917.

Year ended 30th June.	Commonwealth Loan Fund.			Expenditure in year ended 30th June.	Total Expenditure up to year ended 30th June.	Unexpended Balance.
	Inscribed Stock.	Treasury Bills.	Total Receipts.			
	£	£	£	£	£	£
1912 ...	700,000	...	700,000	660,475	660,475	39,525
1913 ...	2,000,000	...	2,000,000	1,185,027	1,848,502	151,498
1914 ...	4,100,000	...	4,100,000	2,155,261	4,003,763	96,237
1915 ...	4,580,000	1,578,202	6,158,202	2,154,439	6,158,202	...
1916 ...	4,580,000	4,437,543	9,017,543	2,859,341	9,017,543	...
1917 ...	4,580,000	4,437,543	9,017,543	...	9,017,543	...

In addition to the securities enumerated in the preceding table, £371,118 worth of Treasury Bills were issued in 1914-15 in aid of Revenue. They were repaid by the Consolidated Revenue Fund in 1916-17.

The preceding table gives the total expenditure for five years. The details of the expenditure are as follows:—

## COMMONWEALTH LOAN EXPENDITURE, DETAILS, 1912-16. (b)

Particulars.	1911-12.	1912-13.	1913-14.	1914-15.	1915-16.

(a) Including cost of erection of buildings. (b) There were no transactions in this Fund for 1916-17, except the cancelling of £371,118 Treasury Bills already referred to.

3. **Properties Transferred from States.**—At the time of Federation, when the Commonwealth undertook control of a great many departments which had previously been administered by the States, a great deal of property was handed over to the Commonwealth Government. This consisted mainly of Post Offices, Customs Houses, Defence works, and other buildings necessary to the effective working of the transferred departments. In the early days of the "Braddon Clause," when the Federal Government was spending less than its statutory proportion of the Customs revenue, the question of suitable compensation to the States did not become acute; but, when the "Braddon Clause" was replaced by another arrangement between Commonwealth and States, much less favourable to the latter, the time had evidently come to put matters on a more definite footing. In the Commonwealth accounts of the last five years, certain amounts (independent entirely of the subsidy) have been paid to the States as "Interest on Transferred Properties." These amounts have been substantially based upon a valuation made by the old Home Affairs Department, with the following result:—

## ORIGINAL VALUATION OF TRANSFERRED PROPERTIES.

State.	Department.				Total.
	Postmaster-General.	Defence.	Trade and Customs.	Home Affairs.	
	£	£	£	£	£
New South Wales ...	2,337,316	1,182,003	154,009	1,320	3,674,648
Victoria ...	1,332,862	805,389	190,657	1,266	2,330,174
Queensland ...	925,628	386,802	202,082	7,356	1,521,868
South Australia ...	842,281	161,140	28,486	815	1,032,722
Western Australia ...	600,895	64,842	37,714	835	704,286
Tasmania ...	214,906	121,490	48,212	143	384,751
<b>Commonwealth ...</b>	<b>6,253,888</b>	<b>2,721,666</b>	<b>661,160</b>	<b>11,735</b>	<b>9,648,449</b>

Since the valuation some transfers and retransfers have been made. The estimated value of the transferred properties for the last five years is given in the table in sub-section 7 hereinafter.

4. **War Loan from the Imperial Government.**—On the outbreak of the European war in 1914, the Commonwealth Government contracted a loan from the Imperial Government for the purpose of financing the large military expenditure which was seen to be

inevitable. At first, the arrangement was that the Imperial Government should advance the sum of £18,000,000 in twelve monthly instalments of £1,500,000 each. It was soon found, however, that this would be insufficient, and consequently the Imperial Government made a fresh advance of £6,500,000, also to be paid in monthly instalments. A third loan of £25,000,000 was subsequently contracted for, of which £12,000,000 was received by 30th June, 1916, and £11,000,000 in 1916-17. The total capital debt thus created up to 30th June, 1917, is set out in the following table:—

Authority.	Imperial Loans—Capital Debt created up to 30th June, 1917.			
	Issues, 3½% at 95.	Issues, 4½% at 99.	Issues, 5% at par.	Total.
	£	£	£	£
War Loan Act 1914—£18,000,000 ...	1,263,158	15,454,545	1,500,000	18,217,703
War Loan Act No. 2 1915—£6,500,000 ...	...	5,656,566	900,000	6,556,566
War Loan Act (United Kingdom) No. 2 1916—£25,000,000 ...	...	...	23,000,000	23,000,000
	1,263,158	21,111,111	25,400,000	47,774,269

Interest is paid on these loans in London as at 31st March and 30th September in each year. The amounts paid in the three financial years comprising the currency of the loans are as follows:—1914-15, £36,489; 1915-16, £843,893; and 1916-17, £2,082,258.

5. **Flotation of War Loans in Australia.**—In addition to the advances from the Imperial Government, the Commonwealth Government has raised large amounts of money for the prosecution of the war, by direct application to the investing public of Australia. Acts No. 21 and No. 50 of 1915 authorised the Commonwealth to make application for £20,000,000 and £18,000,000 respectively, and in pursuance of these a loan of £5,000,000 was placed upon the market late in 1915, and a further amount of £10,000,000 early in 1916. These issues—unprecedented in Australian finance—were entirely successful, the latter being subscribed twice over, and the former more than two and a-half times. Both loans were issued at par, bore interest at 4½ per cent., and are redeemable on 15th December, 1925. The expenses included a commission of two shillings per cent. to the Commonwealth Bank, commission to brokers at ½ per cent., and miscellaneous items such as printing. The total cost of flotation, however, was most moderate, amounting only to £85,041, or less than five shillings per cent. of the amount subscribed. The two Acts already mentioned were succeeded by a third, which authorised the Commonwealth Parliament to raise a further sum of £50,000,000. In pursuance of this a third issue was placed upon the market, closing on 1st August, 1916, and subsequently a fourth issue, closing on 8th February, 1917. These issues differ in no material respect from the first two, and the full details for the entire four are appended in the following table:—

#### PARTICULARS OF LOCAL AUSTRALIAN WAR LOANS, 1915-17.

Heading.	1st Issue.	2nd Issue.	3rd Issue.	4th Issue.	Total.
Number of subscribers—	No.	No.	No.	No.	No.
For Inscribed Stock ...	8,603	12,450	13,660	13,657	48,370
For Treasury Bonds ...	10,145	16,495	88,382	53,303	168,325
Total ...	18,748	28,945	102,042	66,960	216,695
Amount subscribed—	£	£	£	£	£
For Inscribed Stock ...	9,581,120	16,271,710	15,417,650	14,565,190	55,835,670
For Treasury Bonds ...	3,808,320	5,383,970	8,169,770	6,855,860	24,217,940
Total ...	13,389,440	21,655,680	23,587,420	21,421,070	80,053,610
Accrued interest ...	221,502	324,170	326,881	252,399	1,124,952
Expenses of flotation ...	34,659	50,382	50,688	45,900	181,629
Total deductions ...	256,161	374,552	377,569	298,299	1,306,581
Net proceeds of loan ...	13,133,279	21,281,128	23,209,851	21,122,771	78,747,029

It will be seen that whilst the expenses of flotation are small, the accrued interest is by no means negligible. Owing mainly to this, the net proceeds to the Federal Government only amount to about 98½ per cent., consequently, when allowance is made for redemption at par, the Government pays about £4 14s. per cent. interest, instead of the nominal 4½ per cent. In view, however, of the advancing rate of interest, this cannot be called excessive.

A fifth Commonwealth War Loan, floated in November, 1917, realised £20,281,160, and a sixth loan, floated in April, 1918, realised £43,510,740. Full details of these are not yet available. A seventh loan of £40,000,000 is now being asked for at 5 per cent., subject to Commonwealth Income Tax.

**6. Australian Notes.**—In connection with the subject of the Public Debt a further reference to the issue of Australian notes will be of interest. The gold held in reserve in the Treasury has varied from rather more than 30 per cent. to rather less than 50 per cent. of the outstanding notes. Consequently a large proportion of the notes—all of which are payable on demand—is permanently uncovered by gold, and this proportion constitutes an undoubted part of the Public Debt. The item is constantly fluctuating in amount, and financially resembles a bank overdraft on which no interest is payable. Whilst, however, attention has been drawn to this on the ground of principle, no reference has been made to the uncovered notes in the tables summarising the Public Debt which appear in sub-section 7 hereafter. As already stated, on 30th June, 1917 the value of the notes issued and unredeemed was £47,201,362, against which there was a gold reserve of £15,418,391, leaving an uncovered amount of £31,782,971. In this connection reference may be made to the table on page 779.

**7. Total Commonwealth Public Debt.**—Separate consideration has already been given to the items composing the Public Debt. The table appended to this sub-section shews the entire debt of the Commonwealth (apart from the States) at yearly intervals since 1913. The liability on account of the note issue is excluded, for reasons already given, but the liability on account of the transferred properties has been included for the entire period. The Commonwealth Public Accounts first took cognizance of this item in 1913, although the debt had been incurred much earlier.

**PUBLIC DEBT OF THE COMMONWEALTH AS AT 30th JUNE, 1913 to 1917.**

Details.	1913.	1914.	1915.	1916.	1917.

					(a)
Commonwealth Debt per capita	£3 11 2	£3 17 11	£7 11 6	£20 13 5	£34 11 3

(a) Including £7,500,000 raised for the States.

It will be noticed that the amount of the Commonwealth Internal Loans does not quite agree with the totals of the first four issues in the table on page 783. This is owing to the fact that stock to a considerable amount has been presented as payment of Estate Duty, and cancelled, the payments being accepted in accordance with the provisions of section 5 of the Commonwealth Inscribed Stock Act 1915. The amount of £79,506,510 is the balance of the first four issues. To this must be added £736,000 raised by the sale of War Savings Certificates.

**8. Place of Flotation.**—The loans taken over from South Australia, which constituted the first portion of the Federal Public Debt, included both London and Australian securities. The presence in the Treasury of a large holding of gold, and the moderate rate of interest ruling on gilt-edged securities, made the conditions in 1911, and for some little time afterwards, very favourable for the flotation of local loans. London securities were redeemed as they fell due, and replaced by the 3½ per cent. stock of the Loan Fund. Consequently, up to 1914 the amount of the securities repayable in London fell steadily, and the amount repayable in Australia rose rapidly. In 1915, however, the military loan from the Imperial Government caused a sharp rise in the amount of the securities repayable in London, which was maintained in the two following years. This was, however, more than offset by the flotation of the local war loans. Appended is a table shewing particulars of the loans of the Commonwealth for seven financial years which have been floated in London and Australia respectively. A separate column is reserved for the cost of the transferred properties, which, for obvious reasons, it is impossible to allocate:—

**COMMONWEALTH PUBLIC DEBT.—LONDON AND AUSTRALIAN FLOTATIONS, 1911-17.**

Year ended 30th June—	Payable in—		Value of Transferred Properties.	Total.
	London.	Australia.		
	£	£	£	£
1911 ... ..	3,815,502	2,116,820	9,648,449	15,580,771
1912 ... ..	3,815,502	2,556,345	9,648,449	16,020,296
1913 ... ..	3,646,548	3,784,401	9,648,449	17,079,398
1914 ... ..	3,510,921	5,884,401	9,787,011	19,182,333
1915 ... ..	18,337,949	8,313,720	10,777,161	37,428,830
1916 ... ..	40,063,440	50,499,048	10,781,797	101,344,285
1917 ... ..	58,426,312	100,013,506	10,789,739	169,229,557

**9. Rates of Interest.**—When the first debt was taken over from South Australia it consisted in the main of a mass of securities varying from 3 per cent. to 4 per cent., the average rate of interest for the first year being £3 12s. 4d. For the first three years the increase in the debt was due almost entirely to the expansion of the 3½ per cent. stock of the Loan Fund, and as a consequence the average rate of interest fell steadily, until on 30th June, 1914, it stood at £3 11s. 10d. Then came the loans for military purposes, and the fall in the average rate will in future be checked, since there is not likely to be any further borrowing for some time at a rate of less than 4½ per cent. In fact, the influence of the heavy borrowing of 1915-16 at high rates is already reflected in the average rate of interest, which rose during that year by more than ½ per cent. It is notoriously difficult to forecast the future of the rate of interest, but the influence of the large Imperial War Loans on gilt-edged securities has been so far-reaching, that in all probability during the next decade the average rate of interest on the Federal Public Debt will rise continuously.

The accompanying table gives full particulars concerning the interest for the five financial years ended 30th June, 1917.

## RATES OF INTEREST ON COMMONWEALTH PUBLIC DEBT, 1913 to 1917.

Rates of Interest.	Year ended 30th June—

Average rate of interest	£3 12 1	£3 11 10	£3 11 6	£4 2 10	£4 4 8

10. **Dates of Maturity.**—A table is appended giving the dates of maturity of the several portions of the Commonwealth debt. The Commonwealth Government has refrained from issuing interminable stock, although as regards about three-tenths of the debt no definite date of maturity had been assigned on 30th June, 1917. It will be noticed that nearly £80,000,000 falls due in one year—1925, the bulk of this being represented by the balance of the first four internal loans.

DUE DATES OF THE COMMONWEALTH PUBLIC DEBT OUTSTANDING ON

## SECTION XX.

## STATE FINANCE.

## § 1. General.

**1. Functions of State Governments.**—In any comparison of the finances of the several States due recognition must be made of the actual functions assumed by the respective Governments, and also of the local conditions and requirements in each case. Direct comparisons of public expenditure are thus rendered difficult, owing to the fact that functions which in one State are assumed by the Central Government are in another State relegated to local governing bodies, and further by the fact that costly developmental work may, under certain conditions, be not only economically justifiable, but may be an essential of progress, whilst parsimonious expenditure may be a serious economic blunder. A large expenditure may, therefore, be an indication either of gross extravagance and bad economy on the one hand or healthy and vigorous progress and good economy on the other.

Similarly, as regards revenue, imposts which in some States are levied by the Central Government are in others considered as matters to be dealt with locally. Under these circumstances care is needed in instituting comparisons between the several States, and the particulars contained in this section should be read in connection with those contained in the section dealing with Local Government. It should also be noted that in many ways the budgets of the Australian Governments differ materially from those of most European countries, owing to the inclusion therein of the revenue and expenditure of departments concerned in rendering public services, such for instance as railways, tramways, water supply, etc., which, in the other countries referred to, are often left to private enterprise.

**2. Accounts of State Governments.**—The various financial transactions of the States are in each case concerned with one or other of three Funds—the “Consolidated Revenue Fund,” the “Trust Funds,” and the “Loan Funds.” All revenue collected by the State is placed to the credit of its Consolidated Revenue Fund, from which payments are made under the authority of an Annual Appropriation Act passed by the Legislature, or by a permanent appropriation under a special Act. The hypothecation of the revenue from a specific tax to the payment for some special service is not practised in Australia, all statutory appropriations ranking on an equality as charges on the Consolidated Revenue Fund. The Trust Funds comprise all moneys held in trust by the Government, and include such items as savings banks funds, sinking funds, insurance companies’ deposits, etc. The Loan Funds are credited with all loan moneys raised by the State, and debited with the expenditure therefrom for public works or other purposes.

**3. Inter-relation of Commonwealth and State Finance.**—The principal alteration in State finance, brought about by Federation, has been that the States have transferred to the Commonwealth the large revenue received by the Customs and Postal Departments, and have been relieved of the expenditure connected with these and the Defence Departments, while, on the other hand, a new item of State revenue has been introduced, viz., the payment to the States of a Commonwealth subsidy. Provision for the taking over by the Commonwealth of certain of the public debts of the States is made in section 105 of the Constitution, and a proposed law extending this provision to the whole of the State indebtedness, which passed both Houses of the Federal Legislature by

the statutory majority, was submitted to a referendum at the election in April, 1910, and received the requisite endorsement by the electorate. No action has as yet been taken, although the subject has, on more than one occasion, been under discussion.

## § 2. State Consolidated Revenue Funds.

### (A) Receipts.

#### 1. Sources of Revenue.—The principal sources of State revenue are:—

- (a) Taxation.
- (b) The public works and services controlled by the State Governments.
- (c) Sale of and rental from Crown lands.
- (d) The Commonwealth subsidy.
- (e) Miscellaneous sources, comprising fines, fees, interest, etc.

Of these sources, that yielding the largest revenue for the States as a whole is the group of public works and services, the principal contributor being the Government railways and tramways. Next in magnitude comes Taxation, followed in order by the Commonwealth Subsidy and Land Revenue..

2. Amount Collected.—The following table furnishes particulars of the total amount of consolidated revenue received by the several States during the ten years 1907-8 to 1916-17:—

STATE REVENUE, 1907-8 to 1916-17.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£

1916-17	20,537,835	11,813,879	7,880,893	4,874,603	4,577,007	1,369,368	51,053,585

The figures given in this table relate in each instance to the financial year ended 30th June.

During the nine years from 30th June, 1908, to 30th June, 1917, the aggregate revenues of the States increased by no less a sum than £16,185,939, or about 46 per cent. Increases were in evidence in all the States, the largest being that of £6,577,072 in New South Wales. This general advance is the more notable since, during recent years, a much smaller amount has been received from the Commonwealth, in the way of subsidy, than was the case up to 1910.

It will be noticed that in all the States, except Queensland, the revenue for 1908-9 was lower than that of the preceding year, largely owing to the fact that the revenue for 1907-8 was swelled by the payment of Customs duties in anticipation of, or in consequence of, the new tariff imposed on 8th August, 1907.

3. Revenue per Head.—Details concerning the revenue per head of population, collected in the several States of the Commonwealth during the ten years 1907-8 to 1916-17, are furnished in the table given hereunder. It will be seen that throughout the period Western Australia has collected by far the largest amount per head, and that Tasmania has collected the least.

## STATE REVENUE PER HEAD OF POPULATION, 1907-8 to 1916-17.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1907-8 ...	8 18 10	6 14 11	8 4 6	9 17 3	13 5 9	5 6 0	8 7 7

1909-10 ...	9 0 2	6 14 8	8 17 2	10 3 6	13 15 4	5 4 6	8 10 11
1910-11 ...	8 8 5	7 1 5	8 17 8	10 3 11	13 18 2	5 0 1	8 8 11
1911-12 ...	9 8 5	7 6 11	9 12 6	10 12 10	13 9 8	5 12 1	9 0 8
1912-13 ...	9 0 6	7 9 0	10 0 5	10 9 6	15 0 3	6 2 4	9 1 10
1913-14 ...	9 19 10	7 12 0	10 11 3	10 19 2	16 4 8	6 2 9	9 14 1
1914-15 ...	10 3 1	7 7 2	10 12 10	8 19 11	15 18 3	6 3 6	9 10 3
1915-16 ...	10 10 1	8 1 10	11 6 6	9 18 2	16 16 11	6 16 11	10 2 4
1916-17 ...	11 1 0	8 8 9	11 15 4	11 5 9	14 16 5	6 17 0	10 9 5

In all the States, during the period, there has been a marked increase in the State revenue collections per head, the most noticeable advance being £3 10s. 10d. in the case of Queensland. Western Australia showed a falling-off in 1908-9, but there was a recovery in 1909-10, and for 1916-17 the revenue per head in that State exceeded the Commonwealth average by about 42 per cent. South Australia showed a marked decline in 1914-15, due largely to a diminished revenue from public works and services, but has since recovered.

4. Details for 1916-17.—Classifying the revenue of the several States in the manner indicated in § 2 (A) 1 above, particulars for the year 1916-17 are as follows:—

## DETAILS OF STATE REVENUE, 1916-17.

Particulars.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	All States.
	£	£	£	£	£	£	£
Taxation ...	3,629,404	2,237,016	1,564,044	726,645	402,336	438,632	8,998,077
Public Works & Services ...	12,293,664	6,471,981	3,987,757	2,895,557	3,250,056	411,878	29,310,893
Land ...	1,747,009	302,031	962,953	264,777	330,148	91,743	3,698,661
Commonwealth Subsidy ...	2,286,913	1,722,409	820,604	531,340	569,982	(a)336,004	6,267,252
Miscellaneous ...	580,845	1,080,442	545,535	456,284	24,485	91,111	2,778,702
Total ...	20,537,835	11,813,879	7,880,893	4,874,603	4,577,007	1,369,368	51,053,585

(a) Including special grant of £90,000.

It will be noted that the amounts returned under the heading "Commonwealth subsidy" do not always agree with those given in the chapter on Commonwealth Finance, page 777. This arises from the fact that the State figures shew the amount for which credit was taken by the State during the financial year 1916-17, whilst the Commonwealth figures shew the amounts paid to State Treasurers on account of that financial year.

5. Revenue per Head, 1916-17.—Particulars concerning the revenue per head of population in each State derived from the several sources enumerated in the preceding paragraph are given hereunder:—

## STATE REVENUE FROM VARIOUS SOURCES PER HEAD OF POPULATION, 1916-17

Particulars.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	C'wealth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Taxation ...	1 19 1	1 12 0	2 6 9	1 13 8	1 6 1	2 3 11	1 16 11
Public Works & Services ...	6 12 3	4 12 6	5 19 1	6 14 1	10 10 6	2 1 3	6 0 3
Land ...	0 18 10	0 4 3	1 8 9	0 12 3	1 1 5	0 9 2	0 15 2
Commonwealth Subsidy ...	1 4 7	1 4 7	1 4 6	1 4 7	1 16 11	1 13 7	1 5 8
Miscellaneous ...	0 6 3	0 15 5	0 16 3	1 1 2	0 1 6	0 9 1	0 11 5
Total ...	11 1 0	8 8 9	11 15 4	11 5 9	14 16 5	6 17 0	10 9 5

The magnitude of the revenue per head from public works and services in the case of Western Australia is mainly due to the fact that the number of miles of railway in that State is large compared with the population, while the revenue-earning power of the railways is also high.

**6. Relative Importance of Sources of Revenue.**—The following table furnishes an indication of the relative importance of the different sources of revenue in the several States, the figures given being the percentage which each item of revenue bore to the total for the State for the year 1916-17:—

PERCENTAGE OF ITEMS ON TOTAL STATE REVENUE, 1916-17.

<b>Total ... ..</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>

**7. State Taxation.**—(a) *Details, 1916-17.* Prior to the inauguration of Federation the principal source of revenue from taxation was the imposition of duties of Customs and Excise. At the present time the most productive forms of State taxation are the income tax, which is now imposed in all the States (Western Australia, the last of the States to adopt this method of taxation, having passed the necessary legislation during the Parliamentary session of 1907), and probate and succession duties. For 1916-17 stamp duties occupied third place. In addition to these a State land tax is now collected in all the States, license fees of various kinds are also collected in all the States, while a dividend tax is levied in Western Australia. The total revenue from taxation collected by the States during the year 1916-17 was £8,998,077, details of which are set forth in the table given hereunder:—

STATE REVENUE FROM TAXATION, 1916-17.

Taxation.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.A.	Tas.	All States.
	£	£	£	£	£	£	£

<b>Total ... ..</b>	<b>3,629,404</b>	<b>2,237,016</b>	<b>1,564,044</b>	<b>726,645</b>	<b>402,336</b>	<b>438,632</b>	<b>8,998,077</b>

(a) Includes 105,554 dividend tax.

(b) *Summary, 1907-8 to 1916-17.* The total amount raised by means of taxation by the several State Governments during the ten years 1907-8 to 1916-17 is given in the following table:—

## STATE REVENUE FROM TAXATION, 1907-8 to 1916-17.

Year.	New South Wales.	Victoria.	Queensland.	S. Australia.	W. Aust.	Tasmania.	All States.
	£	£	£	£	£	£	£
1907-8	1,077,534	977,620	525,540	477,637	277,463	265,656	3,601,450
1908-9	907,249	1,072,228	535,194	450,250	296,599	250,835	3,512,355

1913-14	2,330,005	1,598,876	887,798	730,640	386,104	371,413	6,304,836
1914-15	2,955,670	1,762,041	954,457	588,690	371,960	367,577	7,000,395
1915-16	3,117,221	2,074,839	1,455,358	701,511	407,997	384,820	8,141,746
1916-17	3,629,404	2,237,016	1,564,044	726,645	402,336	438,632	8,998,077

During the period between 30th June, 1908, and 30th June, 1917, the aggregate State revenue from taxation increased by about 150 per cent., the increase varying considerably in the several States. The remarkable increase of the last four years in New South Wales is due principally to the broadening of the basis of the State Income Tax, and increased receipts from Stamp Duties. Queensland collected a Land Tax for the first time in 1915-16. The total increase in State taxation for the year 1916-17 amounted to £856,331, or about 10½ per cent.

The revenue from State taxation per head of population, collected in the several States during each of the years 1907-8 to 1916-17, was as follows:—

## STATE TAXATION PER HEAD, 1907-8 to 1916-17.

Year.	New South Wales.	Victoria.	Queensland.	S. Australia.	W. Aust.	Tasmania.	C'wealth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1907-8	0 13 9	0 15 10	0 19 3	1 5 3	1 1 10	1 8 0	0 17 3
1908-9	0 11 6	0 17 2	0 19 2	1 3 1	1 2 10	1 6 2	0 16 7
1909-10	0 15 2	0 17 0	1 0 3	1 4 3	1 5 4	1 11 5	0 18 7
1910-11	0 12 6	1 0 8	1 2 3	1 6 8	1 3 6	1 9 5	0 19 0
1911-12	1 2 6	1 2 1	1 5 4	1 6 2	1 3 11	1 15 2	1 3 9
1912-13	0 15 10	1 2 10	1 5 4	1 4 9	1 5 8	1 15 0	1 1 5
1913-14	1 5 5	1 2 8	1 6 11	1 13 2	1 4 1	1 16 10	1 5 11
1914-15	1 11 8	1 4 8	1 8 2	1 6 8	1 3 0	1 16 6	1 8 4
1915-16	1 13 4	1 9 3	2 2 9	1 11 11	1 5 8	1 18 3	1 13 0
1916-17	1 19 1	1 12 0	2 6 9	1 13 8	1 6 1	2 3 11	1 16 11

Taking the States as a whole, the State taxation increased by nineteen shillings and eightpence per head during the period from 1907-8 to 1916-17, the most marked increase occurring in the case of Queensland. Most of the advance took place in the last two years and was chiefly due to the Land Tax.

8. **Commonwealth and State Taxation.**—For the purpose of obtaining an accurate view of the extent of taxation imposed on the people of the Commonwealth by the central governing authorities, it is necessary to add together the Commonwealth and State collections. This has been done in the table given hereunder, which contains particulars

concerning the total taxation for each of the years 1912-13 to 1916-17, as well as the amount per head of population:—

### COMMONWEALTH AND STATE TAXATION, 1912-13 to 1916-17.

Particulars.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
Commonwealth taxation ...	17,117,828	16,587,906	16,870,596	23,533,529	24,523,013
State taxation ...	5,065,213	6,304,836	7,000,395	8,141,746	8,998,077
Total ...	22,183,041	22,892,742	23,870,991	31,675,275	33,521,090
Taxation per head ...	£4 13 9	£4 14 0	£4 16 7	£6 8 5	£6 17 6

Whilst the Commonwealth taxation increased during the period by £7,405,185, the State taxation advanced by £3,932,864, the aggregate increase being £11,338,049. The amount per capita of total taxation remained fairly constant from 1912-13 up to 1914-15, at an average of about £4 15s. In the last two years, however, it reached an abnormally high amount, owing to the imposition of fresh direct taxation by the Commonwealth Government. The large increase in Commonwealth taxation in recent years is mainly due to the appearance of the Federal Land Tax, Federal Income Tax, and Federal Succession Duties.

9. **Public Works and Services.**—A very large proportion of the revenue of all the States of the Commonwealth is made up of the receipts from the various public works and services under the control of the several Governments. The principal of these are railways and tramways, harbour works, and water supply and sewerage, while in addition, State batteries for the treatment of auriferous ores exist in Western Australia, and various minor revenue-producing services are rendered by the Governments of all the States. For the year 1916-17 the aggregate revenue from these sources totalled £29,310,893, or nearly 57 per cent. of the revenue from all sources. Details of revenue from public works and services for the year 1916-17 are as follows:—

### STATE REVENUE FROM PUBLIC WORKS AND SERVICES, 1916-17.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
Railways and Tramways ...	10,390,602	5,882,968	3,834,436	2,294,368	2,004,148	340,173	24,746,695

Total ...	12,293,664	6,471,981	3,987,757	2,895,557	3,250,056	411,878	29,310,893

(a) Water supply only.

10. **Land Revenue.**—The revenue derived by the States from the sale and rental of Crown lands has, with few exceptions, been treated from the earliest times as forming part of their respective Consolidated Revenue Funds, and has been applied to meet ordinary current expenses. Where the rentals received are for lands held for pastoral or for residential purposes, such application of the revenue appears perfectly justifiable. On the other hand, where the rentals are those of mineral and timber lands, and in all cases of sales of lands, such a proceeding is essentially a disposal of capital in order to defray

current expenses and as a matter of financial procedure is open to criticism. In the following table particulars of revenue derived from sales and rental of Crown lands are given for the year 1916-17:—

## STATE LAND REVENUE, 1916-17.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	All States.
	£	£	£	£	£	£	£

Rentals ...	769,125	138,838	700,503	155,172	47,925	31,344	1,837,907
Total ...	1,747,009	302,031	962,953	264,777	330,148	91,743	3,698,661

**11. Commonwealth Subsidy.**—The payments to the States of Commonwealth subsidy represent in each instance a considerable proportion of the States' revenue, and for the year 1916-17 aggregated £6,267,252. This represents a great decline from the amounts received up to 1910, owing to the new system of allotting the subsidy. The percentage which the subsidy received by each State for 1916-17 was of the total revenue of that State is shewn in the following table:—

## COMMONWEALTH SUBSIDY PAID TO STATES DURING 1916-17.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
Commonwealth subsidy ...	2,286,913	1,722,409	820,604	531,340	569,982	(a) 336,004	6,267,252
Total revenue ...	20,537,835	11,813,879	7,880,893	4,874,603	4,577,007	1,369,368	51,053,585
Percentage of subsidy on revenue ...	% 11.13	% 14.58	% 10.41	% 10.90	% 12.45	% 24.54	% 12.28

(a) Including special grant of £90,000.

The amount of subsidy here shewn is that for which the several States took credit during the year 1916-17. (See also page 789.)

**12. Miscellaneous Items of Revenue.**—In addition to the foregoing sources of revenue there are in each State several miscellaneous ones, including such items as interest, fines, fees, etc., which for the year 1916-17 aggregated £2,778,702.

## (B) Disbursements.

**1. Heads of Expenditure.**—The principal heads of State expenditure from Consolidated Revenue Funds are:—

- (a) Interest and sinking funds in connection with public debt.
- (b) Working expenses of railways and tramways.
- (c) Justice.
- (d) Police.
- (e) Penal establishments.
- (f) Education.
- (g) Medical and charitable expenditure.
- (h) All other expenditure.

Of these items that of working expenses of railways and tramways was the most important, and for the year 1916-17 represented about 35 per cent. of the aggregate expenditure from the Consolidated Revenue Fund. Next in order for that year was the item of interest and sinking fund in connection with the public debt, then education, medical and charitable expenditure, and police in the order named.

**2. Total Expenditure.**—The total expenditure from Consolidated Revenue Funds in the several States during each of the years 1907-8 to 1916-17 is furnished in the table given hereunder:—

**STATE EXPENDITURE, CONSOLIDATED REVENUE FUNDS, 1907-8 to 1916-17.**

Year.	N.S. Wales.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
1907-8 ...	12,095,593	7,862,246	4,373,097	3,862,336	3,379,006	929,885	32,502,163

1912-13 ...	16,798,500	10,258,081	6,372,097	4,506,698	4,787,063	1,095,883	43,818,322
1913-14 ...	17,701,851	10,717,642	6,962,516	4,604,130	5,340,754	1,235,014	46,561,907
1914-15 ...	17,935,748	11,706,968	7,199,399	4,662,395	5,706,542	1,384,150	48,595,202
1915-16 ...	18,931,814	11,683,363	7,671,573	4,741,377	5,705,201	1,340,711	50,074,039
1916-17 ...	20,806,633	11,795,295	8,134,387	5,190,453	5,276,764	1,412,893	52,616,425

As in the case of the table previously given for revenue, the above figures relate to the year ended 30th June.

**3. Expenditure per Head.**—Owing to the varying conditions of the several States and the extent to which the different functions of Government are distributed therein between central and local governing authorities, the expenditure per head from Consolidated Revenue Funds differs materially in the several States, being highest in the case of Western Australia and lowest in that of Tasmania. The expenditure per head of population for each State for the years 1907-8 to 1916-17 is as follows:—

**STATE EXPENDITURE PER HEAD, 1907-8 to 1916-17.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1907-8 ...	7 14 11	6 7 6	8 0 3	10 4 8	13 5 6	4 18 1	7 16 2
1908-9 ...	8 2 10	6 11 9	8 10 10	9 13 1	12 19 7	5 0 2	8 0 7
1909-10 ...	8 1 7	6 14 4	8 17 0	10 11 9	12 19 6	5 3 3	8 3 7
1910-11 ...	8 8 0	7 1 3	8 17 5	10 3 11	13 9 9	5 4 11	8 8 4
1911-12 ...	9 2 5	7 6 9	9 11 9	10 12 10	13 18 10	5 10 1	8 18 10
1912-13 ...	9 9 0	7 8 8	10 0 3	10 9 6	15 12 9	5 11 2	9 5 2
1913-14 ...	9 13 3	7 11 10	10 10 11	10 9 3	16 13 1	6 2 6	9 11 2
1914-15 ...	9 12 8	8 3 8	10 12 7	10 11 1	17 13 4	6 17 5	9 16 8
1915-16 ...	10 2 7	8 4 10	11 5 6	10 15 8	17 18 10	6 13 4	10 3 1
1916-17 ...	11 3 11	8 8 6	12 3 0	12 0 5	17 1 9	7 1 4	10 15 10

The total expenditure per head has increased every year in the period under review, although there have been fluctuations in the individual States.

**4. Details of Expenditure for 1916-17.**—The following table furnishes for the year 1916-17 particulars as to the expenditure of the several States under each of the principal heads:—

## DETAILS OF STATE EXPENDITURE, 1916-17.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
Public debt (int., sink'g fund, &c.)	4,945,367	3,165,856	2,278,832	1,484,275	1,769,917	611,300	14,255,547
Rlws. & tramways (work'g exps.)	7,605,045	4,184,199	3,003,743	1,736,423	1,552,058	293,018	18,374,486

All other expenditure ... ..	4,422,246	2,035,110	1,231,028	1,183,730	1,098,572	218,954	10,189,640
Total ... ..	30,806,633	11,795,295	8,134,387	5,190,453	5,276,764	1,412,893	52,616,425

5. **Expenditure per Head, 1916-17.**—The expenditure per head of population of the several States for the year 1916-17, under each of the principal items, is given hereunder:—

## STATE EXPENDITURE PER HEAD, 1916-17.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Public debt, (interest, sink- ing fund, &c.) ... ..	2 13 3	2 5 3	3 8 1	3 8 9	5 14 8	3 1 2	2 18 6
Railways and tramways (working expenses) ... ..	4 1 10	2 19 9	4 9 9	4 0 5	5 0 6	1 9 4	3 15 5
Justice ... ..	0 3 10	0 2 5	0 3 3	0 2 4	0 4 11	0 1 4	0 3 2
Police ... ..	0 6 6	0 5 2	0 9 5	0 5 10	0 7 10	0 4 9	0 6 5
Penal establishments ... ..	0 1 0	0 0 10	0 0 11	0 1 1	0 1 4	0 0 8	0 1 0
Education ... ..	0 19 11	0 16 7	0 19 8	0 16 4	1 3 2	0 13 2	0 18 6
Medical and charitable ... ..	0 10 0	0 9 5	0 15 2	0 10 10	0 18 2	0 9 0	0 11 1
All other expenditure ... ..	2 7 7	1 9 1	1 16 9	2 14 10	3 11 2	1 1 11	2 1 9
Total ... ..	11 3 11	8 8 6	12 3 0	12 0 5	17 1 9	7 1 4	10 15 10

In four of the States, viz., Western Australia, South Australia, Queensland, and New South Wales, the average State expenditure per head exceeded that for the Commonwealth as a whole, and fell short of it in the other two States.

6. **Relative Importance.**—The relative importance of the items of expenditure enumerated above varies considerably in the several States. This will readily be seen from the following table, giving for each State the percentage of the expenditure under the various items, on the total expenditure for the State:—

## PERCENTAGE OF ITEMS ON TOTAL STATE EXPENDITURE, 1916-17.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	%	%	%	%	%	%	%
Public debt (interest, sink- ing fund, &c.) ... ..	23.77	26.84	28.01	28.59	33.54	43.26	27.09
Railways and tramways (working expenses) ... ..	36.55	35.47	36.93	33.46	29.41	20.74	34.92
Justice ... ..	1.72	1.43	1.34	0.96	1.45	0.98	1.47
Police ... ..	2.90	3.07	3.88	2.43	2.29	3.35	2.99
Penal establishments ... ..	0.44	0.50	0.38	0.44	0.39	0.50	0.44
Education ... ..	8.90	9.84	8.08	6.79	6.79	9.32	8.58
Medical and charitable ... ..	4.47	5.60	6.25	4.53	5.31	6.35	5.14
All other expenditure ... ..	21.25	17.25	15.13	22.80	20.82	15.50	19.37
Total ... ..	100.00	100.00	100.00	100.00	100.00	100.00	100.00

Taken together, the interest and sinking fund on the public debt, and the working expenses of the railways and tramways, represented for the year 1916-17 about 60 per cent. of the aggregate State expenditure, a proportion which has been maintained with great regularity for many years past.

## (c) Balances.

1. **Position on 30th June, 1917.**—On various occasions in each of the States the revenue collected for a financial year has failed to provide the funds requisite for defraying the expenditure incurred during that year, the consequence being a deficit which is usually liquidated either by cash obtained from trust funds, or by the issue of Treasury bills. In some of the States a number of such deficits has occurred, interspersed with occasional surpluses, the result being an accumulating overdraft, which in certain instances assumed very large proportions. Thus, during the period of financial stress resultant upon the crisis of 1893 and the drought conditions of succeeding years, the accumulated overdrafts of several of the States grew very rapidly, and the situation has changed very much for the worse in the years preceding 1916-17. The position of the balances of the several Consolidated Revenue Funds on 30th June, 1917, was as follows:—

## STATE CONSOLIDATED REVENUE FUND BALANCES, 30th JUNE, 1917.

State.	Cash Credit Balances.	Debit Balance.		Net Result.
		Cash Overdraft.	Overdraft liquidated by Treasury Bills	
	£	£	£	£
New South Wales ... ..	...	483,138	...	Dr. 483,138

Total ... ..	...	3,710,794	2,140,156	Dr. 5,850,950

## (d) Principal State Taxes.

## (a) Probate and Succession Duties.

1. **General.**—Probate duties have been levied for a considerable time in all the States of the Commonwealth. From the provisions of the several State Acts governing the payment of duty, it will be seen that both the ordinary rates and those which apply to special beneficiaries differ widely in several cases. In the following table the amount under which the estates of deceased persons were sworn, is shewn for the years 1912 to 1916:—

## VALUE OF ESTATES OF DECEASED PERSONS, 1912 to 1916.

State.	1912.	1913.	1914.	1915.	1916.

Total ...	1,050,019	1,345,529	1,393,380	1,556,766	1,732,139

For particulars relating to the legislation of the different States on probate and succession duties see Year Book No. 6, pp. 815-818.

**(b) Stamp Duties.**

1. **Revenue.**—The revenue derived by the several States of the Commonwealth from stamp duties for the years 1912-13 to 1916-17 is shewn in the accompanying table:—

**STAMP REVENUE (EXCLUSIVE OF PROBATE AND SUCCESSION DUTIES),  
1912-13 to 1916-17.**

State.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
New South Wales ...	233,940	377,707	552,762	522,992	550,211
Victoria ...	252,407	278,240	289,384	400,056	376,196
Queensland ...	186,083	205,635	208,664	185,734	175,186
South Australia ...	101,498	101,094	81,007	114,169	145,079
Western Australia ...	70,652	77,051	64,398	64,858	67,035
Tasmania ...	75,171	83,202	73,754	69,888	77,636
Total ...	919,751	1,122,929	1,269,969	1,357,697	1,391,343

2. **Bank Notes.**—Promissory notes issued by any bank were not required to bear a duty stamp either impressed or adhesive, and might be re-issued as often as thought fit. An annual composition was, however, paid in lieu of stamp duty up to 1910. This composition was payable quarterly, and was the same in all States, being at the rate of £2 per annum on every £100 or part thereof of the average annual amount of bank notes in circulation. On 2nd June, 1893, the Treasury Notes Act of Queensland was assented to, by which the issue of Treasury notes payable on demand was authorised. These notes were used exclusively by the banks in that State, but their issue was prohibited by the Federal Bank Note Tax Act, and they have now passed out of circulation. (See Section xxi., Private Finance.)

The issue of bank notes by the banks has practically ceased owing to this Act, which passed the Federal Parliament in the session of 1910, and was assented to on 10th October, 1910. Further reference is made to the Act in the section dealing with Private Finance. It is sufficient to say here that it imposed a tax of 10 per cent. per annum on all bank notes issued or re-issued by any bank in the Commonwealth after the commencement of the Act and not redeemed.

For further details concerning Stamp Duty Legislation, see Year Book No. 7, p. 723.

## (c) Land Tax.

1. **General.**—All the States now impose a Land Tax, although Queensland, the last State to fall into line, only collected its first levy in 1915-16. Western Australia imposed its first tax in 1907, but in the other States the impost is of very long standing.

The following table shews the amount collected by means of such taxes during the financial years 1912-13 to 1916-17 in the States in which a land tax was imposed:—

STATE LAND TAX COLLECTIONS, 1912-13 to 1916-17.

For details relating to State Land Tax legislation see Year Book No. 6, pp. 821-823.

## (d) Income Tax.

1. **General.**—A duty on the income of persons, whether it be derived from personal exertion or from the produce of property, is now imposed in all the States of the Commonwealth. As might be expected in dealing with the different States, the rates, exemptions, etc., are widely divergent, but the general principle of the several Acts is strikingly consistent. The Dividend Duties Acts of Queensland and Western Australia—the former of which is now repealed—supplied to a certain extent the place of an income tax in those States in former years, but, with the increasing demands upon the State Treasury, the levying of a direct income tax has been found necessary.

In the following table particulars are furnished concerning the total amount collected in the several States during the years 1912-13 to 1916-17. In the case of Queensland and Western Australia the amount of dividend duty collected is included, this tax being closely allied to the income tax.

STATE INCOME AND DIVIDEND TAXES, 1912-13 to 1916-17.

State.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.

Total ... ..	2,156,054	2,869,005	3,245,836	3,762,105	4,173,960

For details relating to Income Tax legislation in the various States see Year Book No. 6, pp. 823-829.

### § 3. Trust Funds.

1. **Nature.**—In addition to the moneys received by the several State Governments as revenue, and paid to the credit of their respective Consolidated Revenue Funds, considerable sums are held by the Governments in trust for various purposes. One of the chief sources of these trust funds is the State Savings Bank, which exists in each State either as a Government department or under the control of a Board acting under Government supervision or Government guarantee. In most of the States also, sinking funds for the redemption of public debt are provided, and the moneys accruing thereto are paid to the credit of the appropriate trust funds. A similar course is followed in the case of municipal sinking funds placed in the hands of the Government. In all the States except New South Wales, life assurance companies carrying on business are required to deposit a substantial sum in cash or approved securities with the Government, and these deposits go to further swell the trust funds. Various other deposit accounts, superannuation funds, suspense accounts, etc., find a place in these funds. The trust funds have at various times enabled the several State Treasurers to tide over awkward financial positions, but the propriety of allowing deficits to be frequently liquidated in this manner is worthy of very serious consideration.

2. **Extent of Funds.**—The amount of such funds held by the several State Governments on 30th June, 1917, was as follows:—

STATE TRUST FUNDS ON 30th JUNE, 1917.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
Amount of trust funds	5,619,703	10,041,300	Dr. 1,776,739	2,303,897	11,822,775	1,081,835	29,092,771

### § 4. Loan Funds.

1. **Nature.**—As early in the history of Australia as 1842 it was deemed expedient to supplement the revenue collections by means of borrowed moneys, the earliest of the loans so raised being obtained by New South Wales for the purpose of assisting immigration, at rates of interest varying from 2½d. to 5½d. per £100 per diem, or approximately from 4½ per cent. to 8 per cent. per annum. The principal reason for Australian public borrowing, however, has been the fact that the Governments of the several States have, in addition to ordinary administrative duties, undertaken the performance of many functions which, in other countries, are usually entrusted to local authorities, or left to the initiative of private enterprise. Principal amongst these have been the construction of railways and the control of the railway systems of the several States, while the assumption by the State Governments of responsibilities in connection with improvements to harbours and rivers, and the erection of lighthouses, as well as the construction of works for the purposes of water supply and sewerage, have materially swelled the amounts which it has been considered expedient to obtain by means of loans. The Australian State loan expenditure and public debt thus differ very materially from those of most European countries, where such expenditure is very largely incurred for purposes of defence, or absorbed in the prosecution of war. The State debts of Australia, on the other hand, consist in the main of moneys raised and expended with the object of assisting the development of the resources of the Commonwealth, and are, to a very large extent, represented by tangible assets such as railways, tramways, waterworks, etc.

2. **Loan Expenditure, 1916-17.**—During the year ended 30th June, 1917, the actual expenditure of the Australian States from loan funds amounted to £14,714,294, New South Wales with a total of £6,862,179 being the principal contributor to this amount, while Victoria, whose expenditure amounted to £2,440,966, ranked second. The chief item of expenditure for the year was that of railways and tramways, which represented a total of £7,335,033, water supply and sewerage works contributing the amount of £2,364,923; the expenditure on harbours, rivers, etc., and roads and bridges totalling £2,144,530, and land purchases for settlement, loans to local bodies, advances to settlers, etc., were the most important of the remaining items. Details for the year for each State are given in the following table:—

## STATE LOAN EXPENDITURE, 1916-17.

Heads of Expenditure.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.

(a) Repayment.

(b) Including £82,815 in aid of revenue.

3. **Aggregate Loan Expenditure.**—The total loan expenditure of the Australian States from the initiation of the borrowing system to the 30th June, 1917, has amounted to no less a sum than £371,736,652. The manner in which this sum has been spent in the several States is furnished in the following table:—

## AGGREGATE STATE LOAN EXPENDITURE TO 30th JUNE, 1917.

Heads of Expenditure.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.

(a) Included in loans to local bodies.

It must be noted that the figures furnished in this table represent the amounts actually spent, and consequently differ somewhat from those given later in the statements relating to the public debt, which represent amount of loans still unpaid at a given date. The loan expenditure statement includes all such expenditure, whether the

loans by means of which the necessary funds were raised have been repaid or are still in existence. On the other hand, in the public debt statement loans repaid are excluded, but in the case of loans still outstanding each is shown according to the amount repayable at maturity, not according to the amount originally available for expenditure.

4. **Relative Importance of Loan Items.**—The relative importance of the different items of loan expenditure given in the foregoing table varies considerably in the several States, but in each instance the expenditure on railways and tramways predominates, the percentage of this item on total expenditure ranging between the limits of 38 per cent. in the case of Tasmania and 69 per cent. in that of Queensland. The following table gives for each State the percentage of each item on the total loan expenditure of that State to 30th June, 1917:—

**PERCENTAGE OF EACH ITEM ON TOTAL LOAN EXPENDITURE OF THE STATES TO 30th JUNE, 1917.**

1913-14 ...	9,126,844	3,276,994	2,190,150	2,762,686	2,883,169	498,141	20,737,984
1914-15 ...	6,996,107	5,351,830	2,638,266	2,532,759	2,521,608	785,269	20,825,839
1915-16 ...	8,173,104	4,473,569	3,061,839	2,097,197	1,584,643	880,394	20,270,746
1916-17 ...	6,862,179	2,440,966	2,267,962	1,811,531	855,184	476,472	14,714,294

Throughout the ten years under review the loan expenditure of New South Wales exceeded that of any other of the States, and for many years has represented about 40 % of the aggregate of Australia. The large loan expenditure of New South

Wales in 1908-9, 1909-10, and 1910-11, was incurred chiefly in connection with railway construction and the resumption of the foreshores and adjoining properties of Darling Harbour. In Victoria the heavy expenditure of 1905-6 resulted in large measure from the purchase of lands for closer settlement, while the construction of railways and water supply and sewerage works was mainly responsible for the high amounts of 1908-9 and 1909-10. In 1910-11 the large amount was mainly accounted for by heavy expenditure on railways and land purchased for settlement. In the case of the large loan expenditure of Queensland in 1906-7, 1908-9, 1909-10 and 1910-11, railway construction was the principal contributing item. In Western Australia the heavy loan expenditure of 1908-9 was principally in connection with railway construction and water supply. The year 1916-17 shewed a great decline in the total loan expenditure, which is likely to be maintained in the future, in view of the scarcity of capital.

**6. Loan Expenditure per Head.**—The loan expenditure per head of population varies materially in the different States and in different years, reaching its highest point for the ten years under review in Western Australia in 1912-13 with £11 3s. 7d. per head, and its lowest in Victoria in 1906-7 with 9s. 9d. per head. Particulars concerning the loan expenditure per head for the ten years 1907-8 to 1916-17 are given hereunder:—

**STATE LOAN EXPENDITURE PER HEAD, 1907-8 to 1916-17.**

## § 5. Public Debt.

**1. Initiation of Public Borrowing.**—The earliest of the loans raised in Australia for Government purposes was that obtained by New South Wales in 1842. This and nine other loans raised prior to 1855 were all procured locally. In the last-mentioned year Australia's first appearance on the London market occurred, the occasion being the placing of the first instalment of the New South Wales 5 per cent. loan for £683,300. Victoria first appeared as a borrower in 1854, and made its first appearance on the London market in 1859. In the remaining States the first public loans were raised in the following years:—Queensland 1861, South Australia 1854, Western Australia 1845, and Tasmania 1867.

**2. Nature of Securities.**—All the earlier loans raised by the Australian States were obtained by the issue of debentures, some of which were repayable at fixed dates, and others by annual or other periodical drawings. In more recent years, however, the issue of debentures has given place to a great extent to that of inscribed stock, the inscription in the case of local issues being carried out by the State Treasuries, and in the cases of loans floated in London being mainly performed by the Bank of England and the London and Westminster Bank. The issue of debentures has not, however, been entirely discontinued, for within recent years debentures to a large amount have been placed on the market by the Government of New South Wales. In other States also, recent issues of debentures have taken place, the occasions usually being those in which the term of the loan is less than that ordinarily attaching to issues of

inscribed stock. Another form of security is that variously known as the Treasury bill or Treasury bond. This is usually merely a short term debenture having a currency in most instances of from three to five years. The bonds are issued in certain cases to liquidate deficiencies in revenue, and in others to obtain moneys for the purpose of carrying on public works at a time when it is deemed inexpedient to place a permanent loan on the market. The amount of the public debt of the several States held in each of these forms of security is furnished in the table hereunder :—

**PUBLIC DEBT OF THE AUSTRALIAN STATES, 30th JUNE, 1917.**

State.	Debentures.	Inscribed Stock.	Treasury Bills.		Total Amount Outstanding.
			For Public Works and Services.	In aid of Revenue.	
	£	£	£	£	£
New South Wales ...	11,915,450	114,799,302	11,423,595	...	138,138,347
Victoria ...	23,959,422	49,395,828	3,466,860	1,303,285	78,125,395
Queensland ...	18,801,449	38,282,747	3,093,590	1,125,350	61,303,136
South Australia ...	2,110,900	31,245,230	6,008,150	...	39,364,280
Western Australia ...	1,568,410	33,866,076	4,790,340	690,000	40,914,826
Tasmania ...	2,008,608	11,663,032	1,000,000	...	14,671,640
Total ...	60,364,239	279,252,215	29,782,535	3,118,635	372,517,624

The manner in which the amount of public debt of the Australian States held under these various forms of security has grown during the past nine years will be seen from the following table :—

**PUBLIC DEBT OF THE AUSTRALIAN STATES, 1907-8 to 1916-17.**

Date.	Debentures.	Inscribed Stock.	Treasury Bills.		Total Amount Outstanding.
			For Public Works and Services.	In aid of Revenue.	
	£	£	£	£	£
30th June, 1908 ...	37,665,279	190,377,823	12,131,871	3,660,516	243,835,489

" 1917 ...	60,364,239	279,252,215	29,782,535	3,118,635	372,517,624

(a) Includes an advance of £750,000 from South Australian Government to Victorian Government. (b) Includes £150,000, balance of £750,000 referred to in Note (a). (c) Includes £100,000 advance from Queensland to Victorian Government.

During the period between 30th June, 1908, and 30th June, 1917, the public debt of the States increased by £128,682,135, or at the rate of about £14,000,000 per annum. The amount of debentures comprised in the total debt increased by £22,698,960 during the period, while the amount held as inscribed stock increased by £88,874,392, and that held as Treasury bills increased by £17,108,783.

**3. Increase in Indebtedness of the Several States.**—The table given hereunder furnishes particulars of the increase which has taken place during the past nine years in the public debts of the several States :—

## PUBLIC DEBT OF THE AUSTRALIAN STATES, 30th JUNE, 1908 to 1917.

The State in which the greatest increase in indebtedness was experienced during the period is New South Wales, which added £50,502,521 during the period under review. On the other hand, the public debt of Tasmania increased by about £4,500,000 only.

4. **Indebtedness per Head.**—The indebtedness per head of population varies considerably in the several States, being highest in the case of Western Australia, and lowest in that of Victoria. Details for the period from 30th June, 1908, to 30th June, 1917, are as follows:—

## PUBLIC DEBT OF AUSTRALIAN STATES PER HEAD, 30th JUNE, 1908 to 1917.

5. **Flotation of Loans.**—The early loans of the Australian States, usually for comparatively small amounts, were raised locally, but, with the increasing demand for loan funds and the more favourable terms offering in the London than in the local money market, the practice of placing Australian public loans in London came into vogue, and for many years local flotations, except for short terms or small amounts, were comparatively infrequent. In more recent years, however, the accumulating stocks of money in Australia seeking investment have led to the placing of various redemption and other loans locally, with very satisfactory results. In the following table are given particulars of loans of the several States outstanding on 30th June, 1917, which had been floated in London and Australia respectively:—

## PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1917.

The following table, giving corresponding particulars for the aggregate indebtedness of the Australian States at the end of each of the financial years 1907-8 to 1916-17, furnishes an indication of the rapidity with which the local holdings of Australian securities have grown in recent years:—

## PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1908 to 1917.

" 1916 ...	232,040,101	64.85	125,773,670	35.15	357,813,771
" 1917 ...	243,735,172	65.43	128,782,452	34.57	372,517,624

It will be seen that in the course of nine years the London indebtedness of the States has increased by £60,413,916, while the local indebtedness has increased by no less than £68,268,219. In other words, whilst on 30th June, 1908, the Australian portion of the debt represented only about one-fourth of the total, the proportion had on 30th June, 1917, grown to more than one-third.

It will be noticed in the foregoing table that the Australian indebtedness of the States increased during the year 1916-17 to a figure absolutely higher than had ever before been attained. This was due, in the main, to an arrangement with the Commonwealth Government, which was concluded shortly after the outbreak of war. It seemed very probable, at that period, that London would be reluctant to make advances for other than military purposes, and this would have seriously embarrassed several of the States which were committed to a vigorous public works and developmental policy. The Commonwealth Government met the situation by advancing £18,000,000 to five of the States in the following proportion:—New South Wales, £7,400,000; Victoria, £3,900,000; South Australia, £2,600,000; Western Australia, £3,100,000; and Tasmania, £1,000,000. Victoria contracted her portion of the debt in debentures, whereas the remaining States chose Treasury bills, but otherwise the conditions were the same. The Commonwealth Government paid the money in monthly instalments, to be repaid after two years, and the rate of interest was fixed at  $4\frac{1}{2}$  per cent. The money was taken entirely from the Australian Notes Account, and the whole transaction furnishes another illustration of the increasingly intimate financial relationship between the Commonwealth and State Governments, to which reference was made in the preceding chapter, page 779. A further advance was made to the States by the Commonwealth in 1916-17 out of the proceeds of a loan contracted in London. The loan was for £7,500,000, and carried interest partly at  $5\frac{1}{2}$  per cent., and partly at  $5\frac{3}{4}$  per cent. By agreement between the State Treasurers and the Commonwealth Treasurer, the £18,000,000 already referred to is to be repaid within five years of the termination of the war, but not later than 1925.

6. Rates of Interest.—As mentioned above, the highest rate of interest paid in connection with the earliest Australian public loans was fivepence farthing per £100 per diem, or, approximately, 8 per cent. per annum. At the present time the principal rates of interest payable on Australian public securities are  $4\frac{1}{2}$  per cent.,  $4\frac{1}{4}$  per cent., 4 per cent.,  $3\frac{1}{2}$  per cent.,  $3\frac{1}{4}$  per cent., and 3 per cent. It is most probable, however, that the amount

of outstanding debt at the higher rates will increase materially in the future, since conversion can scarcely be effected at present at a lower rate of interest than five per cent. The average rate payable on the aggregate indebtedness of the Australian States is about 3½ per cent. For the separate States the average rate payable varies considerably, being lowest in the case of Victoria and highest in that of Tasmania; the difference between these two average rates is about ½ per cent. In the table given hereunder particulars are furnished of the rates of interest payable on the public debt of the several States of the Commonwealth on 30th June, 1917:—

#### RATES OF INTEREST PAYABLE ON PUBLIC DEBT OF STATES, 30th JUNE, 1917.

(a) Includes £20,000 at 4½ per cent.

(b) Includes £24,718 at 3½ per cent.

The rapid increase which has taken place in recent years in the amount of Australian Government securities, bearing interest at the higher rates, is clearly shown in the table hereunder, which gives particulars concerning the aggregate amount of the Australian indebtedness, at the several rates of interest, on 30th June in each of the years 1913 to 1917:—

#### RATES OF INTEREST PAYABLE ON PUBLIC DEBT OF STATES, 30th JUNE, 1913 to 1917.

Rate of Interest.	30th June, 1913.	30th June, 1914.	30th June, 1915.	30th June, 1916.	30th June, 1917.
%	£	£	£	£	£
6	109,900	74,900	49,900	39,900	19,900
5½	...	...	...	...	5,590,000
5¼	...	...	...	2,950,000	6,695,400
5	142,700	142,700	2,146,800	7,010,675	14,753,617

4¼	...	...	300,000	600,000	...
4	100,000	...	290,750	771,250	901,000
4	...	...	10,625,000	18,000,000	18,000,000
4	87,511,852	111,771,586	100,551,888	97,965,741	95,382,445
3½	27,855,439	27,679,770	26,372,084	25,989,072	24,714,487
3¼	132,108,659	131,292,054	130,392,839	129,732,699	127,146,373
3	46,585,516	46,592,430	(a) 46,567,286	(a) 46,591,188	(a) 46,450,341
Not bearing interest	15,520	6,048	349,475	8,150	19,017
Total public debt	294,472,486	317,598,788	342,925,669	357,813,771	372,517,624
Average rate % payable	£3 11 11	£3 12 6	£3 13 11	£3 15 1	£3 16 6

(a) Including £24,718 at 3½ per cent.

The feature of this table is the rapid rise in the average rate of interest. The process started in 1912, but was accelerated by the war, which has virtually made  $4\frac{1}{2}$  per cent. the present minimum rate of interest for gilt-edged securities. The average rate is likely to rise for some considerable time.

**7. Interest Payable per Head.**—The relative burden of the debts of the several States in respect of interest payments will be seen from the following table, which gives for the 30th June, 1917, the amount of interest paid during the financial year ending at that date, and also the corresponding amount per head of population :—

**STATE DEBTS.—INTEREST PAYABLE PER HEAD, 1916-17.**

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£

Annual interest payable per head	£2 12 11	£2 0 3	£3 8 1	£3 8 3	£4 16 6	£2 12 8	£2 15 5

(a) Inclusive of flotation expenses.

**8. Dates of Maturity.**—An important point of difference between the securities of the Australian Governments, whether in the form of inscribed stock, debentures, or Treasury bills, and such a well-known form of security as British Consols, is that whereas the latter are interminable, the Australian Government securities have in almost all cases a fixed date for repayment, the exceptions being the State of New South Wales, which includes in its public debt an amount representing interminable securities totalling on 30th June, 1913, £532,889; and also £7,275,158 redeemable by Government on giving 12 months' notice; the State of Victoria, which includes £5,432,703 payable at the option of the Government at any time after 29th September, 1917; the State of Queensland, which has £1,744,000 repayable at an indefinite period; and the State of South Australia, which includes £5,089,034 similarly repayable. The terms of the loans raised by the issue of debentures and inscribed stock have varied considerably in the different States, ranging between fifteen and fifty years, while loans obtained by means of Treasury bills have usually been for such short terms as from six months to five years. In the case of the majority of the loans the arrival of the date of maturity means that arrangements for renewal are necessary in respect of the greater portion of the loan, as it is only in exceptional cases that due provision for redemption has been made. The condition of the money market at the date of maturity has an important bearing on the success or otherwise with which the renewal arrangements can be effected, and consequently, in order to obviate the necessity for making an application to the market at an unfavourable time, several of the States have now adopted the practice of specifying a period of from ten to twenty years prior to the date of maturity within which the Government, on giving twelve, or in some cases six, months' notice, has the option of redeeming the loan. By such means advantage may be taken by the Government during the period of opportunities that may offer for favourable renewals. Particulars concerning the due dates of the loans of the several States outstanding on 30th June, 1917, are given in the following table.

Those loans in the case of which the Government has the option of redemption during a specified period, have been in each instance classified according to the latest date of maturity :—

**DUE DATES OF THE PUBLIC DEBTS OF THE SEVERAL STATES OUTSTANDING  
ON 30th JUNE, 1917.**

**9. Sinking Funds.**—The practice of providing for the ultimate extinction of the public debt by means of the creation of sinking funds, receiving definite annual contributions from Consolidated Revenue, and accumulating at compound interest, has only been consistently adopted in the case of Western Australia. This State has established, in connection with each of its loans, sinking funds varying from 1 per cent. to 3 per cent. per annum of the nominal amount of the loan. These funds are placed in the hands of trustees in London, by whom they are invested in the securities of the British, Indian, and Colonial Governments, and applied from time to time in the redemption of loans falling due. In the remaining States the sinking fund provision made is varied, consisting in certain instances of the revenues from specified sources, in others of the Consolidated Revenue Fund surplus, and in others again of fixed annual amounts. In the following table are given particulars of the sinking funds of each State, and the net indebtedness of each after allowance for sinking fund has been made, the details given being those for 30th June, 1917 :—

## STATE SINKING FUNDS AND NET INDEBTEDNESS, 30th JUNE, 1917.

State.	Gross Indebtedness.	Sinking Fund.	Net Indebtedness.	Net Indebted- ness per head.
	£	£	£	£ s. d.
New South Wales ...	138,138,347	463,629	137,674,718	73 13 9

Total...	372,517,624	10,146,481	362,371,143	74 0 3

10. **Total Australian Debt.**—With the object of setting out the entire liability of the Australian public, the Commonwealth and State debts for the last five years have been brought together into one statement. It will be noticed that the total Commonwealth Public Debt does not agree with the amounts given in the chapter on Commonwealth Finance. This is owing to the fact that the value of the transferred properties has been deducted in every year, since if this had not been done it would have been included twice over. The sum of £7,500,000 borrowed by the Commonwealth for the States in London, during 1916-17, has also been deducted from the Commonwealth debt of that year for the same reason.

## SECTION XXI.

## PRIVATE FINANCE.

## § 1. Currency.

1. **The Three Australian Mints.**—Soon after the discovery of gold in Australia steps were taken for the establishment of a branch of the Royal Mint in Sydney. The formal opening took place on the 14th May, 1855, the mint being located in the southern part of the building once known as the "rum hospital." The Melbourne branch of the Royal Mint was opened on the 12th June, 1872, and the Perth branch on the 20th June, 1899. The States of New South Wales, Victoria, and Western Australia provide an annual endowment, in return for which the mint receipts are paid into the respective State Treasuries, and it may be said that, apart from expenditure on buildings, new machinery, etc., the amounts paid into the Treasuries fairly balance the mint subsidies. The figures for 1915 have been repeated in this issue, as the official returns for 1916 are not yet available.

2. **Receipts and Issues in 1915.**—(i.) *Assay of Deposits Received.* The number of deposits received during 1915 at the Sydney Mint was 920, of a gross weight of 509,139 ozs.; at the Melbourne Mint, 2376, of a gross weight of 487,195 ozs.; and at the Perth Mint, 4219, of a gross weight of 1,535,905 ozs. The average composition of these deposits in Sydney was, gold 866.0, silver 83.9, base 50.1 in every 1000 parts; Melbourne, gold 920.3, silver 39.0, base 40.7 in every 1000 parts; and Perth, gold 811.7, silver 125.2, base 63.1 in every 1000 parts. As many parcels have, however, undergone some sort of refining process before being received at the mint, the average assay for gold shews higher in these figures than for gold as it naturally occurs.

(ii.) *Receipts.* Practically all the gold coined at the Australian mints is the produce of either the Commonwealth or of the Dominion of New Zealand. The following table shews the origin of the gold received at the three mints during 1915:—

ORIGIN OF GOLD RECEIVED AT AUSTRALIAN MINTS DURING 1915.

Origin of Gold.	Sydney Mint.	Melbourne Mint.	Perth Mint.
	ozs.	ozs.	ozs.
New South Wales ... ..	123,613.14	11,988.48	...
Victoria ... ..	67.25	361,309.17	...
Queensland... ..	292,474.24	1,933.76	...
South Australia ... ..	...	10,039.72	3
Western Australia ... ..	166.40	9,220.22	1,534,655
Tasmania ... ..	8,412.92	8,616.78	...
Northern Territory ... ..	988.20	...	...
New Zealand ... ..	82,867.43	36,094.16	...
Other countries, origin not stated, and light gold coin ... ..	549.18	47,942.28	1,247
Total ... ..	509,138.76	487,194.57	1,535,905

It will be seen that practically all gold produced in New South Wales and Queensland, about two-thirds of that produced in New Zealand, and one-half of the Tasmanian found its way to the Sydney Mint, while the Melbourne Mint received all Victorian and South Australian gold, together with one-half of the Tasmanian and about one-third of the New Zealand production, and the Perth Mint treated practically all Western Australian gold with the exception of a small portion sent to Sydney and Melbourne.

(iii.) *Issues.* The Australian mints, besides issuing gold coin in the shape of sovereigns and half-sovereigns, also issue gold bullion, partly for the use of local manufacturers (jewellers and dentists), and partly for export, India taking annually a considerable quantity of gold cast into 10-oz. bars. The issues during 1915 are shewn in the table below:—

ISSUES OF GOLD FROM AUSTRALIAN MINTS DURING 1915.

Mint.	Coin.			Bullion.	Total.
	Sovereigns.	Half-sovereigns.	Total.		
	£	£	£	£	£
Sydney ...	1,346,000	446,000	1,792,000	72,036	1,864,036
Melbourne ...	1,637,839	62,832	1,700,671	203,037	1,903,708
Perth ...	4,373,596	68,109½	4,441,705½	851,931	5,293,636½
Total ...	7,357,435	576,941½	7,934,376½	1,127,004	9,061,380½

In addition to the issue of gold, the Mints are also charged with the issue of silver and bronze coin struck in London. There was, however, no issue of either Imperial silver or bronze coin in 1915.

(iv.) *Withdrawals of Worn Coin.* The mints receive light and worn coin for recoinage, gold being coined locally, while silver is forwarded to London. The value of gold coin so received in 1915 amounted to £155,783, viz.:—Sydney, £663; Melbourne, £155,120; and Perth, *nil*. The value of worn silver coins received during 1915 was £97,961, viz.:—Sydney, £64,480; Melbourne, £28,695; and Perth, £4786.

3. **Total Receipts and Issues.** (i.) *Receipts.* The total quantities of gold received at the three mints since their establishment are stated in the gross as follows:—Sydney, 37,376,681.58 ozs.; Melbourne, 36,639,224.26 ozs.; and Perth, 22,236,619.35 ozs. As the mints pay for standard gold (22 carats) at the rate of £3 17s. 10½d. per oz., which corresponds to a value of £4 4s. 11½d. per oz. fine (24 carats), it is possible to arrive at the number of fine ounces received from the amounts paid for the gold received. These amounts were:—Sydney, £137,881,923; Melbourne, £144,179,432; Perth, £78,071,001; corresponding to—Sydney, 32,460,162 ozs. fine; Melbourne, 33,942,715 ozs. fine; and Perth, 18,379,475 ozs. fine. Silver found in assaying is paid for if it exceeds 8 per cent.; in Sydney it has been paid for at the rate of one shilling and sixpence per oz. fine since 12th May, 1902; in Melbourne the price is fixed monthly by the Deputy-master of the Mint; and in the Perth accounts it has been taken at one shilling per oz.

(ii.) *Issues.* The total values of gold coin and bullion issued by the three mints are shewn in the table on the next page. It may be said that rather more than one-half of the total gold production of Australasia has passed through the three Australian mints, the production of the Commonwealth States to the end of 1915 being valued at £572,487,653, and that of New Zealand at £84,648,463, or a total of £657,136,116.

## TOTAL ISSUES OF GOLD FROM AUSTRALIAN MINTS TO END OF 1915.

Mint.	Coin.			Bullion.	Total.
	Sovereigns.	Half-sovereigns.	Total.		
	£	£	£	£	£
Sydney ...	126,726,500	4,557,000	131,283,500	6,612,255	137,895,755
Melbourne ...	132,605,388	946,780	133,552,168	10,630,743	144,182,911
Perth ...	70,182,045	257,344	70,439,389	7,610,414	78,049,803
Total ...	329,513,933	5,761,124	335,275,057	24,853,412	360,128,469

The total issues of silver coins to the end of 1915 were £2,415,200, viz.:—Crowns, £3500; double florins, £4585; half-crowns, £722,600; florins, £528,215; shillings, £606,200; sixpences, £253,220; and threepences, £296,880.

Bronze coins to the value of £180,150 have been issued, viz.:—Pence, £126,640; half-pence, £53,310; and farthings, £200.

(iii.) *Withdrawals of Worn Coin.* Complete figures as to the withdrawal of gold coin are as follows:—Sydney, £1,084,327; Melbourne, £669,945 (since and including 1890); and Perth, £422.

Withdrawals of worn silver coin amounted to £502,388 in Sydney, to £516,791 in Melbourne, and to £47,505 in Perth.

4. *Standard Weight and Fineness of Coinage.*—The coinage of the Commonwealth is the same as that of the United Kingdom, and the same provisions as to legal tender hold good, viz., while gold coins are legal tender to any amount, silver coins are only so for an amount not exceeding forty shillings, and bronze coins up to one shilling. As will be seen from the table below, the standard weights of the sovereign and half-sovereign are respectively 123.27447 grains and 61.63723 grains, but these coins will pass current if they do not fall below 122.5 grains and 61.125 grains respectively.

## STANDARD WEIGHT AND FINENESS OF COMMONWEALTH COINAGE.

Denomination.	Standard Weight.	Standard Fineness.
<b>GOLD—</b>	Grains.	
Sovereign ...	123.27447	Eleven-twelfths fine gold, viz.:— Gold ... 0.91667 } 1.00000 Alloy ... 0.08333 }
Half-sovereign ...	61.63723

Half-penny ...	87.50000	
Farthing ...	43.75000	

5. *Prices of Silver and Australian Coinage.*—(i.) *Prices of Silver.* The value of silver has greatly decreased since its demonetisation and restricted coinage in almost the whole of Europe. Its average price in the London market in recent years is shewn in the subjoined table:—

## AVERAGE PRICE OF SILVER IN LONDON MARKET, 1877 to 1915.

Year.	Price per Standard Oz.	Year.	Price per Standard Oz.	Year.	Price per Standard Oz.
	d.		d.		d.
1877 ...	54.7500	1890 ...	47.7500	1903 ...	24.7500
1878 ...	52.5625	1891 ...	45.0625	1904 ...	26.3750
1879 ...	51.1875	1892 ...	39.8125	1905 ...	27.8125
1880 ...	52.2500	1893 ...	35.6250	1906 ...	30.8750
1881 ...	51.7500	1894 ...	29.0000	1907 ...	30.1875
1882 ...	51.8125	1895 ...	29.8750	1908 ...	24.3750
1883 ...	50.5625	1896 ...	30.7500	1909 ...	23.6875
1884 ...	50.6875	1897 ...	27.5625	1910 ...	24.6875
1885 ...	48.6250	1898 ...	26.9375	1911 ...	24.5625
1886 ...	45.3750	1899 ...	27.5000	1912 ...	28.0625
1887 ...	44.6250	1900 ...	28.3125	1913 ...	27.5625
1888 ...	42.8750	1901 ...	27.2500	1914 ...	25.3125
1889 ...	42.6875	1902 ...	24.1250	1915 ...	23.6875

(ii.) *Profits on Coinage of Silver.* As sixty-six shillings are coined out of one pound troy of standard silver, the silver required to produce £3 6s. of coin was only worth £1 3s. 8d. during 1915; the difference of £2 2s. 4d. represents, therefore, the gross profit or seignorage made on the coinage of every £3 6s. This represents a rate of seignorage of 178.63 per cent., but the expenses of coining (including interest on cost of machinery) and of withdrawals of worn coin must be deducted. Still, given a large annual demand for new silver coin, even the net profit amounts to a considerable sum. Negotiations, therefore, took place for a number of years between the Imperial authorities and the Governments of New South Wales and Victoria, which in 1898 resulted in permission being granted to the two Governments named to coin silver and bronze coin at the Sydney and Melbourne Mints for circulation in Australia. No steps were, however, taken in the matter, and as section 51 of the Commonwealth Constitution makes legislation concerning "currency, coinage, and legal tender" a federal matter, the question remained in abeyance until the latter part of 1908, when the Commonwealth Treasurer announced his intention of initiating the coinage of silver in the future.

(iii.) *Coinage Bill.* In 1909 a Coinage Bill was introduced in the Commonwealth Parliament, which provided that the future Australian coinage should consist of the following coins:—In gold, £5, £2, £1, and 10s.; in silver, 2s., 1s., 6d., and 3d.; and in bronze, 1d. and  $\frac{1}{2}$ d. Gold was to be legal tender up to any amount, silver up to 40s., and bronze up to 1s. Ultimately the coinage was to be undertaken in Australia, but for the time an agreement was made with the authorities of the Royal Mint in London, under the terms of which the coinage was to be done in London on account of the Commonwealth Government. Orders were given for the immediate coinage of £200,000 worth of silver, viz., one million florins, one million shillings, one million sixpences, and two million threepences. The coins were to bear on the obverse H.M. the King's head, with the Latin inscription which appears on the British coins, and on the reverse the Australian coat-of-arms, with the denomination and the date. The Imperial authorities undertook to withdraw £100,000 worth of the existing silver-coinage per annum at its face value. The first consignment of the new coinage arrived in Australia early in 1910, and in a short time all the silver coins contracted for were supplied to the Royal Mints, Australia. Copper coins of the value of £10,000, viz., 1,560,000 pennies and 1,680,000 half-pennies, of a design similar to that of the silver coins, were ordered. It was not, however, intended to withdraw any of the existing copper coins, but merely to make good the "leakage," which was considerable.

The issue of Australian coin in 1915 was as follows:—Sydney, £148,700 silver, and £7070 bronze; Melbourne, £98,700 silver, and £3180 bronze; and Perth, £25,400 silver, and £860 bronze. In Melbourne, the coin is distributed from the Federal Treasury.

For information concerning the imports into the Commonwealth and exports from the Commonwealth of coin and bullion during the year 1916, the enquirer is referred to the tables on pages 587 to 589.

## § 2. Banking.

1. **Banking Facilities.**—*Head Offices of Banks.* Of the twenty-four banks trading in the Commonwealth on 30th June, 1917, four have their head offices in London, viz., the Bank of Australasia; the Union Bank of Australia Limited; the English, Scottish and Australian Bank Limited; and the London Bank of Australia Limited. The head offices of the following five banks are in Sydney—The Commonwealth Bank of Australia, The Bank of New South Wales, the Commercial Banking Company of Sydney Limited, the Australian Joint Stock Bank Limited (now the Australian Bank of Commerce Limited), and the City Bank of Sydney. Five banks have their head offices in Melbourne, viz., the National Bank of Australasia Limited, the Commercial Bank of Australia Limited, the Bank of Victoria Limited, the Colonial Bank of Australasia Limited, and the Royal Bank of Australia Limited. Brisbane is the headquarters of two banks, viz., the Queensland National Bank Limited, and the Bank of Queensland Limited. Only one bank has at present its head office in Adelaide, viz., the Bank of Adelaide; and one in Perth, viz., the Western Australian Bank. Of the two Tasmanian banks, the Commercial Bank of Tasmania Limited has its head office in Hobart, and the National Bank of Tasmania Limited in Launceston. The Bank of New Zealand has its headquarters in Wellington. Of the three remaining banks, the Comptoir National d'Escompte de Paris has its head office in Paris, the Ballarat Banking Company in Ballarat, and the Yokohama Specie Bank in Yokohama, Japan. It is proposed, in the few instances where the banks are referred to by name, to arrange them in the order just given, with the exception of the Commonwealth Bank, which is placed first.

2. **Banking Legislation.**—Under Section 51 of the Commonwealth Constitution Act the Commonwealth Parliament has power to legislate with respect to "Banking, other than State banking, also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money." Until recently the only Commonwealth banking legislation passed was Act No. 27 of 1909, "An Act relating to Bills of Exchange, Cheques, and Promissory Notes," which came into force on the 1st February, 1910. In the session of 1910, however, two Acts relating to banking were passed by the Federal Parliament. The first was the Australian Notes Act No. 11 of 1910, assented to on the 16th September, 1910, and proclaimed 1st November, 1910; and the second the Bank Notes Tax Act No. 14, 1910, assented to on 10th October, 1910, and proclaimed 1st July, 1911. Under the first of these Acts the Commonwealth Treasurer was empowered to issue notes which shall be legal tender throughout the Commonwealth, and redeemable at the seat of Federal Government. The notes are issued in denominations of 10s., £1, £5, £10, £20, £50, and £100. The Act directed the Treasurer to hold the following reserve of gold coin:—

- (a) An amount not less than one-fourth of the amount of Australian notes issued up to seven million pounds;
- (b) An amount equal to the amount of Australian notes issued in excess of seven million pounds.

For the purpose of estimating the reserve, notes which have been redeemed are not included amongst those issued.

The portion of the Act relating to the reserve has been amended by Act No. 21 of 1911, which was assented to on 22nd December, 1911. According to this amending Act the clause relating to the reserve now reads as follows:—"The Treasurer shall hold in gold coin a reserve of not less than one-fourth of the amount of Australian notes issued." It was intended that this amendment should come into force on 1st July, 1912, but the Federal Treasurer afterwards announced that its operation would be deferred until after the Commonwealth elections of 1913. These elections resulted in the return to power of another administration, and the new Treasurer, Sir John Forrest, announced his intention of maintaining the reserve at the rate provided for in the original Act during his tenure of office. This only lasted until September, 1914, but there has not, since then, been a very great diminution in the proportionate gold reserve, which on 26th June, 1918, stood at about 33.61 per cent.

The Australian Notes Act prohibited the circulation of notes issued by a State six months after the commencement of the Act, and such notes then ceased to be legal tender. In addition, the Bank Notes Act imposed a tax of 10 per cent. per annum in respect of all bank notes issued or re-issued by any bank in the Commonwealth after the commencement of this Act and not redeemed.

The Notes Act and the Bank Notes Act were supplemented in the following year by the passing of No. 18 of 1911, "An Act to provide for a Commonwealth Bank," which passed both Houses and was assented to on 22nd December, 1911. The bank thus authorised has no power to issue notes, but in every other respect it has the functions of an ordinary bank of issue. It is managed by a governor and a deputy-governor, who are appointed by the Governor-General and will hold office during good behaviour for a period of seven years, after which they will be eligible for reappointment. A novel feature is the establishment of a department dealing with savings bank business only. No further reference need be made here to this department, which is dealt with in detail in § 5. The framers of the Act have largely followed the lines laid down by the respective State Savings Bank Acts, particularly the Western Australian Act No. 9 of 1906. The capital of the bank was originally fixed at one million pounds, to be raised by the issue and sale of debentures. During the session of 1914 authority was obtained from Parliament to increase the capital of the bank to ten million pounds, with the object, it was understood, of acquiring the entire business of another bank. No such acquisition has, as yet, taken place, and no capital has, so far, been actually advanced by the Commonwealth Government to the bank. The debentures previously referred to were to be for ten pounds or certain multiples of ten pounds and redeemable at par, the Commonwealth guaranteeing interest and principal. All expenses incidental to the establishment of the bank were met by an advance from the Consolidated Revenue Fund, such advance to be ultimately repaid with interest at the rate of three-and-a-half per cent.

The first step in the organisation of the bank was the appointment as Governor, from 1st June, 1912, of Mr. Denison Miller, of the Bank of New South Wales. Mr. James Kell, of the Bank of Australasia, was subsequently appointed Deputy-Governor, and the bank was formally opened on 20th January, 1913, for the transaction of all general banking business. The result of the first day's operations was the deposit of £2,341,720, the bulk of which consisted of funds belonging to various departments of the Commonwealth Government. The opening of branches simultaneously at Sydney, Melbourne, Brisbane, Adelaide, Perth, Hobart, Townsville, Canberra, and London, marked the accomplishment of the provisions of the Commonwealth Bank Act of 1911. The Savings Bank Department, which came into existence six months previously, is dealt with in detail in the section on Savings Banks.

As the initial expenses of the bank were heavy, and as no capital was advanced, the early operations resulted in a small loss. This was debited to the profit and loss account of the bank, and the increasing prosperity of the institution can be seen by the way in which the original debit was reduced, until on 30th June, 1915, it was entirely extinguished. The following table shows the results of the transactions of the bank as published for the several periods mentioned:—

#### COMMONWEALTH BANK, 1913-17.

Net Result at 30th June.				General Bank.	Savings Bank.	Entire Bank.
				£	£	£
1913	...	...	...	Dr. 24,329	Dr. 22,308	Dr. 46,637
1914	...	...	...	Cr. 11,761	Dr. 48,757	Dr. 36,996
1915	...	...	...	Cr. 56,905	Dr. 54,694	Cr. 2,221
1916	...	...	...	Cr. 181,445	Dr. 34,376	Cr. 147,069
1917	...	...	...	Cr. 522,467	Cr. 3,825	Cr. 526,292

It will be seen from the above that the general bank became profitable at a much earlier stage than the savings bank. According to the provisions of section 30 of the Bank Act, the net profit of £526,292 disclosed at 30th June, 1917, was divided equally between a bank reserve fund and a redemption fund. The reserve fund is available for

the payment of any liabilities of the bank. The redemption fund is available for the repayment of any money advanced to the bank by the Treasurer, or for the redemption of debentures or stock which may be issued by the bank; and any excess may be used for the purposes of the redemption of any Commonwealth debts, or State debts taken over by the Commonwealth.

Under the existing laws, banks are required to furnish quarterly statements of their average assets and liabilities, but these statements are not equally complete in all the States. Until the close of 1907 these quarterly statements, together with the periodical balance-sheets of the banks (generally half-yearly, but in a few cases yearly), were the only information available in regard to banking business. During the year 1908 the Commonwealth Statistician, under the provisions of the Census and Statistics Act, asked the banks for quarterly returns giving slightly more detailed information than had previously been obtained. As, however, this extra information has not been forthcoming in the case of all the banks, the returns for the years subsequent to 1907 have been practically left in the same condition as those for 1907 and previous years.

The Acts under which the various banks are incorporated are not all of the same nature, but it may be stated that while most of the older banks were incorporated by special Acts, *e.g.*, the Bank of New South Wales, by Act of Council 1817; the Bank of Australasia, by Royal Charter; the Bank of Adelaide, by Act of the South Australian Parliament; and the Bank of New Zealand, by Act of the General Assembly of New Zealand, the newer banks are generally registered under a "Companies Act," or some equivalent Act. This is also the case with those banks which, after the crisis of 1893, were reconstructed.

**3. Capital Resources of Banks.**—The paid-up capital of the cheque-paying banks, together with their reserve funds, the rate per cent., and the amount of their last dividends, is shewn in the table hereunder. The information relates to the balance-sheet last preceding the 30th June, 1917. In regard to the reserve funds it must be stated that in the case of some of the banks these are invested in Government securities, while in other cases they are used in the ordinary business of the banks, and in a few instances they are partly invested and partly used in business.

1. Including calls in arrear. 2. £305,780 preferential, £1,192,440 ordinary. 3. Subject to estimated deficiency in connection with Special Assets Trust Co. Ltd. 4. £416,760 preferential, £1,061,250 ordinary. 5. For 12 months. 6. Dividend for quarter.

4. **Liabilities and Assets of Banks.**—(i.) *Liabilities of Banks for Quarter ended 30th June, 1917.* As already stated, the banks transacting business in any State are obliged, under the existing State laws, to furnish a quarterly statement of their assets and liabilities, which contains the averages of the weekly statements prepared by the bank for that purpose, and they have, during the years 1908-17, furnished quarterly statements to the Commonwealth Statistician. As all other financial returns in this work embrace, so far as possible, a period ended 30th June, 1917, it seems advisable to give the banking figures for the quarter ended on that date, and, where they are shewn for a series of years, similarly to use the figures for the June quarter of each year. The liabilities are those to the general public, and are exclusive of the banks' liabilities to their shareholders, which are shewn in the preceding table:—

**AVERAGE LIABILITIES OF BANKS IN EACH STATE OF THE COMMONWEALTH AND THE NORTHERN TERRITORY FOR THE QUARTER ENDED 30th JUNE, 1917.**

1917	21,685,410	1,156,033	5,288,199	2,035,297	5,429,884	176,739,172	212,333,995

(a) Including Government and Municipal securities, and Australian notes.

As the table shews, the increase in the total amount of assets is partly due to advances, and, to a lesser extent, to an increase in the "balances due." The marked advance in the item "all other debts" in the year 1915 was due to the large expansion of the Australian note issue, owing to the war. The decline in 1917 was due to a fall in the advances, which was not quite balanced by the rise in Government securities. The banks have materially assisted the Federal Government in its war finance by advancing £10,000,000 in gold, receiving in return an equivalent amount in Australian notes, which they undertook not to present for payment until the termination of the war.

**5. Percentage of Coin, Bullion, and Australian Notes to Liabilities at Call.—**

(i.) *Commonwealth.* Although it is not strictly correct to assume that the division of deposits into those bearing interest and not bearing interest would in every case coincide with a division into fixed deposits and current accounts, the division, in default of a better one, must be adopted, and in the following table "liabilities at call" are therefore understood to include the note circulation of the banks and the deposits not bearing interest. From 1912 onwards, however, the former item has steadily decreased.

**PERCENTAGE OF COIN, BULLION, AND AUSTRALIAN NOTES TO LIABILITIES AT CALL, COMMONWEALTH BANKS, 1908 to 1917.**

Year.	Liabilities at Call.			Coin, Bullion, and Australian Notes.		Percentage to Liabilities at Call.
	£			£		%
1908 ... ..	49,551,675			24,931,560		50.31
1909 ... ..	50,323,261			26,297,843		52.26
1910 ... ..	58,982,344			30,149,628		51.12
1911 ... ..	65,945,355			33,470,770		50.76
1912 ... ..	65,945,825			34,120,831		51.74
1913 ... ..	62,381,748			36,105,775		57.88
1914 ... ..	70,502,271			41,446,540		58.79
1915 ... ..	75,656,505			55,376,352		73.19
1916 ... ..	93,079,493			58,312,009		62.65
1917 ... ..	105,635,767			53,777,126		50.91

It would appear from the figures just given that the banks generally consider it advisable to hold rather more than half the amount of liabilities at call in coin and bullion. In the two years 1913 and 1914 the ratio rose to more than four-sevenths, and in 1915 to nearly three-fourths. The large rise in 1913 was due to a decrease in the deposits, coupled with a simultaneous advance in coin, bullion, and Australian notes. The result of over 73 per cent. for 1915 was abnormal, and was due to the rise in the holdings of Australian notes, which are being held in excess of requirements. The subsequent fall is due partly to an increase in the deposits, and partly to a diminution in the holding of gold coin.

(ii.) *Queensland Treasury Notes.* No bank notes are issued by any of the banks in Queensland, where a Treasury note took the place of bank notes from 1893. These Treasury notes are disregarded in the quarterly statements of the banks; according to Treasury returns the amount outstanding on 30th June, 1917, was £27,369. Under the Australian Notes Act, previously referred to, the issue of notes by a State is now prohibited.

(iii.) *States.* The proportion of coin, bullion and Australian notes to liabilities at call varies considerably in the different States, and is generally highest in Western Australia, and lowest in Queensland. A table is appended shewing the percentage for each State for the quarter ended 30th June in each of the years 1908 to 1917:—

**PERCENTAGE OF COIN, BULLION, AND AUSTRALIAN NOTES TO LIABILITIES AT CALL, COMMONWEALTH BANKS, 1908 to 1917.**

(ii.) *Deposits per Head of Population.* To shew the extent to which the population makes use of the banking facilities afforded to it, a table is given hereunder shewing the amount of total deposits per head of mean population for each of the years 1908 to 1917. The figures must not be taken as representative of the savings of the people, as a large proportion of the deposits is non-interest-bearing and therefore presumably used in the business of the banks' customers, together with a small part of the interest-bearing deposits.

(iii.) *Total Advances.* In the quarterly statements furnished by the banks the column headed "all other debts due to the banks," which usually average about 75 per cent. of the total assets, is made up of such miscellaneous items as bills discounted, promissory notes discounted, overdrafts on personal security, overdrafts secured by deposit of deeds or by mortgage, etc. The quarterly returns furnished to the Commonwealth Statistician in 1908 and 1909 provided for a division of the amounts contained under this heading into a number of sub-headings, but all the banks were not in a position to make the necessary division, so that under present circumstances it is impossible to separate these items, and the total amounts contained in the column must, therefore, be treated as advances. The following table shews the totals for each State during the years 1908 to 1917. It will be noted that between the pair of consecutive years 1908-9 and 1912-13 there was a marked decrease in the advances. In each case this was roughly concurrent with a slackening in the increase of deposits, and was due partly to this slackening, and partly to international causes. The fall in 1917 was due to the fact that the banks were not called upon to finance the harvest, this being undertaken by the Imperial Government.

## ADVANCES BY COMMONWEALTH BANKS, 1908-17.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Northern Territory.	All States.

(iv.) *Proportion of Advances to Deposits.* The percentage borne by advances to total deposits shews to what extent the needs of one State have to be supplied by the resources of another State, and where the percentage for the Commonwealth as a whole exceeds 100 (as it did in the early years of the century), the banks must have supplied the deficiency from their own resources, or from deposits obtained outside the Commonwealth. The following figures shew, however, that the banking business of the Commonwealth has been self-contained during the period under review :—

**PERCENTAGE OF ADVANCES TO TOTAL DEPOSITS, COMMONWEALTH BANKS,  
1908 to 1917.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	All States.
	%	%	%	%	%	%	%	%

**7. Clearing Houses.**—The Sydney Banks' Exchange Settlement and the Melbourne Clearing House, at which two institutions settlements are effected daily between the banks doing business in New South Wales and Victoria respectively, publish figures of the weekly clearances effected. From these figures it appears that in 1917 the total clearances in Sydney amounted to £444,533,000, and in Melbourne to £377,031,000. These figures represent an increase for Sydney of £22,162,000 on those for 1916, and for Melbourne of £19,513,000. Owing to the different distribution of the banking business in the two cities these figures do not, however, afford a fair comparison of the volume of banking business transacted in Sydney and Melbourne. For Adelaide the clearances in 1917 totalled £83,866,000, an increase for the year of £12,433,000. Returns for all Australian Clearing Houses for the last six years are shewn in the following table :—

**YEARLY TOTAL OF BILLS, CHEQUES, etc., PASSED THROUGH AUSTRALIAN  
CLEARING HOUSES, 1912 to 1917.**

Year.	Sydney.	Melbourne.	Brisbane.	Adelaide.	Perth.
	£	£	£	£	£

1916 ...	422,371,000	357,788,000	100,064,000	71,433,000	40,366,000
1917 ...	444,533,000	377,301,000	119,501,000	83,866,000	41,370,000

### § 3. Companies.

**1. General.**—Returns in regard to registered companies are defective, and, with few exceptions, are not available for Tasmania. They embrace (a) Returns relating to Trustees, Executors and Agency Companies; (b) Returns relating to Registered Building and Investment Societies; and (c) Returns relating to Registered Co-operative Societies.

**2. Trustees, Executors and Agency Companies.**—Returns are available of eight Victorian, two New South Wales, one Queensland, three South Australian, one Western Australian, two Tasmanian companies, and two with head offices in New Zealand. The

paid-up capital of these nineteen companies amounted to £582,405; reserve funds and undivided profits to £511,775; other liabilities, £182,424; total liabilities, £1,276,604. Among the assets are included:—Deposits with Governments, £245,077; other investments in public securities, fixed deposits, etc., £221,421; loans on mortgage, £138,436; property owned, £442,224; other assets, £229,446. The net profits for the year were £82,325, and the amount of dividends and bonuses £50,723. Returns as to the amount at credit of estates represented by assets are available for only eleven companies, the total shewn being £48,768,602.

Probably about £20,000,000 would have to be added to this amount for the remaining seven companies, so that the total amount would not be far short of £70,000,000. None of these companies receives deposits, and advances are only made under exceptional circumstances, and to a very limited extent, the total so shewn in the last balance-sheets being but £93,967.

**3. Registered Building and Investment Societies.**—Returns have been received of a total of 201 societies, viz., 117 in New South Wales, 31 in Victoria, 12 in Queensland, 24 in South Australia, 13 in Western Australia, and 4 in Tasmania. The balance-sheets cover various periods ended during the second half of 1916 and the first half of 1917, so that the returns may be assumed to correspond roughly to the financial year 1916-17. The liabilities of the societies are stated as follows:—

#### LIABILITIES OF REGISTERED BUILDING AND INVESTMENT SOCIETIES, 1916-17.

State.	Paid-up Capital or Subscriptions.	Reserve Funds.	Deposits.	Bank Over-drafts and other Liabilities.	Total Liabilities.
	£	£	£	£	£
New South Wales	1,537,548	(a)	488,051	186,581	2,212,180
Victoria ...	1,316,145	332,877	796,325	118,831	2,564,178
Queensland ...	490,640	43,895	102,180	35,509	672,224
South Australia ...	514,481	14,691	1,197	19,219	549,588
Western Australia	132,299	138	33,744	19,103	185,284
Tasmania ...	105,059	54,036	151,059	6,982	317,136
Total ...	4,096,172	445,637	1,572,556	386,225	6,500,590

(a) Included in paid-up capital or subscriptions.

The assets of the companies for the same period were as follows:—

#### ASSETS OF REGISTERED BUILDING AND INVESTMENT SOCIETIES, 1916-17.

State.	Advances on Mortgage.	Landed and House Property, Furniture, etc.	Cash in Hand and on Deposit and other Assets.	Total Assets.

(a) Exclusive of Tasmania.

## § 4. Savings Banks.

1. **General.**—The total number of savings banks, with their branches and agencies, in the Commonwealth, nearly approximates to that of ordinary banks, and at the middle of 1917 numbered 2227, distributed as follows:—New South Wales, 639; Victoria, 470; Queensland, 466; South Australia, 308 (exclusive of school penny savings banks); Western Australia, 195 (exclusive of school penny savings banks); and Tasmania, 149.\* These figures are exclusive of the recently-established Commonwealth Savings Bank, except in the State of Tasmania, in which the Commonwealth Savings Bank absorbed the State Savings Bank.

In the following tables the figures for all the States except Tasmania refer to financial years ended 30th June. In the case of Tasmania figures for the two joint-stock savings banks are made up to the last day of February in each year. In the case of the Commonwealth Bank, figures are made up to the 30th June, 1917.

2. **Depositors.**—The total number of depositors, *i.e.*, of persons having accounts open, not of those making deposits, in each of the last ten years is shewn in the following table :—

### NUMBER OF DEPOSITORS IN SAVINGS BANKS, 1907-8 to 1916-17.

Year.	N.S.W.	Victoria. (a)	Q'land.	S. Aust. (a)	W. Aust. (a)	Tasmania.	All States.
1907-8 ...	421,928	511,581	100,324	174,289	72,178	55,620	1,335,920

(a) Inclusive of depositors in penny savings banks.  
Commonwealth Savings Bank.

(b) Inclusive of

The subjoined table shews the above figures in relation to the population of the States; it must, of course, be borne in mind that savings bank accounts are not restricted to the adult population, but that it is, on the contrary, a very usual practice to open accounts in the names of children. Even so, the proportion is a large one, amounting in the case of the Commonwealth to about one-half, and rising in Victoria to five-eighths, and in South Australia to about three-quarters. In the case of this table and the one that follows, it may be pointed out that as it is possible for the same person to have accounts in both Commonwealth and State Savings Banks, the figures given are perhaps slightly in excess of the truth.

(a) Inclusive of Commonwealth Savings Bank.

3. **Deposits.**—The total amount of deposits in the savings banks of the six States reaches the large sum of one hundred and seven million pounds, and would no doubt be even larger if the banks did not restrict interest-bearing deposits to certain limits. It must be remembered that though not granting facilities to draw cheques, the Australian savings banks practically afford the small tradesman all the advantages of a current account, in addition to which they also allow him interest on his minimum monthly balance, instead of charging him a small fee for keeping his account, as the ordinary banks do. The rates of interest allowed, and the limits of interest-bearing deposits, are as follows:—New South Wales, Government Savings Bank,  $3\frac{1}{2}$  per cent. up to £500; Victoria,  $3\frac{1}{2}$  per cent. on first £350, and on deposit stock up to £1000; Queensland,  $3\frac{1}{2}$  per cent. up to £1000; South Australia,  $2\frac{1}{2}$  per cent. on accounts closed during the year, and 4 per cent. up to £350 on accounts remaining open; Western Australia,  $3\frac{1}{2}$  per cent. from £1 to £500, and 3 per cent. from £500 to £1000; also 4 per cent. on deposit stock up to £1000; Hobart Trustees' Savings Bank, 4 per cent. up to £300. Launceston Trustees' Savings Bank, 4 per cent. up to £150, and Commonwealth Savings Bank, 3 per cent. up to £300. The savings banks of five of the States—New South Wales, Victoria, Queensland, South Australia, and Western Australia—have, for the further benefit of depositors, entered into a reciprocity arrangement, under which money deposited in one State may be drawn out in another State, even by telegraph. The two Savings Banks in New South Wales amalgamated on 1st May, 1914. The Act of amalgamation provided for interest at the rate of  $3\frac{1}{2}$  per cent. on the accounts carried to the combined institution. If the rate of interest to Government Savings Bank depositors should fall subsequently below 3 per cent., the transferred accounts of the old Barrack Street Bank were to receive a preferential rate of interest of  $\frac{1}{2}$  per cent. Otherwise their accounts will never receive less than  $3\frac{1}{2}$  per cent.

The table below shows the total amounts at credit of depositors in each of the last ten years:—

(a) Inclusive of Commonwealth Savings Bank.

A comparison between the tables shewing the number of depositors and the amount of deposits reveals the fact that the average amounts to the credit of each depositor are considerably larger in some States than in others; in other words, that in one State a comparatively larger proportion of the population makes use of the savings banks, and that the natural result is a smaller amount to the credit of the individual depositor. Within the same State there is little variation in the figures from year to year.

#### AVERAGE AMOUNT PER DEPOSITOR IN SAVINGS BANKS, 1907-8 to 1916-17.

4. **Annual Business.**—The annual volume of business transacted by the Australian savings banks is very large when compared with the total amount of deposits. This is mainly due to the fact already pointed out that many accounts are used as convenient current accounts. Thus, during the last year of the period under review, the total amount deposited and withdrawn (exclusive of interest added) amounted to about 156 per cent. of the total amount of deposits at the end of the previous year, while the amount at credit of depositors (inclusive of interest added) increased by only about 10 per cent. during the same year. The following table shews the business transacted during the year 1916-17:—

## SAVINGS BANKS TRANSACTIONS DURING THE YEAR 1916-17.

State.	Total Deposits at End of Year 1915-16.	Amounts Deposited during Year 1916-17.	Interest Added during Year 1916-17.	Total.	Amounts Withdrawn during Year 1916-17.	Total Deposits at End of Year 1916-17.

5. **Commonwealth Savings Bank.**—The Savings Bank department of the Commonwealth Bank started operations in Victoria on 15th July, 1912, in Queensland on 16th September, 1912, in the Northern Territory on 21st October, 1912, and in the States of New South Wales, South Australia, and Western Australia on 13th January, 1913. Business is being transacted on the usual Savings Bank lines, interest at the rate of 3 per cent. per annum being allowed on deposits up to £300. Extensive use is being made of the country post-offices as local agencies, the several States having received notice that their Savings Banks would have to be removed from the post-offices by the end of 1912.

For further particulars concerning the Commonwealth Bank, see Official Year Books Nos. 6-10.

The following table shews for each State the number of depositors, and the amount at credit on 30th June, 1917, in the Commonwealth Savings Bank :—

## § 5. Life Assurance.

1. **General.**—Under section 51 of the Commonwealth Constitution Act, the Commonwealth Parliament is empowered to legislate in regard to "insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned." With the exception of Act No. 12 of 1905, "an Act relating to assurance on the lives of children by life assurance companies or societies," no legislation relating to life assurance has been passed by the Commonwealth Parliament, and life assurance companies carry on their business under State laws where such laws are in existence, or otherwise under the provisions of various companies' or special Acts. A Royal Commission consisting of the Honourable J. H. Hood, one of the judges of the Supreme Court of Victoria, and G. H. Knibbs, Esq., C.M.G., Commonwealth Statistician, was, however,

appointed in 1908, "to inquire into and report upon the law relating to and the methods of operating, Fire, Life, Industrial, and other Insurance in Australia." The Commission was originally required to report the result of its inquiry before the 30th June, 1909. A progress report was issued before that date, and the time for the final report extended to the 30th June, 1910. The report relating to Life Assurance was published on 15th March, 1910, and that relating to Fire Insurance on 15th October, 1910. On the conclusions contained in these reports future Commonwealth legislation will probably be based. In fact, a bill embodying some of the conclusions was introduced into the Federal Parliament on 20th December, 1912, but, owing to lack of time, did not reach its second reading. An additional report on Social Insurance was prepared by the Commonwealth Statistician and issued on 9th September, 1910.

Returns for the year 1916 have been directly collected from life assurance societies by the Commonwealth Statistician, with results which are in the main satisfactory. Figures for 1916 refer to business in the Commonwealth only, and do not include New Zealand business.

**2. Companies Transacting Business in the Commonwealth.**—The total number of companies at present established in the Commonwealth is nineteen, of which the following nine have their head offices in New South Wales:—The Australian Mutual Provident Society, the Mutual Life and Citizens' Assurance Company Limited, the City Mutual Life Assurance Society Limited, the Australian Metropolitan Life Assurance Company Limited, the People's Prudential Assurance Company Limited, the Life Insurance Company, the Assurance and Thrift Association Limited, the Co-operative Assurance Company Limited, and the Australian Provincial Assurance Association Limited. The Standard Life Association Limited is now omitted, since a controlling interest in it has been purchased by the Colonial Mutual Life Assurance Society, and almost all its policyholders have transferred themselves to the latter corporation. The Mutual Life and Citizens' Assurance Company Limited was formed in 1908 by the amalgamation of the Mutual Life Association of Australasia and the Citizens' Life Assurance Company Limited. During 1910 it increased in size by amalgamating with the Australian Widows' Fund Life Assurance Society Limited, which is therefore no longer included in the list of independent corporations. Five companies have their head offices in Victoria, viz.:—The Australian Alliance Assurance Company, the National Mutual Life Association of Australasia Limited, the Victoria Life and General Insurance Company, the Colonial Mutual Life Assurance Society Limited, and the Australasian Temperance and General Mutual Life Assurance Society Limited. The head office of the Provident Life Assurance Company is in New Zealand, and that of the Liverpool and London and Globe Insurance Company in England. The remaining three societies belong to the United States, viz.:—The Equitable Life Insurance Society of the United States, the Mutual Life Insurance Society of New York, and the New York Life Insurance Society.

Most of the Australian companies are purely mutual; the following, however, are partly proprietary, the figures in brackets representing the shareholders' capital paid up:—The Victoria Life and General (£40,000), Mutual Life and Citizens' (£200,000), Metropolitan (£11,744), Prudential (£10,000), Life Insurance Company (£44,000), Assurance and Thrift (£17,684), Co-operative Assurance (£56,254), and Australian Provincial Association (£75,345). Of foreign companies transacting business in the Commonwealth, the Liverpool and London and Globe, the Provident, and the Equitable are partly proprietary, the shareholders' capital amounting to £265,525, £21,000, and £20,550 respectively.

**3. Ordinary and Industrial Business.**—Of the societies enumerated in the preceding paragraph, the following seven in 1916 transacted both ordinary and industrial business:—The Australian Mutual Provident Society, the Mutual Life and Citizens' Assurance Company Limited, the Australasian Temperance and General Mutual Life Assurance Society Limited, the Australian Metropolitan Life Assurance Company Limited, the Colonial Mutual Life Assurance Society, the Life Insurance Company, and the Co-operative Assurance Company.

The People's Prudential Assurance Company Limited and the Provident Life Assurance Company formerly restricted their operations to industrial business, but have now established an ordinary department.

The remaining nine societies transacted ordinary life assurance business only, with the exception of those companies which have fire and accident branches, etc.

It has been attempted in this section to keep returns relating to ordinary and to industrial business apart, so far as it is possible to do so, and figures relating to companies whose head offices are in New Zealand or in Europe or America refer to the Australian business only of those companies.

**4. Ordinary Business: Australian Business in Force, 1916.**—The subjoined table shows the ordinary life business in force at the latest dates available in the nineteen societies conducting operations in the Commonwealth:—

(a) Decrease.

**7. Liabilities and Assets of Assurance Societies, 1916.**—The liabilities of the Australasian societies consist mainly of their assurance funds; as already mentioned, only nine of the societies are partly proprietary, viz., the Mutual Life and Citizens', with a paid-up capital of £200,000; the Metropolitan, with a paid-up capital of £11,744; the Prudential, with a paid-up capital of £10,000; the Victoria Life and General, with a paid-up capital of £40,000; the Provident, with a paid-up capital of £21,000; the Life Insurance Company, with £44,000; the Assurance and Thrift, with £17,684; Co-operative Assurance Company, with £56,254; and the Australian Provincial with £75,345. With

the exception of the Victoria, the Life Insurance, Assurance and Thrift, and Australian Provincial, this paid-up capital belongs in every case to the industrial branch of the respective societies. The capital of the Provident (£21,000) is held in New Zealand, that of the Liverpool and London and Globe (£265,525) in England, and that of the Equitable Life (£20,550) in the United States. None of these three amounts appears, therefore, in the two subjoined tables, where the capital of the Australian societies is included with the assurance funds. The assets consist mainly of loans on mortgage and policies, Government, municipal, and similar securities, shares, freehold property, etc. As in some cases the Australian liabilities exceed the Australian assets, it may be pointed out that this table should be read in connection with the table on page 832, which sets out the total assets. Loans on personal security are granted by only very few of the Australian societies.

(i.) *Ordinary Business.* The following table shows the liabilities and assets of the societies transacting ordinary life business :—

(a) Including industrial business. As the business of these three societies is mainly ordinary life business they have been included in this table. (b) Not available. (c) Several life offices have a considerable portion of their assets invested outside the Commonwealth (see table on the next page).

(ii.) *Industrial Business.* As stated in the footnote to the preceding table, the Australian Mutual Provident Society, the Australasian Temperance and General Mutual Life Assurance Society, and the Co-operative Assurance Company, which transact a certain amount of industrial business, but whose business is mainly ordinary life business, have been included with those societies doing only ordinary life business. On the other hand, the People's Prudential Assurance Company, in whose case industrial business greatly predominates over ordinary life business, has been included in the following table. Incomplete as the table is, it shews that the funds appropriated to industrial business are very insignificant in comparison with those pertaining to ordinary life business. Taking the table in conjunction with the statements of revenue and expenditure, the question may well be asked whether in the case of some of the societies, industrial business is worth catering for at all.

## INDUSTRIAL LIFE ASSURANCE.—AUSTRALIAN LIABILITIES AND ASSETS, 1916.

People's Prudential Assurance Company (a)	61,448	51	62,029	46,010	16,019	62,029
Provident Life Assurance Company	8,773	73	8,846	21	9,025	9,046

(a) Including ordinary business. (b) Particulars not available.

(iii.) *Total Assets.* It has been thought advisable to confine the figures relating to life assurance to business in the Commonwealth. Several of the companies whose head offices are in Australia transact, however, a large amount of business elsewhere, viz., in New Zealand, in South Africa, and in the United Kingdom, while in the case of the foreign companies, the Australian business is insignificant compared with that done elsewhere. Particulars as to this foreign business of both Australian and foreign companies will be found in "Finance Bulletin, No. 10," and a short table only is inserted here, shewing the total assets of the various companies, so that the deficiencies in the Australian assets shewn in the previous tables for those companies doing business elsewhere may not be misunderstood:—

## § 6. Fire Insurance.\*

1. *General.*—Returns as to fire insurance are very defective, and only for Sydney and Melbourne and the country districts of Victoria have some figures been given which are worth reproducing. The Royal Commission mentioned above under "Life Assurance" has reported upon fire insurance matters, and Commonwealth legislation may, therefore, be expected in the future. Legislation concerning fire insurance was, in fact, contained in the bill to which reference has already been made. [§ 5, sub-section 1.]

2. *Sydney.*—Under the Fire Brigades Act 1902 the cost of the Metropolitan Fire Brigade is defrayed by equal payments on the part of the Colonial Treasurer, the municipal councils within the area under the jurisdiction of the Fire Brigades Board, and the insurance companies represented in Sydney. The companies divide their share proportionately to the amount held at risk. Under this arrangement the amount payable by the companies for the year 1909 was £19,100, divided amongst sixty-five companies, of

\* See also Section XXVI., § 5, Fire Brigades.

which not more than six had their head office in Sydney. The amounts thus held at risk at the close of the last four years for which returns are available were, in 1905, £78,108,749; in 1906, £81,364,129; in 1907, £86,563,304; and in 1908, £89,071,992. A new Act, which came into force on the 1st January, 1910, was passed in 1909. This Act substituted a Board of Fire Commissioners for New South Wales for the original Metropolitan Fire Brigades Board, and divided the whole State into eight fire districts for the greater facilitation of working.

**3. Melbourne.**—In Melbourne the Metropolitan Fire Brigades Board assesses the amount payable by the insurance companies on the amount of premiums returned. These premiums for the last four years averaged about £477,000 per annum, while the contributions paid by the companies averaged about £24,000, or about £5 for every £100 of premiums. It may be said, therefore, that the companies have to devote about 5 per cent. of their premium income from metropolitan insurances to the maintenance of the fire brigade.

The value of ratable property is about £7,537,000, and the amounts contributed by the municipalities—as in the case of the insurance companies, one-third of the amount required by the Fire Brigades Board, the remaining one-third being contributed by the State Treasurer—are equal to about  $\frac{7}{8}$ d. per £1 of ratable value. In addition to this contribution, insurance companies doing business in Victoria have to take out an annual license at a cost of  $1\frac{1}{2}$  per cent. of the gross premium income, which is probably equal to about  $1\frac{3}{4}$  per cent. on net income.

**4. Country Districts of Victoria.**—The country districts are divided into nine areas for fire insurance purposes, and the contributions to be paid vary in these areas according to the actual requirements of the Country Fire Brigades Board. The value of ratable property for the last year was slightly over £1,824,000. The premium income of the insurance companies from country business in protected areas during the year 1916 was about £206,000, and the contributions of the companies £5156, equal to rather more than  $2\frac{1}{2}$  per cent. of the premium income.

**5. Brisbane.**—A similar arrangement holds good in Brisbane, under which the cost of the Fire Brigade Board, amounting to about £20,000 per annum, is paid in equal shares by the Government, the Brisbane City Council, and the insurance companies.

**6. Adelaide.**—The Fire Brigades Board of South Australia is incorporated under "The Fire Brigades Act 1904"; "The Fire Brigades Act Amendment Act 1905"; and "The Fire Brigades Act Further Amendment Act 1910." The cost is distributed as follows:—Three-ninths to the Government; four-ninths to the insurance companies; and two-ninths to the municipalities and districts which come under the operations of the board. The insurance companies are assessed in proportion to that portion of their premium incomes derived from the insurance of property (re-insurance within the State excepted) situated within the limits of the municipalities and districts coming under the operations of the board. The respective contributions for 1916 were as follows:—The Government, £7635; the companies, £10,180; the municipalities, £5090.

**7. Perth.**—A District Fire Brigades Bill was reported on by a committee of the Legislative Assembly during 1909, and it was recommended that all brigades should in future be controlled by one board, and that the expense should be met by contributions at the following rate:—By Government, two-eighths; by the municipalities, three-eighths; and by the insurance companies, three-eighths. These provisions were incorporated in an Act, "The District Fire Brigades Act 1909," which was assented to on 21st December, 1909, and came into force on the 1st day of January, 1910. This Act, however, did not apply to Perth or the other districts in which the Fire Brigades Act 1898 was still operative. According to the provisions of the latter Act the expenditure was allocated as follows:—One-ninth to the Government; four-ninths to the insurance companies; and four-ninths to the municipalities. It was provided that the Governor might, at any time, on the petition of the council of any municipality, declare by proclamation that the

provisions of the Act of 1898 should cease to be in force in that municipal district. The whole of the State, however, has now come under the operation of the Act of 1909. The latest valuation of ratable property is £1,583,000, and expenditure £31,550, of which the Government paid £7888, the municipalities £11,831, and the insurance companies, £11,831.

**8. Australian Fire Insurance Business.**—Returns are available shewing the revenue and expenditure, assets and liabilities, and investments of twenty-seven insurance companies having their head offices either in the Commonwealth or in New Zealand. These companies are:—(a) with head office in Sydney—the Australian Mutual Fire Insurance Company, the City Mutual Fire Insurance Company, the Mercantile Mutual Fire Insurance Company, the Queensland Insurance Company Limited, the United Insurance Company, the Insurance Office of Australia Limited, the Federal Mutual Insurance Company of Australia, the Manufacturers' Mutual and the Farmers and Settlers; (b) with head office in Melbourne—the Australian Alliance Assurance Company, the Colonial Mutual Fire Insurance Company, the Victoria Insurance Company, the Victoria General Insurance and Guarantee Company Limited, the Australasian Mutual Insurance Society, the Commonwealth Insurance Company, the Chamber of Manufactures, and the Victoria State Accident Office; (c) with head office in Hobart—the Derwent and Tamar Fire and Marine Assurance Company Limited; (d) with head office in Launceston—the Mutual Fire Insurance Company of Tasmania; (e) with head office in Auckland—the New Zealand Insurance Company, and the South British Fire and Marine Insurance Company of New Zealand; (f) with head office in Dunedin—the National Fire and Marine Insurance Company of New Zealand, and the Standard Fire and Marine Insurance Company of New Zealand; (g) with head office in Wellington—the New Zealand State Fire Insurance Office, and the New Zealand Government Accident; (h) with head office in Christchurch—the Farmers' Co-operative Insurance Association of New Zealand; and (i) with head office in Perth—the Western Australian Insurance Company. As their names imply, the majority of these companies transact marine insurance, and in some cases guarantee and other business, in addition to the fire insurance business, and the returns relating to the latter cannot be separated from the former.

The accounts given hereunder cover two consecutive years, the second year ending at various dates from 31st December, 1915, to 30th April, 1917. The figures for the first year are in brackets.

The premiums, less reinsurances and returns, amounted to £4,015,460 (£3,064,411); losses were £2,060,135 (£1,515,008). Expenses and commission came to £1,187,988 (£994,726), and there was, therefore, a profit on trade operations of £767,337 (£554,677). As, however, interest, rent, fees, etc., amounted to £265,026 (£235,025), the total profit was £1,032,363 (£789,702). Dividends and bonuses came to £300,628 (£268,280). The ratio to premium income of losses was, therefore, 51.30 per cent. (49.44 per cent.), and of expenses and commissions, 29.59 per cent. (32.46 per cent.). The resulting ratio of trade surplus to premium income was 19.11 per cent. (18.10 per cent.).

The paid-up capital of the twenty-seven companies was £2,500,443 (£2,263,221); reserve and reinsurance funds, £3,338,577 (£3,142,006); undivided profits, £540,649 (£315,989). The total paid-up capital and reserves were, therefore, £6,379,489 (£5,721,216). In addition to these liabilities there were others, viz.:—Unsettled losses, £480,077 (£408,018); sundry creditors, £525,402 (£434,102); dividend to pay, £230,818 (£199,140); and, in the case of one company, a life assurance fund, £95,139 (£112,306); thus bringing the total liabilities to shareholders and to the general public up to £7,710,925 (£6,874,782).

The corresponding amount of assets is made up of investments, £6,291,468 (£5,820,934), viz.:—Loans on mortgage, £1,506,161 (£1,561,770); Government securities, debentures, shares, etc., £2,326,587 (£1,836,709); landed and other property, including furniture, £1,193,970 (£1,154,471); fixed deposits, £1,175,676 (£1,184,917); in the case of one company doing a mixed business—loans on its own life policies, etc., £6502 (£6889); other investments, £82,572 (£76,225). The balance of assets consisted of cash in bank, on hand, and bills receivable, £478,882 (£397,617); and sundry debtors, etc., £940,575 (£656,181).

The financial position of the companies is undoubtedly a strong one, owing to the steady accumulation of reserves, and the high ratio borne by capital and reserves to premium income must be a cause of satisfaction to policy holders.

### § 7. Marine Insurance.

No returns are available in regard to Marine Insurance. It may, however, be stated, that the Commonwealth Parliament in 1909 passed an Act (No. 11 of 1909, "An Act relating to Marine Insurance") which was assented to on the 11th November, 1909. This Act materially alters some of the conditions under which marine policies have heretofore been issued.

### § 8. Friendly Societies.

1. **General.**—Friendly societies are an important factor in the social life of the community, as probably nearly one-third of the total population of the Commonwealth comes either directly or indirectly under their influence. Their total membership is about 450,000, but as certain benefits, such as medical attendance and free medicines, and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must, even when due allowance is made for young and unmarried members, be multiplied by at least four to arrive at the total number of persons more or less connected with these societies. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its rules are conformable to the law, and that the scale of contribution is sufficiently high to enable the promised benefits to be conferred on members. Societies are obliged to forward annual returns as to their membership and their finances to the Registrar, and elaborate reports are published in most of the States dealing with the returns thus received.

In the following tables the figures refer to the year 1916.

2. **Number of Societies, Lodges, and Members.**—The total number of societies registered in New South Wales is 67; in Victoria, 46; in Queensland, 20; in South Australia, 17; in Western Australia, 15; and in Tasmania, 18. No total is given of these figures for the Commonwealth, as the societies shewn in one State are in most cases represented in all the other States. The number of different lodges, the total number of benefit members at the end of the year, and their average number during the year are shewn in the following table:—

FRIENDLY SOCIETIES.—LODGES AND MEMBERS, 31st DECEMBER, 1916.

State.	Number of Lodges.	Benefit Members at End of Year.	Average No. of Benefit Mem- bers during Year.
New South Wales	1,883	164,173	162,443
Victoria	1,522	157,889	157,819
Queensland	558	51,130	51,523
South Australia	591	65,540	65,670
Western Australia	287	18,467	18,829
Tasmania	207	22,738	(a) 22,956
Commonwealth	5,048	479,937	479,240

(a) Estimated.

3. **Sickness and Death.**—Sick pay is generally granted for a number of months at full rates, then for a period at half rates, and in some societies is finally reduced to quarter rates. The following table shews the total number of members who received sick pay during the year, the number of weeks for which they received pay in the aggregate, and the average per member sick, and further the number of benefit members who died during the year, together with the proportion of deaths per thousand average members :—

**FRIENDLY SOCIETIES.—SICKNESS AND DEATH, 1916.**

State.	Number of Members who received Sick Pay.	Total Number of weeks Sick Pay granted.	Average No. of weeks per Member sick.	Deaths of Benefit Members and Wives.	Proportion of Deaths to 1000 average Benefit Members.
New South Wales	(a)	(a)	(a)	(a)	(a)
Victoria...	28,189	261,077	9.26	2,411	15.28
Queensland ...	9,100	56,631	6.22	481	9.34
South Australia ...	10,892	110,865	10.18	1,106	16.84
Western Australia	2,715	18,682	6.88	257	13.65
Tasmania ...	3,816	28,619	7.50	310	13.51
Commonwealth	(a)	(a)	(a)	(a)	(a)

(a) Not available.

4. **Revenue and Expenditure.**—The financial returns are not prepared in the same way in each State, but an attempt has been made in the subjoined table to group the revenue under the main headings :—

**FRIENDLY SOCIETIES.—REVENUE, 1916.**

State.	Entrance Fees, Members' Contributions, and Levies.	Interest, Dividends, and Rents.	All other Income.	Total Revenue.
	£	£	£	£
New South Wales ...	508,033	95,103	28,645	631,781
Victoria ...	471,736	124,071	76,843	672,650
Queensland ...	164,629	37,301	...	201,930
South Australia ...	163,696	56,742	46,906	267,344
Western Australia ...	58,144	14,840	22,972	95,956
Tasmania ...	64,830	10,854	10,089	85,773
Commonwealth ...	1,431,068	338,911	185,455	1,955,434

The returns relating to expenditure are more complete than those relating to revenue, and can be shewn in full for every State. The figures shew that the excess of revenue, amounting in the aggregate to £354,862, exclusive of South Australia, was divided amongst the six States as follows:—New South Wales, £93,444; Victoria, £136,391; Queensland, £54,540; South Australia, £52,019; Western Australia, £17,205; and Tasmania, £1263. The revenue exceeded the expenditure by about fifteen shillings per average benefit member, a margin which cannot be called very large.

## FRIENDLY SOCIETIES.—EXPENDITURE, 1916.

State.	Sick Pay.	Medical Attendance and Medicine.	Sums Paid at Death of Members & Members' Wives.	Administration.	All other Expenditure.	Total Expenditure.
	£	£	£	£	£	£
New South Wales	172,497	178,926	61,566	89,630	35,718	538,337
Victoria ...	175,601	166,228	41,829	78,740	73,861	536,259
Queensland ...	41,881	57,702	18,825	28,982	(a)	147,390
South Australia ...	65,964	35,820	32,736	30,538	50,267	215,325
Western Australia	15,034	18,898	7,822	14,547	22,450	78,751
Tasmania ...	19,620	17,525	16,522	11,447	19,396	84,510
Commonwealth	490,597	475,099	179,300	253,884	201,692	1,600,572

(a) Included in "Administration."

It appears from the above figures that sick pay averaged about thirteen shillings and sixpence per week, but, as the returns include pay at half and quarter rates, and as the proportion of these to full rates is not stated, the average given must be taken for what it is worth. Medical attendance and medicine came to about one pound per average benefit member, or to about £5 per member who received sick pay during the year.

5. **Funds.**—The two foregoing tables shew that the surplus of revenue over expenditure in five States amounted to £354,862 for the year, and a small surplus must, of course, result annually in every society which levies adequate contributions to enable it to meet all possible claims. These accumulations of profits are generally invested, and the subjoined table shews for all of the six States the division into invested and uninvested funds:—

## FRIENDLY SOCIETIES.—FUNDS, 31st DECEMBER, 1916.

State.	Invested Funds.	Uninvested Funds.	Total Funds.
	£	£	£
New South Wales ...	1,970,271	(a)	1,970,271
Victoria ...	2,813,881	98,297	2,912,178
Queensland ...	844,860	4,334	849,194
South Australia ...	1,239,766	38,343	1,278,109
Western Australia ...	259,882	9,193	269,075
Tasmania ...	233,526	14,904	248,430
Commonwealth ...	7,362,186	165,071	7,527,257

(a) Included in Invested Funds.

(b) Exclusive of Other Funds, £13,969.

The total funds amounted, therefore, to about £15 14s. Od. per member at the close of the year under review.

## § 9. Probates.

1. **Number of Probates and Letters of Administration and Value of Estates.**—The value of the estates left by deceased persons gives a fair view of the distribution of property among the general population. There occurred in 1916 the deaths of 37,766 adult persons, while the total number of probates and letters of administration granted during the same period was 14,792. It would therefore appear that about two in every

five adults who died during the year were possessed of sufficient property to necessitate the taking out of probate. The details for each State are shewn in the table hereunder:—

### PROBATES AND LETTERS OF ADMINISTRATION, 1916.

## SECTION XXII.

## PUBLIC INSTRUCTION.

## § 1. Evolution of Educational Systems in Australia.

1. *Educational Systems of the States.*—(i.) *Place of New South Wales in Australian Education.* The first settlement in Australia being in New South Wales, it is but natural that Australian education should have had its beginning in that State. In the evolution of educational method and system in Australia, New South Wales also has played a leading part, and has had practically a dominating influence. For that reason an account of the evolution of education in this State contains, as it were, the key to the understanding of the Australian attitude to this question. The subject is dealt with in some detail in No. I. and No. II. issues of the Commonwealth Official Year Book, but it is not proposed to repeat it in the present volume. (See also 2 hereunder.)

(ii.) *Educational Systems of Commonwealth States.*—A more or less detailed account of the origin and development of the primary educational systems of the other States also appears in No. I. and No. II. issues of the Year Book. Later details are given hereunder.

2. *Recent Development in State Educational Systems.*—(i.) *New South Wales.* The year 1913 was an important one in New South Wales educational history, in that it was the first complete year of active operation of the principles laid down in the University Amendment Act and the Bursary Endowment Act of 1912. More extended reference to these Acts will be found later on. It was also remarkable for the reorganisation of technical education on a Trades School basis and of the Superior Schools on a vocational basis. Reference may also be made to the development of the Evening Continuation Schools established in 1911, and to the wide extension of the scheme of school medical inspection. As pointed out in a preceding Official Year Book (see No. VII., page 765), the Education Department instituted a scheme of examinations in 1911 for what were termed respectively the "qualifying," "intermediate," and "leaving" certificate. The first "qualifying" examination was held in March, 1911, the first "intermediate" in November, 1912, and the first "leaving" in November, 1913. The successful students who were awarded exhibitions at the leaving certificate examination took up University studies in the first term of 1914, thus marking the definite linking up of the State School system with the University. Amongst noteworthy features in the year 1914 were the remarkable increase in school population, the establishment of Trade Schools, the expansion of secondary education, and the extension of the scheme of school medical inspection. The travelling hospital and the travelling ophthalmic and dental clinics are rendering splendid service in the remote and sparsely settled districts. During the last few years increasing attention has been devoted to the development of infant schools on the lines of awakening a larger sense of responsibility amongst the young children by giving them a greater measure of freedom. It is recognised by modern educationists that freedom coupled with responsibility lies at the root of all true education.

(ii.) *Victoria.* Under the Amending Education Act of 1910 it is provided that every child must attend school for the full period of eight years between 6 and 14, unless he be given a certificate of education at 13. The schools are open on an average 225 days in each year, and require attendance on all these days, unless reasonable excuse is forthcoming. Provision is made for the mentally deficient. The primary curriculum divides the school life into eight grades, so that a child entering at six years of age will have completed the full course by the time he reaches his fourteenth year. After completion of the elementary school course, the pupil may go on to the Evening Continuation Schools, Higher Elementary Schools, District High Schools, or the Trade Schools. Special schools for feeble-minded children have been established in the metropolis, and an "open air" school for delicate children is in operation at Blackburn. There is also a special school for epileptics at Clayton. Highly encouraging results have been obtained at all these institutions. A Council of Public Education has been appointed to advise on educational matters generally, and particularly in regard to co-ordination. Examinations are held throughout the State for the certificate of merit and the qualifying certificate. The former is granted to pupils who, under prescribed conditions, reach a satisfactory standard in subjects prescribed for Grade VIII., while the latter is awarded to pupils who reach a satisfactory standard in Grade VI. Possession of this certificate enables the holder to enter upon the work of the Higher Elementary or the District High School. Acting on the advice of the Council of Education, the Melbourne University has established a Schools Board. The function of this body is to consider all questions relating to school studies and the inspection and examination of schools. In addition to University representation, there are also on the Board representatives of the Department of Education, the registered Secondary Schools, and the business interests of the community. Being clothed with such wide powers, this Board must of necessity be the chief guiding factor in the development of education in Victoria. During the year 1915 a considerable amount of attention was devoted to the organisation of the elementary schools, especially in connection with the question of retardation, and in regard to the teaching of infants. It is hoped that the greater flexibility in organisation and system of promotions, coupled with special methods of dealing with backward pupils, will tend to considerably lower the retardation percentage. The institution of the uniform school year, the greater powers conferred on the head teachers in regard to the promotion of scholars, the making of the inspector an advisory rather than an examining officer, and the better provision for the practical training of the junior teachers have all been fraught with excellent results. During recent years methods of training teachers have been considerably improved. Formerly there was only one course leading to the trained teacher's certificate. At present four courses are provided—primary, secondary, infant, and short course for teachers of rural schools.

(iii.) *Queensland.* The Amending Act of 1910 introduced several new features into the educational system of Queensland, chief amongst them being—(a) employment of proceeds of sales of land and other school property for school purposes, instead of paying them into Consolidated Revenue; (b) abolition of local contributions; (c) provision of scheme of school certificates to assist in co-ordination of various branches of the system; (d) establishment of compulsory continuation classes; (e) compulsory medical and dental examination; (f) raising the compulsory age to 14 years instead of 12 years; (g) provision for compulsory attendance on every day on which the school is open. The last-mentioned provision has already produced good results in regard to improved attendance. The organisation of the general scheme of education is being systematically developed. State High Schools were inaugurated in February, 1912, and a more liberal scheme of scholarships to secondary schools came into force in 1913. A Teachers' Training College has been established, and greater attention is being given to the development of technical education. Methods of instruction have been brought into consonance with the latest developments under the new syllabus adopted in 1914. During this year also the medical and dental inspection of State School children were considerably extended.

(iv.) *South Australia.* One of the chief events in educational development in South Australia in 1911 was the provision of Evening Continuation Schools, intended to help those who cannot afford to attend the Higher Day Schools. The State has also come into line with the other States in the matter of medical supervision of school children, and a medical officer and two trained nurses have been appointed. The changes introduced at the Teachers' Training College have proved very satisfactory, and the academic teaching at the University is now supplemented by a systematic pedagogic instruction for all classes of teachers. A course of six months' instruction and training for teachers of small schools was introduced in 1913, and has proved of great value. In 1913 the principle was adopted of simultaneous examination of the schools, and granting to teachers the authority to make the promotions of their scholars. An Act to consolidate and amend the law relating to Public Instruction was assented to on the 23rd December, 1915. Under the Amending Act of 1916 all Lutheran Schools are to be taken over by the State. A Superintendent of Technical Education was appointed in 1916.

(v.) *Western Australia.* During 1912 the curriculum of the Primary Schools was remodelled in order to bring it into line with the most up-to-date principles. The work was lightened in directions where experience shewed there was overloading, and efforts were particularly directed toward the removal of the abstract and to the development of the imaginative and constructive throughout all grades. Greater freedom was given for experiment by the teacher, and it is recognised that considerable improvement has resulted. Montessori principles are being increasingly adopted in the teaching of the youngest children. Constructive work is receiving greater attention in all departments, and encouragement is given to original or research work of an elementary character. Four special courses—commercial, industrial, domestic, and professional have been established at the central schools. These schools are practically day continuation schools designed to carry on the education of boys and girls beyond the primary stage. Continued efforts are being made in the direction of bringing about a closer correlation between primary and secondary education. The Modern School at Perth was opened in 1911. In June, 1914, a Goldfields High School was opened at Kalgoorlie, and it is proposed to establish additional schools at the larger country centres, and in the meantime to grant scholarships at the existing High Schools to country children. Continuation classes were held at various centres in 1916, with an enrolment of 2600. Certificates granted to successful students entitle the holder to advanced tuition at the Technical College.

(vi.) *Tasmania.* During the last seven years educational effort in Tasmania has been directed to the development on modern lines of the primary system, the foundation of secondary schools, and the provision of a satisfactory system of training for teachers. Kindergarten, Montessori Schools, and Model Country Schools have been established as adjuncts to the training system, and the courses have been remodelled with a view to providing trained teachers for secondary as well as for primary work. At the High Schools, secondary, commercial, and industrial courses have been established. School hygiene has received especial attention, doctors and nurses have been appointed, and two dental clinics have been established.

(vii.) *Northern Territory.* Although the number of children of school age in the Territory is small, nevertheless ample provision has been made by the Commonwealth Government for their education. Five State schools are in operation, viz., at Darwin, Pine Creek, Brook's Creek, and Daly River in the northern portion, and at Alice Springs in the south. There is a special school for aboriginal and half-caste children at Darwin, also one at Alice Springs. A satisfactory standard is maintained at the schools, but progress is somewhat retarded by irregular attendance. Continuation classes are available at Darwin for cadets in Government employment and for others.

(viii.) *Present Position of State Education in Australia.* Throughout Australia primary education is compulsory and free of charge, while there exists in most of the States a liberal provision of scholarships and bursaries to the Higher State Schools, to the Secondary Schools, and to the Universities. Provided that the requisite standard is reached, it is, of course, permissible for children to receive home tuition, or to attend so-called private schools. Considerable interest is taken in educational matters by the people of the Commonwealth, and within recent years several of the States have sent qualified representatives to inspect and report on the methods adopted in the chief countries of Europe and America. The reports of these Commissioners, especially those of New South Wales, have been widely studied, and various improvements have been made in accordance with their recommendations. The orientation, lighting, and ventilation of school buildings are being modernised. In all of the States periodical medical inspection of the children is in force. (A detailed statement of the work being done in this direction will be found in the chapter dealing with Public Hygiene.) Methods of training teachers are now better developed, and although the "pupil teacher" system with its effects have not been wholly eliminated, it appears to be gradually vanishing. (The methods adopted in the various States for the selection and training of teachers are described in some detail in § 2, 10, hereinafter.) There has been a wider employment of kindergarten principles in the early stages, and the more or less purely abstract teaching of the older days has been largely replaced by concrete methods. Such subjects as nature study, manual training, music, and drawing have received a general impetus. Greater attention has been given to the scientific classification of children. Moreover, as will be seen from the above, and from § 2, 7, the State Education Departments are increasing their activities in the direction of secondary education. Lastly, the system of inspection has been considerably remodelled. Under the old system, the inspector was little more than an examining officer, but, under the present régime, the primary duty of this officer consists in guiding and directing the teaching in accordance with approved methods. [See also § 6, Technical Education.]

(ix.) *Co-ordination of Educational Activities.* As pointed out already, the educational system of New South Wales may now be considered as a more or less homogeneous entity, the various stages succeeding one another by logical gradation from kindergarten to university. In the other States development is proceeding on somewhat similar lines, although in varying degree.

(x.) *Educational Conference.* In May, 1916, the first Conference of Directors of Education in the States of the Commonwealth was held at Adelaide. Amongst important matters discussed thereat may be mentioned:—(a) *Education Reports (Departmental).* In regard to these a decision was arrived at respecting the general principles which should govern the preparation of future reports in order to ensure uniformity so far as the compilation and presentation of statistics relating to enrolment, attendance and finance are concerned. (b) *Raising School-age Limit.* In view of the circumstance that educational expenditure has, up till now, been largely wasted owing to school attendance ceasing at the age of 14 in the case of so many children, it was resolved that legislation is desirable providing for continuous education up to the age of 16, and that attendance be made compulsory except where special exemption could be granted on the ground of educational fitness. (c) *Schools for Defectives.* At present New South Wales and Victoria have a school each of this type, but it was agreed that such schools ought to be provided where required. (d) *Other Special Schools.* Each State is making experiments in regard to the provision of new types of schools giving industrial and secondary instruction, and arrangements were made for the exchange of detailed information in regard to their working. (e) *Sex Physiology.* The Conference was opposed to the introduction of special teaching on this subject, and it was affirmed that efforts should

be directed towards excluding all thought and talk about sex matters from the schools. It was agreed, however, that the Departments should prepare a special leaflet setting forth the duties of parents in this direction.

## § 2. State Schools.

**1. Introductory.**—The State Schools, or, as they are sometimes termed, the “public” schools, of the Commonwealth comprise all schools directly under State control, in contradistinction to the so-called “private” schools, the bulk of which, though privately managed, nevertheless cater for all classes of the community. Information regarding Technical Education is given in § 6.

**2. Enrolment and Attendance.**—The following table shews the number of State Schools, together with the teachers employed and the enrolment and “average attendance” in each State during the year 1916:—

### STATE SCHOOLS, TEACHERS, AND SCHOLARS, 1916.

(COMMONWEALTH.)

State or Territory.	Schools.	Teachers.*	Scholars Enrolled.	Average Attendance.
New South Wales† ... ..	3,188	8,254	272,156	200,695
Victoria ... ..	2,280	6,505	230,182	167,745
Queensland ... ..	1,479	4,017	106,373	84,968
South Australia ... ..	851	1,976	66,982	52,474
Western Australia ... ..	604	1,613	46,049	39,965
Tasmania ... ..	466	1,017	29,098	23,295
Northern Territory ... ..	7	7	286	164
Commonwealth ... ..	8,875	23,389	751,126	569,306

\* Exclusive of sewing mistresses. † Including Federal Territory.

Unfortunately, the schemes of enrolment and of the computation of “average attendance” are not identical in each State, so that the comparisons are imperfect.

The enrolment and average attendance at the State Schools in the Commonwealth are given below for the years 1891, 1901, and for each year of the period 1911 to 1916:—

### ENROLMENT AND ATTENDANCE AT STATE SCHOOLS, 1891 to 1916.

(COMMONWEALTH.)

Year.	Total Population*	Enrolment.	Average Attendance.	Year.	Total Population*	Enrolment.	Average Attendance.
1891	3,240	561,153	350,773	1913	4,872	685,406	515,948
1901	3,825	638,478	450,246	1914	4,941	713,232	544,230
1911	4,569	638,850	463,799	1915	4,932	732,464	557,962
1912	4,733	662,576	496,252	1916	4,875	751,126	569,306

\* In thousands.

**3. Schools in the Federal Capital Area.**—During the year 1916 fourteen State Schools were in operation in the Federal Territory (Yass-Canberra). The pupils enrolled numbered 415 and the average attendance 278. Cost of upkeep in 1916 amounted to £2635. By arrangement with the Federal Government these schools are conducted by the New South Wales Education Department on the same lines as the ordinary State Schools, the Department being recouped for expenditure.

**4. Centralisation of Schools.**—The question of centralisation of schools adopted so successfully in America has received some attention in the Commonwealth, and particularly in New South Wales. It is recognised that a single adequately-staffed and well-equipped central institution can give more efficient teaching than a congeries of small scattered schools in the hands of less highly trained teachers, and the small schools in some districts were therefore closed and the children conveyed to the central institution. The principle was first adopted in New South Wales in 1904, when the conveyance of pupils was authorised in the case of 12 schools. During 1916 over £11,000 was expended in the conveyance of pupils to Central Schools.

**5. Education in Sparsely-settled Districts.**—It has always been the aim of the State to carry the benefits of education into the remotest and most sparsely-settled districts. This is effected in various ways. (i.) By the establishment of Provisional Schools, *i.e.*, small schools in which the attendance does not amount to more than about a dozen pupils, these institutions merging into the ordinary public school list when the attendance exceeds the minimum. (ii.) When there are not enough children to form a provisional school, what are known as Half-time Schools are formed, the teacher visiting them on alternate days. In still more sparsely-peopled districts, an itinerant teacher goes from house to house within a certain radius. Thus, in Queensland during 1916 the 17 itinerant teachers covered 388,700 square miles of country and travelled 50,160 miles to visit 1332 children. In this State also the Education Department has established what are known as Saturday Schools, in which small groups of children in outlying districts are visited by the nearest teacher on Saturdays and receive the benefit of several hours' instruction. These schools, of which there are now ten, have been warmly welcomed in the districts in which they are established, inasmuch as under this system the children "outback" receive a greater amount of instruction than is possible under the system of itinerant teachers. During 1916, the Education Department in Western Australia disbursed £7519 in "driving grants," *i.e.*, sums of money granted to parents whose homes are over three miles from the nearest schools, and who arrange to have their children driven in. In New South Wales, Victoria, Western Australia and Tasmania parents in the thinly-peopled areas are also allowed to club together and build a school, which receives aid from the Government in the form of a yearly subsidy and grant of school material. During 1916 subsidy was paid to 668 schools in New South Wales. (iii.) An experiment on the part of New South Wales, the result of which was awaited with some interest, was the establishment in 1908 of a "Travelling" School. A van was provided in which the teacher travelled, carrying with him a tent for himself and one to be used as a school, together with such books and apparatus as are required in a Primary School. So far very satisfactory results have been attained. Two additional schools of this nature were established in 1914. (iv.) There are also railway camp schools in operation on the sites of extensive railway works. Regulations were framed in Tasmania during 1912, providing for the subsidising of private teachers at a rate not exceeding £5 per pupil in districts too remote or sparsely settled to warrant the establishment of an ordinary Provisional School. The schools of this nature established in 1916 numbered 62, with an enrolment of 759 scholars. During the year the department also paid for the conveyance of 218 children to schools by boat, vehicle, or train. New South Wales and Victoria provide for education, by correspondence, of children in isolated districts.

6. **Evening Schools.**—Evening Public Schools have been in existence for many years in some of the States, but their progress has been uncertain. In New South Wales the 44 Evening Continuation Schools had an average attendance in 1916 of 2008. In Victoria there was only one night school in operation for elementary work during the year. It is stated that future developments in evening instruction will be in the direction of continuation classes. Western Australia has evening continuation classes in the chief centres; the attendance in 1916 numbered 2610. Evening Continuation Schools have been established under regulation in South Australia, and are intended principally to help the working boy to improve his general education and to add to the store of knowledge most useful in his present work.

7. **Higher State Schools.**—(i.) In *New South Wales* public schools, which provided advanced courses of instruction for two years for pupils who have completed the primary course, were classed as *Superior Schools*. These were reorganised in 1913 as Day Continuation Schools, and divided into Superior Commercial Schools, Superior Junior Technical Schools, and Superior Domestic Schools for Girls. At the close of 1916 there were 27 schools in the Commercial group, 22 in the Junior Technical, and 42 in the Domestic group, with an average attendance of 3282 in the sixth and seventh classes. It is believed, however, that greater efficiency could be produced by reducing the number of these schools and establishing Central "Superior Public Schools" instead. Provision has also been made for the more advanced education of children in country centres by the establishment of 20 District Schools. These schools are specially staffed, and undertake the work of preparing students for admission to the training colleges. There are also 19 *High Schools* in the State. These had an enrolment in 1916 of 5228, with an average attendance of 4301. To meet the wishes of representatives of the registered Secondary Schools, the syllabus of the High Schools was amended in 1913, and now offers such a wide range of choice in the selection of subjects that there is no possibility of producing a merely stereotyped uniformity of study. Three "Intermediate" High Schools have been established to meet the growing demand for High School education in the metropolis, and others will be provided during the next few years in the city and in country centres. The average attendance at these schools in 1916 was 530. In accordance with Departmental regulations liberal provision is made for scholarships and bursaries to the higher State Schools. Under the provisions of the University Amendment Act of 1912, 200 exhibitions were awarded in 1916 to successful students at the leaving certificate examinations, and 123 of these were given to pupils attending the State Schools.

The Sydney Grammar School (not a "State" School in the ordinary acceptance of the term), which receives a State endowment of £1500 a year, had, in 1916, a quarterly enrolment of 601 pupils, and an average attendance of 562.

(ii.) In *Victoria*, action was taken in January, 1912, to give effect to the provisions of the Education Act of 1910, with regard to the decentralisation of the system of secondary education. Eighteen Higher Elementary and 28 District High Schools have been established, and, to obviate congestion at the High Schools, Higher Elementary Classes are carried on at seven centres and at six "Central" Schools. The average attendance at the Higher Elementary Schools in 1916 was 1524, of whom 750 were girls, at the District High Schools 5177, of whom 2660 were girls, while 641 boys and 620 girls were receiving secondary teaching in the Central Schools and higher elementary classes. The qualifications for admission to the High Schools and Higher Elementary Schools are that pupils shall not be less than 12 years of age, shall possess the qualifying certificate or its equivalent, and that their parents shall undertake that the children will remain at school for four years. For the first two years there is a common course

for all pupils, thereafter replaced by four special courses :—(1) A preparatory professional course for pupils preparing to proceed to the University, to enter the teaching profession, or to gain a sound general education ; (2) an agricultural course to be taken in agricultural High Schools ; (3) a commercial course ; and (4) a domestic arts course for girls. Parallel with these courses an industrial course has been developed for pupils who intend to enter upon some form of industrial occupation.

Junior Technical Schools have been established apart from the High Schools in Melbourne, Ballarat, Bendigo, and Geelong, and there are schools also at Glenferrie, Collingwood, Sunshine, and Warrnambool.

Scholarships granted by the Department are as follows :—(a) One hundred junior, tenable for four years at a District High School or approved Secondary School, with allowance of £26 per annum for board where required ; (b) Forty senior, tenable four to six years, with allowance of £40 towards expense of course at University ; (c) Fifty junior technical, giving free tuition for two years at a Junior Technical or other approved school, and, in certain cases, board allowance of £26 per annum ; (d) Fifty senior technical, giving free tuition for approved courses at Technical schools, with £30 allowance for day students, and £10 for night students ; (e) Sixty teaching, similar in other respects to junior ; (f) Twenty nominated courses, giving four to six years' free tuition in agriculture, mining, or veterinary science at the University, with allowance in certain cases of £26 per annum.

(iii.) Prior to the year 1912, *Queensland* did not possess any distinctly Secondary Schools under State control, but in February of that year High Schools were opened at Warwick, Gympie, Bundaberg, Mount Morgan, Mackay, and Charters Towers. Tuition at these schools is free, but students must pass a qualifying entrance examination. In smaller centres where an average of not less than 25 qualified pupils can be obtained, secondary tuition is provided at existing State Schools, and this has been arranged for at Brisbane Central (boys), Brisbane Central (girls and infants), Herberton, Childers, Gatton, Dalby, Pittsworth, Roma, Southport, and Cairns. The enrolment at High Schools in 1916 was 734, and the daily attendance 548. There are, moreover, ten Grammar Schools—six for boys and four for girls, each of which is subsidised by the State to the extent of £750 per annum, and in addition receives a payment of £250 per annum for providing five scholarships for State scholars. In order to conserve the interests of children of poor parents, scholarships have been made available at any State High School, Technical School, Grammar School, or approved Secondary School, and allowances are granted up to £30 per annum to students who must live away from home, and £12 to those who live at home. The scholarships to Secondary Schools awarded in 1916 numbered 878. Of these, 201 boys and 135 girls were granted the allowance at £12 per annum, and 70 boys and 51 girls received £30 per annum. There are also 20 University scholarships tenable for three years, carrying an allowance of £52 per annum where the holder has to live away from home, and £26 per annum in cases where the holder can reside at home while taking the University lectures. The enrolment at the Grammar Schools in 1916 was 1636, and the average attendance 1513. Since the year 1909 these schools have been regularly examined by the Inspector-General of the Education Department.

(iv.) *South Australia*. Including the Adelaide High School, there were altogether twenty-three High Schools open in South Australia in 1916, with an enrolment of 2855 students, and a staff of 93 teachers. In addition to giving secondary education, these institutions form a valuable source from which the Department can draw a supply of young teachers. Under existing regulations provision is made for the following scholarships :—(i.) Eight public exhibitions open to boys and girls who have been *bonâ*

*fide* residents of South Australia for two years prior to the competitive examination. The exhibitions are tenable for three years at an approved school or college, carry free tuition and books, and an allowance of £22 per annum when the holder lives away from home. (ii.) Forty exhibitions, tenable for three years at any approved school or college are open to competition by children under 13 years of age in attendance at State Primary Schools. (iii.) Eight senior exhibitions, worth £40 per annum, and four of the value of £20, are tenable at the Adelaide High School or other approved Secondary School, and are open to pupils of any Secondary School. (iv.) Twelve junior exhibitions, eight of £40 and four of £20, tenable for two years at any approved Secondary School, are reserved for pupils of Secondary Schools within a radius of 10 miles of the General Post Office, Adelaide. (v.) Twelve Government bursaries, of which six are reserved for pupils of the High Schools. These are tenable at the University, and the holder receives £20 per annum and free tuition. (vi.) The Government provides £180 per annum to assist students who are unable to attend the University during the day. Each studentship is limited to £10 for science students, and £7 for arts students.

(v.) *Western Australia.* A Modern School, designed to give a four years' course to pupils admitted at about the age of 13 years, was opened in Perth early in 1911. The first two years of the course are to a large extent common to all, but in the final two years specialisation is aimed at, in order to meet the needs of future University students, teachers, agriculturists, scientific and business men; and in the case of girls, to give tuition in domestic economy to those desirous of it. Parents are required to undertake that their children will remain at the school for the full course. At the end of 1916 there were 273 students. No fees are charged at the Modern School. A High School organised on similar lines was opened with 128 pupils in May, 1914, at Kalgoorlie, and at the end of 1916 had 169 pupils. During 1909 the upper classes of schools in the largest centres of population were brought together into central schools, in order to secure more economical and effective teaching, and it is intended that these central institutions shall form the nucleus of future High Schools. Continuation classes were inaugurated in 1911, and were attended at 17 centres in 1916 by about 2600 pupils. The classes are intended to provide some measure of higher education to those who leave school as soon as they reach the compulsory age of 14 years. Admission to these classes is free, but pupils must attend regularly three evenings a week. Evening Schools are held in various parts of the State, but the work carried on is mainly primary. Junior and senior exhibitions were abolished in 1914 and provision made for 10 University exhibitions, each tenable for three years, and valued at £40 per annum for students living at home and £60 in the case of those living away from home.

(vi.) *Tasmania.* Up to the year 1912 the Department confined its efforts to the provision of primary education for the school children in Tasmania. In 1911, however, super-primary classes were formed in the larger schools, with an enrolment in 1911 of 200, and in 1912 of 400 pupils. It was recognised, however, that the previously existing scheme of scholarships and exhibitions was inadequate to meet the demands for higher education. High Schools were therefore opened in January, 1913, at Hobart and Launceston, and intermediate High Schools were opened in 1915 at West Devonport and Burnie. These provide for five classes of pupils—(i.) Those who desire to become teachers; (ii.) University students; (iii.) Commercial; (iv.) Mechanics; (v.) Home duties (girls). The enrolment in 1916 was 707. It is proposed to grant a leaving certificate at the end of a four years' course. The Bursaries Act of 1915 provides for 30 junior and 20 senior bursaries tenable for two years at an approved State School or registered Secondary School. They are valued at £2 per annum for a State School and £12 at a Secondary School, in addition to satisfactory boarding and travelling allowance where required. Four-fifths of the bursaries are awarded to country children. The Tasmanian Education Department scholarship is open for competition to High School pupils under the age of 19 years. The scholarship is valued at £20 per annum, with an allowance of £40 if the student lives away from home while attending the approved University course.

8. **Agricultural Training in State Schools.**—The question of agricultural training in ordinary schools has received considerable attention in *New South Wales*. In 1905 a teacher of school agriculture was appointed to visit schools and districts for the purpose of giving instruction to teachers and scholars in the subject, the officer selected possessing the qualifications of a thorough acquaintance with agricultural work as well as school methods. The Education Department makes grants of seeds of various kinds to schools having gardens, and in some instances has installed windmill plants to provide an adequate water supply. Under the direction of a capable head master, a college has also been opened at Hurlstone, near Sydney, at which practical lessons are given in elementary agriculture, and the institution also serves as a stepping-stone to the Hawkesbury Agricultural College. Scholarships are available to students of the Hurlstone Agricultural High School as it is now called, and these scholarships entitle the holder to a two years' free course at the Hawkesbury institution, with a grant of £1 10s. per annum for text books. The Department has also organised Rural Camp Schools for the purpose of giving teachers and scholars first hand knowledge of country industries.

The subject of Agricultural Colleges and Experimental Farms is dealt with in the section relating to Agriculture. (See page 392.)

In *Victoria*, what are termed Agricultural High Schools have been established at Ballarat, Colac, Leongatha, Mansfield, Mildura, Sale, Shepparton, Wangaratta, Warragul, and Warrnambool. Pupils must be at least fourteen years of age, and have passed beyond the curriculum of the elementary school, or else be able to afford satisfactory proof that they are qualified to profit by the instruction offered. The schools are practically secondary schools with an agricultural bias, and form a link between the rural school and the agricultural college. They are also used as a preliminary stage in the education of boys and girls who wish to become teachers and eventually graduate in the State Training College and the University. At some of the schools short courses in agriculture have been instituted for farmers' sons who have left school. A local council is appointed for each school, and exercises a general oversight over its operations. The experimental plots at these schools have aroused much interest among the farmers from the surrounding districts. A Supervisor of Agriculture reports and gives advice on the teaching of agriculture in the State Schools. A fair number of teachers have gained diplomas in agriculture, and will be in a position to give practical instruction at the High Schools. The elementary principles of agriculture are taught in 755 State Schools. A Horticultural Society has been established in connection with State Schools, and there are 1200 schools in affiliation. The Society has a nursery and distributing centre for plants and seeds at Oakleigh. During 1916, 56 teachers attended a school of horticulture held at this institution.

In *Queensland* the Government provides a small grant to encourage the study of agriculture, horticulture, and kindred subjects in the State Schools, while a departmental teacher of agriculture visits the schools and gives assistance in agricultural, horticultural, and nature study work. Some excellent experimental work has been carried out at a few of the schools, while gardens have been established wherever circumstances permitted. Short courses of instruction for teachers have been instituted at the Gatton College. A large number of teachers have gained a practical knowledge of milk and cream testing, and the subject is now added to the programme of instruction in several of the dairying districts. At Nambour, a Rural School, the first of its type, was opened early in 1917. In addition to the ordinary subjects of the curriculum this school provides for instruction in farming, fruit growing, dairying, etc.

In *South Australia*, the Public Schools' Floral and Industrial Society, founded in 1880, holds annual exhibitions of school work from all parts of the State. In addition, it has for some years undertaken the distribution of flower seeds among school children at a very cheap rate, and has thus fostered the love of horticulture with remarkable

success. A special instructor has been appointed to give assistance to teachers desirous of making their school gardens aid in nature study work. During the year 1916, 410 students received instruction in nature study. Amongst the trainees were students attending the school for Class IX. teachers (small schools), University Training College students, and junior teachers and primary students at Adelaide High School. A seed wheat competition amongst school children inaugurated in 1911 proved very successful, and a second, which was commenced in 1916, will conclude in 1920.

In *Western Australia* an advisory teacher of nature study visits the schools and gives advice in regard to proper methods in horticulture and experimental agricultural work. The number and usefulness of the gardens and experimental plots attached to State Schools shew marked improvement each year. Early in 1914 a school was opened on the Narrogin State Farm. The students are taken directly from the primary schools, and the course of instruction lasts for two years. On its completion students are qualified to enter on the diploma course at the University.

In *Tasmania* the organising teacher of nature study visits and advises the teachers at the State Schools, and also gives addresses and model lessons at the schools of instruction.

**9. Teachers in State Schools.**—The distribution of the teaching staff in the State Schools during the year 1916, including teachers of needlework, was as follows:—

### TEACHING STAFF IN STATE SCHOOLS, 1916.

(COMMONWEALTH.)

State.	Principal Teachers.		Assistants.		Pupil or Junior Teachers.		Sewing Mis-tresses.	Total.		
	Males.	Fem.	Males.	Fem.	Males.	Fem.		Males.	Fem.	Total.
New South Wales	2,454	1,271	1,274	3,182	14	59	115	3,742	4,627	8,369
Victoria ...	1,699	1,100	480	1,449	296	1,481	447	2,475	4,477	6,952
Queensland ...	833	726	398	1,015	422	623	...	1,653	2,364	4,017
South Australia ...	422	458	90	622	82	302	136	594	1,518	2,112
Western Australia	352	304	118	607	44	188	61	514	1,160	1,674
Tasmania ...	161	313	78	190	47	228	2	286	733	1,019
Northern Territory	2	3	...	2	...	...	...	2	5	7
Commonwealth	5,923	4,175	2,438	7,067	905	2,881	761	9,266	14,884	24,150

It will be observed that there is a fairly large number of junior teachers, or pupil teachers, as they are called in some of the States. The pupil teachers, will, however, in time disappear, and their places will be filled by young people who have undergone a course of training in schools specially provided for the purpose. Allusion to the methods of training will be found in the next paragraph.

**10. Training Colleges.**—The development of the training systems of the various States has been alluded to at some length in earlier issues of the *Year Book*. The present position is as follows:—

(i.) *New South Wales.* During 1916, the total number of students in the Blackfriars Training College was 732, women students numbering 550. A branch institution was opened early in 1911 at Hereford House for the training of candidates for the position of teacher or assistant at small country schools, and this was attended in 1916 by 363 students. Several of the larger metropolitan schools are used as practice schools for giving training college students opportunity to acquire practical skill in teaching. At the college a complete set of Montessori apparatus has been prepared for demonstration work on the Montessori principles, and one of the College staff was recently sent to Italy

in order to gain first-hand knowledge of the possibilities of the scheme. Opportunities are also afforded to other members of the teaching staff to visit foreign countries on study leave. The Principal of the Training College is also Professor of Education at the Sydney University. A new Teachers' College within the University grounds is now in course of erection. Up to the year 1913 the limits of accommodation at the Teachers' College were responsible for the employment of a number of untrained junior assistants, but it is now provided that no teacher enters the Service without at least six months' professional training. Schools of instruction for teachers are held each year, the subjects chosen being military drill, swimming, physical training, first-aid work, manual training work, etc.

(ii.) *Victoria.* Candidate teachers in this State are trained in the District High Schools or Agricultural High Schools, the period of probation being supplemented by a course of training for one year in the Senior Training College at Melbourne. A "short course" of training was introduced in 1913 for students who have passed the junior public or an equivalent examination. The course lasts for six months, about half the time being spent at lectures and the rest at practice in teaching. The present Training College dates back to 1874, but during the retrenchment period, viz., from 1893 to 1900, it was closed. The institution was reopened in February, 1900, with an enrolment of fifty-seven students. During the year 1916 over 400 teachers, some of whom were extra-departmental, were brought into contact with the college work. A Training College Hostel has been established, and a Correspondence class formed for country teachers desirous of qualifying for the Infant Teacher's Certificate. The students at the Hostel receive training in domestic economy. Three city and six country practising schools are attached to the Training College, and four infant rooms with attached kindergartens have been specially equipped for the training of infant teachers. The University High School gives secondary teaching practice to both departmental and private students. A remodelled system of training came into force in 1914, providing, amongst other things, for the alteration of the name "Training College" to "Teachers' College," and for the classification of students into three groups, i.e., those training for secondary teachers' certificate, for sub-primary teachers, and for primary teachers.

(iii.) *Queensland.* In connection with the Teachers' Training College opened in Brisbane in 1914, the following scheme has been evolved:—Twenty-five special Teacher scholarships to the University, each with a currency of two years, are to be awarded annually. Living allowances at the rate of £52 per annum and £26 per annum respectively are provided, the former being paid to students living away from home. The University is to provide an Education group of subjects, including Logic, Psychology, and Education. Ten of the scholarships may be carried on for a third year, and five for a fourth year. Practical training is entrusted to a Training Master appointed by the Department. Those who attend the two years' course will be appointed to the Primary Schools, and the graduates from the three and four years' course will be available for High Schools and Secondary Schools. Short courses of training have been instituted for teachers to take charge of small schools, and arrangements have been made to allow an approved number of teachers already in charge of such small schools to obtain the benefit of the training. About 70 short course students are trained each year. In the meantime, young people of both sexes are admitted to the service as pupil teachers at the age of 14 years, and receive training from the principals of the schools to which they are appointed. The schools for infants at Kangaroo Point and Rockhampton have been specially staffed and equipped for training Kindergarten teachers, and Kindergarten methods have been introduced into most of the larger schools. Teachers of small schools are also greatly helped by the inspectors' practical and theoretical instruction in the various districts. During 1916 the inspectors of the Northern, Townsville, Central and Gladstone districts held schools of instruction for the untrained teachers of small schools in their respective districts.

(iv.) *South Australia.* During the year 1910 the system of training in force in South Australia was remodelled and improved. Prior to that year students had devoted themselves chiefly to academic studies, but in 1910 provision was made for increased attention to the theory and practice of teaching. District courses of training were established to prepare teachers for work in primary and infant schools, and an advanced course was outlined for those who will become High School teachers. Each of these courses extends over a year. Students in the primary course who shew special ability may be granted a second year's training. The special course for Secondary Schools will give students an opportunity of obtaining the Diploma of Education. Provision has also been made for a six months' course of training for teachers of provisional schools. There were 37 students in the Training College in 1916. At the Adelaide High School there were 200 students training for teachers at the beginning of 1916, and 142 new candidates were admitted, 107 for one year, and 35 for two years. In December, 1916, 98 students left the school to commence teaching. There were also 236 candidates for the junior teachers' entrance examination, of whom 156 passed. Practice in teaching is gained by the student teachers at the Observation School, which also provides training for teachers qualifying for appointment to provisional schools. A considerable amount of help is given to the teachers of small schools at the periodical "Summer" Schools and "refresher" courses.

(v.) *Western Australia.* A Training College for teachers was opened at Claremont in 1902. The original building provided accommodation for sixty students, but extensions were opened in 1908, and the number in training in 1916 was 134. Two classes of training are provided for—the full course, lasting two years, and a special course of six months. The latter is intended for teachers of small schools in country districts, and the trainees are drawn partly from those already acting as teachers in these schools and partly from outside applicants who pass the necessary qualifying examination. Special practising schools have been established for the proper training in teaching and managing the smaller country schools. Three classes of students are admitted to the full course—(i.) from State or private secondary schools; (ii.) monitors from departmental schools; (iii.) ordinary teachers from the departmental schools. The standard of education required on entering is the school-leaving or matriculation certificate, but a special examination is held for candidates possessing neither. The course is both academic and practical, the former being co-ordinated with the University. As a help in the practical work, there is an adjunct school attached to the college, and several practising schools, two of which are for infants only. At the Claremont Infants' School a room has been set apart for work on Montessori lines. During 1916 schools of instruction for teachers of small schools were held at Toodyay, York, Wickepin, and Pingelly. Each school lasted for a fortnight, and the total attendance numbered 54.

(vi.) *Tasmania.* Consequent on the establishment of State High Schools and a lectureship in Education at the University, the Department has reorganised the scheme of work and raised the standard of entrance to the Training College. The junior teachers will in future receive their education and preliminary professional training in the High Schools and practising schools. From 1917 onwards it is hoped that the bulk of the students will have matriculated, and on entering the college will attend University lectures in Arts and Science, leaving the college staff to devote itself to purely professional training, and instruction in special subjects. Students in training during 1916 numbered 35.

The practical training of students and junior teachers is carried out in Hobart, while the training of candidates for the office of provisional teacher and the preliminary training of junior teachers are undertaken at the East Launceston practising school. Schools of instruction for teachers of small schools are conducted at regular intervals by the inspectors, and practical instruction is given at the Observation and Model schools in Hobart and Launceston.

**11. School Savings Banks.**—Returns shew that these institutions are in existence in three States. In New South Wales, there were 726 banks at the end of 1916, the deposits amounting to £37,097, and withdrawals to £35,099. Since the establishment of the banks in 1887, deposits totalled £562,552, and withdrawals £549,377. Of the latter sum £127,126 was placed to the children's accounts in Government Savings Banks. In South Australia, 496 schools had 23,233 depositors, with £19,479 to their credit; and in Western Australia, there were 382 school banks, with 23,127 depositors and £32,399 to their credit.

**12. Expenditure on State Schools.**—The net expenditure on State education during 1901 and for the five years ended 1916 is shewn below. The figures do not include expenditure on buildings, which is shewn separately in a subsequent table.

**EXPENDITURE ON MAINTENANCE, STATE SCHOOLS, 1901 and 1912-16.**  
(COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	Nor. Ter.	C'wealth.
	£	£	£	£	£	£	£	£
1901 ...	623,734	656,907	256,245	152,006	89,694	37,710	...	1,816,296

1916 ...	303,001	220,042	96,397	33,472	24,863	28,793	...	706,568

The net total cost and the net cost per scholar in average attendance during the year 1916 were as follows:—

**NET TOTAL COST, STATE SCHOOL EDUCATION, 1916.**  
(COMMONWEALTH.)

Item.	N.S.W.	Vic.	Q'land.	S. Aust.	W. A.	Tas.	N. T.	C'wealth.
Net cost of education, including buildings ... ..	£ 1,837,187	£ 1,252,750	£ 580,897	£ 301,871	£ 329,993	£ 139,933	£ 1,956	£ 4,444,587
Per scholar in average attendance ... ..	£9 3/1	£7 9/4	£6 16/9	£5 15/0	£8 5/2	£6 0/2	£11 18/6	£7 16/2

The average for the Commonwealth in 1901 was £4 9s. 3d. per scholar in average attendance.

**§ 3. Private Schools.\***

1. **School Teachers, etc., in 1916.**—The following table shews the number of Private Schools, together with the teachers engaged therein, and the enrolment and average attendance in 1916:—

**PRIVATE SCHOOLS, 1916.**  
(COMMONWEALTH.)

State.	Schools.	Teachers.	Enrolment.	Average Attendance.
New South Wales ... ..	701	3,678	67,704	56,318
Victoria ... ..	495	1,900	57,400	48,000
Queensland ... ..	154	868	19,857	16,609
South Australia ... ..	218	736	14,687	10,786
Western Australia ... ..	125	470	11,173	9,807
Tasmania ... ..	86	324	6,753	4,803
Northern Territory ... ..	1	2	76	57
Commonwealth ... ..	1,780	7,978	177,650	146,380

The totals for New South Wales are exclusive of returns from the Sydney Grammar School, which receives a yearly State subsidy of £1500, and which, in 1916, had an enrolment of 601, and an average attendance of 562.

The figures for Queensland include the returns from Grammar Schools, of which there are ten—six for boys and four for girls. These schools are governed by boards of trustees, partly nominated by Government, and partly by the subscribers to the funds. The trustees make regulations regarding the fees of scholars, the salaries of teachers, and generally for the management of the schools. Each school is endowed by the Government at the rate of £750 per annum, together with, in some instances, an additional £250 to provide district scholarships. The total Government aid received in 1916 was £9250. The Grammar Schools are inspected annually by the departmental Inspector-General.

2. **Growth of Private Schools.**—The enrolment and average attendance at Private Schools during 1891, 1901 and in each year of the period 1909 to 1916 are as follows:—

**ENROLMENT AND ATTENDANCE AT PRIVATE SCHOOLS, 1891 to 1916.**  
(COMMONWEALTH.)

Year.	Enrolment.	Average Attendance.	Year.	Enrolment.	Average Attendance.
1891 ...	124,485	99,588	1912 ...	164,085	133,940

1911 ...	160,794	132,588	1916 ...	177,650	146,380

\* Private Schools include all schools not wholly under State control. The term "private" though popularly applied, is, of course, a misnomer.

The small rate of increase in private school enrolment and attendance is due in a large measure to the development of the State educational systems, especially as regards the provision of secondary education.

**3. Registration of Private Schools.**—Until recent years the various State Governments had comparatively little control over privately conducted schools. With the advance of modern educational thought the position is improving, but still leaves much to be desired. It is evident that without a thorough system of registration there will always be a difficulty in regard to enforcing the compulsory clauses of the various Education Acts. Moreover, advanced educational thought demands complete supervision, not only of curricula, but of all matters pertaining to school hygiene.

In New South Wales, under the provisions of the Bursary Endowment Act of 1912, 33 non-State Schools were inspected by the Departmental Inspector of Secondary Education for registration or renewal thereof. It is pointed out by the inspector that the schools obtaining registration under this Act will gain an advantage over non-registered schools which will tend to increase their yearly capital value.

In Victoria, up to the year 1905, no attempt had been made to bring Private Schools under general administrative control, but the Registration of Teachers and Schools Act of 1906, and the Education Act of 1910, established a registration scheme under a special committee. At present, the committee consists of nine members of the Council of Education. Section 60 of the Act of 1910 also empowers the Minister of Education to authorise the inspection of any school (other than a State School) in order to ascertain whether the instruction given is satisfactory. The inspector of registered schools has on several occasions pointed out that there is a fair number of institutions which are very unsatisfactory, both as regards buildings and quality of instruction given therein.

In Queensland, with the exception of the Grammar Schools, which are now examined annually, there is practically no control over the private schools, beyond the fact that they may submit themselves to inspection if so desired, and there is apparently no provision in South Australia for any Government supervision over private school affairs.

In Western Australia, non-Government schools must be declared efficient by the Education Department if attendance at them is to be recognised as fulfilling the requirements of the law, and the school registers must be open to the inspection of the compulsory officers of the Department.

In Tasmania the Education Act requires the teachers of other than State Schools "to furnish during January of each year returns shewing attendances at such schools." Despite the fact that penalties are prescribed for non-compliance with the law, many teachers neglect to return the forms sent out. Provision has been made for registration of private teachers and schools very much on the lines adopted in Victoria. The Act declares that all persons who were employed in a *bona fide* manner for at least three months before 25th October, 1906, were entitled to be registered as teachers without submitting proof of professional qualifications. No person can be registered as a private teacher since July, 1907, unless the Board is satisfied as to his fitness for the work.

**4. German Schools in Australia.**—The accompanying particulars in regard to German Schools in Australia have been extracted from information supplied by the State Education Departments.

*New South Wales.*—In this State there are 3 private schools conducted by German teachers, and attended entirely by children of German descent. The schools are situated at Jindera, near Albury (33 pupils); Trungley Hall, near Temora (36 pupils); and Gidginburg, near Temora (14 pupils). The schools are inspected by the Departmental officers, and school work is conducted in English. The use of German as the language of instruction is not permitted in any school. Trungley Hall and Gidginburg have been gazetted "certified" schools under the provisions of the Public Instruction Amendment Act of 1916.

The scholars attending the following State schools consisted largely of children whose parents were known to be of German descent :—Alma Park, Burrumbuttock (East and North), Gerogery Railway Station and Gerogery West, Glenellen, Hovell, Major's Plains, Jindera, Lavington, Walkyrie, Walla Walla. Many of the scholars at these schools could speak German before they attended school.

*Victoria.*—There are 10 registered private Lutheran schools in Victoria, with an attendance of 307 pupils. In connection with these schools it has been laid down by the Government that the German language is not to be employed in teaching, and books, charts, etc., in German are prohibited. Religious instruction in German is not permitted, and the syllabus of instruction must be on lines laid down by the Education Department, and be such as will promote good citizenship and loyalty to the British Empire. There are no State German schools.

*Queensland.*—There are now no German day schools in operation. In districts where German families form a considerable proportion of the population the children attend the State schools, and, in common with other children, are subject to the conditions imposed by the compulsory clauses of the State Education Act now in force.

*South Australia.*—In the year 1916 there were 52 Lutheran schools in this State, practically all under the control of the Lutheran Church. In many of these schools the teaching was carried on in the German language and English was hardly spoken at all. Religion as taught by the Lutheran Church formed an important part of the instruction.

The Education Act of 1915 provided that teaching should be through the medium of the English language for at least four hours a day. The Education Amendment Act of 1916, however, provided that the Government should take over and carry on all Lutheran schools not earlier than 30th June, 1917, and not later than 31st December, 1917, and that no language but English shall be spoken in the schools. The Act was put into force on the 1st July, 1917.

*Western Australia and Tasmania.*—There are no German schools in either of these States.

#### § 4. Free Kindergartens.

The following information regarding Free Kindergartens in the Commonwealth has been compiled from particulars supplied by the principals of the chief institutions in each State, except in the cases of Victoria and Western Australia, the details for which were furnished by the Education Departments.

##### FREE KINDERGARTENS IN THE COMMONWEALTH, 1916.

State.	No. of Schools.	Average Attendance.	Permanent Instructors.	Student Teachers.	Voluntary Assistants.
New South Wales (Sydney) ...	9	514	16	*52	12
Victoria (Melbourne) ...	26	1,149	52	19	236
(Ballarat) ...	1	46	2	...	16
Queensland (Brisbane) ...	6	189	6	21	6
South Australia (Adelaide) ...	6	200	8	16	...
Western Australia (Perth) ...	2	80	4	9	...
Tasmania (Hobart) ...	2	80	3	3	8
(Launceston) ...	1	44	6	5	3
Total ...	53	2,302	97	125	281

\* Exclusive of 27 Sunday School students and 23 students attending single classes.

It must, of course, be distinctly understood that the information given above refers to institutions under private kindergarten unions or associations, and is exclusive of institutions controlled by the Education Departments of the various States.

## § 5. Universities.

**1. Origin and Development.**—The history of the foundation and progress of the four then existing Australian Universities was traced at some length in Year Books I. and II. In the present volume space will permit of only a very brief reference to the subject.

(i.) *University of Sydney.* The Act of Incorporation of the University of Sydney received Royal Assent on the 1st October, 1850, and the first Senate was appointed on the 24th December of that year. The first matriculation examination was held in October, 1852, when 24 candidates passed the required test, and the formal inauguration ceremony took place on the 11th October of the same year. A Royal Charter was granted to the University on the 27th February, 1858. Women students were admitted in 1881. The passing of the University (Amendment) Act of 1912 marks an important epoch in the development of the educational system of New South Wales. The Act aims at placing the University in a more effective position as the culminating point in a thoroughly co-ordinated system of State education, and it is claimed that the passing of this measure makes the educational system—from the Primary Schools through the Secondary Schools to the Technical Colleges or to the University—form a progressive and continuous whole. Under the new Act the Constitution of the Senate was radically changed, and this body now consists of—four Fellows appointed by the Governor, one elected by members of the Legislative Council, one elected by members of the Legislative Assembly, five representatives of the University teaching staff, ten elected by graduates of the University, and three elected by the aforesaid Fellows. The professorial representatives hold office for two years, and the other Fellows for five years. In addition, it was provided that in view of their distinguished services, the late Chancellor, Sir Normand MacLaurin, and the Vice-Chancellor, Judge Backhouse, should each during his life be a Fellow in addition to the ten Fellows elected by the graduates. The second part of the Act contains a feature of outstanding importance, in that it provides for the allotment of exhibitions in the proportion of 1 for every 500 of the population of New South Wales between the ages of 17 and 20, or in such other ratio as may be determined by Parliament. These exhibitions, which carry exemption from all fees, are not restricted to any particular faculty in the University, and are principally allotted in order of merit as shewn by examinations for leaving certificates at the State Schools. Pupils of registered Secondary Private Schools are also eligible for leaving certificates on the same conditions as those of the State Schools. To gain a leaving certificate a candidate must have satisfactorily completed an approved four years' course of study. Five per cent. of the total number of exhibitions allotted in any year are available for successful candidates at the written examination, even though they be ineligible for a leaving certificate. At the inception of the University there were only three professorships. The present staff consists of 23 professors, including the Director of Military Science, seven assistant professors, and 122 lecturers and demonstrators. There are, in addition, 8 honorary lecturers, various honorary demonstrators, as well as various miscellaneous assistants in laboratories, and three curators of museums.

(ii.) *University of Melbourne.*—This institution was established by Act of Parliament assented to on the 22nd January, 1853, and its first Council was appointed on the 11th April of that year. The foundation stone of the main building was laid on the 3rd July, 1854, and the University was formally inaugurated on the 13th April, 1855. By Royal Letters Patent, issued in 1859, its degrees are, like those of the Sydney institution,

declared of equal status with those of any other University in the British Empire. Women students attended lectures for the first time in 1881. The University, which began in 1855 with Schools of Arts and Laws, has now a staff of 18 professors, 69 lecturers and demonstrators, as well as various assistants. The Conservatorium of Music has a staff numbering 30.

(iii.) *University of Adelaide.* This University was established by Act of Parliament in 1874. Its origin and progress were largely due to the munificence of the late Sir Walter Watson Hughes and Sir Thomas Elder, G.C.M.G., the total gifts of the latter amounting to over £100,000. The academical work of the institution was commenced in March, 1876, when eight matriculated and fifty-two non-graduating students attended lectures. The foundation stone of the University buildings was laid on the 30th July, 1879, and the buildings were opened in April, 1882. In 1881, by Royal Letters Patent, the degrees granted by the institution were recognised as of equal distinction with those of any University in the British Empire. The Elder Conservatorium of Music was opened in 1898. Power was given by Act of Parliament in 1880 to grant degrees to women. At first there were only four professorships in the University, whereas the present staff consists of eleven professors, forty-three lecturers with the necessary complement of demonstrators, etc., while the staff at the Conservatorium, not included in the foregoing figures, numbers fourteen.

(iv.) *University of Tasmania.* The Act to establish the University of Tasmania (Hobart) was assented to on the 5th of December, 1889. At the present time, the institution, which is small but efficient, possesses a staff of six professors, eight independent lecturers, and five miscellaneous assistants. Under Statute dated 13th April, 1905, the Zeehan School of Mines and Metallurgy was affiliated to the University. Tutorial classes have been arranged at Hobart and Launceston, and Extension Committees have been formed in various country centres.

(v.) *University of Queensland.* The Act to establish the University of Queensland was passed in 1909, and the first Senate was appointed on the 14th April, 1910. The University was opened on the 14th March, 1911, when 60 students were matriculated. Provision has been made for a Correspondence Study department in connection with the institution, and at the request of the Brisbane branch of the Workers' Educational Association, weekly lectures are given in History and Economics. At the present time there are four professors, i.e., one each of classics, chemistry, engineering, and for mathematics and physics, with eleven independent lecturers, nine assistant lecturers and demonstrators and five miscellaneous assistants. University extension lectures are delivered at important country centres.

(vi.) *University of Western Australia.* The University of Western Australia was established under an Act which received Royal assent on the 16th February, 1911, and the first Senate was appointed on the 13th February, 1912. There are now professorships in agriculture, biology, chemistry, English, geology, history and economics, mathematics and physics, and mining and engineering, in addition to ten lecturers and demonstrators, and seven miscellaneous assistants, etc. The Chair of Agriculture was endowed by Sir Winthrop Hackett. Students of the Perth Technical School and the Kalgoorlie School of Mines are admitted to the first year examinations in certain subjects provided they have matriculated. The institution was opened in March, 1913.

**2. Teachers and Students of Universities.**—The following table shews the number of professors and lecturers and the students in attendance at each of the Commonwealth Universities during the year 1916:—

## UNIVERSITIES.—TEACHERS AND STUDENTS, 1916.

University.	Professors.	Lecturers.	Students attending Lectures.		
			Matriculated.	Non-matriculated.	Total.
Sydney ... ..	30	122	1,240	420	1,660
Melbourne ... ..	18	69	...	...	1,137*
Adelaide ... ..	11	43	284	207	491†
Tasmania (Hobart) ...	6	8	78	20	98
Queensland (Brisbane)	4	20	160	22	182
West. Australia (Perth)	8	10	157	57	214

\* Exclusive of 160 music students. † Exclusive of 267 music students.

3. University Revenues.—The income of the Universities from all sources during the year 1916 was as follows:—

## UNIVERSITIES.—REVENUE, 1916.

University.	Government Grants.	Fees.	Other.	Total.
	£	£	£	£
Sydney ... ..	54,592	13,707	31,341	99,640
Melbourne ... ..	27,818	37,794	10,052	75,664
Adelaide ... ..	12,467	8,388	6,617	27,472
Tasmania (Hobart) ...	6,650	787	809	8,246
Queensland (Brisbane)	15,000	3,588	5,017	23,605
Western Australia (Perth)	13,500	...	1,641	15,141

The column "Other" includes the receipts from private foundations. The extent to which the Universities have benefited by private munificence will be apparent from the following table:—

## PRINCIPAL PRIVATE BENEFACTIONS TO AUSTRALIAN UNIVERSITIES.

University of Sydney.		University of Melbourne.		University of Adelaide.	
Donor.	Amount.	Donor.	Amount.	Donor.	Amount.
	£		£		£
J. H. Challis ...	250,750	Sir Samuel Wilson	30,000	Sir Thos. Elder ...	98,760
Sir P. N. Russell ...	100,000	James Stewart ...	25,624	Sir W. Hughes ...	20,000
Thos. Fisher ...	30,000	Hon. Francis Ormond	20,000	Hon. J. H. Angas	10,000
Edwin Dalton ...	8,000	John Hastie ...	19,140	R. Barr Smith ...	10,150
Hugh Dixon ...	7,050	Robert Dixon ...	10,837	Other donations ...	19,584
Hon. Sir W. Macleay	6,221	John Dixon Wy-			
Mrs. Hovell ...	6,000	selaskie ...	8,400		
Thos. Walker ...	6,200	David Kay ...	5,764		
Other donations ...	55,980	Henry Dwight ...	5,000		
		Wm. Thos. Mollison	5,000		
		Other donations ...	52,545		
Total	£ 470,201	Total	£ 182,310	Total	£ 158,494

In addition to the sum of £6000 shewn above, the Hon. Sir W. Macleay also presented the Museum of Natural History to the University.

The credit balances of some of the above endowments now amount to very considerable sums. For example, on the 31st December, 1916, the Challis Fund amounted to nearly £316,000, and the Fisher bequest to over £41,000. The cash balance at the end of 1916 on account of all private foundations to Sydney University stood at £565,890. In the case of Melbourne University the Stewart fund on the 31st December, 1916, stood at £30,550, the Hastie at £19,266, and the Dixson fund at £13,627.

In addition to the above there were various other bequests to Sydney University—*e.g.*, collection of Egyptian antiquities, etc., by Sir Charles Nicholson, and Natural History collection by Mr. Geo. Masters, while the building for the Natural History Museum was given by Sir W. Macleay. Numerous prizes and scholarships have also been given to the various colleges. In Melbourne, the Hon. Francis Ormond's benefactions to Ormond College amounted to about £108,000. With a view to advancing the course of education in agriculture, forestry and allied subjects, Mr. Peter Waite transferred to the Adelaide University in 1914 the whole of the valuable Urrbrae estate at Glen Osmond. The estate comprises 134 acres of land with a fine mansion. Private benefactions to the University of Tasmania and the newly-established University of Queensland amount to £3280 and £16,000 respectively. In Western Australia the chair of Agriculture was founded by an endowment of Sir Winthrop Hackett, first Chancellor of the University, who made available also an annual sum of £900 for the establishment of a Department of Agriculture.

**4. University Extension.**—Extension lectures were instituted at Sydney University in 1886, but under a Statute of the Senate, approved of in 1892, a Board was appointed, which was empowered from time to time to recommend to the Senate the names of suitable persons for giving courses of lectures, and to hold examinations in the subjects of the lectures. The Board receives and considers applications from country centres, and makes provision for engaging lecturers and managing the entire business connected with the various courses. The project has only met with fair success, no lectures having been given in some years, but lately there appears to be an awakening of interest in the matter. The Board also arranges for courses of lectures in other States. In 1916 the average attendance at extension lectures in New South Wales was 144.

University extension lectures in Victoria date from the year 1891, when a Board was appointed by the Melbourne University for the purpose of appointing lecturers and holding classes and examinations at such places and in such subjects as it might think fit. Interest in University extension has varied in Victoria, the attendance at the various centres being estimated at 475 in 1916.

The Adelaide University has also instituted short courses of extension lectures in Arts and Science, to which students are admitted on payment of a nominal fee. Public intimation of these lectures is made from time to time during the session. For 1915 a course of nine lectures was provided at the University, and courses are given in various country centres as desired.

The University of Tasmania provides for courses of extension lectures at various centres. Tutorial classes in Economics, History, Philosophy, and Literature are conducted in Hobart, and a class in Economics has been formed at Launceston. Attendance at extension lectures in 1916 numbered 151.

As pointed out previously, a correspondence study department has been inaugurated in connection with the University of Queensland in order to overcome, as far as possible, the difficulties of students who desire to benefit by University teaching, but who for various reasons are unable to attend the lectures. At present the work of this department is confined to the Arts course.

In Western Australia provision has been made for the giving of courses of extension lectures in Perth and suburbs, and also—by arrangement with local committees—in country centres. The professor of agriculture visits the chief farming districts for the purpose of giving lectures to, and holding conferences with the primary producers. Special short courses for farmers are given at the University.

**5. Soldiers' Scholarships at British Universities.**—A scheme has been evolved under which men on active service with the military and naval forces of the Dominions may benefit by the facilities for special education afforded by British Universities and technological institutions. Funds have been made available to allow selected disabled soldiers and sailors to commence work as soon as they are fit to take up their studies. The Earl of Selborne has generously provided a number of scholarships, a large subscription has been allotted from the Kitchener Memorial Fund, and the Rhodes' Trust has set apart several scholarships, some of which have been given to Australians. At present a small number of Australian soldiers are studying at Oxford, Cambridge, and Leeds. The scholarships are of the annual value of £150 to £250, and cover all expenses, including tuition fees and cost of living. They are granted with the proviso that those who hold them will follow up in their future professions and occupations the line of study embraced in the scholarships. The South African Government has offered twenty-five additional scholarships for South Africans, and in view of the possibilities of the scheme it is hoped that endowments will be provided by all the Dominion Governments.

**6. Workers' Educational Association.**—Chiefly as the result of a visit to Australia in 1913 by Mr. Mansbridge, Secretary of the Workers' Educational Association of Britain, a movement has been incorporated having for its object the bringing of the University into closer relationship with the masses of the people, and thereby providing for the higher education of the workers in civic subjects. In New South Wales the Workers' Educational Association was at once formed, and similar branches of the movement have since been established in all the States of the Commonwealth and in New Zealand. The Government of New South Wales granted the University of Sydney the sum of £1000 to initiate the scheme for tutorial classes. In that State the number of classes and study circles had grown by 1918 to between 40 and 50, and the number of students exceeded 1000, while the Government grant has increased to £5150. There are now direct grants from all State Governments except Western Australia, and a University grant in New Zealand. The particulars of grants to classes are as follow:—New South Wales, £5150, 42 classes; Victoria, £1500, 4 classes; Tasmania, £675, 5 classes; South Australia, £1600, 5 classes; Queensland, £300, 5 classes; New Zealand, £1500, 30 classes. The total number of students throughout Australasia is approximately 2000, the greater number of whom are taking three-year courses while working at their daily occupations as artisans and clerical workers. The principal subjects chosen in all States are Industrial History, Economics, Political Science, and Sociology, while Psychology, Philosophy, Literature, and Biology are increasingly selected. Each University co-operates with the W.E.A. in the formation of a joint committee for tutorial classes, which elects tutors and generally supervises the work with the assistance of a University officer with the title of Director of Tutorial Classes. In addition to the longer and more serious courses, a great many preparatory classes and study circles are organised by the association, numerous courses of public lectures are delivered, and educational conferences promoted. In New South Wales the association organised an important representative conference on "Trade Unionism in Australia" in 1915, the report of which has been issued in book form. Another conference on the "Teaching of Sex Hygiene" was held in 1916, the report of which has passed through a large first edition. Steps are now being taken to create a federal organisation of the association. The honorary secretary of the W.E.A. of Australasia is Professor Meredith Atkinson, M.A. (Oxon), Director of Tutorial Classes in the University of Melbourne.

## § 6. Technical Education.

1. **General.**—Although provision has been made in some of the States in respect to many necessary branches of technical education, the total provision made would imply that this branch of education has not been regarded as of great importance. As will be seen later on, the expenditure on technical education for the whole of Australasia is comparatively insignificant. The question of apprenticeship is dealt with in the sections dealing with "Manufacturing Industries" and "Labour and Industrial Statistics."

2. **New South Wales.**—The present organisation of technical education in this State dates from the year 1883, when a Technical Education Board was appointed as a result of suggestions made at the Technological Conference held in 1879. This Board continued its functions till November, 1889, when it was dissolved, and the work has thenceforward been carried on as a branch of the Public Instruction Department. The chief centre of activity is, of course, in Sydney, where the Technical College and Technological Museum are situated, the college having been opened for the reception of students early in 1892. Colleges were also erected in some of the chief country towns—at Maitland in 1890; Newcastle 1896; Bathurst, 1898; Broken Hill 1898; Albury 1899; and Goulburn 1902. In other centres classes were established in various subjects whenever the prospects were sufficiently encouraging. Up to the year 1912 the provision for technical education is stated to have partaken more or less of the nature of successive accretions on the original humble beginnings, rather than to have aimed at development in accordance with a definite plan. With the systematisation of the other branches of education, the necessity for more effective organisation of the technical side became imperative, and in 1913 a rearrangement was effected. Under the new conditions Trade Schools will supersede the branch Technical Colleges, with the exception of that at Newcastle. Entrance to the Trades Schools will be conditional on a student being actively engaged in the trade concerned during the day and possessing a certain degree of preparatory knowledge. The latter qualification is assured by the possession of a certificate from a Commercial Superior Junior Technical School or an Evening Continuation Junior Technical School. It is proposed to build new Trades Schools in several of the suburbs of Sydney, and to establish institutions in the country wherever circumstances demand. The co-operation of both employers and employees has been sought and obtained, and while at first there will be some diminution in the number attending the classes, this will be counterbalanced by increased efficiency. At the beginning of 1913 a conference was held between the education authorities and leading employers and employees with a view to deciding on a scheme of organisation of the system of technical education. Sub-conferences were held for each trade or group of trades. In view of the information received, the Director of Education submitted a scheme to the Minister, and the scheme was approved at the end of November. Under the new plan the instruction will be given in two divisions—(1) Trade Courses; (2) Higher Technical Courses. Instruction in the trade courses will be really continuation trade instruction, i.e., supplementary to actual workshop practice under an employer. Attempts to train youths to be tradesmen in the College will be abandoned, and only those actually engaged as apprentices or journeymen will be admitted to the college classes. Entrance tests are prescribed so as to ensure that students admitted to the courses will possess sufficient preparatory knowledge to benefit by them, but journeymen desirous of improvement may join at any time. Advisory committees have been appointed for each trade or group of trades. The first two or three years' course of instruction will be given in the Trade Schools, of which there are ten, and the last two or three years' at the Technical Colleges, of which there are three, one at Sydney, one at Newcastle, and one at Broken Hill. The higher courses will embrace instruction in advanced trades work qualifying for the position of manager or foreman, but no attempt will be made to train for the professional standing. It is hoped, however, that the scheme will develop so that part of the graduates may proceed to the University. Admission to the higher courses will eventually be restricted to those

who have either graduated in the Trade Schools of the Department, or who evidence possession of a similar standard of knowledge. A liberal scheme of scholarships has been provided for students passing from the day or evening Junior Technical Schools or Domestic Science Schools to the Trades and Science Schools, as well as scholarships to the University at the close of the diploma course.

The table below gives some idea of the development of technical education in New South Wales:—

TECHNICAL EDUCATION, NEW SOUTH WALES, 1912-16.

Year.	Number of Classes.	Number of Enrolments.	Average Weekly Attendance.	Number of Lecturers and Teachers.	Fees Received.
					£
1912 ... ..	793	28,082	17,749	320	15,846
1913 ... ..	582	16,193	12,214	286	13,760
1914 ... ..	513	13,687	11,523	289	10,779
1915 ... ..	519	13,000	9,257	298	9,830
1916 ... ..	529	14,188	10,077	321	9,989

At the beginning of 1913 the Sydney Technical High School and the Hurlstone Agricultural High School were removed from the control of the technical branch and placed under the Inspector of Secondary Schools. Reference to the Agricultural Colleges will be found in the section dealing with Agriculture.

3. **Victoria.**—Technical instruction in mining has for many years received considerable attention in Victoria, the Ballarat School of Mines, which was established as far back as 1870, having achieved an Australasian reputation. Fine work was also done at the School of Mines in Bendigo, and later on excellent courses of training were evolved at the Working Men's College in Melbourne. The general scheme of instruction, however, lacked cohesion, and it was not until after the publication of the Report of the Royal Commission on Technical Education, which was appointed in 1899, that many defects were remedied. It is hoped that the Agricultural and District High Schools will serve as an effective connecting link between the ordinary State Schools and the Technical Schools, as also the Junior Technical Schools established in and around Melbourne, and at Ballarat, Bendigo, Geelong, Sunshine, and Warrnambool. At present there are 23 Technical Schools receiving State aid, and of these 7 afford instruction in Science, Art, Commercial and Trade subjects; 8 in Art, Trade, and Science; 2 in Art, Commerce, and Trade; 1 in Science, Commerce, and Art; 1 in Art and Commerce, while 3 confine their teaching to Art. The largest technical institution in Melbourne is the Working Men's College, founded in 1887. The College, in addition to giving instruction in a large number of technical subjects, is also a School of Mines. Six of the schools, viz., the Working Men's College, and the Schools of Mines at Ballarat, Bendigo, Bairnsdale, Maryborough and Stawell are classed as Certified Science Schools, and provide full courses in metallurgy and mining engineering, extending over three or four years. There are at the present time eleven Junior Technical Schools in existence, giving a two years' course of instruction to boys between the ages of 12½ and 15 years.

During the year 1916 a new Art School, costing £17,000, was opened at the Working Men's College, also an Art School at Ballarat at a cost of £8600, and a Technical School at Brunswick, costing £8400, while the Footscray Technical School cost £6650.

The Committee of the Mechanics' Institute at Prahran has erected a building at a cost of £17,000, to a design approved by the Department, and has made it available without rent as a Technical School, the Department undertaking the expenses of equipment and maintenance.

In his report for 1913-14, the Chief Inspector of Technical Schools alludes to the necessity for an Employment Officer, in order to ensure that boys who have had vocational training will be able to find suitable situations when their term has expired.

## TECHNICAL EDUCATION, VICTORIA, 1912-16.

Year.	No. of Classes.	No. of Enrolments.	Fees Received.
			£
1912 ... ..	101	7,923	11,664
1913 ... ..	92	9,036	13,054
1914 ... ..	103	10,249	12,968
1915 ... ..	110	10,782	14,992
1916 ... ..	104	12,049	16,439

The average attendance in 1914 was 6487, in 1915, 6852, and in 1916, 7724.

4. **Queensland.**—The control of technical education in Queensland was removed from the hands of the local Committee in 1905, and vested in the Education Department. At present the Director is assisted in his administration by a Superintendent, and an Inspector of Technical Colleges. During 1916 there were 15 colleges in operation—Bowen, Bundaberg, Cairns, Central, Charters Towers, Gympie, Ipswich, Mackay, Maryborough, Mount Morgan, Rockhampton, Sandgate, Toowoomba, Townsville, Warwick, and branch classes of these colleges were held in various country centres. The progress of technical education since 1912 is shewn in the following table:—

## TECHNICAL EDUCATION, QUEENSLAND, 1912-16.

Year.	Number of Classes.	Enrolments.	Average Weekly Attendance.	Number of Teachers.	Fees Received.
					£
1912 ... ..	363	7,851	5,589	238	9,794
1913 ... ..	353	7,958	6,009	247	11,069
1914 ... ..	355	7,820	6,481	255	11,326
1915 ... ..	358	7,522	6,258	271	10,761
1916 ... ..	365	8,644	8,500	283	12,024

Greater attention is being devoted to the development of trade classes, and the Technical College authorities have been assisted by the University Professors in the preparation of a properly organised system of Trade instruction. Full time Commercial Day Schools are in operation at Warwick, Ipswich, Brisbane, and Townsville. Preparatory Day Trade Schools have been established in connection with the Central and Ipswich Technical Colleges. Trade Advisory Committees have been inaugurated in connection with several of the subjects of instruction at the Central Technical College. Compulsory attendance at technical classes in various districts has been provided for by industrial awards, the decisions so far—with the exception of Printing—being confined to trades connected with Engineering and Metal Working. The Department now pays about £2000 per annum to the Technical Colleges for the instruction of selected State School pupils in approved subjects. Tuition by correspondence is given by the Central Technical School. It is believed that the raising of the school age to 14 years, coupled with the establishment of High Schools, will result in a more effective co-ordination between ordinary and technical education in the State. At present the Colleges are assisting in the training of returned soldiers, and during 1916, 111 soldier students were receiving instruction in book-keeping, wool-classing, motor mechanics, sugar work, and various other subjects.

5. **South Australia.**—A considerable amount of attention has been given to technical education in South Australia, particularly in connection with the mining industry. The School of Mines and Industries in Adelaide was founded in 1889. There are in addition Schools of Mines at Moonta, Port Pirie, Kapunda, Mt. Gambier and Gawler. The conditions connected with the country Technical Schools, viewed from the standpoint of the Department of Education, are not considered satisfactory. While the Government bears the bulk of the cost of maintenance, the Minister for Education is not consulted in regard to the organisation, curriculum, or staffing of the schools.

Although good work has been accomplished, the system of control of Technical Schools by independent councils is declared by the Director of Education to be no longer suitable, and stress is laid on the necessity for co-ordinating technical effort under one central authority. A Director of Technical Education was appointed in 1916 and the necessary preliminary steps have been taken in the direction of evolving a co-ordinated system. The development of technical education during the last five years is set out in the table hereunder:—

**TECHNICAL EDUCATION, SOUTH AUSTRALIA, 1912-16.**

Year.	Number of Classes.	Enrolments.	Average Weekly Attendance.	Number of Teachers.	Fees Received.
					£
1912 ... ..	201	4,760	3,445	95	3,526
1913 ... ..	218	4,885	3,473	115	3,459
1914 ... ..	229	4,947	3,508	127	3,365
1915 ... ..	228	5,402	3,645	126	3,272
1916 ... ..	203	5,335	4,520	119	3,221

6. **Western Australia.**—A Technical School was established at Perth in 1900, and since its opening has progressed rapidly. Extensive additions to the buildings were made in 1909, and the remodelled institution was opened in 1910. The school is affiliated to the University. There are branch institutions at Midland Junction, Fremantle, Claremont, Kalgoorlie, Boulder, and Geraldton. In addition, Continuation Classes are held at various centres. The schools are all under the control of the Education Department, the officer entrusted with their supervision being styled Director of Technical Education. The Director also supervises the School of Mines at Kalgoorlie, which is controlled by the Mines Department. Advanced work at present is taken only in Perth, Fremantle, Boulder, and in Kalgoorlie by the School of Mines, the other branches dealing almost entirely with preparatory work, chiefly in Continuation Classes. Until the establishment of the local University, the Perth Technical School was affiliated with Adelaide University. Over 100 railway apprentices regularly attend the special classes held at Midland Junction.

At present pupils leaving the State Schools at the age of 14 to take up employment may by attendance at evening classes qualify for free admission to the technical schools. Those with leaving certificates from the eighth standard, and others able to devote their full time to study, may obtain day instruction at the technical schools in subjects bearing on their intended occupations, or may qualify for a more extended course, including graduation at the University. Returns for the last five years are embodied in the table hereunder:—

**TECHNICAL EDUCATION, WESTERN AUSTRALIA, 1912-16.**

Year.	No. of Classes.	Enrolments.	No. of Teachers.	Fees Received.
				£
1912 ... ..	304	5,090	163	3,144
1913 ... ..	230	2,346	77	1,941
1914 ... ..	306	3,353	89	969
1915 ... ..	313	3,184	96	928
1916 ... ..	369	3,757	103	1,058

The average attendance at classes in 1915 was 1920, and in 1916, 2366.

7. **Tasmania.**—In this State provision for technical education dates from the year 1888. At the present time the most important technical institution is the School of Mines and Metallurgy at Zeehan. Courses of instruction are given in metal mining and in metallurgical chemistry and assaying, the diploma in metal mining entitling the holder to the Government certificate of competency as a mine manager. The institution is affiliated to the University of Tasmania. There are also Schools of Mines at Beaconsfield and Queenstown, and Technical Schools at Hobart and Launceston. In the report of the Commission appointed in 1916 to enquire into the condition of technical education in Tasmania, allusion was made to the want of co-ordination between these institutions

and the Education Department, and it was recommended that the schools should be taken over by the Government, and a trained technologist appointed as organising inspector. Statistics for the last five years are as follows:—

#### TECHNICAL EDUCATION, TASMANIA, 1912-1916.

Year.	No. of Classes.	Enrolments.	Average Weekly Attendance.	No of Teachers.	Fees Received.
					£
1912 ...	62	993	300*	36	768
1913 ...	76	1,013	787	41	918
1914 ...	78	900	700	40	936
1915 ...	85	955	545	40	874
1916 ...	69	882	438	37	992

\* Estimated.

8. **Attendance at Commonwealth Technical Schools.**—The table hereunder shows the enrolment and attendance at Technical Schools and classes in the Commonwealth during 1916:—

#### ENROLMENT AND ATTENDANCE AT TECHNICAL SCHOOLS, Etc., 1916. (COMMONWEALTH.)

State.	Enrolment.	Average Attendance.
New South Wales ...	14,188	10,077
Victoria ...	12,049	7,724
Queensland ...	8,644	8,500
South Australia ...	5,335	4,520
Western Australia ...	3,757	2,366
Tasmania ...	882	433
Commonwealth ...	44,855	33,620

9. **Expenditure on Technical Education.**—The expenditure on technical education in each State during the period 1912 to 1916 is shewn below:—

#### EXPENDITURE ON TECHNICAL EDUCATION, 1912-16. (COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Queensland.	South Aust.	West. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1912 ...	99,265	42,541	44,073	15,121	27,536	3,318	231,854
1913 ...	132,305	49,139	63,589	14,769	26,886	3,529	290,217
1914 ...	72,718	73,654	83,722	15,720	13,552	3,493	262,859
1915 ...	78,129	77,852	69,740	16,173	10,375	3,906	256,175
1916 ...	102,139	94,098	41,083	17,614	10,849	4,438	270,221

The figures in the preceding table represent an expenditure of about 1s. 1d. per head of the population of the Commonwealth, as compared with 15s. 3d. per head spent on maintenance for primary education, and clearly shew that technical education has not attained its proper place in the educational organisation of Australia. Expenditure on buildings, included in the foregoing totals, comprises £21,481 in New South Wales, £27,462 in Victoria, £7776 in Queensland, and £898 in Western Australia.

#### § 7. Business Colleges and Shorthand Schools.

There has been considerable development in recent years both in the number and scope of privately conducted institutions, which aim at giving instruction in business methods, shorthand, typewriting, the use of calculating machines, etc. Particulars for all States excepting Queensland are given in the table hereunder:—

## BUSINESS COLLEGES, SHORTHAND SCHOOLS, Etc., 1916.

State.	Schools.	Teachers.	Students Enrolled.		Aver. Attendances.		Fees Recd.
			Males.	Females.	Males.	Females.	
New South Wales ...	17	112	2,336	4,907	1,059	1,685	£ 30,521
Victoria ...	17	163	3,966	3,171	2,882	2,368	†
Queensland*	...	...	...	...	...	...	...
South Australia ...	4	39	691	1,272	451	757	10,697
Western Australia ...	7	45	544	695	†	†	9,077
Tasmania ...	3	9	76	246	35	115	1,725

\* Included in Private Schools. † Not available.

The figures for New South Wales are exclusive of students instructed at home through the medium of correspondence classes.

In Victoria it is explained that the preponderance of male students is due to the larger enrolment of males in the correspondence classes.

## § 8. Diffusion of Education.

1. **General Education.**—A rough indication of the state of education of the people is obtained at each Census under the three headings, "read and write," "read only," and "cannot read." The grouping of the whole population, exclusive of aborigines, in these three divisions is given for each Census since 1861:—

EDUCATION AT CENSUS PERIODS, 1861 to 1911.  
(COMMONWEALTH.)

State or Territory.		1861.	1871.	1881.	1891.	1901.	1911.

	{ Cannot read	348,952	447,842	520,356	671,183	674,522	671,386

\* Including Federal Territory prior to 1911.

† Including Northern Territory prior to 1911.

‡ Included in South Australia prior to 1911.

§ Included in New South Wales prior to 1911.

The proportion in the Commonwealth of the various classes per 10,000 of the population is shewn below for each Census period:—

**PROPORTION OF EDUCATED AND ILLITERATE PER 10,000 PERSONS, 1861 to 1911.**  
(COMMONWEALTH.)

Division.	1861.	1871.	1881.	1891.	1901.	1911.
Read and write ...	5,752	6,239	7,073	7,543	8,004	8,452
Read only ...	1,217	1,068	615	343	208	41
Cannot read ...	3,031	2,693	2,312	2,114	1,788	1,507

**2. Education of Children.**—The figures in the preceding tables refer to the entire population of the Commonwealth, and as the age constitution of those dwelling in the various portions of Australia underwent considerable modifications during the period dealt with, a far more reliable test of the diffusion of education will be obtained by a comparison of the Census returns in regard to children of school age. For comparative purposes this has been taken to include all children in the group over five and under fifteen years of age, and the degree of education of these at each Census will be found below:—

**EDUCATION OF CHILDREN AT CENSUS PERIODS, 1861 to 1911.**

\* Including Federal Territory prior to 1911. † Including Northern Territory prior to 1911. ‡ Included in South Australia prior to 1911. § Included in New South Wales prior to 1911.

In the case of Tasmania full details for the years 1861 and 1871 are not available, and the figures for those years are approximate. The variation in degree of education will be more readily seen by reducing the foregoing figures to the basis of proportion per 10,000, and the results so obtained are embodied in the following table, a glance at which is sufficient to demonstrate the remarkable strides that at least the lower branches of education have made since 1861. In that year, only 47 per cent. of the children of school age could read and write, while 26 per cent. were illiterate. The returns for 1911 shew that the proportion of those who could read and write had increased to over 90 per cent., while the totally ignorant had declined by nearly two-thirds.

**EDUCATION OF CHILDREN (AGES 5 TO 14) PER 10,000 AT CENSUS PERIODS,

§ Included in New South Wales prior to 1911.

**3. Education as shewn by Marriage Registers.**—Another common method of testing the spread of education is to compare the number of mark signatures with the total number of persons married during each year of a series. The percentage of males and females signing with a mark to the total persons married in the Census years 1861 to 1901, and during each of the last nine years, was as follows. The figures refer to marriages in the Commonwealth in respect of which information was obtainable.

**ILLITERACY SHEWN BY MARRIAGE SIGNATURES, 1861 to 1916.**  
(COMMONWEALTH.)

Year.	Proportion Signing with Marks of Total Persons Married.						
	Males.	Females.	Total.	Year.	Males.	Females.	Total.
	per cent.	per cent.	per cent.		per cent.	per cent.	per cent.
1861 ...	18.50	30.69	24.60	1210 ...	0.56	0.59	0.58
1871 ...	10.58	16.40	13.49	1911 ...	0.56	0.54	0.55
1881 ...	4.34	6.78	5.56	1912 ...	0.43	0.45	0.44
1891 ...	2.27	2.40	2.34	1913 ...	0.36	0.38	0.37
1901 ...	1.35	1.29	1.32	1914 ...	0.41	0.38	0.39
1908 ...	0.71	0.73	0.72	1915 ...	0.27	0.27	0.27
1909 ...	0.65	0.62	0.64	1916 ...	0.37	0.32	0.35

The table shews that there has been a large diminution in illiteracy, and judging from the figures for the last few years the proportion bids fair to practically disappear. Up to 1891 there was a higher proportion of illiteracy amongst females, but during the last nine years the rates have been very even.

### § 9. Miscellaneous.

1. **Scientific Societies.**—(a) *Royal Societies.* Despite the trials and struggles incidental to the earlier years of the history of Australia, higher education and scientific advancement were not lost sight of. Thus the origin of the Royal Society of New South Wales dates as far back as 1821, when it was founded under the name of the Philosophical Society of Australasia, Sir Thomas Brisbane being its first president. Scientific work was fitfully carried on by means of a society whose name varied as the years rolled on. It was called the Australian Philosophical Society in 1850. In 1856 the old Australian Society merged into a resuscitated Philosophical Society of New South Wales, and its papers were published up to 1859 in the *Sydney Magazine of Science and Art* (2 vols. 1858-9). Its present title dates from 1866. Some of the papers of the old Philosophical Society were published in 1825 under the title of "Geographical Memoirs of New South Wales" (Barron Field), and contain much that is interesting in regard to the early history of Australia. One volume containing the Transactions of the Philosophical Society of New South Wales (1862-65) was published in 1866. The journal of the Society did not begin to bear a serial number, however (vol. 1), until the year 1867. "Transactions of the Royal Society of New South Wales" were issued in 1867, the title of the series being altered to "Journal" in 1876. Up to the end of 1917, 51 volumes had been published. The exchange list comprises the names of 380 kindred societies. At the present time the library contains about 23,000 volumes and pamphlets, valued at about £7000. Income and expenditure for the year ended 31st March, 1916, were £1316 and £1254 respectively, and the Society had on the same date 319 members.

The Royal Society of Victoria dates from 1854, in which year the Victorian Institute for the Advancement of Science and the Philosophical Society of Victoria were founded. These were amalgamated in the following year under the title of the Philosophical Institute of Victoria, whilst the Society received its present title in 1860. The first volume of its publications dates from 1855. The earlier publications dealt largely with Physics, later on Biology became prominent, while at present a large number of papers deal with Geology. Up to 1917, 63 volumes of publications had been issued. The Society exchanges with 326 kindred bodies. The constitution of the Society states that it was founded "for the promotion of art, literature, and science," but for many years past science has monopolised its energies. The library contains over 11,000 volumes, valued at £3100. Income for the year 1917 amounted to £330, and expenditure to £350. There are 192 members on the roll.

The inaugural meeting of the Royal Society of Queensland was held on the 8th January, 1884, under the presidency of the late Sir A. C. Gregory. The Society was formed "for the furtherance of the natural and applied sciences, especially by means of

original research." Shortly after its formation it received an addition to its ranks by the amalgamation with it of the Queensland Philosophical Society, which was started at the time when Queensland became a separate colony. At latest date the members numbered 88; publications issued, 29 volumes; library, 5000 volumes; societies on exchange list, 173. Income and expenditure in 1917 amounted to £130 and £129 respectively.

The present Royal Society of South Australia grew out of the Adelaide Philosophical Society, which was founded in 1853, its object being the discussion of all subjects connected with science, literature and art. Despite this programme, the tendency of the papers was distinctly scientific, or of a practical or industrial nature. With the advent of the late Professor Tate the society became purely scientific. Permission to assume the title of "Royal" was obtained in 1879, the Society thenceforward being known as "The Royal Society of South Australia." In 1903 the society was incorporated. In 1917 the number of members was 90. The income for the year 1917 was £450, and expenditure £471. Up to 1917 the Society had issued 43 volumes of proceedings and six parts of memoirs, exclusive of several individual papers published in earlier years. The exchange list numbers about 212, while the library contains 3200 volumes and over 1300 pamphlets.

Permission to assume the title of Royal Society was granted to the Natural History and Science Society of Western Australia in March, 1914. This Society has grown out of the Mueller Botanic Society, founded in July, 1897. The objects of the society are the study of natural history and pure science, promoted by periodical meetings and field excursions, the maintenance of a library, and issue of reports of proceedings. It numbers at present 90 members, whose subscriptions form its main source of revenue, the income and expenditure in 1917 being respectively £88 and £46. Five volumes of proceedings were issued as Journal of the Natural History and Science Society of Western Australia, and two as of the Royal Society. Its publications are exchanged with 55 institutions at home and abroad. The library contains 320 volumes, besides unbound journals, pamphlets, etc.

The Royal Society of Tasmania (the first Royal Society outside the United Kingdom) was inaugurated by Sir Eardley Wilmot, Lieutenant-Governor of Van Diemen's Land, on the 14th October, 1843. It may be mentioned, however, that a scientific society had been formed as far back as 1838 under the presidency of Sir John Franklin, then Governor of the colony, and in 1841 the number of resident members was 31, and corresponding members, 38. The meetings of this parent society were held at Government House, and three volumes of proceedings were issued. A large portion of the Colonial Gardens, together with a grant of £400, was given to the Society. A library and museum were established in 1848. In 1885 the museum and gardens were given back to the State, the Society being granted room in the museum for its library and meetings. The names of Captains Ross and Crozier, of H.M.S. *Erebus* and *Terror*, appear in the list of the first corresponding members. The society, which, since 1844, has published 56 annual volumes of proceedings, possesses 94 members, 13 corresponding members, exchanges with 216 kindred bodies, and has a library containing 12,800 volumes, in addition to manuscripts, etc., valued at £4000. Income for the year 1917 was £202, and expenditure £153.

(b) *Other Scientific Societies.* The Australasian Association for the Advancement of Science, founded in 1888, has its headquarters in Sydney. It meets usually in each State biennially in turn. Its receipts to date were about £14,000, including Government aid to the amount of £4000. The library contains 4000 volumes, valued at £400. Up to date, 14 volumes of proceedings have been issued. The exchange list numbers 176. The Linnean Society of New South Wales, with headquarters in Sydney, was founded in 1875, and possesses a library of 10,000 volumes, valued at £6000. Up to date 42 volumes of proceedings have been issued. Exchanges number 188. This Society maintains five investigators engaged in research work, and owes its development almost entirely to the benefactions of Sir William Macleay. The number of ordinary members at the end of 1917 was 154. Income for the year came to £1245, and expenditure to £929. The

special revenue for research purposes only was £2849, and the expenditure £2314. The British Astronomical Society has a branch in Sydney, and in some of the States the British Medical Association has branches.

The Chemical Society of Western Australia was founded in 1915, for the promotion of the study of Chemistry and the furtherance of the interests of professional chemists. Meetings are held monthly. There is a council consisting (in 1917) of seven members.

In addition to the societies enumerated above, there are various others in each State devoted to branches of scientific investigation, particulars respecting which are not at present available.

2. **Libraries.**—As far as can be ascertained the total number of libraries in the Commonwealth at the latest available date was about 1700, and the number of books contained therein is estimated at about four millions. In each of the capital cities there is a well-equipped Public Library, the institutions in Melbourne and Sydney especially comparing very favourably with similar institutions elsewhere. The new reading room at the Melbourne Library ranks amongst the finest in the world. It was opened in November, 1913, and has a diameter of 114 feet, with a similar height, and is capable of seating 320 readers at a time, all of whom are under efficient supervision from the centre of the room. The following statement gives the number of volumes in the Public Library of each city :—

#### METROPOLITAN PUBLIC LIBRARIES.

City.	Number of Volumes in—			Total.
	Reference Branch.	Ordinary Lending Branch.	Country Lending Branch.	
Sydney ... ..	278,948	*	16,394	295,342
Melbourne ... ..	245,455	34,472	...	279,927
Brisbane ... ..	39,544	...	...	39,544
Adelaide ... ..	99,109	31,715	...	130,824
Perth ... ..	105,116	13,011	...	118,127
Hobart ... ..	21,000	...	...	21,000

\* The maintenance and control of the lending branch of the Public Library at Sydney were transferred in 1908 to the Municipal Council. At the end of December, 1916, the books numbered 34,000.

The Mitchell Library in Sydney consisted of over 60,000 volumes and pamphlets, and 300 paintings, principally relating to Australasia, valued at £100,000, and bequeathed in 1907 by Mr. D. S. Mitchell, together with an endowment of £70,000. The testator stipulated that the regulations of the British Museum were to be adopted as far as practicable, hence the library is the resort of specialists. There are now 88,000 volumes in the library. The Fisher Library at the Sydney University contains 100,000 volumes.

The Launceston Mechanics' Institute in Tasmania possesses a library of 27,000 volumes.

The number of libraries in receipt of State or municipal aid, together with the estimated number of books contained therein, is given below for each State:—

#### SUBSIDISED LIBRARIES AND BOOKS THEREIN.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Terr.
Number of libraries ... ..	464	500	232	210	253	25	3
Estimated number of books ...	1,064,000	1,173,000	373,000	567,000	258,000	103,000	5,000

The figures in the above table can be taken only as approximations, as in many instances returns were not received from various institutions. The return for New South Wales includes the Public Library, the Mitchell Library, and the Sydney Municipal Library. Amongst other important libraries not included, may be enumerated those at the Sydney University and the Australian Museum, which contain 100,000 and 22,000 volumes respectively, and the Parliamentary Library with over 52,000 volumes. There are also over 2700 libraries, with an estimated total of 362,000 volumes, attached to State Schools.

**3. Museums.**—The Australian Museum in Sydney, founded in 1836, is the oldest institution of its kind in Australia. In addition to possessing a fine collection of the usual objects to be met with in kindred institutions, the Museum contains a very valuable and complete set of specimens of Australian fauna. The cost of construction of the building was £79,000. The number of visitors to the institution in 1916 was 191,000, and the average attendance on week-days 507, and on Sundays 1069. The expenditure for 1916 amounted to £10,102. A valuable library containing over 22,000 volumes is attached to the Museum. Representative collections, illustrative of the natural wealth of the country, are to be found in the Agricultural and Forestry Museum, and the Mining and Geological Museum. The latter institution prepares collections of specimens to be used as teaching aids in country schools. The "Nicholson" Museum of Antiquities, the "Macleay" Museum of Natural History, and the Museum of Normal and Morbid Anatomy, connected with the University, and the National Herbarium and Botanical Museum at the Sydney Botanic Gardens, are also accessible to the public. There is a fine Technological Museum in Sydney, with branches in six country centres, the combined institutions containing over 115,000 specimens. Valuable research work has been undertaken by the scientific staff in connection with oil and other products of the eucalyptus. The number of visitors at the Technological Museums during 1916 was about 233,000.

The National Museum at Melbourne, devoted to Natural History, Geology, and Ethnology, is located in the Public Library building. The National Art Gallery is also situated in the same building. The expenditure for specimens, furniture, etc., in 1916 was £560, and salaries and wages £2621. The Industrial and Technological Museum, opened in 1870, contains about 9000 exhibits. There is a fine Museum of Botany and Plant Products in the Melbourne Botanic Gardens. In addition to the fine collection in the geological museum attached to the Mines Department in Melbourne, well-equipped museums of mining and geological specimens are established in connection with the Schools of Mines in the chief mining districts.

The Queensland Museum dates from the year 1871, but the present building was opened in January, 1901. Since its inauguration the Government has expended on the institution a sum of £89,521, of which buildings absorbed £19,538, purchases £27,210, and salaries £42,773. The number of visitors during the year was 71,745, of whom 25,903 visited the institution on Sundays. The Queensland Geological Survey Museum has branches in Townsville, opened in 1886, and in Brisbane, opened in 1892.

Under the Public Library Act of 1884 the South Australian Institute ceased to exist, and the books contained therein were divided amongst the Museum, Public Library, and Art Gallery of South Australia, and the Adelaide Circulating Library. The Museum was attended by 81,000 visitors in 1916.

The latest available returns shew that the Western Australian Museum contains altogether 88,000 specimens, of an estimated value of £78,000. The Museum is housed in the same building as the Art Gallery, and the visitors to the combined institutions during the year reached 82,000. The expenditure for the year 1916-17 was £1820, and the Government grants for the year amounted to £2300.

There are two museums in Tasmania—the Tasmanian Museum at Hobart, and the Victoria Museum and Art Gallery at Launceston, both of which contain valuable collections of botanical and mineral products. The Tasmanian Museum received aid from the Government during last year to the extent of £600. The Hobart institution cost £9500 to construct, and that at Launceston £6000.

**4. Art Galleries.**—Information regarding the State collections of objects of art in the various capitals is in some cases very meagre, while the method of presentation does not admit of any detailed comparisons being made. The National Art Gallery of New South Wales originated in the Academy of Art founded in 1871. Cost of construction is returned at £94,000. The contents, which are valued at £151,000, comprise 437 oil paintings, 411 water colours, 626 black and white, 168 statuary and bronzes, and 434 ceramics, works in metal and miscellaneous. During 1916 the average attendance on week days was 438, and on Sundays 1960.

The National Gallery at Melbourne at the end of 1916 contained 584 oil paintings, 4683 objects of statuary, bronzes and ceramics, and 14,107 water-colour drawings, engravings, and photographs. The Gallery is situated in the same building as the Museum and Public Library, the total cost of construction being £325,000. Several munificent bequests have been made to the institution. That of Mr. Alfred Felton, given in 1914, amounts to about £8000 per annum. In 1913, Mr. John Connell presented his collection of art furniture, silver, pictures, etc., the whole being valued at £10,000. At the end of 1916 the Ballarat Art Gallery contained 221 oil paintings and 163 water colours, etc., while there are some valuable works of art in the smaller galleries at Bendigo, Castlemaine, Geelong, and Warrnambool.

The Queensland National Art Gallery, situated in the Executive Buildings, Brisbane, was founded in 1895 and contains a small, but well chosen, collection of pictures. At latest available date there were on view 93 oil paintings, 23 water colours, 99 black and white, and 29 pieces of statuary, together with various prints, mosaics, and miniatures. Exclusive of exhibits on loan, the contents are valued at about £10,000.

The Art Gallery at Adelaide dates from 1880, when the Government expended £2000 in the purchase of pictures, which were exhibited in the Public Library building in 1882. The liberality of private citizens caused the Gallery to rapidly outgrow the accommodation provided for it in 1889, at the Exhibition Building, and on the receipt of a bequest of £25,000 from the late Sir T. Elder, the Government erected the present building, which was opened in April, 1900. The Gallery also received bequests of £16,500 in 1903 from the estate of Dr. Morgan Thomas, and of £3000 in 1907 from Mr. David Murray. At the latest available date there were in the Gallery 238 oil paintings, 71 water colours, and 24 statuary. Building and site are valued at upwards of £31,000. Visitors during the year 1916 numbered 90,000.

The foundation stone of the present Art Gallery at Perth in Western Australia was laid in 1901, the building and site being valued at £60,000. The collection comprises 96 oil paintings, 51 water colours, 192 black and white, 265 statuary, and miscellaneous metal works, etc.

In Tasmania the Art Gallery at Hobart was opened in 1887. Its present contents consist of 96 paintings and 81 etchings and black and white drawings. The building is valued at £9500.

The Art Gallery at Launceston was erected in 1888 at a cost of £5000, and opened on the 2nd April, 1891. Only a small proportion of the contents belong to the Gallery, the bulk of the pictures being obtained on loan. At latest date there were on view 80 oil paintings and 44 water colours valued at £5000. The building is valued at £6000. Average attendance of visitors on week days is returned as 96 and on Sundays 200.

5. **State Expenditure on all Forms of Educational Effort.**—The expenditure from the Consolidated Revenue in each State and Territory on all forms of educational and scientific activity during each of the last five financial years was as follows:—

**EXPENDITURE ON EDUCATION, SCIENCE, AND ART, 1912-13 to 1916-17.**

State or Territory.		1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
		£	£	£	£	£
New South Wales	Total	£ 1,609,734	1,735,404	1,651,571	1,717,040	2,039,792
	Per head	18/1	18/11	17/9	18/4	20/2

	Per head	10/3	11/2	12/5	12/7	13/3
Northern Territ'y	Total	£ 2,516	3,916	2,073	2,180	2,257
	Per head	14/6	21/4	10/5	9/7	9/6
Commonwealth	Total	£ 4,101,860	4,393,074	4,498,789	4,396,886	4,855,320
	Per head	17/4	18/0	18/3	17/10	19/11

The comparatively heavy increases in Queensland and Western Australia since 1912 are due to the inclusion of expenditure in connection with the newly-established Universities in those States.

## SECTION XXIII.

## PUBLIC JUSTICE.

## § 1. Police.

1. **Introductory.**—In previous issues of the Year Book a *résumé* was given of the evolution of the police force in Australia up to the passing of the Police Act of 1862 (25 Vic. No. 16) in New South Wales, but considerations of space preclude its inclusion in the present volume.

In general terms the police forces of Australia may be said to be satisfactory both in regard to physique and intelligence, while as regards methods of prevention and detection of crime it is believed that the system in vogue here compares very favourably with those of the older-settled countries of the world.

2. **Strength of Police Force.**—The strength of the police force in each State during the five years ended 1916 was as follows. It may be mentioned that the police forces are entirely under State control, but, by arrangement, the Commonwealth Government utilises their services in various directions, such as the collection of Commonwealth electoral rolls, etc.:—

POLICE FORCES IN THE COMMONWEALTH, 1912 to 1916.

State.	Area of State in Sq. Miles.	1912.	1913.	1914.	1915.	1916.
New South Wales	310,372	2,554	2,582	2,627	2,613	2,587
Victoria...	87,884	1,662	1,753	1,739	1,737	1,638
Queensland	670,500	1,084	1,108	1,112	1,194	1,176
South Australia	380,070	522	500	556	541	567
Western Australia	975,920	487	477	482	495	473
Tasmania	26,215	237	237	231	233	232
Northern Territory	523,620	25	26	25	26	27
Commonwealth	2,974,581	6,571	6,683	6,772	6,839	6,700

The figures for New South Wales for 1916 are exclusive of forty-two "black trackers," i.e., natives employed in detection of offenders chiefly in outlying districts, and five female searchers. In Queensland there were 100 native trackers. The South Australian returns for 1916 are exclusive of eight "black trackers" and one female searcher, and the Tasmanian returns are exclusive of a female searcher. The Northern Territory had twenty-four "black trackers" in 1916. There are also fifty-three "black trackers" in Western Australia and four searchers not included in the table.

*Average Number of Inhabitants to each Police Officer.* The average number of inhabitants to each officer in each State during the same period is as follows. In considering these figures, allowance must, of course, be made for the unequal area and unequal distribution of the population of the various States.

**INHABITANTS TO EACH POLICE OFFICER, 1912 to 1916.**  
(COMMONWEALTH.)

State.	No. of Persons per Sq. Mile, 1911 Census.	Inhabitants to each Police Officer.				
		1912.	1913.	1914.	1915.	1916.
New South Wales ...	5.31	697	710	709	716	719
Victoria ...	14.97	831	805	823	816	855
Queensland ...	0.90	587	595	603	570	569
South Australia ...	0.46	824	880	794	810	762
Western Australia ...	0.29	628	672	670	642	653
Tasmania ...	7.29	832	851	872	863	862
Northern Territory ...	...	139	141	159	175	177
Commonwealth ...	1.50	720	729	730	721	728

The figures in the preceding tables shew a great disparity in the relative numbers of the population protected by each police officer in the various States, and also in the relative area of territory to each officer. Western Australia and South Australia exhibit the largest figures in the latter respect, this, of course, being due to the fact that extensive areas in each State are as yet unpeopled by white settlers.

**3. Duties of the Police.**—In addition to the ordinary employment attaching to their office, the police are called upon to perform many duties which in other countries are carried out by various functionaries. Thus, in Queensland, according to the Commissioner's report for 1916, no less than sixty-two subsidiary offices are held by the police. As far as the statistician is concerned, it is found that the expert local knowledge possessed by the police renders their services in the collection of such returns as those relating to the agricultural, pastoral, and manufacturing industries, private schools, etc., more than ordinarily valuable. Then, again, the fact that their services are enlisted by such widely different departments as those dealing with mines, stock, agriculture, elections, registrations of births, deaths, and marriages, forestry, fisheries, explosives, old-age pensions, lunacy, public works, labour, etc., greatly enhances their general alertness by widening the range of their experience. Occasionally the objection is heard in some quarters that these special tasks involve some degree of sacrifice of ordinary routine duties, but that the general intelligence of the Australian police is adequate to the obligation to perform these tasks, besides being most creditable, results in a great saving of the public money.

**4. Cost of Police Forces.**—The expenditure from Consolidated Revenue on the police forces in each State during the five years 1912 to 1916 is shewn in the following table. Cost of buildings has been excluded from the return:—

**COST OF POLICE FORCES IN THE COMMONWEALTH, 1912 to 1916.**

State.	1912.	1913.	1914.	1915.	1916.
	£	£	£	£	£
New South Wales ...	578,767	593,406	592,694	603,347	649,093
Victoria ...	348,227	354,264	380,724	365,821	356,885
Queensland ...	306,431	304,817	302,633	302,209	322,422
South Australia ...	116,847	129,834	132,445	131,580	127,632
Western Australia ...	129,556	126,532	133,452	131,806	125,446
Tasmania ...	43,236	45,237	45,972	45,952	47,320
Northern Territory ...	10,609	10,614	10,307	10,216	10,260
Commonwealth ...	1,533,673	1,564,704	1,598,227	1,590,931	1,639,058

The total for New South Wales includes £47,000 payment to Police Superannuation Fund. Similar payments in Victoria and Queensland amount to £20,000 and £34,000 respectively, while smaller sums are included in the returns for other States. The cost per head of the population in each State for the period 1912 to 1916 was as follows:—

**COST OF POLICE PER INHABITANT, 1912 to 1916.**

(COMMONWEALTH.)

State.	1912.	1913.	1914.	1915.	1916.
	s. d.	s. d.	s. d.	s. d.	s. d.
New South Wales ...	6 8	6 7	6 4	6 6	7 0
Victoria ...	5 2	5 1	5 4	5 2	5 0
Queensland ...	9 8	9 4	9 0	8 11	9 8
South Australia ...	5 6	6 0	6 0	6 0	5 11
Western Australia ...	8 7	8 1	8 3	8 3	8 1
Tasmania ...	4 6	4 7	4 7	4 7	4 9
Northern Territory ...	63 2	58 0	52 0	44 9	43 0
Commonwealth ...	6 7	6 6	6 6	6 6	6 9

The relatively high cost per head in Queensland and Western Australia is due to the fact that there are in those States extensive areas of sparsely settled country, in which mounted patrols have to be maintained.

In view of the small number of its white population and the vast extent of country to be patrolled, the figures for the Northern Territory necessarily shew a very high average. The duties of the police, moreover, chiefly pertain to matters connected with the control of aborigines.

**§ 2. Lower (Magistrates') Courts.**

1. **Introductory.**—In considering the criminal returns of the various States, due allowance must be made on account of several factors, such as the relative powers of the courts, both lower and higher, etc. In the case of lower courts, the actual number of laws in each State, the breach of which renders a person liable to fine or imprisonment, must be taken into account. Again, the attitude of the magistracy and police towards certain classes of offences is a factor, for in the case of liquor laws, or laws connected with vagrancy or gaming, the views of magistrates, and instructions issued to the police, may be responsible for considerable variations in the returns. The strength and distribution of the police forces, and the age constitution and distribution of the State's population, also influence the results. In any consideration of criminal returns, due weight should also be given to the prevalence of undetected crime, but information on this point can only be obtained for the State of Victoria. It may be mentioned that each State has its own separate judicial system, the Commonwealth jurisdiction being confined to the High Court of Australia, which is largely a Court of Appeal intermediate to the Privy Council, although it has also original jurisdiction, and the Commonwealth Court of Arbitration and Conciliation. Full particulars regarding the judicial power of the Commonwealth will be found in Chapter III. of the Commonwealth Constitution (see page 27).

2. **Powers of the Magistrates.**—In New South Wales there is no general limit to the powers of the magistrates in regard to offences punished summarily, their authority depending in such case on the statute which creates the offence and gives them jurisdiction. Except in the case of a very few statutes, and excluding cumulative sentences,

the power of sentence is limited to six months. Imprisonment in default of payment of fine is regulated by a scale limiting the maximum period according to the sum ordered to be paid, but in no case exceeding twelve months. Actions for debt and damage within certain limits also come within magisterial jurisdiction. In cases of debts, liquidated or unliquidated, the amount recoverable is not exceeding £50 before a court constituted of a stipendiary or police magistrate at certain authorised places, and not exceeding £30 at any other place before a court constituted of a stipendiary or police magistrate or two or more justices of the peace. The amount in actions of damage is limited to £10, but may extend to £30 by consent of parties.

In Victoria, the civil jurisdiction of magistrates is restricted to what may be designated ordinary debts, damages for assault, restitution of goods, etc., where the amount in dispute does not exceed £50. No definite limit is fixed to the powers of the magistrates on the criminal side, and for some offences sentences up to two years may be imposed. The proportion of long sentences is, however, comparatively small.

In Queensland, generally speaking, the maximum term of imprisonment which justices can inflict is six months, but in certain exceptional cases, such as offences against sections 233 and 445 of the criminal code (betting-houses and illegally using animals), sentences of twelve months may be imposed. No limit exists as to the extent to which cumulative sentences may be applied, but in practice the term is never very lengthy.

In South Australia, under the Minor Offences Act, magistrates can impose sentences up to six months, and under the Summary Convictions Act, up to three months. The Police Act of 1869 gives power to sentence up to one year, with hard labour, in the case of incorrigible rogues; while under the Quarantine Act of 1877, and the Lottery and Gaming Act of 1875, sentences of two years may be imposed.

Under the Petty Sessions Act of 1867, in Tasmania, any person charged with having committed, or with having aided or abetted in the commission of an offence, in regard to property of a value not exceeding £10, may, on conviction, for a first offence, before two or more justices in Petty Sessions, be imprisoned for any term not exceeding one year, and for a term not exceeding two years for a second or subsequent offence.

**3. Persons Charged at Magistrates' Courts.**—The total number of persons who were charged before magistrates in each State is given below for the five years 1912 to 1916:—

**PERSONS CHARGED BEFORE MAGISTRATES IN THE COMMONWEALTH, 1912 to 1916.**

State.	1912.	1913.	1914.	1915.	1916.
New South Wales ...	89,951	92,107	94,766	86,576	82,036
Victoria ...	53,087	56,058	57,977	63,140	59,315
Queensland ...	27,323	29,166	29,635	30,047	25,206
South Australia ...	10,685	11,818	10,693	9,587	8,322
Western Australia ...	15,092	16,442	17,879	14,864	15,454
Tasmania ...	7,084	7,101	6,481	6,306	5,259
Northern Territory...	219	189	203	287	105
Commonwealth ...	203,441	212,831	217,634	210,807	195,697

As the table shews, there was a decrease in 1916 in charges in all the States with the exception of Western Australia, where there was a small increase due to the preponderance of offences against the public welfare. It may be pointed out, however, that many of these offences consist of technical breaches of various enactments which hardly come within the category of ordinary crime.

Investigation of the returns shews, moreover, that considerable variations in the total for single States are occasioned by breaches of new Acts, or the more stringent enforcement of the provisions of existing Acts. For example, the increase in the Victorian figures for 1915 was due to the inclusion in the summons returns of over 10,000 cases in connection with the Commonwealth Electoral Act. Any deductions drawn from the total returns as to the increase or otherwise of criminality must, therefore, be largely influenced by a careful analysis of the detailed list of offences. (See also § 2, 1, *ante*.)

The figures given in the tabulation above include, of course, a number of people who were wrongly charged, and statistically are not of great importance. The actual number of convictions in connection with the persons who appeared before the lower courts in each year of the period 1912 to 1916 is, therefore, given hereunder. A separate line is added shewing the committals to higher courts.

CONVICTIONS AND COMMITTALS AT MAGISTRATES' COURTS, 1912 to 1916.

\* Exclusive of four extradited.

4. **Convictions for Serious Crime.**—While the figures given in the preceding table refer to the entire body of convictions, the fact must not be lost sight of that they include a large proportion of offences of a technical nature, many of them unwittingly committed, against various Acts of Parliaments. Cases of drunkenness and minor breaches of good order, which, if they can be said to come within the category of crime at all, at least do so in a very different sense to some other offences, also help to swell the list. The following table has, therefore, been prepared for the purpose of shewing the convictions at magistrates' courts for what may be regarded as the more serious offences, *i.e.*, against the person and property, either separately or conjointly, and forgery and offences against the currency:—

**CONVICTIONS FOR SERIOUS CRIME AT MAGISTRATES' COURTS, 1912 to 1916.**  
(COMMONWEALTH.)

State.	1912.	1913.	1914.	1915.	1916.
New South Wales ...	5,904	6,161	6,100	5,217	6,271
Victoria ...	2,655	2,405	2,705	2,994	2,736
Queensland ...	1,495	1,651	1,497	1,639	1,487
South Australia ...	554	571	665	607	522
Western Australia ...	1,053	1,111	1,237	1,005	1,014
Tasmania ...	566	657	611	558	441
Northern Territory ...	11	12	28	18	37
Commonwealth ...	12,238	12,568	12,843	12,038	12,508

Compared with the population the above figures give the following results per 10,000 inhabitants:—

**CONVICTIONS FOR SERIOUS CRIME PER 10,000 INHABITANTS, 1912 to 1916.**  
(COMMONWEALTH.)

State.	1912.	1913.	1914.	1915.	1916.
New South Wales ...	33.9	34.1	32.9	27.9	33.5
Victoria ...	19.6	17.3	19.0	21.0	19.4
Queensland ...	23.7	25.3	22.2	23.9	21.9
South Australia ...	13.1	13.2	15.1	13.8	12.1
Western Australia ...	34.9	35.4	38.2	31.2	32.2
Tasmania ...	29.5	33.5	30.8	28.0	22.3
Northern Territory ...	32.7	32.8	74.6	40.9	76.3
Commonwealth ...	26.3	26.2	26.1	24.3	25.5

**5. Decrease in Crime.**—The figures quoted in the preceding table shew that during the last five years the rate of serious crime has decreased slightly, while if the comparison be carried back to 1881 the position is seen to be still more satisfactory. The rate of convictions at magistrates' courts per 10,000 of the population is given below for each of the years 1881, 1891, 1901, 1912, and 1916. Only the more serious offences, particularised in the preceding sub-section, have been taken into consideration.

**RATE OF CONVICTIONS FOR SERIOUS CRIME IN THE COMMONWEALTH, 1881-1916.**

Year.						Convictions per 10,000 Persons
1881 ...	...	...	...	...	...	69.3
1891 ...	...	...	...	...	...	44.8
1901 ...	...	...	...	...	...	29.1
1912 ...	...	...	...	...	...	26.3
1916 ...	...	...	...	...	...	25.5

The figures already quoted refer to total convictions, and in respect of individuals necessarily involve a considerable amount of duplication, especially in minor offences, such as petty larcenies, etc., in which the same offender appears before the court many times in the course of the year.

**6. Causes of Decrease in Crime.**—The statistics given shew that there has been a considerable decrease in crime throughout Australia. The results so far quoted are restricted entirely to the lower or magistrates' courts. There has also been a gratifying decrease in regard to offences tried at the higher courts, as will be seen later.

Attempts have been made to account for this decline: *e.g.*, advance in education, enlightened penological methods, etc. Much depends upon what is meant by education. Many classed in census statistics as "educated" can barely read and write. In this connection, moreover, it ought not to be forgotten that collaterally with the introduction of ordinary intellectual education certain people have departed from their pristine virtues. In regard to the deterrent effect of punishment, it may be said that in respect of many offences, notably drunkenness, vagrancy, petty larcenies, etc., it appears to be almost negligible. In general, punishment has declined in brutality and severity, and has improved in respect of being based to a greater extent upon a scientific penological system, though in this latter respect there is yet much to be desired. Recent advances in penological methods will be referred to in a subsequent section. Here it will be sufficient to remark that under the old *régime*, a prisoner on completion of a sentence in gaol was simply turned adrift on society, and in many cases sought his criminal friends, and speedily qualified for readmission to the penitentiary. Frequently he was goaded to this by mistaken zeal on the part of the police, who took pains to inform employers of the fact of a man having served a sentence in gaol. For a long time any assistance to discharged prisoners was in the hands of private organisations, such as the Salvation Army Prison Gate Brigade, but in some of the States, and notably in New South Wales, the authorities themselves look after the welfare of discharged prisoners in the way of finding work, providing tools, etc.

Improvements in the means of communication and identification have been responsible for some of the falling-off noticeable in the criminal returns, the introduction of the Bertillon system having contributed to certainty of identification. In his report for the year 1910 the Inspector-General of Police in New South Wales states that "criminals have a wholesome dread of the finger print system, and I have not the slightest doubt that it is one of the principal causes of the diminution of serious crimes." Part of the improvement may no doubt be referred also to the general amelioration in social conditions that has taken place during the last fifty years.

7. **Drunkenness.**—The number of cases of drunkenness and the convictions recorded in connection therewith during the period 1912 to 1916 will be found in the following table:—

**CASES AND CONVICTIONS.—DRUNKENNESS, 1912 to 1916.**  
(COMMONWEALTH.)

State.	1912.		1913.		1914.		1915.		1916.	
	Cases.	Convictions.	Cases.	Convictions.	Cases.	Convictions.	Cases.	Convictions.	Cases.	Convictions.
New South Wales	32,915	32,720	32,676	32,467	33,393	33,208	26,010	25,863	23,192	23,017
Victoria	13,524	7,446	14,782	7,676	14,437	7,425	13,453	7,086	11,316	6,049
Queensland	14,225	14,213	14,852	14,840	16,510	16,443	16,260	16,196	13,374	13,059
South Australia	5,470	5,416	5,994	5,962	5,282	5,243	4,060	4,027	3,451	3,433
Western Australia	4,908	4,855	5,353	5,302	5,795	5,770	4,836	4,806	4,081	4,045
Tasmania	614	633	729	721	685	661	628	612	486	480
Northern Territory	80	80	61	61	64	64	158	158	208	202
Commonwealth	71,766	65,363	74,447	67,029	76,166	68,814	65,405	58,748	56,110	50,285

The number of convictions is, as might naturally be expected, almost identical with the number of cases. Victoria, however, is an exception, but in this State it is explained that offenders are generally discharged on a first appearance, and no conviction is recorded, a similar procedure being also adopted in the case of those arrested on Saturday and detained in custody till Monday. The logic of excluding these cases from the list of convictions is certainly open to doubt.

The convictions for drunkenness per 10,000 of the population during each of the years from 1912 to 1916 are given hereunder :—

### CONVICTIONS FOR DRUNKENNESS PER 10,000, 1912 to 1916.

(COMMONWEALTH.)

State.	1912.	1913.	1914.	1915.	1916.
New South Wales ...	188.1	179.3	179.3	138.2	123.1
Victoria ...	54.9	55.1	52.2	49.7	42.9
Queensland ...	225.0	227.4	243.6	235.7	192.7
South Australia ...	128.4	137.5	119.1	91.5	79.3
Western Australia ...	161.1	168.9	178.4	149.1	128.5
Tasmania ...	33.0	36.8	33.3	30.7	24.2
Northern Territory...	238.1	166.6	170.6	358.8	416.6
Commonwealth ...	140.7	139.5	139.9	118.7	102.5

The convictions for drunkenness taken by themselves are not an altogether satisfactory test of the relative sobriety of the inhabitants of each State, inasmuch as several important factors must be taken into consideration. The age and sex constitution of the people, for example, is by no means identical in each State, Western Australia having by far the largest proportion of adult males. Owing to the smallness of the population the figures for the Northern Territory are, of course, abnormal. The avocations of the people affect the result, since persons engaged in strenuous callings are, on the whole, more likely to indulge in alcoholic stimulants than those employed in less arduous ones. The distribution of the population is also a factor, the likelihood of arrest or summons for drunkenness obviously being greater in the more densely populated regions, and lastly, allowance must be made for the attitude of the magistracy, the police, and the public generally in regard to the offence.

It is not unusual to supplement statistics of drunkenness by furnishing also the relative consumption of alcoholic beverages. Deductions drawn therefrom will be very misleading if they fail to take into account also the consumption of non-intoxicating beverages such as tea and coffee, and the general habits of the people. Throughout the greater part of Europe, tea and coffee are consumed but sparingly, while Australia, as is well known, is one of the greatest tea-drinking countries of the world.

The following table shewing the consumption of spirits, wine, and beer per head of the population has, with the exception of the figures relating to the Commonwealth, been compiled from returns prepared by the British Board of Trade. The figures quoted for the Commonwealth refer to the year 1916-17, and for the other countries mentioned cover the quinquennium 1907-11.

### CONSUMPTION OF ALCOHOLIC BEVERAGES IN VARIOUS COUNTRIES.

Country.	Consumption per Head of Population.			Country.	Consumption per Head of Population.		
	Spirits.	Wine.	Beer.		Spirits.	Wine.	Beer.
United Kingdom...	Imp. Galls. 0.76	Imp. Galls. 0.27	Imp. Galls. 26.94	Canada ...	0.96	0.11	6.22
Commonwealth...	0.61	0.50	11.62	German Empire	1.37	1.12	22.86
New Zealand ...	0.78	0.15	9.88	France ...	1.38	34.32	8.48
Union of South Africa ...	0.33	0.70	1.28	United States ...	1.04	0.54	16.72

**8. Treatment of Drunkenness as Crime.**—Though the problem of the correct method of dealing with dipsomania is by no means an easy one, it seems fairly clear that the present plan of bringing offenders before magistrates, and subjecting them to the penalty of imprisonment or fine, has little deterrent effect, as the same offenders are constantly reappearing before the courts. Further, the casting of an inebriate into prison, and placing him in his weakened mental state in the company of professional malefactors, doubtless tends to swell the ranks of criminals and certainly tends to lower his self-respect. Examination of the prison records in New South Wales some years ago disclosed the fact that over 40 per cent. of the gaol population had commenced their criminal career with a charge of drunkenness. During the last few years the dangers of moral contamination in this way have been more accurately appreciated, and a system of classification of prisoners has been adopted whereby the petty offender is as far as possible kept from association with the more evilly-disposed. The Comptroller-General of Prisons in Queensland stated in his report for the year 1907 that "the drunken habit in many cases is merely one of many symptoms which jointly indicate the existence of a graver condition than simple habitual drunkenness."

**9. Remedial Treatment of Inebriates.**—Legislation has been passed in each State providing for the commitment of inebriates to special Government institutions. The laws in the various States are as follows:—New South Wales, Inebriates Act 1912; Victoria, Inebriates Act 1915; Queensland, Inebriate Institutions Act 1896; South Australia, Inebriates Act 1908 and 1913; Western Australia, Inebriates Act 1912; Tasmania, Inebriates Act 1885, Inebriate Hospitals Act 1892. Curative work was first undertaken by the Government of New South Wales in 1907. In most cases the institutes are connected with the gaols, and, naturally, custodial measures are still a strong feature in their management; nevertheless, the results of remedial measures have been encouraging. In Victoria an institute purporting to be wholly remedial was founded in 1907. It may be mentioned that there are private retreats in various places in the Commonwealth, but these are not officially subsidised or inspected.

**10. Treatment of Habitual Offenders.**—In New South Wales the Habitual Criminal Act of 1905 gives judges the power of declaring a prisoner, after a certain number of sentences, to be an habitual criminal, and as such to be detained until, in the opinion of the authorities, he is fit to be at large. At the end of 1916 there were twenty-three persons in prison under this Act. Since the passing of the Act sixty-eight males and one female have been declared to be habitual criminals. Of the thirty-five habitual criminals released under section 7 of the Act up to the end of 1916, four have been re-committed to prison. The Indeterminate Sentences Act came into force in Victoria in July, 1908, and up to the end of June, 1917, 414 prisoners had been admitted to the three reformatory prisons, and 286 had been released on probation on the recommendation of the Indeterminate Sentences Board, and ten by special authority of the Governor. Of the 276, ninety-eight have completed their probation of two years and passed out of control by the Board, sixty remain in various stages of probation, thirty-four were still in the parole stage, and eighty-four have again become delinquent. The provisions of the Habitual Criminals Amendment Act of 1907 were put into force in South Australia in 1909, and twenty criminals had been declared to be habitual offenders up to the end of 1916. Of these, eleven had been released after serving the indeterminate portion of their sentence. The Criminal Code Amendment Act of 1914, which makes provision for the detention and control of habitual criminals, was assented to in Queensland on the 3rd December, 1914, but up to the end of 1916 no prisoners had been brought under its provisions. Naturally it will be some time before the full effect of these measures on the prevalence of crime can be estimated. The Comptroller-General of Prisons in New South Wales states, however, that the system has exercised a wholesome deterrent effect on the criminal who is not a prisoner, while the Indeterminate Sentence Board in Victoria states that it has become impressed with the advantages which this form of sentence offers, both from a reformatory and deterrent standpoint, over the ordinary sentence.

During the period in which the Habitual Criminals and Offenders Act of 1907 has been in force in Tasmania, sixty-six men and two women have been released under its provisions, and the results, according to the Sheriff, have been satisfactory.

**11. Treatment of First Offenders.**—In all the States and in New Zealand statutes dealing with first offenders have been in force for some years, the dates of passing the Acts being as follows: New South Wales, 1894; Victoria, 1890; Queensland, 1887; South Australia, 1887 and 1913; Western Australia, 1892; Tasmania and New Zealand, 1886. The method of procedure is practically the same in all cases, *i.e.*, with regard to most first offenders the magistrate or judge is empowered to allow the offender to go free on recognisances being entered into for his good behaviour for a certain period. In practice, this humane law has been found to work excellently, very few of those to whom its provisions have been extended having been found to relapse into crime.

**12. Children's Courts.**—Special courts for the trial of juvenile offenders have been established in New South Wales, Victoria, Western Australia, and New Zealand within the last few years, while Children's Courts, although not under that name, are practically provided for by the State Children's Acts of 1895 and 1900 in South Australia. The object of these courts is to avoid, as far as possible, the unpleasant surroundings of the ordinary police court.

**13. Committals to Superior Courts.**—In a previous section it has been pointed out that comparisons of criminality based on a consideration of the total returns from magistrates' courts are somewhat inadequate, seeing that the figures include numbers of cases which are merely technical breaches of laws having in some instances a purely local significance. The committals to higher courts give a better basis of comparison, although even in this connection allowance must be made for the want of uniformity in jurisdiction. The table below gives the number of committals in each year from 1912 to 1916, with the proportion of such committals per 10,000 of the population. The rates are shewn on a separate line.

### COMMITTALS TO SUPERIOR COURTS, 1912 to 1916.

			Rate	7.0	6.1	6.3	5.9	5.7

\* Exclusive of four extradited.

The above figures shew that the rate of committals for serious crime has decreased by 19 per cent. during the last five years, but if the comparison be carried farther back, it will be found that, as compared with the earlier years, there has been a considerable improvement. This will be evident from an examination of the following figures, which shew the rate of committals per 10,000 persons in Australia at various periods since 1861:—

#### RATE OF COMMITTALS IN AUSTRALIA, 1861 to 1916.

Year ...	...	...	...	...	1861.	1871.	1881.	1891.	1901.	1916.
Committals per 10,000 inhabitants	...	...	...	...	22	14	12	11	8	6

The decline in proportion to population since 1861 has therefore been about 73 per cent.

### § 3. Superior Courts.

1. **Convictions at Superior Courts.**—The total number of convictions at superior courts, together with the rate per 10,000 of the population, is shewn below for each of the years 1912 to 1916:—

#### CONVICTIONS AT SUPERIOR COURTS, 1912 to 1916.

(COMMONWEALTH.)

State.				1912.	1913.	1914.	1915.	1916.
New South Wales	...	...	No.	620	772	810	843	815
			Rate	3.6	4.3	4.4	4.5	4.4
Victoria	...	...	No.	501	506	494	533	462
			Rate	3.7	3.6	3.5	3.7	3.3
Queensland	...	...	No.	384	343	382	351	266
			Rate	6.1	5.3	5.7	5.1	3.9
South Australia	...	...	No.	86	86	93	74	52
			Rate	2.0	2.0	2.1	1.7	1.2
Western Australia	...	...	No.	92	92	84	66	91
			Rate	3.1	2.9	2.6	2.0	2.9
Tasmania	...	...	No.	25	28	41	19	30
			Rate	1.3	1.4	2.1	1.0	1.5
Northern Territory	...	...	No.	3	1	1	1	1
			Rate	8.9	2.7	2.7	2.3	2.1
Commonwealth	...	...	No.	1,711	1,828	1,905	1,887	1,717
			Rate	3.7	3.8	3.9	3.8	3.5

The rate in 1901 was 4.6 per 10,000, and the decrease to the end of 1916 was, therefore, practically one-fourth.

In considering the above figures allowance must be made for the various factors enumerated in a preceding paragraph. Tasmania, it will be noted, shews the smallest proportion of serious crime, while the figures available shew that the island State is relatively the smallest consumer of alcoholic beverages. That a definite causal relation exists between the figures shewn by the respective tables is not, however, obvious.

2. **Offences for which Convictions were Recorded at Superior Courts.**—In the following table will be found a classification of the principal offences for which persons were convicted at the higher courts during each year of the period 1912 to 1916. Owing to lack of uniformity in the presentation of the returns for the several States the information is confined to the chief offences against the person only. In the case of Victoria the information is incomplete regarding the convictions on summons committals. The figures quoted refer to convictions in the Commonwealth during the period dealt with.

### CONVICTIONS FOR SERIOUS CRIME, SUPERIOR COURTS, 1912 to 1916.

(COMMONWEALTH.)

Offences.	1912.	1913.	1914.	1915.	1916.
Murder and attempts at ...	33	38	42	25	22
Manslaughter ...	16	14	15	15	13
Rape and crimes of lust ...	88	71	67	90	77
Other offences against the person ...	221	298	300	226	209

While the individual totals shew considerable fluctuations, the returns generally manifest considerable improvement. The general total of convictions for all offences against the person shews a decline since 1901 of about 26 per cent, and since 1912 of over 10 per cent.

3. **Capital Punishment.**—The table below gives the number of executions in each State during the period 1912 to 1916:—

### EXECUTIONS, 1912 to 1916.

(COMMONWEALTH.)

State.	1912.	1913.	1914.	1915.	1916.
New South Wales ...	1	...	...	...	2
Victoria ...	1	...	...	...	2
Queensland ...	...	2	...	...	...
South Australia ...	...	...	...	...	...
Western Australia ...	...	1	1	1	...
Tasmania ...	...	1	1	...	...
Commonwealth ...	2	4	2	1	4

In the early days of the history of Australia the penalty of death was attached to a large number of offences, many of which at the present time would be dealt with in the lower or magistrates' courts. With the growth of settlement, and the general amelioration in social and moral conditions, the list was, however, considerably curtailed, and the existing tendency is practically to restrict death sentences to cases of murder. It may be remarked that in cases of rape, which is a capital offence in some of the Australian States, the penalty has been but sparingly inflicted during the last few years. Juries are reputed to be loth to convict on this charge, owing to the uncertainty whether sentence of death will be pronounced.

During the period 1861 to 1880 the annual average number of executions in the Commonwealth was nine, from 1881 to 1900 the average was six, for the period 1901 to 1910 the figure stood at four, while the average for the last quinquennium was three.

#### § 4. Prisons.

1. **Prison Accommodation and Prisoners in Gaol.**—The table below shews the number of prisons in each State and the accommodation therein at the end of 1916:—

##### PRISONS AND PRISON ACCOMMODATION, 1916.

(COMMONWEALTH.)

State.	Number of Prisons.	Accommodation in—		Prisoners at End of Year.
		Separate Cells.	Wards.	
New South Wales ... ..	29	2,303	...	1,451
Victoria ... ..	17	1,438	646	773
Queensland ... ..	13	586	380	328
South Australia ... ..	13	760	453	237
Western Australia ... ..	24	640	816	207
Tasmania ... ..	2	190	280	45
Northern Territory ... ..	1	3	48	14
Commonwealth ... ..	99	5,920	2,623	3,055

The figures for Western Australia and the Northern Territory are exclusive of aborigines.

The number of prisoners in gaol, exclusive of debtors, at the 31st December in each of the years 1912 to 1916, is given below. A separate line is added in each instance shewing the proportion per 10,000 of the population.

##### PRISONERS IN GAOL, 1912 to 1916.

(COMMONWEALTH.)

State.	1912.	1913.	1914.	1915.	1916.
New South Wales ... { Number	1,257	1,456	1,643	1,579	1,451
... { Proportion	7.2	8.0	8.9	8.5	7.8
Victoria ... { Number	880	863	898	861	773
... { Proportion	6.5	6.2	6.3	6.1	5.5
Queensland ... { Number	529	450	518	413	328
... { Proportion	8.4	6.9	7.7	6.0	4.8
South Australia ... { Number	287	288	341	282	237
... { Proportion	6.8	6.6	7.7	6.4	5.5
Western Australia ... { Number	356	284	277	238	207
... { Proportion	11.8	9.0	8.6	7.5	6.6
Tasmania ... { Number	69	50	50	55	45
... { Proportion	3.6	2.6	2.6	2.7	2.3
Northern Territory ... { Number	12	7	8	12	14
... { Proportion	35.7	19.1	21.3	26.3	28.9
Commonwealth ... { Number	3,390	3,398	3,735	3,440	3,055
... { Proportion	7.3	7.1	7.6	6.9	6.2

From the preceding table it will be seen that the proportion to population of prisoners in gaol has fallen by 15 per cent. during the last five years, but, if the comparison be carried farther back, the position is seen to be more favourable, the prisoners in gaol in the Commonwealth numbering as much as 16 per 10,000 of the population in 1891.

**2. Improvement of Penological Methods.**—During recent years Australia, in common with most other civilised countries, has introduced considerable modifications and improvements in methods of prison management. Under the old *régime*, punishment partook more or less of the character of reprisal for wrongdoing, and the idea of constituting the prison as a reformatory agency was in the background. But of recent years there has been an earnest attempt at effecting a moral reformation in the unfortunates who lapse into crime. This aspect of prison management has been specially prominent in New South Wales. A short account of the re-organisation of the prison system in this State appears in preceding Year Books (see No. V., p. 922), but considerations of space preclude its repetition here. At the present time it is found that good results have followed the principles of scientific classification and restricted association of prisoners, together with the provision of separate institutions for the treatment of inebriates. Special efforts are put forward to provide reproductive work for prisoners, and no capable able-bodied man is engaged in labour that demeans him, but on the other hand is encouraged to take pride and pleasure in good work. There are five principal gaols in which prisoners are classified according to history, etc. The large establishments at Goulburn, Bathurst, and Parramatta deal respectively with first offenders, previously convicted but hopeful cases, and incorrigibles. At Long Bay there is a well-designed reformatory institution for females, providing for effective classification, and a penitentiary used as a distributing centre and a place of detention for short-term prisoners from the metropolis. The first-class minor gaols at Albury, Armidale, Broken Hill, Grafton and Maitland, are convenient centres for the reception of country prisoners, and also for the treatment of special cases. There are also several second-class minor gaols and police gaols where short-sentenced prisoners from the surrounding districts are dealt with. In New South Wales the system of carrying on afforestation by prison labour, somewhat after the manner of that in vogue for several years in New Zealand, has been introduced, and in 1911 a site near Tuncurry, on the Manning River, was selected for the purpose of initiating the scheme. Pine trees of various kinds have been planted, the seedlings set out in 1916 numbering over 167,000 in addition to 170,000 pine seeds sown. The daily average number of prisoners in camp was 28.9, and the cost per head about 24s. per week, or 3s. 5d. per day for each prisoner. So far the scheme appears to be a great success, the prisoners being healthy, cheerful, well-behaved, and industrious. Each prisoner has his own comfortable hut, where he takes his meals and sleeps, and may, if he so desires, write his letters. There are no armed or night guards at the camp. During the year 1914 a property of 107 acres was purchased, near the Emu Plains railway station, for the purpose of establishing a prison farm, and this was opened in April, 1915, with ten prisoners. This institution was disestablished in 1916, when it was taken over by the Department of Agriculture, and beyond selecting the prisoners for work on the farm, the Prisons Department has no further responsibility. That there is some connection between mental and physical health and crime is proved by the condition in which many persons are received into gaol. In a large number of instances prisoners are found to be suffering from contagious diseases. Under the Prisoners Detention Act such persons may be kept in gaol until cured, but, unfortunately, the provisions of the Act do not apply to short-sentenced prisoners detained in lieu of paying fines, many of whom are known to be afflicted with disease. A further reform, introduced in 1915, was the provision of the Shaftesbury Inebriate Institution for the treatment of non-criminal inebriates. In 1916 accommodation was provided for voluntary paying guests who wish to undergo treatment.

In 1902 the system of finger-print identification of criminals was introduced, and by the year 1903 bureaux had been established in the various States for the exchange of records. Very successful results have attended the introduction of the system.

Space will not permit of more than a passing reference to the improvements brought about in prison management in the other States. In Victoria there is an excellent system of classification and allocation of prisoners in various grades to different gaols, while at the important penal settlement at Pentridge a careful segregation into several classes is carried out. In common with the other States the latest humane methods of accommodation and prison treatment have for some time been employed. An afforestation camp known as McLeod Settlement, French Island, was opened in 1916, and on the 30th June, 1917, there were thirty-five inmates. The trees planted numbered 300,000. It is stated that the experiment has resulted in improvement, both in demeanour and physique of prisoners, and it is hoped that in many cases it will be conducive to a return to honest citizenship. A prison farm has also been established about three miles from the prison at Castlemaine, and the inmates are taken to and fro daily. It is proposed to provide accommodation later on for housing a certain number of prisoners on the farm site.

Queensland prisons have been considerably modernised during the last few years. The prison for females at Brisbane has been built on the radiating plan, and embodies the latest ideas in penological methods. Classification of prisoners has been fully carried out in the male and female divisions of Brisbane prison, at Rockhampton prison, and at the Stewart's Creek penal establishment. It is proposed to erect a new prison establishment at St. Helena, embodying the most modern features in design. Amongst recent reforms are the reduction of the period of separate treatment undergone by prisoners sentenced to hard labour or penal servitude, a remodelling of the remission clauses, and allowance of more liberal privileges in the way of correspondence and visits from friends. Electric light has been installed in the Brisbane prison, and prisoners are allowed to read up to 8 o'clock each evening.

Unusual circumstances have combined to keep crime at a low point in South Australia. In the first place there was never any transportation of criminals to the State, while in the earlier years of its history South Australian lawbreakers were transported elsewhere. The discovery of gold in the neighbouring colonies was also responsible for the drawing away of turbulent spirits who might later on have caused trouble. The present system was drafted mainly on English and European lines by the late W. R. Boothby, C.M.G., and has since been as far as possible adapted to modern penological procedure. It is proposed to establish an afforestation camp prison at the Bangham Forest Reserve on similar lines to that at Tuncurry in New South Wales. Excellent work for the benefit and assistance of discharged prisoners is performed by the Prisoners' Aid Association.

A Royal Commission in 1911 recommended the adoption of various reforms in connection with the prison system of Western Australia. The bulk of these were carried out, and included, amongst other things, an extension of the principle of separate treatment, improvement in prisoners' dietary scale, more satisfactory arrangements in regard to remission of sentences, and improvements in regard to hours of labour, leave of absence, etc., for the staff. The separate system has, however, been abolished. Amongst other improvements recently introduced may be mentioned the grant of an eight hours day to officers, enlargement and improved hygiene of cells, additional library facilities, assistance to discharged prisoners by provision of railway passes and monetary aid, appointment of committees to look after the welfare of discharged prisoners, and the remodelling of the "mark" system. The military method of control at Rottnest Island, coupled with considerable privileges to well-conducted prisoners, has proved very successful.

The daily average number of prisoners in confinement in Tasmanian gaols during the quinquennium 1911-12 to 1915-16 was about 63. There are penal establishments at Hobart and Launceston, and at the former the prisoners were concentrated in the northern wing during 1915-16. A new workshop also was erected, and the sanitary and lighting conditions were remodelled.

### § 5. Civil Courts.

1. **Lower Courts.**—The transactions of the lower courts on the civil side during each of the last five years are given in the table hereunder. As pointed out previously, the jurisdiction of the courts is by no means uniform in the various States.

#### LOWER COURTS.—CIVIL CASES, 1912 to 1916.

(COMMONWEALTH.)

State.				1912.	1913.	1914.	1915.	1916.
New South Wales	...	Cases	No.	32,531	40,265	37,472	39,828	35,724
		Amount	£	93,592	106,809	107,810	110,229	101,530.
Victoria	...	Cases	No.	36,043	39,911	41,497	41,055	38,573
		Amount	£	190,485	204,175	207,863	188,542	170,086.
Queensland	...	Cases	No.	14,962	15,716	16,015	15,729	14,094
		Amount	£	61,047	64,518	66,226	68,337	64,502
South Australia	...	Cases	No.	18,905	21,288	21,681	17,765	16,505.
		Amount	£	60,813	74,623	74,627	80,918	50,515.
Western Australia	...	Cases	No.	12,735	14,549	16,974	17,259	15,776.
		Amount	£	60,774	67,470	66,864	61,169	51,050.
Tasmania	...	Cases	No.	4,487	5,194	5,813	6,081	4,879.
		Amount	£	28,571	34,425	81,610	67,152	30,739.
Commonwealth	...	Cases	No.	119,663	136,923	139,452	137,717	125,551
		Amount	£	495,282	552,020	605,000	576,347	468,422

During the year 1916-17 the civil causes at lower courts in the Northern Territory amounted to 101 and the amount of judgments to £2003.

The figures just given represent the returns from Petty Sessions Courts in New South Wales and Victoria, the Petty Debts cases in Queensland, the Local Courts of South Australia and Western Australia, and the Court of Requests in Tasmania.

2. **Superior Courts.**—In the next table will be found the transactions on the civil side in the Superior Courts during each of the years 1912 to 1916.

The New South Wales returns are to some extent defective, as the figures quoted for amount of judgments include, up to 1913, in the case of the Common Law jurisdiction of the Supreme Court, the total judgments signed, while in the case of the other States the figures refer to sums actually adjudged after trial. For New South Wales, also, the transactions of district courts refer to the total amounts sued for, and, not the sums actually awarded after trial. Statistically the chief importance of the table consists in the fact that it shews a decline in litigiousness in Australia.

## SUPERIOR COURTS.—CIVIL CASES, 1912 to 1916.

(COMMONWEALTH.)

State.		1912.	1913.	1914.	1915.	1916.
New South Wales	{ Causes No.	847	926	864	845	902
	{ Amount £	528,384	568,761	*328,429	*293,697	*290,642
Victoria	{ Causes No.	637	617	710	713	536
	{ Amount £	75,886	91,428	91,903	93,695	104,965
Queensland	{ Causes No.	108	133	129	129	124
	{ Amount £	16,013	22,932	19,156	22,165	20,335
South Australia...	{ Causes No.	26	44	27	21	14
	{ Amount £	29,352	9,688	17,358	2,882	2,482
Western Australia	{ Causes No.	496	546	578	367	348
	{ Amount £	78,068	79,534	37,610	37,581	36,042

	{ Amount £	7,866	7,486	28,159	17,112	17,539
Commonwealth	{ Causes No.	2,227	2,384	2,693	2,357	2,232
	{ Amount £	735,569	779,829	522,615	467,132	472,005

\* Exclusive of judgments signed, Supreme Court, the amount not being recorded.

During the year 1916-17 the civil causes in the higher courts of the Northern Territory numbered 13 and the amount of judgments was returned as £2288.

3. Divorces and Judicial Separations.—The number of divorces and judicial separations in each State during the period 1912 to 1916 is shewn below :—

## DIVORCES AND JUDICIAL SEPARATIONS, 1912 to 1916.

(COMMONWEALTH.)

State.	1912.		1913.		1914.		1915.		1916.	
	Divorces.	Judicial Separations	Divorces.	Judicial Separations	Divorces.	Judicial Separations	Divorces.	Judicial Separations	Divorces.	Judicial Separations
New South Wales	349	12	317	9	297	6	349	6	348	11
Victoria	250	2	237	2	244	1	218	1	206	1
Queensland	17	1	31	1	29	1	27	...	24	...
South Australia	13	...	8	...	20	...	12	...	15	...
Western Australia	36	...	37	...	21	1	31	2	13	...
Tasmania	8	...	8	...	7	...	7	...	2	...
Northern Territory	...	...	...	...	1	...	1	...	...	...
Commonwealth	673	15	638	12	619	9	645	9	608	12

The average annual number of divorces and judicial separations in the Commonwealth at decennial periods from 1871 to 1910 and for the six years 1911-16 is given on next page :—

### DIVORCES AND JUDICIAL SEPARATIONS, 1871 to 1916.

	1871-1880.	1881-90.	1891-1900.	1901-10.	1911-16.
Commonwealth ...	29	70	358	401	627

The bulk of the divorces and judicial separations refer, as the table shews, to New South Wales and Victoria, the Acts of 1899 and 1889 in the respective States making the separation of the marriage tie comparatively easy. In some statistical works it is customary to compare the divorces in any year with the marriages in the same year. The comparison is, however, quite valueless, as there is no necessary connection between the figures.

4. **Probates.**—The number of probates and letters of administration granted, together with the value of the estates concerned, is shewn below for each State for the period 1912 to 1916:—

### PROBATES AND LETTERS OF ADMINISTRATION, 1912 to 1916.

(COMMONWEALTH.)

State.			1912.	1913.	1914.	1915.	1916.
New South Wales	...	{ Number	3,648	3,679	4,438	5,088	5,336
		{ Value £	13,389,806	8,443,068	9,997,615	10,813,889	11,687,910
Victoria	...	{ Number	4,585	4,483	4,451	4,449	5,448
		{ Value £	8,533,502	8,367,862	8,481,720	8,759,728	8,917,481
Queensland	...	{ Number	755	765	765	896	967
		{ Value £	2,730,039	2,640,017	2,331,224	2,720,696	3,041,514
South Australia	...	{ Number	1,246	1,373	1,418	1,515	1,661
		{ Value £	2,383,238	2,214,241	3,050,075	2,894,517	2,031,206
Western Australia	...	{ Number	552	580	577	682	957
		{ Value £	841,800	607,972	1,009,677	936,107	1,699,297
Tasmania	...	{ Number	465	415	336	418	423
		{ Value £	983,618	680,477	727,126	793,106	871,950
Commonwealth	...	{ Number	11,251	11,295	12,035	13,048	14,792
		{ Value £	28,862,003	22,953,637	25,597,437	26,918,243	28,249,358

As may naturally be expected, the figures in the above table, giving the value of property left each year, shew considerable variations.

5. **Bankruptcies.**—The returns in bankruptcy during each of the last five years are given in the following table.

For several reasons comparisons drawn from the figures in the following table are of little value. In the first place, the statements of assets and liabilities are notably unsatisfactory, particularly in regard to the former. Then, again, there is wide dissimilarity in regard to the laws in force in the various States and the method of procedure thereunder in connection with bankruptcy. Further, there are no means of knowing how many persons in each State who were in a bankrupt condition made private arrangements with their creditors either personally or by intervention of a solicitor. The figures quoted in the table exclude the private arrangements in Victoria and South Australia, and the liquidations and compositions in Queensland and Tasmania.

## BANKRUPTCIES, 1912 to 1916.

(COMMONWEALTH.)

6. **High Court of Australia.**—Under the provisions of section 71 of the Commonwealth Constitution Act, the judicial power of the Commonwealth is vested in a Federal Supreme Court, called the High Court of Australia, and in such other courts as the Parliament creates or invests with federal jurisdiction. The Federal High Court possesses both original and appellate jurisdiction. The powers of the court are defined in Chapter III. of the Constitution Act and in the Judiciary Acts of 1903-15. At present the court consists of a Chief Justice and six other judges. Sittings of the court are held in the capitals of the various States as occasion may require. The following statement shews the transactions of the High Court for the quinquennium 1912-16:—

## COMMONWEALTH HIGH COURT TRANSACTIONS, 1912 to 1916.

Items.	1912.	1913.	1914.	1915.	1916.
I. ORIGINAL JURISDICTION.					
Number of writs issued ...	63	83	75	126	141
Number of causes entered for trial ...	7	9	6	12	14
Verdicts for plaintiffs ...	6	5	5	6	7
Verdicts for defendants ...	...	2	1	6	3
Otherwise disposed of ...	20	16	31	40	60
Amount of judgments ...	£769	£6,556	£5,304	£4,966	£4,479
II. APPELLATE JURISDICTION.					
Number of appeals set down for hearing ...	89	66	71	85	67
Number allowed ...	43	33	25	23	23
Number dismissed ...	36	26	38	39	24
Otherwise disposed of ...	10	7	8	23	10

## COMMONWEALTH HIGH COURT TRANSACTIONS, 1912 TO 1916—continued.

Items.	1912.	1913.	1914.	1915.	1916.
III. AMOUNT OF FEES COLLECTED.					
Amount in each year...	£590	£692	£656	£808	£756

During the year 1916 the Court dealt also with other matters as follows:—

Appeals from Assessments under the Land Tax Assessment Act...	10
Special cases stated for the opinion of the Full Court ...	13
Applications for Prohibition ...	3
Applications under the Trading with the Enemy Act ...	5

7. **Commonwealth Court of Conciliation and Arbitration.**—A more or less detailed statement regarding the operation of this Court, which was established under the provisions of the Commonwealth Conciliation and Arbitration Act of 1904-15 will be found in Section xxvii.

## § 6. Cost of Administration of Justice.

The table below shews the expenditure from Consolidated Revenue during each of the last five years in connection with the administration of justice in each of the States. Expenditure on police and prisons has been separately shewn. With regard to the figures quoted for "other" expenditure, a slight allowance has to be made for the fact that some extraneous expenditure has been included which it was found impossible to disentangle from the total, but the amount is in no instance large.

EXPENDITURE ON JUSTICE, 1912 to 1916.  
(STATES.)

State.		1912.	1913.	1914.	1915.	1916.

	Gaols	22,291	21,403	22,339	23,265	22,321
	Other	77,544	77,182	79,142	86,790	79,510
Tasmania	Police	43,236	45,237	45,972	45,952	47,320
	Gaols	5,664	6,103	7,071	7,261	7,013
	Other	19,524	20,877	21,763	21,338	22,190
Northern Territory	Police	10,609	10,614	10,307	10,216	10,260
	Gaols	2,309	2,289	2,501	2,128	2,875
	Other	2,513	2,136	1,941	1,453	2,744
Commonwealth	Police	1,533,673	1,564,704	1,598,227	1,590,931	1,639,058
	Gaols	217,307	223,959	235,893	238,132	236,591
	Other	668,381	690,543	712,748	735,439	735,149

With the exception of that of the Northern Territory, the expenditure shewn in the foregoing table is that incurred by the State Governments only, and does not include expenditure in connection with the Federal High Court, which is shewn hereunder for the period 1912-13 to 1916-17:—

## EXPENDITURE ON FEDERAL HIGH COURT, 1912-13 to 1916-17.

Year.	Amount.	Year.	Amount.
	£		£
1912-13 ... ..	23,334	1915-16 ... ..	31,447
1913-14 ... ..	32,709	1916-17 ... ..	31,780
1914-15 ... ..	31,037		

Other items of federal legal expenditure also not included in the table are Court of Conciliation and Arbitration £11,068, Crown Solicitor £10,766, and general £13,880. Excluding Patents and Copyrights, the total expenditure by the federal law authorities for the year 1916-17 was £71,627.

For the purposes of comparison the figures in the first table above have been reduced to a population basis, and the results are given in the table following:—

## EXPENDITURE ON JUSTICE PER INHABITANT, 1912 to 1916.

(STATES.)

State.	1912.	1913.	1914.	1915.	1916.
	s. d.	s. d.	s. d.	s. d.	s. d.

Tasmania ... ..	(Police 4 6 Gaols 0 7 Other 2 0)	(Police 4 7 Gaols 0 7 Other 2 2)	(Police 4 7 Gaols 0 8 Other 2 2)	(Police 4 7 Gaols 0 9 Other 2 1)	(Police 4 9 Gaols 0 8 Other 2 3)
Northern Territory ... ..	(Police 63 2 Gaols 13 9 Other 15 0)	(Police 58 0 Gaols 12 6 Other 11 8)	(Police 52 0 Gaols 12 7 Other 9 9)	(Police 44 9 Gaols 9 4 Other 6 4)	(Police 43 1 Gaols 12 1 Other 11 6)
Commonwealth ... ..	(Police 6 7 Gaols 0 11 Other 3 0)	(Police 6 6 Gaols 0 11 Other 3 0)	(Police 6 6 Gaols 0 11 Other 3 0)	(Police 6 6 Gaols 1 0 Other 3 0)	(Police 6 9 Gaols 1 0 Other 3 0)

Owing to the smallness of the white population, large area to be policed, and cost of supplies, transport, etc., the figures for the Northern Territory must necessarily appear somewhat abnormal.

The total expenditure in the Commonwealth in connection with the administration of justice in the various States has risen from ten shillings per inhabitant in 1901 to ten shillings and ninepence in 1916. Police expenditure has increased by about a shilling per head, the average for gaols is about twopence per head less, while the expenditure on courts and the remaining machinery of justice has slightly decreased during the same period. Including federal expenditure, the outlay in 1916-17 amounted to about eleven shillings per head.

## SECTION XXIV.

## PUBLIC BENEVOLENCE.

## § 1. Introductory.

1. **General.**—Charity and charitable effort in Australia may be classified under three headings, viz.:—(a) State; (b) public; (c) private. To the first belong all institutions wholly provided for by the State, such as the principal lunatic asylums in the various States, the Government hospitals in Western Australia, and the Government asylums for infirm in New South Wales. The second class comprises public institutions of two kinds, viz.:—(i.) Institutions partially subsidised by the State or State endowed, but receiving also private aid, and (ii.) those wholly dependent upon private aid. To the former division belong such institutions as the principal metropolitan hospitals. In the latter are included institutions established and endowed by individuals for the benefit of the needy generally. All charitable movements of a private character are included in the third group.

A more or less accurate statistical account is possible in classes (a) and (b), but in regard to (c) complete tabulation is, for obvious reasons, impossible. Moreover, public response to special appeals, and summary relief in kind, cannot be statistically recorded. Hospitals, orphanages, homes, benevolent asylums, etc., naturally attract the largest share of charitable aid; but there are numerous minor charities dependent upon private beneficence. In institutions which receive Government aid, management and finance are usually relegated to executive bodies.

The scope which economic and industrial conditions in Australia afford for the exercise of natural ability, and the comparatively wide distribution of wealth throughout the Commonwealth, operate to prevent the development of a permanent pauper class, and at the same time lessen in a dual way the burden of charity. This result is brought about by the increase, on the one hand, of the number of people whose prosperity enables them to relieve the indigent and unfortunate, and by the reduction, on the other, of the number who need assistance. Enactments of State Legislatures have decreed short hours and a liberal holiday allowance for large numbers of persons engaged in industrial and other pursuits, and, even in occupations not covered by Act of Parliament, the general conditions of employment often provide a considerable amount of leisure. This, coupled with an equable climate, enables the community to spend much of its time in the open air, with resultant advantages to its physique and general health. No poor-rate is levied in Australia, and Government aid without return is required only for the aged and disabled. Moreover, although Old Age Pensions, Invalid Pensions, and Maternity Allowances are paid by the Commonwealth, the payments are looked upon rather in the light of a citizen's right than as a charity. Reference to these matters will be found in § 4, *Miscellaneous*, chap. xxxiv.

To meet special and temporary conditions, various relief works have been started from time to time, in which the able-bodied who may be forced to seek official relief are required to make some return for the assistance afforded.

In each of the States there are Government asylums for the care of the insane, and the condition of these unfortunates has been steadily ameliorated by the general advance in psychiatry.

Young children deprived of parental training and control are cared for and educated in orphanages and industrial schools, and those who have been guilty of some specific offence, or who are beyond effective parental control, are committed to "reformatories."

From time to time relief funds have been organised for famine-stricken territories (*e.g.*, China, India, etc.), or for places where plague, flood, fire, or earthquake has shewn the need of urgent relief. Special funds are also raised for such as are disabled or bereaved through war. Complete statistical information in regard to these forms of charity is not, however, available. It may be mentioned that the daily Press frequently accepts the duties of collectorship in charity appeals. In regard to subscriptions to the various patriotic funds, which have been instituted in consequence of the war, the total for Australia, up to the end of July, 1916, has been estimated at £5,758,000.

**2. Charity Reforms.**—The evident overlapping of charitable effort has on various occasions led to discussion regarding methods of collection and distribution. The great desideratum in charity organisation is that the available aid should be relegated solely to the relief of distress and suffering. The true interests of the sick poor would thus be conserved, and the real intention of the donors fulfilled. With greater public attention, improved administration has been brought about. Societies to prevent overlapping have been formed, resulting in improved economical collection and distribution of charitable aid, and a better system of using the available accommodation.

Other proposed reforms aim at ascertaining the cause of poverty and crime, and finding the necessary palliative. Increased provision of better houses and workrooms and improved sanitation are advocated, together with more stringent legislative measures to enforce cleanliness and healthy modes of life. Further, factory legislation, Health Acts, etc., have enacted provisions for safeguarding dangerous machinery, and permitting only competent persons to be employed thereon.

**3. Tabulation of Charities Statistics.**—Differences in the organisation of charities prevent uniform tabulation of statistics for all the States, but certain of the larger features of the statistics of benevolence have been combined for the whole Commonwealth, and are shewn for a period extending over five years. Where the combination has been for dissimilar periods the nearest years have been taken. Satisfactory tabulation for other charities is not yet possible.

## § 2. The Larger Charities of Australia.

**1. Hospitals.**—All of the State capitals have several large and well-equipped hospitals, and there is at least one in every important town. In large centres there are hospitals for consumptives, women, children, infectious diseases, incurables, etc. The

number of hospitals in Australia, with the admissions, patients treated, deaths, and expenditure, is shewn in the following table. Only general hospitals are tabulated, since the working of "special" institutions is not properly comparable with those which treat every class of case.

#### HOSPITALS IN THE COMMONWEALTH, 1912 to 1916.

Particulars.	1912.	1913.	1914.	1915.	1916.
Number of institutions ...	368	381	389	398	391
Number of beds ...	14,574	15,225	15,345	16,374	15,811
Admissions during year ...	139,378	145,908	155,531	169,892	166,588
Indoor patients treated ...	144,692	152,077	164,349	179,829	176,279
Deaths ...	11,235	11,362	11,468	12,809	13,128
Expenditure ...	£ 1,102,134	1,264,605	1,255,658	1,280,461	1,351,160

In addition to those admitted to the institutions there are large numbers of out-patients. The exact number of these cannot be given, but a rough estimate of distinct cases for 1916 places the total at about 300,000.

Fuller details of hospital statistics are given for 1916 in the table below, the States and Northern Territory of the Commonwealth being shewn separately :—

#### GENERAL HOSPITALS.—NUMBER, STAFFS, AND ACCOMMODATION OF HOSPITALS IN THE COMMONWEALTH, 1916.

2. **Principal Hospitals in each State.**—The tables here given refer to general hospitals. In addition there are hospitals for "specials" (such as women's, children's, and infectious diseases hospitals), and institutions nearly allied to hospitals (such as consumptive sanatoria). Where the institutions carry on general hospital relief, they are still included with those establishments.

(i.) *New South Wales.* A Government hospital, with a staff of 17 medical officers and accommodation for 411 patients, is established at Little Bay, near Sydney. Altogether, there are four women's hospitals, one for women and children, and three children's hospitals in the metropolis. The Royal Prince Alfred Hospital, with a medical staff of 67, and with 410 beds, is the largest metropolitan endowed institution. Amongst other large metropolitan hospitals may be mentioned the Sydney Hospital, with a medical staff of 79 and with 334 beds, St. Vincent's with 49 doctors and 190 beds, and Lewisham with 24 medical attendants and 169 beds. In extra-metropolitan areas the Waterfall Hospital for Consumptives, which is a Government institution, provides accommodation for 300 patients. The Newcastle Hospital has 100 beds and a medical staff of 16. At the Carrington Convalescent Home at Camden, 110 patients may be admitted. The hospital in the Broken Hill district can accommodate 138.

(ii.) *Victoria.* There are several large metropolitan hospitals in Victoria. The largest of these, the Melbourne Hospital, has 327 beds; the Austin Hospital for Incurables has 230, the Alfred Hospital 168, St. Vincent's 138, and the Homœopathic 98. Amongst the country institutions, Bendigo has 218 beds, Geelong 205, and Ballarat 170.

(iii.) *Queensland.* Of the metropolitan hospitals, the largest is the Brisbane General, which can accommodate 316 patients. The Children's Hospital has 167 beds, the Diamantina 144, and the Mater Misericordiæ 112. Ipswich Hospital, with 146 beds, is the largest of the country institutions, followed by Toowoomba with 128, Townsville with 105, Rockhampton with 100, Mackay and Maryborough 96 each, Charters Towers 92, Mt. Morgan 71, and Bundaberg 70.

(iv.) *South Australia.* Including the Consumptive Home and Infectious Diseases Block, the Adelaide Hospital can accommodate a total of nearly 440 patients. The most important of the country hospitals are Port Augusta, Port Pirie, and Wallaroo, with 61, 49, and 48 beds respectively.

(v.) *Western Australia.* Information regarding the capacity of the Western Australian hospitals is not available, but some idea of their comparative importance may be gained from the figures relating to cases treated. In the metropolis, 3964 cases were treated at the Perth Hospital in 1916, and 896 at the Perth Children's. Of the country hospitals, Kalgoorlie returned 1358 cases, Fremantle 781, and Woorloo 533.

(vi.) *Tasmania*. There are well-equipped general hospitals in Hobart and Launceston. The former has a medical staff of 11 and can accommodate 185 patients, and the latter has 190 beds and a medical staff of two. Hospitals for women have been established in both centres, and there is a sanatorium for consumptives at Newtown. Outside the metropolitan area, the Devon Cottage Hospital has a medical staff of 3, and beds for 95 patients; the Lyell District Hospital can accommodate 35 patients, and there are nine other institutions in important country centres.

(vii.) *Northern Territory*. In addition to the hospitals at Darwin and Pine Creek, arrangements have been made for the supply of medicines and first aid to outlying stations. Great improvements have recently been made by the Public Health Department in the sanitation of Darwin. Close supervision is also exercised over the sanitary conditions at railway camps.

3. **Benevolent and Destitute Asylums.**—A marked increase has taken place in the amount of aid bestowed upon the aged. Two elements, each of them independent of the growth of population, have influenced this increase. One is, that the general age of the community has advanced—the large flow of immigration of fifty and sixty years ago having been mostly of persons in the prime of life; the other is the increased regard paid in all British communities to the well-being of the helpless. The result in Australia has been that numerous establishments have been founded for the housing and protection of such as are no longer able to care for themselves. The institutions are supported by Government and municipal aid, public subscriptions, charity performances, bequests, etc., and in many cases relatives of indigent and afflicted persons contribute to their maintenance.

The impossibility of an entirely satisfactory statistical tabulation in regard to all forms of charitable aid is especially marked in the case of benevolent institutions, since the conditions under which they have been established in the different centres in the Commonwealth have caused divergence in their development and in the classes of cases treated by them. For example, in Western Australia the Home for Destitute Women includes a maternity ward, for which the statistics are not separately kept. Since the predominating function of the institution is aid to the destitute, it has been included among benevolent asylums. In Victoria, nine of the hospitals are also benevolent asylums, and they are included wholly under the former. In South Australia, the Destitute Asylum includes lying-in and children's departments.

#### BENEVOLENT INSTITUTIONS.—REVENUE AND EXPENDITURE, 1916.

(i.) *Government Asylums for the Infirm, New South Wales*. There were three asylum hospitals in New South Wales at the end of 1916. Rookwood, the largest of these, had an average number resident of 1352, Newington had 757, and Liverpool 564. At the

Cottage Homes, situated at two separate localities in Parramatta, the average number resident was about 350. The State Labour Depot and Refuge at Randwick had 59 inmates at the end of 1916.

(ii.) *Benevolent Asylums, Victoria.* Besides the asylums attached to hospitals, there are eight institutions in Victoria. The Melbourne Benevolent Asylum had 693 inmates in 1916, the Victorian Home for Aged and Infirm 452, and the Convent of the Little Sisters of the Poor 220. Of the country benevolent asylums, Ballarat had 199 inmates, Bendigo 171, and Castlemaine 136.

(iii.) *Benevolent Asylums, Queensland.* There are four institutions in Queensland, with 939 beds. The most important of these is at Dunwich (Stradbroke Island) with 821 beds, while there are small institutions at Nundah, Rockhampton, and Toowoomba. At the end of 1916 the inmates of the four institutions numbered 1066.

(iv.) *Destitute Asylum, Adelaide.* Outside of hospitals and lunatic asylums the destitute of South Australia are dealt with and relieved at the Destitute Asylum, Adelaide. The institution includes lying-in and children's departments. In the asylum the number of inmates at the end of 1916 was 311.

(v.) *Homes for the Destitute, Western Australia.* There are two of these homes in Western Australia supported by public funds. The Old Men's Home at Claremont had 587 inmates at the end of 1916, and the Women's Home, Fremantle, which receives children also, had 121 adult inmates. The children admitted during the year numbered 45.

(vi.) *Charitable Establishments, Tasmania.* There are two principal Government charitable establishments in Tasmania. The New Town Infirmary and Consumptive Home, which has 220 beds, had 178 inmates at the end of June, 1917, and the Home for Invalids, Launceston, which has 21 beds, had 18 inmates on the same date.

4. **Orphanages, Industrial Schools, etc.**—The organisation of charitable effort varies greatly in regard to orphans and waifs. In many institutions shelter and some form of industrial training are offered to destitute children of all classes, whether orphans or not, while some of those styled orphanages do not confine their relief to orphans strictly so called. The figures in the next table are those for institutions where, it is believed, the principal effort is on behalf of those who are really orphans:—

#### ORPHANAGES IN COMMONWEALTH, 1912 to 1916.

Particulars.	1912.	1913.	1914.	1915.	1916.
Number of institutions ... ..	41	42	50	50	48
Admissions ... ..	1,563	1,514	2,340	2,376	2,118
Total number of inmates during year ...	5,057	4,720	4,344	4,503	5,061
Deaths ... ..	18	18	46	48	35
Expenditure* ... ..	£ 63,362	72,091	86,390	93,758	79,526

\* Incomplete. Expenditure is not available for some orphanages.

(i.) *New South Wales.* The care of destitute and neglected children is entrusted to the State Children's Relief Board, whose officers are charged with a strict supervision regarding the welfare of the children and the treatment of them by those to whom they are boarded out. Provision is made for instruction in various trades and callings, and many of the children become useful members of society. The number of children under the Board's supervision in 1916-17 was 11,976. The board's expenditure in that year was £168,623, or £14 2s. per child.

There are also fifteen orphanages, and various farm homes, country homes for children, etc., with upwards of 1000 children under care.

There are several reformatory and industrial schools maintained by the State. At the Parramatta Industrial School for Girls, to which a Training Home was attached in 1912, there were on 31st December, 1916, 155 inmates—125 in the Industrial School, and 30 in the Training Home. At the Farm Home for boys, Gosford, 80 boys were admitted, and 75 discharged. Of the latter, 5 were apprenticed and 59 released on probation.

(ii.) *Victoria*.—There are ten orphanages in Victoria, with 1613 beds. The total number under care in 1915-16 was 2101, of whom 1637 were inmates on 30th June, 1916. The expenditure in 1915-16 was £32,253. The Melbourne Protestant Asylum had 308 inmates on the 30th June, 1916, the Ballarat Asylum 215, Nazareth House, Ballarat, 228, Geelong Roman Catholic Boys 201, and Melbourne Roman Catholic Boys 184.

At the end of 1916 there were six schools for neglected children and seven reformatory schools in the State. Of these, two in each class are wholly controlled by the Government, being used merely as receiving and distributing depots. The children are sent thence to situations, foster homes, or other institutions dealing with State wards. The other schools are under private management, receiving an allowance for State wards. Many of the reformatory children are placed with friends, or licensed out. On 31st December, 1916, the wards of the State numbered 10,780—classed mostly as neglected children. There were also 37 children free from legal control, who, being incapacitated, were maintained by the State. The total expenditure for 1916 was £167,799, of which £159,929 was borne by the Government.

(iii.) *Queensland*.—There are ten orphanages in Queensland. The number under care on 31st December, 1916, was 1077, and the expenditure for the year £23,104.

There are also six industrial and reformatory schools, with 105 boys and 82 girls under detention at the end of 1916. The total number of children under State control at the end of 1916 was 5764. The gross cost was £134,158, of which £127,346 was borne by the Government.

(iv.) *South Australia*.—The State Children's Department exercises a supervision over the probationary and industrial schools and the reformatories. The total number of admissions into these institutions in 1916-17 was 294. The number of inmates on the 30th June, 1917, was 199, in addition to which 1645 were placed out, or had been adopted or apprenticed. There were no deaths amongst children in industrial schools and reformatories, and of those placed out and in other institutions eight died. The number of children under State control on 30th June, 1917, was 1844. The expenditure for 1916-17 was £40,724, of which the Government aid was £37,344.

There are three orphan asylums. The number under care during 1916 was 312, of whom 231 were inmates on 31st December, 1916. There was one death in the year, and the expenditure amounted to £2889.

(v.) *Western Australia*.—In Western Australia there were, at the end of 1916, four orphanages, three orphanages and industrial schools, and two industrial schools, containing 446 boys and 356 girls. There were also eight boys and thirteen girls at the Government Receiving Depot. The total number of children in charge of the State Children's Department at the end of 1916 was 1761, and the net cost £23,454.

(vi.) *Tasmania*.—There are three industrial schools and one orphanage under benevolent institutions in the State. Admissions in 1916-17 numbered thirty-five and total inmates during the year 174. No deaths occurred. The expenditure was £3540.

The New Town Training School for boys had 32 inmates at the end of June, 1916.

Under the boarding-out system upwards of 200 children are placed out. The total number of children under State control at the end of June, 1917, was 256, the gross cost to the State of children's relief being £4040, of which £461 represents parents' contributions.

(vii.) *Neglected Children.* The following table summarises the number of neglected children under State Departments. Included in the figures are children boarded out with their own mothers, the numbers being, New South Wales 7923, Victoria 4984, Queensland 3101, South Australia 291, Western Australia 434, Tasmania 7; the total for the Commonwealth being 16,140.

#### STATE RELIEF OF NEGLECTED CHILDREN.—TRANSACTIONS OF STATE DEPARTMENTS, 1916.

‡ Details not available.

5. *Lepers.*—Lazarets for the treatment of lepers have been established in New South Wales (Little Bay); Queensland (Peel Island, near Brisbane, and Dayman Island, Torres Strait); and the Northern Territory (Mud Island). Quarantine and isolation stations have also been used for the segregation of patients. A great deal of information concerning the beginning and progress of leprosy in Australia was collected and published by the late Dr. J. Ashburton Thompson, while Chief Government Medical Officer and President of the Board of Health, New South Wales, from whose reports the following table has been compiled, up to and including the year 1915, later figures not being available:—

#### CASES OF LEPROSY RECORDED IN THE COMMONWEALTH, 1855 to 1915.

\* In addition, some Chinese.

† In addition, many Kanakas.

‡ As from the year 1911.

6. **Hospitals for the Insane.**—The method of compiling insanity statistics has been fairly uniform throughout the States, but the various methods of observing the early stages of the development of insanity introduce an element of uncertainty which considerably reduces the value of comparison. In the summary given below, licensed houses (except as regards expenditure) are included in the total for New South Wales and Victoria, but in the latter State the figures are exclusive of reception houses and observation wards in gaols:—

## HOSPITALS FOR INSANE,\* 1912 to 1916.

(COMMONWEALTH.)

Particulars.	1912.	1913.	1914.	1915.	1916.
Number of institutions ... ..	35	35	35	34	35
Number of beds ... ..	15,911	16,115	16,432	16,417	16,673
Admissions ... ..	3,017	3,153	3,339	3,118	3,268
Discharged as recovered, relieved, etc. ...	1,365	1,415	1,574	1,491	1,451
Deaths ... ..	1,311	1,292	1,270	1,341	1,459
Expenditure ... ..	£693,772	772,984	755,697	815,200	861,258

\* Exclusive of receiving wards at two general hospitals and including six licensed houses for insane in Victoria.

The proportion of insane, as well as the total number returned as under treatment, has changed very little during recent years. In the next table the number of insane under official care in Australia is given, and in the table following, the proportion of insane to population.

The number of insane persons in institutions in Australia at the end of each of the years 1912-1916 was as follows:—

## INSANE PERSONS IN THE COMMONWEALTH, 1912 to 1916.

State.	1912.	1913.	1914.	1915.	1916.
New South Wales ... ..	6,470	6,639	6,906	7,063	7,240
Victoria ... ..	5,470	5,631	5,729	5,767	5,793
Queensland ... ..	2,322	2,370	2,448	2,441	2,517
South Australia ... ..	1,082	1,082	1,080	1,137	1,158
Western Australia ... ..	876	933	981	1,009	1,045
Tasmania ... ..	534	526	537	522	545
Commonwealth ... ..	16,754	17,181	17,681	17,939	18,298

For the period embraced in the tables Victoria shows the highest rate of insanity, roughly one in 250 persons. It is stated that this is chiefly owing to the proportionately greater number of old persons in that State. On the other hand, in South Australia a considerably lower insanity rate has prevailed, averaging about one in 400, Tasmania following closely with an average of about one in 370.

## PROPORTION OF INSANE, 1912 to 1916.

(COMMONWEALTH).

State.	1912.	1913.	1914.	1915.	1916.
PER 1000 OF THE POPULATION.					
New South Wales ...	3.64	3.62	3.71	3.78	3.92
Victoria ...	3.96	3.98	4.00	4.04	4.15
Queensland ...	2.65	3.60	3.62	3.55	3.70
South Australia ...	2.50	2.46	2.42	2.58	2.67
Western Australia ...	2.86	2.91	3.04	3.13	2.38
Tasmania ...	2.71	2.61	2.67	2.62	2.72
Commonwealth ...	3.54	3.53	3.58	3.62	3.75

Consequent upon the development of a more rational attitude towards the treatment of mental cases, a greater willingness is being shewn to submit necessary cases to treatment at an earlier stage than formerly. Hence an increase in the number of recorded cases does not necessarily imply an actual increase in insanity. It is important to bear this in mind, because the small progressive increase in the numbers in the first of the immediately preceding tables is probably to be attributed largely, if not solely, to this circumstance.

The leading features in regard to institutions for the care of the insane are given below for 1916:—

## HOSPITALS FOR THE INSANE.—NUMBER, STAFFS, ACCOMMODATION, 1916.

\* Exclusive of inmates of the Receiving House, Royal Park, and of Receiving Wards attached to the hospitals at Bendigo and Geelong, and of five private licensed houses.

In some of the States it is the practice to allow persons well advanced towards recovery to leave the institutions and reside with their relatives or friends, but they are nevertheless under supervision of the asylum authorities and are kept on the books. The figures for admission, etc., include absconders captured and readmitted. Very few escapees succeed in avoiding capture.

The revenue of Government asylums is small in comparison with their cost, and consists chiefly of patients' fees. The proportion of expenditure borne by the State amounts to about 87 per cent.

### HOSPITALS FOR THE INSANE (GOVERNMENT ONLY), REVENUE AND EXPENDITURE, 1916.

(i.) *New South Wales.* The latest return available shews that the average length of residence in the hospitals of persons who died was 4 years 8 months for males and 5 years 9 months for females; and that of persons who were discharged was 1 year 2 months for males and 1 year 7 months for females.

There are also two State reception houses, where suspected persons are confined for observation, being subsequently either discharged or transferred to lunatic asylums. In two of the gaols observation wards have been instituted, with similar functions.

(ii.) *Victoria.* The average residence in the hospitals of those who died was 8 years 3 months for males and 12 years 11 months for females; that of those discharged, 1 year 3 months for males and 1 year 9 months for females.

There are lunacy wards in two of the general hospitals; also a State receiving house where persons are placed for observation, and subsequently discharged or transferred to asylums.

(iii.) *Queensland.* The average residence in the institutions of those who died was 7 years 7 months for males and 10 years 3 months for females; and of those who were discharged, 14 months for males and 12 months for females.

There are also three reception houses for insane, which act as depots to which patients are sent with a view to determining whether their mental illness is of a merely temporary character, readily to be relieved, or is of such a nature as to need further treatment at the State asylums.

(iv.) *South Australia.* The average residence of those who died was 7 years and 1 month for males and 5 years for females; of those discharged, 1 year and 3 months for males and 2 years and 2 months for females.

(v.) *Western Australia.* The period of residence of those who died during the year averaged 5 years 2 months for males and 3 years 1 month for females; of those who were discharged, 1 year and 3 months for males and 7 months for females.

(vi.) *Tasmania.* The period of residence of those who died was 7 years 3 months for males and 9 years 2 months for females; that of those discharged, 1 year 3 months for males and 8 months for females.

(vii.) *Causes of Insanity.* The proportion of causes of insanity to the total of ascertained causes in Australia in the five years 1912-1916 shews that hereditary influences have been the chief factor, more than one-fifth of the total ascertained causes

coming under this head. Domestic troubles, adverse circumstances, etc., have also been a fruitful source. About one case in seven was due to intemperance in drink.

**PROPORTION OF ASCERTAINED CAUSES, Etc., OF INSANITY, COMMONWEALTH,

7. **Treatment of Inebriates.**—The treatment of inebriates is referred to in the section dealing with Public Justice hereinbefore. (See page 883.)

8. **Protection of Aborigines.**—For the protection of the aboriginal Australian race there are institutions, under the supervision of Aborigines Boards, where the blacks are housed and encouraged to work, the children receiving elementary education. The work is usually carried on at mission stations, but many of the natives are nomadic in habit of life, and receive food and clothing when they call, whilst others but rarely come under the notice of the boards. The native race is extinct in Tasmania. The estimated average annual expenditure on maintenance, etc., for the last five years was—New South Wales, £25,000; Victoria, £4000; Queensland, £21,000; South Australia, £19,000; Western Australia, £25,000; Northern Territory, £3000; total for Commonwealth, £97,000. In New South Wales the average number receiving monthly aid in 1916 was 2071, of whom 899 were adults; in Victoria there were 281 under the care of the Aborigines Protection Board on the 30th June, 1916; in Queensland, at the end of 1916, there were 2999 aborigines at the mission stations; in South Australia, there were 753 inmates at mission stations, while in Western Australia the aborigines and half-castes in the native institutions numbered 373. At the mission stations in the Northern Territory about 300 were in residence, but casual assistance and medical attendance are given to large numbers of natives every year.

9. **Royal Life Saving Society.**—In each of the State Capitals, "centres" of the Royal Life Saving Society have been established. Life preservation is the object of the Society, and its immediate objects are (a) educative and (b) remedial. By stimulating the acquirement of the art of swimming in schools, colleges, clubs, etc., it is desired to bring about a widespread and thorough knowledge of natation and life-saving; while life-belts, reels, lines, and other first-aid appliances are provided on ocean beaches and at places where they are likely to be in demand. Certificates of proficiency in various grades are issued after examination. In the year 1917-18 the number of certificates issued in New South Wales was 658; in Victoria 1039; in Queensland 532; in South Australia 16; in Western Australia 531; in Tasmania 114; making a total for the Commonwealth of 2890.

**10. Royal Humane Society.**—The Royal Humane Society of Australasia has for its objects (a) to grant awards for skill, promptness, and perseverance in life saving; (b) to provide assistance in cases of danger and apparent death; (c) to restore the apparently drowned; (d) to collect and circulate the latest information regarding approved methods and apparatus for life saving. In 1917, 89 awards of medals and certificates were made. Upwards of 350 lifebuoys have been provided at various places on the coasts, rivers, lakes, and reservoirs in the various States. Swimming is encouraged amongst school children, and awards made for proficiency.

**11. Other Charitable Institutions.**—Owing to variety of name and function of other charitable institutions it has been found impracticable to give detailed results. The aid given in kind—food, clothing, tools of trade, etc.—is considerable, whilst the shelter and treatment afforded ranges from a bed for a night for casual callers in establishments ministering minor charity, to indoor treatment over long periods in those that exist for the relief of the aged and infirm. The institutions not so particularised include asylums for the deaf, dumb, and blind, maternity institutions and infant homes, homes for the destitute and aged poor, industrial colonies, night shelters, crèches, homes of hope, rescue homes, free kindergarten and ragged schools, auxiliary medical charities, free dispensaries, benevolent societies and nursing systems, ambulance and health societies, boys' brigades, humane and animals' protection societies, prisoners' aid associations, shipwreck relief societies, bush fires and mining accident relief funds, etc.

**12. State Expenditure on Charities.**—The table below gives the amount expended by Government on charities in each of the last five years, the figures for the various States being compiled, as far as possible, on the same basis:—

STATE EXPENDITURE ON CHARITIES, 1912 to 1916.

State or Territory.	1912.	1913.	1914.	1915.	1916.
	£	£	£	£	£
New South Wales ...	576,886	683,102	711,453	779,303	876,767
Victoria ...	446,332	468,588	485,018	541,668	525,682
Queensland ...	262,171	261,237	321,597	307,899	324,143
South Australia ...	118,931	117,204	129,281	167,272	162,849
Western Australia ...	184,940	201,215	222,417	228,064	247,589
Tasmania ...	45,166	62,205	70,387	78,092	79,494
Northern Territory ...	5,328	5,602	5,301	4,864	5,649
Commonwealth ...	1,639,754	1,799,153	1,945,454	2,107,162	2,222,173

**13. Total Charitable Expenditure.**—The expenditure in the Commonwealth in money on hospitals, charities, and all forms of relief publicly given, comprising the amounts furnished by Government and those raised by public subscription, etc., but excluding old-age pensions, exceeds £3,000,000 annually.

## SECTION XXV.

## GENERAL GOVERNMENT.

## § 1. Scheme of Parliamentary Government.

1. **General.**—The legislative power of the Commonwealth is vested in the Federal Parliament, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General, who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State there is a State Governor, who is the representative of the Sovereign for the State, and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office, and by the instructions, which inform him in detail of the manner in which his duties are to be fulfilled. The Legislature in each State is also bi-cameral, and consists of (a) a Legislative Council and (b) a Legislative Assembly, or House of Assembly, the legislative powers of these chambers being delimited by the Commonwealth and the State Constitutions. The latter chamber, which is the larger, is always elective; the qualification for the franchise varies in character. The former chamber is, in the case of New South Wales and Queensland, nominated by the Governor-in-Council, but in the other States it is elective, the constituencies being differently arranged and some property qualification for the electorate being required. In the Federal Parliament, however, the qualifications for the franchise are identical for both Houses. A brief account of the constitutional history of each of the States was given in previous issues of this book (see especially Year Book No. 4, pp. 27 to 32).

2. **Number of Members of the Legislatures.**—The following table shews the number of members in each of the legislative chambers in the Commonwealth and in each State at 1st October, 1918:—

MEMBERS OF PARLIAMENT OF AUSTRALIA, 1918.

Members in—	C'wealth.	N.S.W.	Victoria.	Q'land.	S. Aust.*	W. Aust.	Tas.	Total.
Upper House	36	71	34	49	20	30	18	258
Lower House	75	90	65	72	46	50	30	428
Total ...	111	161	99	121	66	80	48	686

\* By "Constitution Further Amendment Act 1913," the number of members in the Upper House was increased to 20, and in the Lower to 46, the previous numbers being 18 and 40 respectively.

The use of the expressions "Upper House" and "Lower House" in the above statement, though not justified constitutionally, is convenient, inasmuch as the legislative chambers are known by different names in the Commonwealth and in some of the States.

In the Commonwealth Parliament the Upper House is known as the Senate, and in the State Parliaments as the Legislative Council. The Lower House is known as follows:—In the Commonwealth Parliament as the House of Representatives, in the State Parliaments of New South Wales, Victoria, Queensland, and Western Australia as the Legislative Assembly, and in the State Parliaments of South Australia and Tasmania as the House of Assembly.

**3. The Cabinet and Executive Government.**—The sections of the Commonwealth Constitution Act dealing with the Executive Government are given on pages 26 and 27 hereinbefore. In both the Commonwealth and the State Legislatures the forms of government have been founded on their prototype, the Imperial Government, and the relations established between the Ministry and the representatives of the people are in accordance with those prevailing in Great Britain. The executive powers in the Commonwealth and in the State Governments are vested in the Governor-in-Council. The Executive Council in the Commonwealth and in the majority of the States is practically co-extensive with a group of departmental chiefs, who are usually spoken of as the Cabinet, and who change with the rise and fall of party majorities. In the Commonwealth Government, however, as well as in the States of Victoria and Tasmania, the Cabinet on leaving office remain members of the Executive Council, though they no longer attend its meetings, and it is in fact an essential feature of the Cabinet system of Government that they should not do so, except to assist the Governor in transacting purely formal business, or to advise on non-political questions.

(i.) *The Executive Council.* This body is composed of the Governor and the Ministers of State holding office for the time being. The latter are sworn both as Executive Councillors and as Ministers controlling the different administrative departments. It should be observed that all persons living who have held Ministerial office under former Governments are also technically members of the Executive Council, and are thus liable to be specially summoned for attendance at meetings of that body. The meetings are official in character; they are presided over by the Governor-General (or Governor) and are attended by the clerk, who keeps a formal record of its proceedings. At these meetings the decisions of the Cabinet are put into official form and made effective, appointments are confirmed, resignations accepted, proceedings ordered, and notices and regulations published.

The official members of the Executive Council in October, 1918, have been previously specified (see page 39). In addition, all living members of past Ministries (see following pages) are technically liable to be officially summoned to attend meetings of the Executive Council.

Particulars of previous Commonwealth Ministries are given on pages 36 to 39 hereinbefore, and the following pages.

(ii.) *The Cabinet.* The meetings of this body are private and deliberative. No one is admitted but the actual Ministry of the day, no records of the meetings transpire, and no official notice is taken of the proceedings. The members of the Cabinet, being the leaders of the party in power in Parliament, control the bent of legislation, and must retain the confidence of the people and also of the Governor-General (or Governor), to whom they act as an advising body. They also in effect wield, by virtue of their seats on the Executive Council, the whole executive force of the community. In summoning, proroguing, or dissolving Parliament, the Governor-General (or Governor) is usually guided by the advice tendered him by the Cabinet, though legally in no way bound to accept such advice. The following statement gives the names of the Ministers of State for the Commonwealth who have held office since the inauguration of the Commonwealth Government:—

## MINISTERS OF STATE FOR THE COMMONWEALTH OF AUSTRALIA FROM

1st JANUARY, 1901, to OCTOBER, 1918.

HON. D. R. HALL.  
*Minister for Public Instruction—*  
HON. A. G. F. JAMES.

*Minister for Lands and Minister for  
Forests—*  
HON. W. G. ASHFORD.  
*Minister for Mines & Assistant Treasurer—*  
HON. J. C. L. FITZPATRICK.  
*Minister for Agriculture—*  
HON. W. C. GRAHAME.  
*Vice-President of the Executive Council  
and Minister for Public Health and  
Local Government—*  
HON. J. D. FITZGERALD, M.L.C.  
*Minister without Portfolio—*  
HON. D. STOREY.

**VICTORIA.—MINISTRY.**

*Premier, Att.-General, & Min. of Labour—*  
HON. H. S. W. LAWSON.  
*Chief Secretary and Minister of Public  
Health—*  
HON. J. BOWSER.  
*Treasurer—*  
HON. W. M. MCPHERSON.  
*Solicitor-General, Commissioner of Public  
Works, and a Vice-President of the  
Board of Land and Works—*  
HON. A. ROBINSON, M.L.C.  
*Minister of Public Instruction and Forests,  
and a Vice-President of the Board of  
Land and Works—*  
HON. W. HUTCHINSON.

*President of the Board of Land and Works,  
Commissioner of Crown Lands and  
Survey and Minister of Water Supply—*  
HON. F. G. CLARKE, M.L.C.  
*Minister of Railways and Mines and a Vice  
President of the Board of Land and  
and Works—*  
HON. S. BARNES.  
*Minister of Agriculture—*  
HON. D. S. OMAN.  
*Ministers without Office—*  
HON. W. KENDELL, M.L.C.  
HON. J. MCWHAE, M.L.C.  
HON. H. J. M. CAMPBELL.  
HON. A. R. ROBERTSON.

**QUEENSLAND.—MINISTRY.**

*Premier, Vice-Pres. of Ex. Council, Chief  
Sec., and Attorney-General—*  
HON. T. J. RYAN.  
*Home Secretary—*  
HON. J. HUXHAM.  
*Secretary for Public Lands—*  
HON. J. H. COYNE.  
*Treasurer and Secretary for Public Works—*  
HON. E. G. THEODORE.  
*Secretary for Railways—*  
HON. J. A. FIDELLY.

*Secretary for Public Instruction—*  
HON. H. F. HARDACRE.  
*Secretary for Mines—*  
HON. A. J. JONES, M.L.C.  
*Secretary for Agriculture and Stock—*  
HON. W. LENNON.  
*Minister without Portfolio—*  
HON. W. N. GILLIES.

**SOUTH AUSTRALIA.—MINISTRY.**

*Premier and Chief Secretary—*  
HON. A. H. PEAKE.

*Treasurer and Minister for Railways and  
Minister in Charge of Wheat Affairs—*  
HON. SIR R. BUTLER.

*Commissioner of Public Works and Minister  
of Mines and of Marine—*  
HON. J. G. BICE, M.L.C.

*Commissioner of Crown Lands and Minister  
for Agriculture and Repatriation—*  
HON. E. A. ANSTEY.

*Attorney-General and Minister for Industry—*  
HON. H. N. BARWELL.

*Minister of Education—*  
HON. W. H. HARVEY, M.L.C.

**WESTERN AUSTRALIA.—MINISTRY.**

*Premier and Minister for Lands and Agriculture—*HON. H. B. LEFROY, C.M.G.  
*Colonial Secretary and Minister for Education—*

HON. H. P. COLEBATCH, M.L.C.

*Minister for Mines and Railways—*  
HON. C. A. HUDSON.

*Attorney-General and Min. for Industries  
and Forests—*  
HON. R. T. ROBINSON, K.C.

*Colonial Treasurer—*  
HON. J. GARDINER.

*Minister for Works, Trading Concerns, and  
for Water Supply—*  
HON. W. J. GEORGE.

*Ministers without Portfolio—*  
HON. F. E. S. WILLMOTT.  
HON. C. F. BAXTER, M.L.C.

**TASMANIA.—MINISTRY.**

*Premier, Chief Secretary and Minister for Education—*HON. W. H. LEE.  
*Attorney-General and Minister for Railways—*

HON. W. B. PROPSTING, M.L.C.

*Treasurer and Minister for Mines—*  
HON. SIR N. E. LEWIS.

*Minister of Lands and Works and Agriculture—*  
HON. J. B. HAYES.

*Ministers without Portfolio—*  
HON. T. SHIELDS.  
HON. H. HAYS, M.L.C.

4. **The Appointment of Ministers and of Executive Councillors.\***—Although it is technically possible for the Governor to make and unmake cabinets at his pleasure, under all ordinary circumstances his apparent liberty in choosing his Executive Council is virtually restricted by the operation of constitutional machinery. When a Ministry is defeated in Parliament or at the polls, the procedure both in the Commonwealth and the State Parliaments generally, though not invariably, follows that prevailing in the Imperial Parliament. The customary procedure in connection with the resignation or acceptance of office by a Ministry is described fully in previous issues of the Year Book. (No. 6, page 942.)

5. **Enactments of the Parliament.**—In the Commonwealth, all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution Act (see pp. 23-26 hereinbefore). In the States, laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council and Legislative Assembly or House of Assembly. The Governor-General or the State Governor acts as Viceroy as regards giving the Royal Assent to or vetoing Bills passed by the Legislatures, or reserving them for the special consideration of the Sovereign. In the States, the Councils and Assemblies are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States, in all cases whatsoever. Subject to certain limitations, they may alter, repeal, or vary their Constitution. Where a law of a State is inconsistent with a law of the Commonwealth the latter prevails, and the former is, to the extent of the inconsistency, invalid.

\* See Jenks' "Government of Victoria," pp. 269 *et seq.*

**6. Powers and Functions of the Governor-General and of the Governors.**—The Governor-General and the State Governors act under the authority of the Commissions by which they are appointed and the Letters Patent under the Great Seal of the United Kingdom, and according to instructions issued by the Colonial Office and passed under the Royal Sign Manual and Signet.

The office of Governor-General and Commander-in-Chief of the Commonwealth was constituted by Letters Patent issued on the 29th October, 1900, in pursuance of the provisions of the Commonwealth Constitution Act (see page 17 hereinbefore). The powers and duties of the Governor-General were further defined by Royal instructions passed on the same date. The principal and most important of his functions, legislative as well as executive, are expressly conferred upon him by the terms of the Constitution itself. He is the custodian of the Great Seal of the Commonwealth, and has the appointment of political officers to administer Departments of State of the Commonwealth.

His legislative functions are exercised with respect to proposed laws as finally passed by the Federal Houses of Parliament. Such Bills are presented to the Governor-General for his assent in the King's name, on receiving of which they become law throughout the Commonwealth. The Governor-General may, however, withhold his assent, or may reserve any Bill for the King's pleasure. He may return to the House in which it originated any proposed law with suggested amendments. The King may disallow any law within one year from the date on which it was assented to by the Governor-General.

The Governor-General's executive functions are, under ordinary circumstances, exercised on the advice of his responsible Ministers. Various specific powers are vested in him by the Constitution; he may summon or prorogue Parliament and may dissolve the House of Representatives. He is the Commander-in-Chief of the military and naval forces of the Commonwealth, and is invested by the Crown with the prerogative of mercy in cases of offences committed against the laws of the Commonwealth.

The Governor-General is also invested with authority in certain matters of Imperial interest, such as the control of the naval and military forces of the Commonwealth; the observance of the relations of foreign States to Great Britain, so far as they may be affected by the indirect relations of such States to the Commonwealth; and the treatment of neutral and belligerent ships in Commonwealth waters in time of war.

The Governor-General may not leave the Commonwealth without having first obtained leave from the Imperial Government, to whom alone he is responsible for his official acts. The powers and functions of the State Governors are, within their respective States, very similar to those exercised by the Governor-General for the Commonwealth, and are defined by the terms of their Commissions and by the Royal instructions accompanying the same. A State Governor is the official head of the State Legislature, and assents in the name of the Crown to all Bills passed by the Parliament, except those reserved for the Royal Assent. The latter include certain classes of Bills, which are regulated by the Constitution Acts and by the instructions issued by the Imperial Government. The Governors are, under ordinary circumstances, guided by their Executive Councils, the chief matters in which the exercise of discretion is required being the granting or withholding of a dissolution of Parliament when requested by a Premier; the appointment of a new Ministry; or the assenting to, vetoing, or receiving of Bills passed by the legislative chambers. The Governors are authorised, under certain restrictions, to administer the prerogative of mercy by the reprieve or pardon of criminal offenders within their jurisdiction, and to remit fines and penalties due to the Crown. All moneys to be expended for the public service are issued from the Treasury under the Governor's warrant.

In a recent work in which the above matters are exhaustively discussed,\* it is indicated that there are important functions in the hands of a Governor, and that his influence may extend beyond what is anticipated by those who are unfamiliar with the activities of actual government. This is, however, essentially a matter of individual character. A Governor is entitled to the fullest confidence of his Ministers, to be informed at once of any important decisions taken by his Cabinet, and to discuss them with the utmost freedom. He can point out objections, give advice, deprecate measures, and urge

\* "Responsible Government in the Dominions," A. B. Keith, Oxford, Clarendon Press, 1912. Vol. I.

alterations, subject, however, to his remaining always behind the scenes. It should be remembered, moreover, that the State Executive Councils owe their existence to the Royal Letters Patent constituting the office of Governor and that, in law, the Governor is never bound to accept the advice of his Ministers. He cannot indeed do many things without their advice, for it is provided by law (either in the Constitution or Interpretation Acts, or by authoritative usage) that a Governor-in-Council must act on the advice of the Council. He cannot therefore perform any act in Council without a majority, though he can always refuse to act, and thus force his Ministers either to give way on the point at issue or to resign their posts. Even in the case of a ministerial act he can forbid a Minister to take any action on pain of dismissal. Nominally a Governor will, of course, be justified in accepting the advice of his Ministers as being a correct statement of the facts and law, but he is not bound to be so satisfied, and in matters of law he must exercise his own judgment if he be in doubt. A Governor is not, however, entitled to refuse to act on the advice of his Ministers because he personally does not approve of their action or policy; his duty is not to his own conscience, but to the people of the State which he governs, and he should execute that duty independently of every other consideration.

Although the above furnishes a brief *résumé* of the powers of a Governor from a legal point of view, in practice the exercise of his powers is generally limited by his ability to persuade his Ministers as to the desirability of any particular course of action. Disagreement with Ministers is only justifiable in extreme cases, and even then it involves the responsibility of finding other Ministers, who must either shew that they have as much support as any other party, or be prepared to administer during a dissolution, pending an appeal to the people. It may be remarked that a Governor who cannot work with Ministers possessing the support of the people must be recalled, unless he has acted on Imperial grounds, and the dispute is not one between him and Ministers, but between the Imperial and State Governments.

It may also be pointed out that a Governor, besides acting according to law, has, within the range of what is lawful, to act according to the instructions of the Secretary of State. He is called upon to do so by the instruments which create his office and appoint him Governor, and he obeys the Secretary of State as the mouthpiece of the Crown. Historically, there have been many cases in which these instructions have placed Governors in opposition to their Ministers.

The present Governor-General is the Right Honourable Sir Ronald Craufurd Munro Ferguson, P.C., G.C.M.G. He assumed office 18th May, 1914. Particulars of previous Governors-General are given on p. 36 hereinbefore.

The following is a list of the Governors of the various States of the Commonwealth:—

<i>New South Wales</i>	... SIR WALTER DAVIDSON, K.C.M.G.
<i>Victoria</i>	... The Hon. SIR ARTHUR LYULPH STANLEY, K.C.M.G.
<i>Queensland</i>	... Major SIR HAMILTON JOHN GOOLD-ADAMS, G.C.M.G., C.B.
<i>South Australia</i>	... Lieutenant - Colonel SIR HENRY LIONEL GALWAY, K.C.M.G., D.S.O.
<i>Western Australia</i>	... The Rt. Hon. SIR WILLIAM GREY ELLISON-MACARTNEY, P.C., K.C.M.G.
<i>Tasmania</i>	... SIR FRANCIS NEWDIGATE-NEWDEGATE, K.C.M.G.

**7. Cost of Parliamentary Government.**—The following statement shews the cost of parliamentary government in the Commonwealth and in each State, as well as the cost per head of population, for the year ended the 30th June, 1917. In order to avoid any incorrect conclusions as to the cost of the Governor-General's or Governor's establishment, it may be pointed out that a very large part of the expenditure (with the exception of item "Governor's salary") under the head of Governor-General or Governor represents official services entirely outside the Governor's personal interests, and carried out at the request of the Government.

## COST OF PARLIAMENTARY GOVERNMENT, 1916-17.

\* See preceding paragraph. (a) Including Lower House. (b) Included in Upper House. (c) Included in Miscellaneous. (d) See note (e). Ministers are allowed £1 per day when travelling. (e) £5000 is paid to the Railway Department to cover issue of passes to State Governor and Staff, members of Parliament of Victoria and other States, and Executive Councillors. (f) Not available. Each member of both Houses has a pass for the whole of the State Railways. (g) Included in Electoral Office. (h) Including Referenda, £77. (i) Exclusive of travelling expenses of members, free passes, special trains, etc.

## § 2. Parliaments and Elections.

**1. Qualifications for Membership and for Franchise.**—The summary on pages 928-9 gives particulars as to the legislative chambers in the Commonwealth and State Parliaments, and shews concisely the qualifications necessary for membership and for the franchise in each House. Persons who are otherwise eligible, either as members or voters, are generally disqualified on the usual grounds of being of unsound mind or attainted of treason, being convicted of certain offences, and, as regards membership, on the grounds of holding a place of profit under the Crown, being pecuniarily interested in Government contracts, or being an undischarged bankrupt.

**2. The Federal Parliament.**—The Senate consists of thirty-six members, six being returned by each of the original federating States. Members of this chamber are elected for a term of six years, but by a provision in the Constitution a certain number retire at the end of every third year, although they are eligible for re-election. In accordance with the Constitution the total number of members of the House of Representatives must be as nearly as possible double that of the Senate. In the House of Representatives the States are represented on a population basis, and the numbers stand at present as follows:—New South Wales, 27; Victoria, 21; Queensland, 10; South Australia, 7; Western Australia, 5; Tasmania, 5—total, 75. The Constitution provides for a minimum of five members in each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. In elections for Senators, each State is counted as a single electorate, but an elaborate scheme of subdivision had to be undertaken in order to provide workable electorates in each State for members of the House of Representatives. Members of both Houses are paid at the rate of £600 per annum. Further information regarding the Senate and the House of Representatives is given on pages 17 to 23 hereinbefore.

*Particulars of Elections.* There have been six complete Parliaments since the inauguration of Federation. The dates of the opening and dissolution of these Parliaments are given on page 35. The fifth Parliament, which was opened on the 9th July, 1913, was dissolved on the 27th June, 1914, in somewhat unusual circumstances. Under Section 27 of the Constitution, it is provided that, should the Senate fail to pass, or pass with amendments, any proposed law previously passed by the House of Representatives, and should the latter House, after a specified interval, again pass the proposed law, with or without the amendments of the Senate, and the Senate for a second time reject it or pass it with amendments to which the lower House will not agree, then the Governor-General may dissolve the two Houses simultaneously. For the first time in the history of the Commonwealth this deadlock between the Senate and the House of Representatives occurred in the second session of the Fifth Parliament, and in accordance with the section of the Constitution referred to above, both Houses were dissolved by the Governor-General. The first session of the seventh Parliament opened on the 11th July, 1917. Particulars regarding the number of electors enrolled and the number of electors to whom ballot-papers were issued at the last six elections may be found in the tables given hereunder:—

\* For the House of Representatives the number of electors enrolled in contested divisions only is given.

In the Senate the figures for the year 1906 shew that ballot-papers were issued to 50.21 per cent. of the electors, and are a slight improvement on those for the year 1903, when only about 47 per cent. of the electors visited the polls. There was, however, a substantial increase in the number of electors who voted at the 1910 elections, 62.16 per cent. of the persons on the rolls exercising the franchise. The elections of 1913 shewed a gratifying increase over those of 1910, no less than 73.66 per cent. of the persons on the rolls exercising their right to vote, while in 1914, the percentage was almost as high, viz., 72.64 per cent. It will be seen from the foregoing table that the electors of the Commonwealth are setting a higher value on the privilege of the franchise. The percentage of female voters in 1914, while still considerably below that of the males, shews a marked increase on that of female voters in the earlier years of Federation. At the elections in 1917, the proportion of voters of both sexes was the highest yet recorded.

**3. Commonwealth Referenda, 26th April, 1911.**—Two proposed laws for the alteration of the Constitution were submitted to the people for acceptance or rejection on the 26th April, 1911. They were (A) The Constitution Alteration (Legislative Powers) 1910, and (B) the Constitution Alteration (Monopolies) 1910. If, in a majority of the States, a majority of the electors voting approve the proposed laws, and if a majority of all the electors voting also approve them, they are presented to the Governor-General for the King's assent. Particulars of the alterations proposed have already been given (see page 23).

Results of the Referenda of 1911 are given in the following table, which shews the number of electors enrolled, electors to whom ballot papers were issued, and the number of votes in favour of, and against, each of the proposed laws, and, as will be seen, neither of the proposed laws was approved by the people.

**4. Commonwealth Referenda, 31st May, 1913.**—At the general elections that took place on 31st May, 1913, the question of altering the Constitution so as to extend the powers of the Commonwealth was again submitted to the people. The particulars of the

proposed laws have been given on page 23 hereinbefore. The results of the Referenda of 1913 are given below, and, as will be seen, none of the proposed laws was approved by the electors.

**COMMONWEALTH REFERENDA (LEGISLATIVE POWERS) TAKEN ON 31st MAY, 1913.**

5. Commonwealth Referendum, 28th October, 1916.—A special referendum was held on the 28th October, 1916, when the following question with regard to military service was submitted to the people:—"Are you in favour of the Government having, in this grave emergency, the same compulsory powers over citizens in regard to requiring their military service, for the term of this War, outside the Commonwealth, as it now has in regard to military service within the Commonwealth?" In New South Wales, Queensland and South Australia the majority of voters were not in favour of the prescribed question; and in Victoria, Western Australia and Tasmania the majority of votes were cast in its favour, the net result being a majority of 72,476 votes not in favour.

6. Commonwealth Referendum, 20th December, 1917.—A further referendum was held on 20th December, 1917, the question being, "Are you in favour of the proposal of the Commonwealth Government for reinforcing the Australian Imperial Force overseas?" The proposal was that, while voluntary enlistment was to continue, compulsory reinforcements should be called up by ballot to make the total reinforcements up to 7000 per month. In New South Wales, Victoria, Queensland and South Australia, the majority of voters were not in favour of the prescribed question; and in Western Australia, Tasmania and the Federal Territories, the majority of votes were cast in its favour, the net result being a majority of 166,588 votes not in favour.

7. The Parliament of New South Wales.—The Legislative Council in this State is a nominee chamber, the Legislative Assembly being an elective body. Theoretically the Legislative Council may contain an unlimited number of members, but in practice the number is restricted to about sixty, the members at the latest available date being seventy-one. The tenure of the seat is for life; four-fifths of the members must be persons not holding any paid office under the Crown, but this is held not to include officers of His Majesty's sea or land forces on full or half-pay, or retired officers on pensions. The Legislative Assembly consists of ninety members, who hold their seats during the existence of the Parliament to which they are elected. The duration of any single Parliament is limited to three years.

*Particulars of Elections.* Since the introduction of responsible government in New South Wales there have been twenty-three complete Parliaments, the first of which opened on the 22nd May, 1856, and was dissolved on the 19th December, 1857, while the twenty-third opened on the 23rd December, 1913, and closed on the 21st February, 1917. The average duration of the Parliaments was two years and five months. The first session of the twenty-fourth Parliament was opened on the 17th April, 1917. Particulars of voting at the last nine elections are given below:—

#### LEGISLATIVE ASSEMBLY ELECTIONS, NEW SOUTH WALES, 1894 to 1917.

Date of Opening of Parliament.	Electors upon the Roll.	Members Returned.	Members Unopposed.	Contested Electorates.

	Females 535,522			487,585	295,354	60.57	

The franchise was extended to women (*Women's Franchise Act*) in 1902, and was exercised for the first time at a State election in 1904.

**8. The Parliament of Victoria.**—Both of the Victorian legislative chambers are elective bodies, but there is a considerable difference in the number of members of each House, as well as in the qualifications necessary for members and electors. The number of members in the Upper House in March, 1918, was 34, and in the Lower House, 65. In the Legislative Council the tenure of the seat is for six years, but one member for each province retires every third year, except in the case of a dissolution, when one half of the newly elected members hold their seats for three years only. Members of the Legislative Assembly are elected for the duration of Parliament, which is limited to three years. The franchise was extended to women by the *Adult Suffrage Act 1908*. An elector for the Legislative Assembly may only vote once, plurality of voting having been abolished in 1899; an elector, however, qualified in more than one district, may select that for which he desires to record his vote. A preferential system of voting (see Year Book No. 6, page 1182) was for the first time adopted in Victoria at the election held in November, 1911.

*Particulars of Elections.* Since the introduction of responsible government in Victoria there have been twenty-four complete Parliaments, the first of which was opened on the 21st November, 1856, and closed on the 9th August, 1859, while the twenty-fourth closed on the 23rd October, 1917. The first session of the twenty-fifth Parliament opened on the 27th November, 1917.

Statistics regarding the elections that have been held since 1901 will be found below:—

**PARTICULARS OF VICTORIAN ELECTIONS, 1902 to 1917.**

Year.	Legislative Council.				Legislative Assembly.			
	Electors on Roll.	Electors in Contested Districts.	Voters in Contested Districts.	Per-centage.	Electors on Roll.	Electors in Contested Districts.	Voters in Contested Districts.	Per-centage.

1917 ...	308,339	*	*	*	828,230	658,488	356,999	54.21

\* Not contested.

As the table shews, the proportion of voters for the Legislative Council is considerably less than that for the Legislative Assembly.

**9. The Parliament of Queensland.**—No limit is set by the Constitution Act to the number of members of the Legislative Council of Queensland, the total at the latest available date being forty-nine. Members are appointed by the State Governor, and it is provided that not less than four-fifths of the members must consist of persons not holding any office under the Crown, except officers of His Majesty's sea or land forces on full or half-pay, or retired officers on pensions. The members are nominated for life. By The Electoral Districts Act of 1910 the Legislative Assembly is composed of seventy-two members, and the State is now divided into that number of electoral districts, and the General Election which took place in 1912 was in conformity with this new Act. A modified system of optional preferential voting is in operation in Queensland. (See Year Book No. 6, page 1183.)

*Particulars of Elections.* Since the establishment of responsible government in Queensland there have been nineteen complete Parliaments, the first of which opened on the 29th May, 1860, and dissolved on the 20th May, 1863, while the first session of the twentieth Parliament opened on the 12th July, 1915. At the elections held in May, 1915, the principle of compulsory voting was introduced for the first time in Australia. It will be seen that of the total number of electors enrolled, 88.14 per cent. went to the polls. Postponement of ballots for some of the northern electorates, on account of devastation by flood and cyclone, delayed the completion of the 1917 returns. Statistics regarding the previous seven elections are given below:—

**ELECTIONS FOR QUEENSLAND LEGISLATIVE ASSEMBLY, 1902 to 1915.**

72	46	50	30
All persons qualified and registered to vote at the election of members of the Legislative Assembly are eligible as members	Any person qualified for the franchise of the House of Assembly is eligible for membership	Male adult British subjects, if resident in the State for 12 months. Naturalised subjects must have been naturalised for 5 years and have resided in the State for 2 years previous to the election	Male adult British subjects, either natural-born or for at least 5 years naturalised, qualified to vote at the election for the House of Assembly, and who have resided in Tasmania for any continuous period of 5 years, or for a period of 2 years immediately preceding the election
Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years
£300 each per annum and £2 per month for postage and telegrams	£200 each per annum	£300 each per annum	£200 each per annum
Adult British subjects of either sex who either (a) have resided in Queensland for 12 months continuously and whose names are on the electoral roll, (b) own freehold estate of the value of £100, (c) have occupied a house of the annual value of £10 for at least 6 months, or (d) have a leasehold estate in possession of the annual value of £20 with not less than 18 months to run	Adult natural-born or naturalised subjects of either sex who have resided in the State for 6 months	Adult natural-born or naturalised subjects of either sex who have resided in the State for 6 months continuously and for a continuous period of 1 month in district	Adult natural-born or naturalised subjects of either sex who have resided in Tasmania for 6 months continuously

\* The President is allowed £1,000 per annum, and the Chairman of Committees £500 per annum.

The election of 1907 was the first State election in Queensland at which women voted, the privilege being conferred under the *Elections Acts Amendment Act 1905*. Some of the returns did not separate the sexes in the figures respecting the number of electors who voted, and the percentage of males and females was therefore calculated on the total returns where the subdivision was made.

**10. The Parliament of South Australia.**—In this State there is a Legislative Council composed of twenty members and a House of Assembly with forty-six members, both chambers being elective. Under the Constitution Amendment Act 1908, the State of South Australia was divided into four Council Districts, of which one returned six members, and the others returned four members each, to the Legislative Council, but under the Constitution Further Amendment Act of 1913, the State is now divided into five districts, which return four members each, making a total of twenty members instead of eighteen as formerly. For the purpose of electing members of the House of Assembly the State was divided into twelve electoral districts, but under the Act of 1913 mentioned above, the State has been divided into nineteen districts, which return forty-six members instead of forty as formerly. The former districts returned five members from one district, four members from two, and three each from the balance. Under the new Act, eight districts return three members each, and eleven districts two members each.

*Particulars of Elections.* Since the inauguration of responsible government in South Australia there have been twenty-two complete Parliaments, the first of which was opened on the 22nd April, 1857, and dissolved on the 1st September, 1859, while the twenty-second was opened on the 8th July, 1915, and terminated on the 28th February, 1918. The first session of the new Parliament was opened on the 25th July, 1918. Particulars of voting at the different elections from the year 1900 are given below :—

\* In contested districts.

It is interesting to note that South Australia was the first of the States to grant women's suffrage (under the *Constitution Amendment Act 1894*), the franchise being exercised for the first time at the Legislative Assembly election on the 25th April, 1896.

**11. The Parliament of Western Australia.**—In this State both chambers are elective. For the Legislative Council there are thirty members, each of the ten provinces returning three members, while the Legislative Assembly is composed of fifty members, one member being returned by each of the fifty electoral districts. At the expiration of two years from the date of election to a seat in the Legislative Council, and every two years thereafter, the senior member for the time being for each province retires. Seniority is determined (a) by date of election, (b) if two or more members are elected on the same day, then the senior is the one who polled the least number of votes, (c) if the election be uncontested, or in case of an equality of votes, then the seniority is determined by the alphabetical precedence of surnames and, if necessary, Christian names. Members of the Legislative Assembly are elected for three years.

*Particulars of Elections.* Since the establishment of responsible government in Western Australia there have been nine complete Parliaments, the first of which was opened on the 30th December, 1890, while the first session of the tenth Parliament commenced on the 20th November, 1917. Women's suffrage was granted by the *Electoral Act* of 1899. The preferential system of voting in use in Western Australia is described in Year Book No. 6, page 1184. Particulars relating to the last seven Assembly and six Council elections are given in the tables below :—

**PARLIAMENTARY ELECTIONS, WESTERN AUSTRALIA, 1901 to 1918.**

**12. The Parliament of Tasmania.**—In Tasmania there are two legislative chambers—the Legislative Council and the House of Assembly, both bodies being elective. The Council consists of eighteen members, returned from fifteen districts, Hobart returning three, Launceston two, and the remaining thirteen districts sending one member each. For the Parliament which expired in March, 1909, there were thirty-five House of Assembly districts, each district returning one member, but, in accordance with the Constitution Amendment Act of 1906, upon the expiration of the last Assembly, either by dissolution or by effluxion of time, there are now five House of Assembly districts, viz., the Commonwealth electoral districts, each district returning six members, who are elected under a system of proportional representation which first came into force at the 1909 elections. (See Year Book No. 6, page 1185.) Women's suffrage was first granted in this State under the *Constitution Amendment Act 1903*.

*Particulars of Elections.* The first Tasmanian Parliament opened on 2nd December, 1856, and closed on 8th May, 1861. There have been nineteen complete Parliaments since the inauguration of responsible government. The first session of the twentieth Parliament opened on 16th May, 1916. Particulars of the voting at the last seven elections are given hereunder:—

\* Manhood suffrage, Act 64 Vic., No. 5. Universal adult suffrage, Act 3 Edward VII., No. 17, has been prescribed at all subsequent elections.

### § 3. Administrative Government.

In each State, as well as in the Commonwealth, the Government is administered by a number of chief departments, on lines similar to those on which administrative government is carried on in the United Kingdom. Reference has already been made to the creation of the Commonwealth Departments (see page 759). In the States the number and functions of the administrative departments vary considerably. This matter has also been referred to hereinbefore (see page 787). In many cases more than one department is under the control of a single Minister. The tabular statement given on this page and on the following pages shows the sub-departments, branches, etc., of each Ministerial Department in the Commonwealth and in each State, together with the principal Acts administered and other more important matters dealt with.

#### COMMONWEALTH ADMINISTRATIVE GOVERNMENT, 1918.

Departments, Sub-departments, Branches, etc.	Principal Acts Administered.	Matters dealt with or under Control.
1. Prime Minister's— (a) Auditor-General. (b) Public Service Commissioner. (c) High Commissioner. Courts of law, gaols, justices of the peace and coroners, lands titles, police, registration of deeds, Supreme Court & Judges, Railways.
8. Education—	Education.	Primary & technical education, University of Tasmania.

## SECTION XXVI.

## LOCAL GOVERNMENT.

## § 1. Introduction.

1. **Early History of Local Government.**—In previous issues of this book, a description was given of the systems of Local Government and their development in the several States of the Commonwealth, and at the same time a comparison was made between the Australian and Continental systems. The early history of Local Government in Australia was also dealt with. Owing, however, to considerations of space, these matters have been omitted from the present volume, and the reader is referred to Year Book No. 5, pages 972 to 975.

## § 2. Local Government Systems.

1. **New South Wales.**—(i.) *Development of Local Government.* The history of Local Government in New South Wales has been given in previous issues of this book (see No. 6, page 966). It is not intended to repeat the information in this issue.

(ii.) *Present System of Local Government.* The law relating to local government in New South Wales is now contained in the Acts of 1906, 1907, 1908 and 1914. Practically the whole of the State, with the exception of the Western Division, has been brought under the operation of these Acts.

(a) *Areas Incorporated.* Prior to the year 1907 the total area incorporated formed a very small part of the whole area of the State, as may be seen in the following statement:—

## AREAS INCORPORATED IN NEW SOUTH WALES, 1860 to 1906.

Year	...	...	1860.	1870.	1880.	1890.	1900.	1906.
Area incorporated—sq. miles	...	...	409	649	1,482	2,387	2,763	2,830

*Total area of State (exclusive of Lord Howe Island), 310,367 square miles.*

The areas incorporated in 1906 in each of the three territorial divisions of the State were as follows:—

## NEW SOUTH WALES.—DISTRIBUTION OF INCORPORATED AREAS, 1906.

Division.			Incorporated Area.	Unincorporated Area.	Total Area.
Eastern	...	Sq. miles	1,977	93,742	95,719
Central	...	"	571	88,579	89,150
Western	...	"	282	125,216	125,498
Total			2,830	307,537	*310,367

\* Total area of State, exclusive of Lord Howe Island, the area of which is 5 square miles.

The total area incorporated under the Local Government Act 1906 to the end of the year 1916 was 183,521 square miles, of which 180,655 square miles were comprised within shires and 2866 within municipalities. The areas incorporated comprise the whole of the eastern and central divisions of the State, with the exception of Lord Howe Island, the islands in Port Jackson, and the quarantine station at Port Jackson.

(b) *General.* The above Act came into operation on the 1st January, 1907; it provided for the continuation of existing shires and municipalities, for the creation of new ones, and for their reconstitution by uniting, dividing, altering, or converting areas.

Each shire is divided into three ridings, and each municipality may be divided into wards by petition of the council or a majority of the ratepayers to the Governor. The councils consist, in the case of shires, of either six or nine councillors, and in the case of municipalities, of from six to fifteen aldermen. A summary of the functions of councils, their powers and duties, together with a detailed statement of rates, ratable property, and endowment, will be found in previous issues of the Year Book. (See Year Book No. 5, pages 977 to 979.)

(iii.) *Shires*.—The total area of the 136 shires constituted under the new system is 180,655 square miles, and the population on the 31st December, 1916, was 646,320.

The shires vary in area from 36 square miles in the case of Ku-ring-gai, immediately north of the metropolis, to 5730 square miles in the case of Lachlan in the Condobolin district.

(a) *Valuation and Rates Levied*. The unimproved capital value of the shires in 1916 was £105,697,791, as against £104,745,633 in the preceding year. It is not possible to give the improved capital value or the assessed annual value, as the shires are not compelled to make these valuations, and in many cases do not make them. The total amount of all rates levied was £651,437.

(b) *Revenue*. The principal heads of revenue for the last five years are shewn in the following table:—

**NEW SOUTH WALES.—INCOME OF SHIRES, 1912 to 1916.**

Particulars.*	1912.	1913.	1914.	1915.	1916.
<i>General Fund—</i>	£	£	£	£	£
General rates ...	517,025	561,378	608,009	610,407	633,973
Government endowment...	372,952	134,635	146,077	163,211	143,259
Public works ...	45,152	62,453	197,754	192,319	205,277
Health administration ...	4,886	4,864	4,889	4,620	4,087
Public services ...	9,232	10,305	10,069	9,711	11,162
Shire property ...	8,768	10,159	13,738	12,512	12,449
Miscellaneous ...	5,648	6,814	6,742	7,613	7,507
<i>Special and Local Funds</i> ...	35,835	45,903	57,714	65,293	75,309
Total revenue...	999,498	836,511	1,044,992	1,065,686	1,093,023

\* The receipts for Public Works, Health Administration, Public Service, etc., include Government grants during 1916 amounting to £188,175.

(c) *Expenditure*. The following statement shews the expenditure of shires during the years 1912 to 1916 inclusive:—

**NEW SOUTH WALES.—EXPENDITURE OF SHIRES, 1912 to 1916.**

Particulars.	1912.	1913.	1914.	1915.	1916.
<i>General Fund—</i>	£	£	£	£	£
Administrative expenses ...	83,721	91,450	95,760	87,527	100,224

\* Including saleyards, pounds, baths, public watering-places, ferries, wharves, etc.

† Includes £78,603 for outstanding loans.

(iv.) *Municipalities.* Including the City of Sydney there were 185 municipalities in New South Wales at the end of 1916; of these, forty were in the suburbs of Sydney and eleven in the district of Newcastle and suburbs. Since the 1st January, 1908, under the Local Government Act 1906, suburban and country municipalities must levy a general rate on the unimproved capital value of all ratable land, and may levy additional general, special, local, or loan rates on either the unimproved or improved capital value. Municipal rates, until the year 1915, were charged on the annual value in the City of Sydney, and an additional rate was also levied on the unimproved capital value, but from 1916 the rates are levied on the unimproved capital value only. The only rates based solely on the assessed annual value are those charged by the Metropolitan and Hunter Water Supply and Sewerage Boards.

(a) *Capital Value, Area, Population, and Rates Levied.* The following table shows the improved capital value, the area, population, number of buildings, and amount of rates levied in municipalities for the years 1901 and 1912 to 1916 :—

NEW SOUTH WALES.—MUNICIPALITIES, IMPROVED CAPITAL VALUE, AREA, POPULATION, NUMBER OF BUILDINGS, AND TOTAL RATES LEVIED, 1901 and 1912-16.

(b) *Revenue.* The Local Government Act 1906 prescribed that there should be a general fund in each local government area (municipality and shire), also special funds for specified purposes. The regulations under the Act prescribed the system of accounts to be kept. This system differs materially from the old "cash" system of receipts (cash actually received) and disbursements (cash actually expended).

Prior to 1908 the municipal year ended on the first Monday in February; now it ends on the 31st December. In all statements of municipal accounts for the year 1908, therefore, the period referred to is from the 4th February to the 31st December, except in the City of Sydney, which does not come under the provisions of the Act of 1906 and where the accounts are kept for the calendar year. The first complete year for which financial particulars are available for the municipalities is the year 1909. Particulars of revenue for the year 1916 are given in the following table :—

**NEW SOUTH WALES.—MUNICIPALITIES, REVENUE, 1916.**

Particulars.	Sydney.	Suburbs.	Country.	Total.
	£	£	£	£

\* See note † to last table on preceding page. † See note ‡ to last table on preceding page.

2. *Victoria.*—(i.) *Development of Local Government.* In Victoria there are now two types of municipal institutions, (a) boroughs, including cities and towns, and (b) shires, and although they are now dealt with by the same Act, their origin was distinct, and in the early days of their development they were provided for by independent enactments. Melbourne and Geelong, the latter of which was for many years the second largest town in the State, having been incorporated under special statutes prior to the establishment of a general system of local government, are not subject to the provisions of the Local Government Acts except in a few comparatively unimportant details. Melbourne was incorporated as a town in 1842, and as a city in 1847; Geelong was incorporated as a town in 1849, and proclaimed a city on 14th December, 1910.

The earlier history of legislation in Victoria relative to Local Government, more especially with reference to the institution of Road Districts, their displacement by Shires, and the constitution of Urban Municipal Districts and Boroughs, has been fully dealt with in previous issues. (See Year Book No. 5, p. 992.)

(ii.) *Present System of Local Government.* Local government is now administered under the Act of 1903 throughout the whole of the State, with the exception of French Island.

(a) *Constitution of Municipalities.* Provision is made for the continuation of municipalities established under previous Acts and for the constitution of new ones.

Definitions of shires, boroughs, and townships have been given in previous issues of this book (see Year Book No. 6, page 978), together with the conditions necessary for their constitution.

(b) *Municipal Councils, etc.* Considerations of space prevent more than a passing reference to the following subjects, which were dealt with in previous issues of this book:—The constitution of municipal councils, their functions and powers, including the power of raising loans, the qualifications necessary for the exercise of the municipal franchise, and the definition of ratable and unratable property. (See Year Book No. 5, pp. 994 to 996.)

(c) *Endowment.* The legislation dealing with municipal endowment prior to 1907 is referred to in previous issues. (See Year Book No. 5, p. 996.) In 1907, under the Municipal Endowment and Reclassification of Shires Act of that year, a new classification was adopted under which the amount of the endowment is to be allocated. In addition to the endowment of £50,000, the municipalities received from the Government during the financial year 1916-17 a sum of £71,529 out of the Licensing Act Fund as the equivalent for (a) fees for licenses, (b) fees for the registration of brewers and spirit merchants, and (c) fines, penalties, and forfeitures incurred under the Licensing Act 1915. Under the Act of 1907 the endowment is payable in equal portions in March and September of each year. No city or town is entitled to receive any part of the endowment. The distribution amongst the boroughs and shires is based on the amount of general and extra rates received in the twelve months ending on the preceding 30th September according to the following scale:—To every borough or 1st class shire, 3s. in the £; to every 2nd class shire, 5s. in the £; to every 3rd class shire, 6s. in the £; to every 4th class shire, 8s. in the £; to every 5th class shire, 10s. in the £; to every 6th class shire, 12s. in the £.

For the three financial years commencing the 1st July, 1907, however, the amounts were definitely fixed by Act No. 2129, and for the seven succeeding financial years by Acts No. 2267, 2334, 2407, 2475, 2562, 2805 and 2872 respectively.

(iii.) *Boroughs and Shires.—Number, Population, and Value of Ratable Property.*—The following table shews the number of cities, towns, boroughs, and shires, their estimated population, the number of ratepayers and dwellings, and the value of ratable property for the years 1901 and 1913-17 inclusive:—

## VICTORIA.—PARTICULARS OF MUNICIPALITIES, 1901 and 1913-17.

3. *Queensland.—(i.) Development of Local Government.* The existing scheme of local government in the State of Queensland is regulated by the provisions of the Local Authorities Act 1902, with its amendments in 1903, 1905 and 1910. A summary of these Acts and of the earlier legislation under which the system of local government in Queensland was inaugurated and developed, will be found in previous issues of this book (see Year Book No. 5, p. 1013).

(ii.) *Present System of Local Government.* The principal features of previous enactments as to the division of the State into local areas are retained in the Acts of 1902 and 1910, but such areas are in future to be of two classes—(a) towns and (b) shires. All municipalities formerly constituted as boroughs become towns, except Brisbane, Rockhampton, and Townsville, which are declared to be cities, and all shires and divisions become shires. The Governor-in-Council may, after giving notice in the *Gazette*, constitute, unite, divide, or abolish areas for the purpose of forming new areas, and may by proclamation constitute a town or city.

(iii.) *The Municipal Councils.* All local areas are governed by councils, the members of which are called aldermen in the case of cities and towns, and councillors in the case of shires. City and town councils are composed of either seven, nine, or eleven members, as declared by Order-in-Council, but if the local authority has wards, three members are assigned to each ward. Shire councils are composed of five, seven, or nine members, as declared by Order-in-Council, but if the shire is divided the number cannot be more than three for each division, and need not be the same for every division.

In previous Year Books allusion has been made at some length to the powers and duties of municipal councils, as well as to loans, valuation, rates and franchise. It is not proposed to repeat this information in the present issue.

(iv.) *Area, Population, Number of Dwellings, Rates, Assets and Liabilities of Cities, Towns and Shires.* The following table gives particulars of the area, population, number of inhabited tenements, assets and liabilities of cities and towns, and of shires, for each year from 1912 to 1916 :—

**QUEENSLAND.—PARTICULARS OF CITIES AND TOWNS AND SHIRES, 1912 to 1916.**

\* Including interest on loans.

4. **South Australia.**—(i.) *Development of Local Government.* In the latter part of 1839 the first municipal law was passed in South Australia, which was thus the birthplace of municipal government in the Commonwealth. On the 31st October, 1840, the principles of self-government were practically adopted in Adelaide by the election of a mayor and council consisting of nineteen members, and the system has since been extended throughout the settled parts of the State by the formation of district councils and municipal corporations, which are the two types of local authorities now in existence.

(ii.) *District Councils.* The first District Councils Act was passed in 1858, was amended in 1862, and was further amended and consolidated by the District Councils Act of 1876, which provided for the continuation of existing districts and for the establishment of new ones by proclamation on the petition of the ratepayers. The revenue of the councils consisted of rents, profits, and income from lands vested in the councils or over which the councils had the control and management; fines and penalties enforced under the Act; fees for licenses; and general and special rates and loans. Provision was made for the election of councillors, their number, qualification, and retirement; for the election of auditors; the meetings, powers and functions of councils; the appointment of constables; revenue and expenditure; assessment of rates; and for making by-laws for various purposes. The Act of 1876 was amended from time to time, and was finally amended and consolidated by the Act which is now in force, namely, the District Councils Act 1887, which has in turn been amended in the years 1889, 1890, 1897, 1904, and 1905. These Acts were again amended by the Local Government Act 1910. The District Councils Consolidation Act 1914 embraces in one Act all the provisions of the above-mentioned Acts with emendations and additions. Subsidies of 25 per cent. on current rates collected are paid to corporations under Act 481 of 1899, and to district councils under Act 1182 of 1914. Votes are annually provided by Act of

Parliament of about £180,000, for payment to corporations and district councils as a contribution towards the cost of main roads throughout the State and other roads in newly-settled areas.

The powers and duties of district councils, together with the qualification necessary for councillors and electors, have been given *in extenso* in previous issues.

(iii.) *Municipalities.* Municipalities were first established under the Municipal Corporations Act of 1861, which, after providing for the extension of the powers and duties of the Corporation of the City of Adelaide, authorised the Governor, on petition of a majority of not less than two-thirds of the property-owners, to constitute any town, district, or place within the province, as a municipality. This Act and its amendments were consolidated in the Municipal Corporations Act 1880, which was amended from time to time until the year 1890, when it was repealed and its provisions consolidated by the existing Act, the Municipal Corporations Acts of 1890, which was in turn amended in 1893, 1896, and 1903. These Acts were again amended by the Local Government Act 1910.

A brief description of the Municipal Corporations Act of 1890, as well as the functions of municipal councils, will be found in previous issues of this book.

(iv.) *Finances of District Councils and Corporations.* The subjoined tables shew the amounts of assessments and the revenue and expenditure of district councils and of corporations for the financial years 1901 and 1913 to 1917; the figures given are exclusive of the Main Roads Funds, particulars as to which may be found in the section of this book on "Roads and Bridges."

\* Up to and including the year 1903, the financial year for Corporations ended on the 31st December, but after that date ends on the 30th November. The financial year for district councils ends on the 30th June.

5. *Western Australia.*—(i.) *Types of Local Authorities.* In this State there are three forms of local authorities, namely :—(i.) Municipalities, (ii.) Road Districts, and (iii.) Local Boards of Health. The first Municipalities Act was passed in 1871, but only a few districts were incorporated under it. In 1895 a more comprehensive measure, the Municipal Institutions Act, was passed, and after being amended from time to time was consolidated by the Municipal Institutions Acts 1902 and 1904. In 1906 the most recent enactment, the Municipal Corporations Act, was passed, repealing and consolidating previous enactments. The whole area of the State outside incorporated municipalities

is divided into road districts, which are administered under the Roads Act 1911. In municipalities the councils act as Health Boards for the purpose of administering the Public Health Act, while outside municipalities local Boards of Health may be formed. In 1904, another local government measure, the Water Boards Act, was passed, under which Boards may be appointed for the control of waterworks, and rates may be levied for the purpose, the maximum being fixed at two shillings in the pound of ratable value.

(ii.) *Municipalities.* These are now regulated by the Municipal Corporations Act, which came into force on the 1st January, 1907. Provision is made for the continuation of existing municipalities, and the Governor is authorised to constitute new municipalities on petition signed by at least fifty property-holders in the district proposed to be incorporated; to unite adjoining municipalities on petition under their common seals; to sever any portion from a municipality on petition signed by a majority of the ratepayers, and to annex such portion to a contiguous municipality or road district.

(a) *Municipal Councils* consist of a mayor and councillors, the number of which depends upon the population of the municipality; if the population is less than 1000 there are six councillors, if from 1000 to 5000 there are nine councillors, and if the population is over 5000 there are twelve councillors, or three for each ward. Any male ratepayer of the age of twenty-one years, if a natural born or naturalised subject, is eligible for election as mayor or councillor, except ministers of religion, uncertificated bankrupts, prisoners, and certain other persons who may be disqualified on the ground of interest.

The duties and powers of municipal councils, the levying of rates, the qualification of voters and the classification of municipalities in Western Australia are fully referred to in previous issues. (Year Book No. 5, p. 1025.) Consideration of space prevents their inclusion in this edition.

(b) *Government Subsidies.* Amounts are granted annually to municipalities by way of subsidies on the amounts of rates collected. To entitle any council to participate in the allocation of the annual Parliamentary vote the council must have levied a minimum general rate of one shilling in the pound. The maximum subsidy payable to any one municipality is £3000, and the minimum is £75. Apart from the above, amounts voted by Parliament for special works in municipal districts are often entrusted to the councils for expenditure under approved conditions.

(iii.) *Area, Population, etc., of Municipalities.* Returns regarding the area, population, and valuation of municipalities are defective. They are shewn in the table hereunder:—

**WESTERN AUSTRALIA.—NUMBER, AREA, POPULATION, NUMBER OF DWELLINGS, AND VALUATION OF MUNICIPALITIES, 1901 and 1912-16.**

\* Including bank balance, cash in hand, and fixed deposit. † Incomplete.

(vi.) *Road Districts.* The whole area of the State, outside incorporated municipalities, is divided into districts, the executive powers being vested in elective boards. These districts were originally formed solely for the purpose of controlling roads and bridges, but their powers and duties have been extended, so that at the present time they correspond closely to the shires of the other States of the Commonwealth. The enactments at present governing the administration of the Road Boards are the Roads Act 1911, the Parks and Reserves Act, the Cattle Trespassing Act, the Width of Tyres Act, the Cart and Carriage Licenses Act, and the Dog Act. The general powers and duties of the Boards are described in previous issues of this book.

(vii.) *Boards of Health.* These may be established under the Public Health Act 1911, which came into force on the 1st June, 1911, either within or outside of municipal boundaries. In the former case the Act is administered by the municipal councils, while in the latter case districts whose borders are continuous with road districts are administered by the local authorities. Those not continuous with road districts are administered by special Boards. The revenue of these Boards consists chiefly of moneys received:

from health rates and sanitary fees, and the largest item of expenditure is directly connected with the sanitary service. The following table shews particulars of the receipts and expenditure of the various Boards—both municipal and extra-municipal—during the years 1901 and 1912 to 1916 :—

**WESTERN AUSTRALIA.—RECEIPTS AND EXPENDITURE OF LOCAL HEALTH  
BOARDS, 1901 and 1912-16.**

Year ended the 31st October.	Revenue.			Expenditure.

a Exclusive of 15 inactive boards and 1 that sent in no return. b Exclusive of 3 boards which did not furnish returns and 14 boards which were inactive. c Exclusive of 13 inactive boards. d Exclusive of 13 inactive boards. e Exclusive of 8 inactive boards. f Including sanitary rates. g Including sanitary fees and charges.

On the 31st October, 1916, there were thirty Local Boards of Health within municipalities, and on the 30th June, 1916, sixty under control of Road Boards, and thirty-three extra-municipal Boards. In and after 1911, the financial year of Municipal Local Health Boards ended 31st October, and that of extra-municipal Boards, 30th June.

6. *Tasmania.*—(i.) *Development of Local Areas.* In this State the city of Hobart was incorporated by special Act in the year 1852, but it was not until 1858, when the Rural Municipalities Act was passed, that a general scheme for the establishment of municipalities was extended throughout the State. This Act was amended from time to time without, however, altering its chief characteristics. In 1869 a Roads Act was passed, and after being amended at various times was consolidated in 1884. Under the provisions of these Acts parts of the State were placed under the control of Town Boards and Road Trusts. The general rate under the Municipalities Act was limited to one shilling and sixpence in the pound of annual value, while special rates could be levied in rural districts, provided that the general and special rates together did not exceed one shilling and sixpence in the pound.

(ii.) *Acts now in Force.* In 1906 the whole of the Acts dealing with local authorities were amended and consolidated by the Local Government Act of that year. The whole State, with the exception of the urban municipalities of Hobart and Launceston, is divided into municipal districts, and every Rural Municipality, Town Board, Main Road District, Road District, Local Health District, Fruit District, Rabbit District, School District, and Public Recreation Ground District included in any municipality established by the Act is abolished. Each district is incorporated and is under the control of a warden and councillors, who, in addition to the specific duties and powers imposed and conferred by the Act of 1906, are vested with powers and authorities under the following Acts :—The Codlin Moth Act 1888, the Rabbits Destruction Act 1889, the Public Health Act 1903, the Education Act 1885, the Roads Act 1884, the Rural Municipalities Act 1865, the Police Act 1905, the Town Boards Act 1896, the Public Recreation Grounds Act 1888, the Cemeteries Act 1865, and the Californian Thistle Act 1883. The Governor is authorised to unite, subdivide, or abolish municipalities or wards on petition, and may

do so without petition if in any municipality there is at any time no council or an insufficient number of councillors to form a quorum. The Act of 1906 was amended in 1908, and again in 1911.

(a) *Formation of Councils.* In the case of municipalities not divided into wards, the council is to consist of the number of members, being a multiple of three, assigned to it by the Governor, while the councils of municipalities which are subdivided consist of three councillors for each ward. Any resident elector is eligible to act as a councillor unless he is disqualified as being an interested person, a bankrupt or convict, or as undergoing a sentence of imprisonment, or as insane. The warden is elected by the councillors from their own body.

° The functions of councils, their borrowing powers, the levying of rates, and the constitution of local and water districts have been referred to in detail in previous issues.

(b) *Qualification of Electors.* Both owners and occupiers of property within a municipality are allowed plurality of votes according to the following scale:—

Annual Value of Property	Under £30.	£30 to £80.	£80 to £160.	£160 to £240.	£240 to £360.	£360 and upwards.
Number of Votes	1	2	3	4	5	6

In the case of joint owners or occupiers the number of votes according to the above scale is equally divided as far as possible, and the vote or votes which cannot be so divided may be given by such one of the joint owners or occupiers as may be appointed by the others. The provisions of the Acts relating to voting by post at parliamentary elections may be made applicable to any municipal election on the petition of the council to the Governor.

(iii.) *Annual Value, Revenue, and Expenditure of Municipalities.* The following table shows the annual value, total receipts, and expenditure of municipalities for the years 1912 to 1916 inclusive:—

**TASMANIA.—ANNUAL VALUE, REVENUE AND EXPENDITURE OF MUNICIPALITIES, 1912 to 1916.**

Year.	Number of Municipalities.	Annual Value of Ratable Property.	Revenue.				Expenditure.†	
			From Rates.	From Govt.	From other Sources.*	Total.

1916	...	50	1,717,878	188,939	12,753	216,880	418,572	510,977

\* Including sums derived from loans. † Including repayments of loans.

According to the latest estimate made by the Commissioner of Taxes the capital value of ratable property in 1911 was £30,924,993.

(iv.) *Total Revenue and Expenditure of Local Bodies.* Particulars as to Road Boards and Road Trusts are given in the chapter of this book on "Roads and Bridges." In addition to the local authorities already mentioned, Marine Boards have been established at seven ports in Tasmania for the purposes of constructing and maintaining wharves and jetties and of controlling all matters relating to shipping in the respective ports. Twenty water trusts and forty cemetery trusts have also been established in connection with municipal bodies. The subjoined statement shews the total revenue and expenditure for all local bodies, exclusive of all amounts contributed by the general Government, during each financial year from 1913 to 1917 inclusive:—

**TASMANIA.—REVENUE AND EXPENDITURE OF ALL LOCAL BODIES, EXCLUSIVE OF AMOUNTS CONTRIBUTED BY THE GENERAL GOVERNMENT, 1913 to 1917.**

### § 3. Water Supply, Sewerage and Drainage.

1. **New South Wales.**—(i.) *Sydney Metropolitan Board of Water Supply and Sewerage.* Prior to the year 1888 the main water supply and sewerage systems of Sydney and suburbs were under the control of the City Corporation, while several of the suburban councils had constructed local systems, but in that year the Government, with the object of placing the administration of both water supply and sewerage systems throughout the County of Cumberland under the control of an independent body, passed an Act authorising the establishment of the Metropolitan Board of Water Supply and Sewerage. This Board consists of seven members, three of whom are appointed by the Government, two by the City Council, and two by the suburban and country municipalities in the County of Cumberland. The Board is under the general supervision of the Minister for Works—a provision considered necessary since the loan expenditure of the Board forms part of the public debt of the State.

(a) *Present System.* In the year 1850 authority was given by the Legislative Council to the City Corporation to construct water and sewerage works. Under this authority a water supply scheme was adopted and carried out, at a cost of nearly £1,750,000, by which the waters of the streams draining into Botany Bay were intercepted and pumped into three reservoirs. This system has now been superseded, the metropolitan water supply being at present obtained from the watersheds of the Nepean, Cataract, and Cordeaux Rivers. The principal reservoirs in connection with the scheme are the "Cataract" and "Prospect" dams. A fuller description of these dams will be found in previous issues of this book (see Year Book No. 5, p. 984), but their dimensions are here given :—

## SYDNEY WATER SUPPLY.—CATARACT AND PROSPECT DAMS.

Dam.	Height above Foundation.	Width at Top.	Thickness at Bottom.	Length.	Area of Reservoir.	Capacity of Reservoir.
	Feet.	Feet.	Feet.	Feet.	Acres.	Gallons.
Cataract ...	192	16½	150	811	2,104	20,743,200,000
Prospect ...	85½	30	523	7,300	1,266½	11,029,200,000*

\* Of which 5,527,000,000 gallons are available by gravitation.

(b) *Aqueducts and Mains.* The water is drawn off from the Prospect reservoir by a canal, five miles in length, to the Pipe Head Basin, situated 16½ miles from Sydney. It is then conveyed for a further distance of five miles to Potts' Hill reservoir, which has a capacity of 100,000,000 gallons, covers twenty-four and a half acres, and is designed to tide the city over any interruption of supply from Prospect, and to prevent fluctuation of pressure. Thence the water passes through a screening tank, and proceeds towards the city in two 48-inch cast-iron mains. A fuller description of the system of reticulation adopted will be found in previous issues.

(c) *Service Reservoirs.* In connection with the water supply there are in all thirty-five service reservoirs, with a total maximum capacity of 67,395,000 gallons.

(d) *Revenue, Expenditure, and Capital Cost of Sydney Waterworks.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan waterworks for 1901 and 1913-17.

## SYDNEY WATERWORKS.—REVENUE, EXPENDITURE, AND CAPITAL COST, 1901 and 1913-17.

Year Ended 30th June.	Revenue.	Working Expenses.	Capital Cost exclusive of Items on which Interest is not charged.	Percentage of Working Expenses to Revenue.	Percentage of Revenue to Capital Cost.	Interest Payable on Capital Cost.	Net Profit after paying Working Expenses and Interest.
	£	£	£	%	%	£	£
1901 ...	203,348	49,270	4,300,552	24.22	4.72	152,333	1,745

\* Rate reduced from 7d. to 6d. from 1/7/08, and meter rents abolished. † - Signifies loss.

(e) *Quantity of Water, Number of Houses, and Population Supplied.* The following table gives various particulars for the years 1901 and 1913-17, shewing the increase in the supply of water in Sydney and suburbs:—

## SYDNEY WATERWORKS.—NUMBER OF GALLONS, HOUSES, AND POPULATION SUPPLIED, 1901 and 1913-17.

Year Ended 30th June.	Number of Houses Supplied.	Estimated Population Supplied.	Average Daily Supply.	Total Supply for the Year.	Aver. Daily Supply.		Mains Laid.
					Per House.	Per Head of Estimated Population	
	No.	No.	1000 Gallons.	1000 Gallons.	Gallons.	Gallons.	Miles.
1901	98,298	491,000	21,583	7,877,677	219	43.95	40
1913	155,213	776,065	32,594	11,896,810	210	41.99	100
1914	166,112	830,560	36,540	13,337,000	220	44.00	102
1915	175,758	878,790	37,548	13,705,061	210	42.72	183
1916	183,598	917,990	39,380	14,374,000	214	42.89	183
1917	193,643	908,215	39,637	14,467,000	204	40.94	194

(f) *Other Water Supply Systems under the Metropolitan Board.* In addition to the main metropolitan water supply system there are certain other systems within the County of Cumberland managed by the Metropolitan Board. (a) The Richmond waterworks are entirely unconnected with the Sydney supply. Water is supplied to the town by a small pumping station on the left bank of the Hawkesbury River, just below the confluence of the Grose and Nepean. (b) The Wollongong waterworks are also unconnected with the Sydney supply. The source of supply is the Cordeaux River and the catchment area is 2400 acres in extent. The total capacity of the reservoir is 173,000,000 gallons and the total length of the main about nineteen miles, exclusive of the extension to Port Kembla and Unanderra. (c) The Manly waterworks are supplied by a special catchment area of about 1300 acres, and are also connected with the metropolitan system by a 10-inch main from Mosman. (d) The water-supply for the districts of Campbelltown, Camden and Narellan, and Liverpool is not drawn from the main Sydney supply through Potts' Hill, but is received by gravitation from the upper canal at Prospect. For further details of these water-supply systems see previous issues.

(ii.) *Metropolitan Sewerage System.* The system which is now under the control of the Metropolitan Board of Water Supply and Sewerage will be found fully described in previous issues. (See Year Book No. 5, p. 986.)

(a) *Revenue, Expenditure, and Capital Cost of Sydney Sewerage Systems.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan sewerage systems for 1901 and 1913-17:—

**SYDNEY SEWERAGE SYSTEMS.—REVENUE, EXPENDITURE, AND CAPITAL COST, 1901 and 1913-17.**

Year ended the 30th June.	Revenue.	Working Expenses.	Capital Cost, exclusive of Items on which Interest is not Charged.	Percentage of Expenditure to Revenue.	Percentage of Revenue on Capital Cost.	Interest Payable on Capital Cost.	Profit or Loss after Payment of Working Expenses and Interest.
	£	£	£	%	%	£	£
1901 ...	125,290	45,395	3,066,147	36.23	4.05	106,475	—26,580

NOTE.—The minus sign represents a loss.

(b) *Number of Houses Drained, Population, and Length of Sewers in Sydney Metropolitan Sewerage Systems.* The following table gives particulars as to the number of houses drained, the population, and the length of sewers within the Sydney metropolitan area for 1901 and 1913 to 1917:—

**SYDNEY SEWERAGE SYSTEMS.—NUMBER OF HOUSES DRAINED, POPULATION SERVED, AND LENGTH OF SEWERS, 1901 and 1913-17.**

Year ended the 30th June.	Number of Houses Drained.	Estimated Population Served.	Total Length of Sewers.	Total Length of Storm-water Drains.	Ventilating Shafts Erected.	Sewers Ventilated.
	No.	No.	Miles.	Miles.	Feet.	Miles.
1901 ...	75,416	370,000	515.62	25.91	194,667	450
1913 ...	114,690	573,450	890.53	52.24	401,344	853
1914 ...	118,643	593,200	930.06	53.15	408,778	871
1915 ...	124,759	623,795	972.14	53.65	427,552	915
1916 ...	129,650	648,250	1,022.15	54.08	443,134	953
1917 ...	136,409	682,045	1,085.45	59.55	475,474	1,030

(iii.) *The Hunter District Water Supply and Sewerage Board.* The waterworks of the Lower Hunter were constructed by the Government under the provisions of the Country Towns Water Supply and Sewerage Act of 1880. In 1892 a special Act was passed establishing an independent Board to control the water-supply works. Fuller reference is made to the constitution of this Board and to the municipalities and incorporated areas under its jurisdiction in previous issues of the Year Book. (See Year Book No. 5, p. 988.)

(a) *Description of Waterworks.* The water supply is pumped from the Hunter River about a mile and a half up stream from West Maitland into a settling-tank of 1,390,500 gallons capacity, and thence flows through filter beds into a clear water tank holding 589,500 gallons. It is then pumped from the clear water tank into two summit reservoirs, one of which supplies East and West Maitland, and Morpeth, while the other supplies Newcastle and suburbs, and the townships of South Maitland and Cessnock. There is also a storage reservoir of 172,408,100 gallons capacity, which is resorted to when the river water is too turbid. In these districts there are fourteen service reservoirs, having a total capacity of nearly 5,794,378 gallons supplied by gravitation. On the hill at Newcastle there is also a high-level iron tank with a capacity of 20,000 gallons, which is supplied by a small pumping engine at Newcastle reservoir. The total length of water mains is 411 miles.

(b) *Water Supply, Capital Cost, Revenue, and Expenditure.* By the Act of 1892 referred to above and an amending Act of 1894 the capital debt of the Board was to be liquidated by annual instalments distributed over 100 years with interest at  $3\frac{1}{2}$  per cent. By a further amending Act of 1897 the repayment of expenditure on permanent works was abrogated, and the annual instalments to be paid in liquidation of the cost of renewable works were to be fixed by the Government from year to year. The capital debt of the Board to the Government at 30th June, 1917, was in respect of water supply £660,067, and £443,257 in respect of sewerage. In the subjoined table particulars are given as to the revenue and expenditure, and also as to the number of houses and population supplied in 1901 and 1913 to 1917:—

**PARTICULARS OF HUNTER DISTRICT WATER SUPPLY, 1901 and 1913 to 1917.**

Year ended 30th June.	Revenue.	Working Expenses (including Interest).	Houses Supplied.	Estimated Population Served.	Supply.	
					Daily Average.	Total.
	£	£	No.	No.	1000 Gallons.	1000 Gallons.
1901 ... ..	27,405	30,948	9,086	45,400	1,005	366,889
1913 ... ..	53,673	49,043	18,405	92,025	2,366	863,692
1914 ... ..	66,323	52,994	19,575	97,875	2,791	1,018,810
1915 ... ..	68,611	55,382	20,709	103,545	2,859	1,043,546
1916 ... ..	79,507	58,436	22,056	110,280	3,507	1,283,754
1917 ... ..	78,040	65,338	22,604	113,020	3,435	1,253,897

The average daily consumption of water for all purposes per inhabitant was 30.39 gallons during the year 1917, as against 31.80 gallons during the previous year.

(c) *Sewerage Works.* Considerable progress has been made by the Department of Public Works with the construction of the sewerage works for Newcastle and suburbs. The scheme is designed on the separate system, and will deal with the sewage partly by gravitation and partly by pumping. Up to the 30th June, 1917, about 103 miles of sewers, connecting with 8284 separate properties, were under the control of the Board. For the financial year 1916-17 the revenue was £21,408 and the expenditure £29,316, the latter amount including a £3473 instalment to the sinking fund for the reconstruction of renewable works, and £2754 interest on works not transferred to the Board at 30th June, 1917, and therefore not revenue producing at that date.

(iv.) *Water Supply and Sewerage in Country Towns.* With the object of assisting municipalities to construct systems of water supply and sewerage, the Country Towns Water Supply and Sewerage Act of 1880 was passed, but has since been amended by the Acts of 1887, 1894 and 1905. The principal provisions of these Acts are more fully dealt with in previous issues of this book. (See Year Book No. 5, p. 989.) By an Act passed in 1916 these Acts were applied to shires.

(a) *Waterworks.* Up to the 30th June, 1917, fifty-five country municipalities had availed themselves of the privileges of the Acts as regards waterworks, all of which at that date had been completed and handed over by the Government. The capital debt of these works was £1,188,083, and the total of the sums payable annually for various periods ranging up to 100 years was £56,401, including interest ranging from  $3\frac{1}{2}$  per cent. to 4 per cent., the first repayments having become due at various dates, starting from the end of the year 1893. In the calculation of these repayments the interest on the sums actually expended has been added, and any payments by the councils, as well as sums remitted under the authority of the Act, have been deducted. Other schemes of water supply and extensions of existing works are in course of construction. A few other municipalities have constructed works out of their own resources, and the water supply of Broken Hill with a capital debt of £473,869 was constructed under a special Act and administered by the Minister for Public Works.

(b) *Sewerage Works.* Only seventeen municipal councils have taken advantage of the Act providing for the construction of sewerage and storm water drainage works in country towns. On the 30th June, 1917, the capital debt of these systems was £342,139, the amount payable annually to the Government being £14,211. Other sewerage systems, as well as extensions to existing systems, are in course of construction.

2. *Victoria.*—(i) *The Melbourne and Metropolitan Board of Works.* This Board was established by an Act of 1890, and entered upon its duties in March, 1891. The Board consists of forty members, one of whom is chairman elected every four years by the other members, the retiring chairman being eligible for re-election. Nine members are elected by the Melbourne City Council, four by the South Melbourne Council, three by the Prahran, two each by the Collingwood, Fitzroy, Richmond, and St. Kilda, and one each by the other fifteen suburban municipal councils returning a representative. The sewerage area over which the Board exercises control consists of fifteen cities, five towns, one shire, and parts of five other municipalities, or twenty-six municipalities in all, comprising a total area of 90,821 acres. Control for water supply purposes is also exercised by consent of the Governor-in-Council over 2949 acres in four municipalities. The Board further supplies water to the metropolitan farm at Werribee, and the outfall sewer area. Various other shires also arrange for bulk supplies of water. The total estimated population on the 31st December, 1917, was 733,496. The waterworks for the supply of Melbourne and suburbs were originally carried out by the Government, which had for that purpose contracted loans amounting to £2,389,934; these works were vested in the Board in 1891. The primary object of the creation of the Board was not, however, to take over these works, but was to supply the long called for and pressing want of a sewerage system for the metropolis. To carry out its work the Board is authorised to borrow £10,750,000, exclusive of the loans contracted by the Government for the purpose of waterworks and taken over by the Board. The liability on Government loans on the 30th June, 1917, was £1,559,786, and for loans raised by the Board was £10,775,110. The Board is still empowered to borrow £805,038 before reaching the limit of its borrowing powers.

(a) *Total Cost of Water Supply and Sewerage.* The subjoined table shews the total cost of construction and maintenance of water supply and sewerage from 1853 to 1917 :—

**MELBOURNE AND METROPOLITAN BOARD OF WORKS.—TOTAL COST OF CONSTRUCTION AND MAINTENANCE OF WATER SUPPLY AND SEWERAGE, 1853 to 1917.**

Period ending 30th June.	Water Supply.			Sewerage.			Grand Total.

\* Excess of stock distribution (£27020) over purchases (£2727).

(ii.) *Melbourne Metropolitan Water Supply.* In December, 1857, the construction of the Yan Yean Reservoir system was completed. A description of the conditions that prevailed in Melbourne prior to that date is given in previous issues of the Year Book.

(a) *Development of System.* The following statement shews the development which has taken place in the water supply system of Melbourne during the sixty years since its inception :—

#### MELBOURNE WATER SUPPLY SYSTEM, 1857 to 1917.

Year.	Estimated Population Supplied.*	Capital cost.†	Charge per 1000 Gallons.	Rate in £.	Reticulation, Mains, &c., Mileage.†	Daily average of annual consumption of water.*
1857 (Dec. 31)	95,442	£ 748,974	10/- and 6/-	1/-	104	2,250,000
1917 (June 30)	733,496	4,867,607	1/-	6d.	1,682	8,604,178

\* 31st December. † 30th June.

(b) *Description of Water Supply Systems.* The water supply of Melbourne consists of three main systems—the Yan Yean (including the high level main), the Maroondah, and the O'Shanassy systems.

A full description of the two former systems has been given in previous issues of this book (see No. 6, p. 983).

The three reservoirs at Preston, which are the main distributors of the central city supply, contain 13,500,000, 24,500,000, and 26,300,000 gallons respectively.

The work has been completed of diverting the waters of the O'Shanassy River, a tributary of the Yarra, by an open aqueduct and pipe line of an aggregate length of 48½ miles, delivering water to the eastern portion of the metropolis by way of Mitcham and Surrey Hills. The total capacity of the scheme is 20,000,000 gallons per day, but it has been completed in the tunnels and some other parts to a capacity of 60,000,000 gallons to provide for further diversions from the Upper Yarra and its tributaries. The scheme was estimated to cost £450,000, and up to 30th June, 1917, £452,027 had been expended. The watershed of the O'Shanassy River, containing 33,000 acres, situated near Warburton, has been excised from the permanent forests area, and a Crown grant was issued to the Board on the 28th January, 1910.

(c) *Catchment Areas, Reservoirs, and Aqueducts.* (i.) *Drainage Areas.* The whole of the catchment areas are absolutely free from population, cultivation, or stock grazing, and are under the complete control of the Metropolitan Board of Works. The present drainage areas from which the water is delivered are as follows :—

#### MELBOURNE WATER SUPPLY.—CATCHMENT AREA IN ACRES, 1917.

Silver and Wallaby Creeks.	Plenty River and Jack's Ck.	Yan Yean Reservoir Catchment.	Maroondah Catchment.	O'Shanassy Catchment.	Total.
12,000	12,000	5,000	40,000	33,000	102,000

All the water is delivered by gravitation, no pumping being required in any portion of the area supplied.

(d) *Storage and Service Reservoirs.* There are two storage reservoirs, having a total capacity of 6,460,000,000 gallons, and thirteen service reservoirs having a total capacity of 131,300,000 gallons. The total daily quantity of water which can be sent into Melbourne is as follows :—

System ...	Yan Yean.	High Level Main.	Maroondah.	O'Shanassy.	Total Supply.
Gallons per day ...	33,000,000	9,000,000	28,000,000	20,000,000	90,000,000

(e) *Quantity of Water, Number of Houses, and Population Supplied.* The following table gives various particulars for the years 1901 and 1913-17, shewing the increase in the supply of water in Melbourne and suburbs :—

**MELBOURNE WATERWORKS.—NUMBER OF HOUSES, POPULATION, AND  
WATER SUPPLIED, 1901 and 1913-17.**

Year Ended 30th June.	Number of Houses Served.	Estimated Population Supplied.	Average Daily Supply.	Total Supply for the Year ended 30th June.	Average Daily Supply.		Rate Levied.	Assess-ments of Houses Served by Metro-politan Water Supply.

\* Works commenced in 1853. † Revenue commenced in 1854. ‡ Returns for expenditure commenced in 1859. § First interest paid in 1856. || Rate reduced from 7d. to 6d. in the £. ¶ Not including renewals (£7349) and special war expenditure (£7728). \*\* Not including renewals (£4545) and special War expenditure (£4689).

(iii.) *Melbourne Sewerage.* As stated above, the chief object of the creation of the Melbourne and Metropolitan Board was to carry out an efficient system of sewerage. The cost of removal of the sewage in 1894 was about £90,000, equal to a capital expenditure of £1,750,000. This movable pan system has been displaced by the water carriage system throughout the greater portion of the metropolis, and in other parts the work of reticulation is now proceeding.

(a) *Description of Sewerage Systems.* The whole of the sewage of the metropolis is being gradually collected by means of two principal sewers and a subsidiary main leading to the pumping station at Spotswood. A description of the scheme may be found in previous issues. (See Year Book No. 5, p. 1007.)

(b) *Metropolitan Sewage Farm.* The farm originally contained 8847 acres, situated on the western side of the Werribee River. The price paid for the land was £17 10s. per acre (including compensation for severance), which in its virgin unimproved state cost the Board in 1892, £159,873. This sum included the purchase of a strip of land 11½ miles long (168½ acres) on which the greater portion of the outfall sewer is constructed. Since 1911, 2306 acres have been purchased, making the total area of the farm 11,153 acres at 30th June, 1917, its total cost to that date being £555,323. About 34,022,175 gallons of sewage had to be disposed of every twenty-four hours during the year in 1916-17 in irrigating the fields. It is spread over properly prepared and sown blocks of land by a series of mains and lateral carriers. The blocks are laid down with grass and lucerne, on

which sheep and cattle are depastured. During the financial year 1916-17, 4569 sheep were sold, the profit for the year being £1154. Cattle to the number of 5147 were sold, the profit for the year on cattle being £19,195.

(c) *Number of Houses Connected, Capital Cost, Revenue and Expenditure.* The following table gives particulars as to the number of houses connected to the sewerage system, the total capital cost, and the receipts and disbursements during 1901 and 1913-17 :—

**MELBOURNE SEWERAGE WORKS.—TENEMENTS CONNECTED, CAPITAL COST, REVENUE, MAINTENANCE, AND WORKING EXPENSES, 1901-2 and 1913-17.**

(iv.) *Water Supply in Country Towns and Districts.* By the Water Act 1905 (now the Water Act 1915), which came into operation on the 1st May, 1906, the control and management of all Irrigation Trusts, with one exception, and of a number of waterworks and water supply districts were centralised, and their works and property vested in the State Rivers and Water Supply Commission. The powers and duties of this Commission were extended by the Water Act 1909 (now embodied in the Water Act 1915), the whole of the Water Supply Department being now merged in the Commission. Further information with regard to this Commission and to the works and districts under its control are given in the section in this book dealing with Water Conservation and Irrigation. There are, however, in different parts of Victoria a number of other waterworks which are concerned chiefly with domestic supply, and which are controlled by local authorities, i.e., by Waterworks Trusts or by municipal corporations. These works are constructed out of moneys either granted or lent by the State Government. The following table gives particulars as to the waterworks under the control of Trusts and municipal corporations for the years 1901 and 1913-17 :—

**VICTORIA.—COUNTRY WATERWORKS UNDER TRUSTS AND MUNICIPAL CORPORATIONS, 1901. and 1913-17.**

Year.	Waterworks Trusts.				Municipal Corporations.			
	Number of Trusts.	Capital Cost.	Capital Indebtedness.	Interest Outstanding.	Number of Corporations.	Capital Cost.	Capital Indebtedness.	Interest Outstanding.

\* Returns not available.

Under the provisions of the Local Government Act 1903 (now embodied in the Local Government Act 1915), municipal councils are authorised to construct and maintain tanks, dams, and reservoirs, and must maintain existing works for the gratuitous supply

of water. They are also empowered to accept the management and control of new waterworks within their respective localities, and may, with the consent of the Governor, construct or purchase new works within or without their locality. Councils are also authorised to enter into contracts for the supply of water for any period not exceeding ten years with the owner of any waterworks. Every municipality may levy a special water rate for water supplied, or for the purpose of constructing waterworks or paying the interest on any loan contracted by the council for such purpose, but the amount of the rate must not exceed in any year the sum of two shillings in the pound, provided that a minimum of ten shillings may be fixed by the council to be paid in respect of any property to which water is supplied.

(v.) *Geelong Waterworks and Sewerage Trust.* This Trust was constituted under the Geelong Municipal Waterworks Act 1907, with borrowing power up to £300,000, afterwards increased by Act No. 2322, 1911, to £350,000, and subsequently to £525,000. It was reconstituted under the Geelong Waterworks and Sewerage Act 1910, with power to borrow an additional £250,000 for the purpose of installing a sewerage system for Geelong and suburbs. These Acts have since been consolidated under the Geelong Waterworks and Sewerage Act No. 2661, and the borrowing power for sewerage purposes increased to £375,000. The available storage capacity of the reservoirs is 1655 million gallons, and the Trust is authorised to supply water to (a) City of Geelong; (b) the suburbs thereof, and all places within a radius of five miles of the Geelong post office; and (c) any place within ten miles on either side of the main pipe from Stoney Creek to Geelong. The cost of the works (water and sewerage) to 30th June, 1917, was £793,660, the estimated population served is 35,000, and the number of assessments 11,346. The receipts for the year amounted to £43,312. The sewerage scheme provides for a main outfall sewer 4 ft. 3 in.  $\times$  3 ft. 3 in. to the ocean at Black Rock—a distance of about nine miles. The drainage area embraces an area of 8081 acres, including the city of Geelong, boroughs of Geelong West, Newtown and Chilwell, and the suburban areas in the shires of Corio, South Barwon, and Bellarine.

**3. Queensland.**—(i.) *The Metropolitan Water and Sewerage Board.* This Board was constituted by the Metropolitan Water and Sewerage Act 1909 and the Amended Act of 1915, which divested the then existing Water Board of its powers and duties and vested them in an extended form in the new Board. The Acts further empower the Board to carry out a sewerage and drainage system, and relieve the local authorities of their responsibilities in that matter. The district of the new Board comprises the cities of Brisbane and South Brisbane, the towns of Hamilton, Ithaca, Toowong, and Windsor, and the shires of Balmoral, Cooparoo, Enoggera (except division 3), Sherwood (except division 1), Stephens, Taringa, Toombul, and a portion of Kedron.

The Board consists of nine members, viz., the president and eight elected colleagues.

(a) *Brisbane Water Supply.* The supply is derived from the upper reaches of the Brisbane River, and from two storage reservoirs, known respectively as the Enoggera and the Gold Creek reservoirs.

(1) *The Brisbane River Supply.* About 75 per cent. of the total supply of water to the metropolitan area is derived from the pumping station situated at Mount Crosby. The catchment area above the pumping station is 4000 square miles. The water is pumped from the river into a reservoir 267 feet long, 100 feet wide, and 15 feet deep, and 463 feet above low water mark at Brisbane. The capacity of this reservoir is 2,500,000 gallons. A larger reservoir and sedimentation basins have been completed at a slightly lower level than the first-named reservoir, the capacity of which is 4,600,000 gallons. The Board has also completed the installation of three powerful pumping engines, each capable of pumping 6,000,000 gallons in 24 hours, the whole plant being one of the finest in Australia.

(2) *The Enoggera Reservoir.* The Enoggera works are distant from Brisbane about eight miles by road. The catchment area is nearly thirteen square miles in extent, and the reservoir, which is formed by an earthen dam, holds 1,000,000,000 gallons, of which 600,000,000 are available by gravitation. The greatest length of the reservoir is 2600 yards, and its greatest

breadth 700 yards. The supply from Enoggera is filtered through an intermittent sand filtration plant, comprising half an acre of sand beds, and a pure water reservoir with a capacity of 750,000 gallons.

- (3) *The Gold Creek Reservoir.* This reservoir is situated in the upper waters of Gold Creek, a branch of Moggill Creek, distant from Brisbane by road about thirteen miles. The supply is drawn from a catchment area adjoining that of Enoggera, and comprising an area of nearly four square miles. The total capacity is about 406,000,000 gallons, of which 400,000,000 gallons are available.
- (4) *The Cabbage Tree Creek Reservoir.* This reservoir is some five miles from the pumping station in a straight line, but by windings in the river about 15 miles. It holds about 5800 million gallons, and is a very valuable asset to the water supply in time of drought. It is intended to convey this water to the pumping station by a conduit.
- (5) *Service Reservoirs.* Certain portions of the metropolitan area are supplied with water from service reservoirs, and these reservoirs are supplied from the sources alluded to above. These service reservoirs are constructed at Highgate Hill, Wickham Terrace, and Bartley's Hill, and have a total capacity of over 4,000,000 gallons. A second reservoir is in course of construction at Bartley's Hill, which will, on completion, bring the capacity of the service reservoirs up to 6½ million gallons. A fuller description of the Brisbane water supply scheme may be found in previous issues.

(b) *Brisbane Waterworks : Cost, Revenue, Expenditure, and Interest.* The subjoined table gives particulars as to the total capital cost, the revenue and expenditure, and amount of interest and loan redemption during 1901 and each of the years 1913 to 1917 :—

**BRISBANE WATERWORKS.—COST, REVENUE, EXPENDITURE, INTEREST, AND REDEMPTION OF LOANS, 1901 and 1913-17.**

Year.	Capital Cost.	Revenue from Rates and Sales of Water.	Working Expenses.	New Work Construction.	Interest and Redemption of Loans.
	£	£	£	£	£
1901 ...	694,973	60,120	17,462	7,535	42,426
1913 ...	1,255,898	76,922	43,135	121,083	31,498
1914 ...	1,489,720	97,366	44,549	233,822	39,194
1915 ...	1,852,622	103,530	50,078	361,765	52,704
1916 ...	2,136,699	111,066	53,879	284,078	53,995
1917 ...	2,422,857	121,514	59,199	286,158	60,388

(c) *Brisbane Waterworks : Length of Mains, Tenements and Population Served, and Water Consumption.* The following table shews the length of mains, the number of tenements connected, the population supplied, the total quantity of water supplied, the average daily supply, and the average daily supply per head of population supplied during 1901 and each year from 1913 to 1917 :—

**BRISBANE WATERWORKS.—PARTICULARS, 1901 and 1913-17.**

Year.	Length of Reticulation Mains.	Number of Tenements Connected.	Estimated Population Supplied.	Quantity Supplied.	Average Daily Supply.	Average Daily Supply per Head of Estimated Population.
	Miles.	No.	No.	,000 Gallons.	Gallons.	Gallons.
1901 ...	198	15,652	78,260	1,536,260	4,208,931	55
1913 ...	370½	28,301	139,925	2,099,590	7,752,302	41.05
1914 ...	389	29,612	148,060	2,293,920	6,284,712	42.44
1915 ...	405	31,442	157,210	2,655,440	6,541,430	41.60
1916 ...	414	31,770	158,030	2,629,108	7,183,354	42.44
1917 ...	429½	33,082	165,410	2,827,836	7,747,498	46.83

The total length of the trunk mains is 97 miles.

A scheme of sewerage has been devised for Brisbane and its suburbs. It is intended to construct works for the provision of a population of 275,000, and work is now being carried on in connection with the main sewers. Altogether 48,668 lineal feet of main sewers have been constructed, and 10,966 lineal feet are under construction. The latter includes a tunnel under the River Brisbane. Plans for the sewage treatment works have been approved of by the Department of Public Works, and further plans embodying the actuated sludge method of treatment are now under review. The survey work has been carried on, 19,252 houses having now been surveyed.

(ii.) *Country Towns Water Supply.* In addition to the city of Brisbane there were at the end of the year 1916 twenty-eight towns in Queensland provided with water supply systems, constructed by municipalities chiefly from Government loans. The sub-joined statement gives particulars of all the water supply systems—exclusive of Brisbane—for the year 1916 :—

#### QUEENSLAND.—PARTICULARS OF COUNTRY WATER SUPPLY SYSTEMS, 1916.

£				£			
Cost of construction to 31/12/16 ... 873,738				Expenditure	Office and salaries ... 14,386		
Receipts	Rates and sales of water 99,622				Construction ... 33,129		
	Other ... 21,338*				Maintenance ... 48,091		
	<hr/>				Interest & redemption 29,766		
	Total receipts ... 120,960				Other expenses ... 9,752		
				<hr/>			
				Total ... 135,124			
<hr/>							
Assets ... 705,012				Liabilities ... 495,048			

\* Including £18,389 from Government loans.

4. *South Australia.*—(i.) *Adelaide Water Supply System.* The water supply system of Adelaide is under the control of the Public Works Department. The supply is obtained partly from the catchment areas of the rivers Onkaparinga and Torrens, and Sixth Creek, and partly from springs and pumping stations. There are three storage reservoirs, situated at Happy Valley, Hope Valley, and Thorndon Park, having an aggregate capacity of 4,101,000,000 gallons, while the tanks used in connection with the springs and pumping stations have a further capacity of 4,824,000 gallons. A new reservoir having a capacity of 3,650,000,000 gallons is nearly completed at Millbrook, to be supplied from the River Torrens. The total capital cost up to the 30th June, 1917, was £2,016,051, the total revenue being £3,160,886, and the area served approximately 106,000 acres.

The following table gives various particulars relating to the water supply of Adelaide for the years 1912 to 1917 inclusive:—

#### ADELAIDE WATER SUPPLY.—LENGTH OF MAINS, REVENUE, EXPENDITURE, AND CONSUMPTION OF WATER, 1912 TO 1917.

Year Ended 30th June.	Length of Mains.	Gross Revenue.	Working Expenses.	Net Revenue.	Percentage of Net Revenue on Capital Cost.	Total Consumption of Water.*
	Miles.	£	£	£	%	Million of Gals.
1912 ...	763½	94,280	26,384	67,896	3.68	4,600
1913 ...	802½	105,590	27,982	77,608	4.12	4,700
1914 ...	836	113,156	30,106	83,050	4.32	5,150
1915 ...	859	112,082	36,029	76,053	3.85	3,467
1916 ...	873	103,947	35,412	68,535	3.42	3,223
1917 ...	882	118,951	32,974	85,977	4.26	4,113

\* In the Adelaide Water District there are no governing meters. The quantities shown above are as recorded by gaugings taken at the reservoirs, and include evaporation and absorption.

(ii.) *Adelaide Sewerage System.* In connection with the sewerage system of Adelaide, which is also under the control of the Public Works Department, about 351 miles of sewers had been laid in the city and suburbs up to the 30th June, 1917. The sewage is

disposed of on a farm and filter-beds, the latter being used only during the winter months. A scheme of sewerage extension which includes a pumping station to deliver the sewage to the existing sewage farm is now nearing completion.

The following table gives particulars relating to the Adelaide sewerage system for the years 1912 to 1917 inclusive:—

**ADELAIDE SEWERAGE SYSTEM.—REVENUE AND EXPENDITURE, 1912 to 1917.**

Year Ended the 30th June.	Revenue.			Expenditure.			Net Revenue.	
	Rates and Interest.	Sewage Farm. Sales of Produce, etc.	Total.	Maintenance.	Sewage Farm. Working Expenses.	Total.	Total.	Percentage on Capital Cost.
	£	£	£	£	£	£	£	%
1912 ...	41,449	6,984	48,383	9,376	5,089	14,415	33,968	4.88
1913 ...	45,373	8,392	53,765	9,803	6,392	16,195	37,570	5.01
1914 ...	49,507	9,588	59,095	10,242	5,629	15,871	43,224	5.55
1915 ...	52,348	10,040	62,388	9,688	6,948	16,636	45,752	5.74
1916 ...	56,606	21,207	77,813	11,410	14,482	25,842	51,971	6.39
1917 ...	57,488	13,664	71,152	11,350	10,794	22,144	49,008	5.96

The seaside town of Glenelg is served by a separate sewage disposal works, including a pumping station, septic tank, lucerne plots, and filter beds. The net revenue for the year ended 30th June, 1917, was £930, being 1.87 per cent. on the capital cost. Up to the same date 15½ miles of sewers had been laid.

(iii.) *Water Supply in Country Towns.* In South Australia there is a number of country waterworks under the control of the Public Works Department. There are large reservoirs at Barossa, Beetaloo, Bundaleer, Yeldulknie, and Warren, which supply sixty-three townships with water for domestic and stock purposes. The principal towns thus supplied are Gawler, Wallaroo, Moonta, Kadina, Port Pirie, Port Wakefield, Balaklava, Tanunda, and Cowell. The following table shews the capacity of these reservoirs, together with particulars as to the townships supplied and the country lands reticulated:—

**PRINCIPAL COUNTRY WATERWORKS, SOUTH AUSTRALIA, 1917.**

Reservoirs.	Townships Supplied.			Country Lands Reticulated.		Capacity in Million Gallons.	
	Number.	Square Miles.	Miles of Main.	Square Miles.	Miles of Main.	Head-works.	Service Reserv'rs.
Barossa ...	23	40	70	1,007	543	993	10
Beetaloo ...	22	158	174	1,661	877	800	100
Bundaleer ...	14	8	32	1,088	477	1,319	16
Yeldulknie and Ullabadinie ...	2	3	6	500	96	288	...
Loxton ...	1	2	3	530	...	*	*
Warren ...	2	4	10	473	22	1,049	...

\* Pumped from River Murray.

Sixteen township districts are supplied from smaller local reservoirs, the most important town served being Port Augusta. A new water supply scheme is in course of construction at the Baroota Creek to augment the supply of Port Augusta, Port Pirie and farming lands, while the construction of a large reservoir on the Tod River is under consideration for the supply of Port Lincoln and farming lands in Eyre Peninsula. The reservoir with leading and reticulation mains for supplying the towns of Port Victor, Port Elliot, Middleton and Goolwa has been completed and is in operation.

5. **Western Australia.**—(i.) *Water Supply, Sewerage and Drainage Department.* Prior to 1912, water supply, sewerage and drainage in Western Australia, although under Governmental control, were nevertheless under the management of several distinct departments. In that year, however, the Government decided that these functions should be concentrated in one department with the Minister of Works as administrator, and on the 1st August, 1912, a new department with the above title assumed the management of the undermentioned water supplies:—(a) The Metropolitan Water Supply, Sewerage and Drainage Undertaking. (b) The Goldfields Water Supply Undertaking. (c) Mines Water Supplies, boring and well-sinking in mining districts, formerly a branch of the Mines Department. (d) Water supplies, sewerage and drainage, well-sinking, boring, etc., in agricultural districts, etc., formerly a branch of the Public Works Department. The total capital expenditure on works controlled by the Department was, at 30th June, 1917, £7,375,104.

The Acts of Parliament administered by the new department are:—“The Metropolitan Water Supply, Sewerage and Drainage Act 1909”; “The Goldfields Water Supply Act 1902” and amendment; “The Water Boards Act 1904”; “The Lands Drainage Act 1900” and amendment; “The Water Supply Act 1893”; and “The Rights in Water and Irrigation Act 1914.”

(ii.) *Perth Metropolitan Water Supply, Sewerage, and Drainage Undertaking.* The Perth Metropolitan Water Supply Works were first opened by a private company in October, 1890. Under the provisions of the Metropolitan Waterworks Act 1896, however, the works were purchased by the Government at a cost of £220,000, and were placed under the control of a Board, the functions of which were exercised from the year 1904 to 1909 by the Minister for Works. By the Metropolitan Water Supply, Sewerage, and Drainage Act 1909, all water and sewerage works formerly vested in the Metropolitan Board were transferred to a Minister of Water Supply, Sewerage, and Drainage. In August, 1912, the administration was transferred to the new Water Supply Department.

(a) *Water Supply.* The supply of water is derived from six sources—(i.) the Victoria reservoir, (ii.) Bickley Brook reservoir, (iii.) the Mundaring reservoir, (iv.) Narrogin Brook, (v.) Walter's Brook, and (vi.) artesian bores. A description of the principal schemes is given in previous year books (see Year Book No. 7, page 887). For the year ending 30th June, 1917, the total consumption of water was 1938 million gallons, an increase of 9 millions over the previous year. The number of services at that date was 31,797, and the length of mains was 609 miles.

(b) *Financial Operations of Water Supply Branch.* The following table gives particulars of the financial operations of the Metropolitan Water Supply Branch for each year ending the 30th June from 1912 to 1917 inclusive:—

**PERTH METROPOLITAN WATER SUPPLY BRANCH.\*—PARTICULARS OF  
FINANCIAL OPERATIONS, 1912 to 1917.**

Year ended the 30th June.			Capital Cost of Works.	Depre- ciation.	Net Capital Cost.	Gross Revenue.	Cost of Main- tenance and Manage- ment.	Ratio of Working Expenses to Revenue.
			£	£	£	£	£	Per cent.
1912	...	...	701,852	107,388	594,464	66,892	25,082	37.49
1913	...	...	768,068	143,030	625,038	74,600	25,479	34.11

\* Includes water supplied to Railways.

(d) *Sewerage and Drainage in Perth and Fremantle.* The work of providing a sewerage system for Perth and Fremantle was commenced in 1906, and has proceeded without interruption up to the present time. Up to 30th June, 1917, 13,069 houses had been connected to the sewers. The revenue of the Sewerage and Drainage undertaking for 1916-17 was £52,538, as against £44,667 for the preceding year. The maintenance expenditure amounted to £15,254, and interest and sinking fund charges to £46,086. A description of the method of sewage disposal adopted may be found in previous issues. (See Year Book No. 5, p. 1031.)

(iii.) *Goldfields Water Supply Undertaking.* The Act under which the works were constructed was introduced in Parliament by Sir John Forrest, G.C.M.G., then Premier of Western Australia, in September, 1896, and provided for an expenditure of £2,500,000, and a daily supply of 5,000,000 gallons. The works designed by the late Mr. C. Y. O'Connor, Engineer-in-Chief of the State, were originally known as the "Coolgardie Water Scheme," but are now officially called the "Goldfields Water Supply." Construction work in connection with the scheme was commenced early in 1898, and the water was delivered in Kalgoorlie in January, 1903. The source of supply is the Helena River, in the Darling ranges, where, at about 18 miles from Perth, an impounding reservoir, 760 acres in extent, with a catchment area of 569 square miles, has been constructed. A detailed description of the scheme will be found in previous issues of the Year Book (see Year Book No. 9, p. 924). The area of operations embraces 16,000 square miles, the total length of the water area being approximately 380 miles. The cost of the original works, including expenses of raising loans, was £2,866,454, and of supplementary works £525,684, making a total of £3,392,138. The Mundaring Reservoir cost £249,000. Its capacity is 4,650,000,000 gallons, and its surface area at full supply level 672 acres. The height of the wall above the river bed is 100 feet; length of wall, 755 feet; width of wall at bottom, 85 feet; at top, 11 feet; and when reservoir is full, the water extends back for the distance of 7 miles.

During the financial year 1916-17, the total consumption amounted to 1,061,000,000 gallons, a decrease on the previous year of 137,000,000 gallons. The gross revenue was £214,838, and the working expenses £88,852, leaving a surplus available towards interest and sinking fund of £125,986. The outlay for interest and sinking fund charges in respect of supplementary capital absorbed £33,216, leaving £92,770, payable to the State Treasury. During the financial year the State Treasury paid £168,813 interest and sinking fund on State loans in respect to these works, and the operations of the undertaking showed a net deficiency of £76,043. Reticulation figures are as follows:—Towns reticulation, 245 miles; supply mains to towns, 80 miles; supply mains to mining centres, 79½ miles; agricultural extensions, 481 miles; total mains, including main conduit, 1230.

(iv.) *Water Supplies for Towns.* Under the Water Boards Act 1904, the following water undertakings are administered by the Department:—Collie, Cue-Day Dawn, Derby, Geraldton, Leonora, Meekatharra, Menzies, Ora Banda, and Pingelly. Water supplies for Albany, Broome, Bunbury, Busselton, Carnarvon, Port Hedland, Roeburne, Sandstone, Wagin, and Wyndham are administered by local boards under the supervision of the Department.

(v.) *Mines Water Supplies.* At the present time the water stations under the control of the Engineer for Goldfields Areas number about 1400, and are spread over an area of nearly 500,000 square miles. The principal works carried out by the Branch are as follows:—(a) Domestic supplies for mining towns and the supply of water for battery and general mining purposes. (b) Opening up the very remote portions of the State by means of tracks, of which there are about 4000 miles. (c) The sinking of wells and bore-wells, also testing the country by means of boring to locate water, and thus enabling the mineral resources of the State to be systematically prospected. (d) Diamond drilling has also been carried out for the purpose of testing the country for minerals at depths unattainable with the ordinary boring plants. (e) Over 3000 miles of stock routes have been opened up, and wells have been sunk at easy stages, capable of watering mobs of 400 head of cattle. Tanks, dams, and reservoirs have been made on the gold-fields for the conservation of surface water, their total storage capacity being over 200,000,000 gallons, and their cost over £400,000.

A very important adjunct of the branch is the camel farm established at Coolgardie, where the breeding of camels is undertaken, the number at present being about 240. These camels are used by parties from the Water Supply Branch in the arid regions of the interior, where water is scarce, and the stages are long.

(vi.) *Water Supplies in Agricultural Areas.* Owing to the rapid development in agricultural districts in what a few years ago was practically unexplored country, and the consequent necessity for providing water for settlers, a large number of tanks were excavated, and wells sunk where suitable water had been proved by boring. Of 2508 shallow bores put down, fresh water was obtained in 427, stock water in 218, the others being salt or dry. The number of tanks excavated to 30th June, 1917, was 322, with an approximate capacity of 114,500,000 gallons, and the number of wells 283, the estimated capacity of which is 52,500,000 gallons. The capital expenditure for the financial year ending June, 1917, was £11,205.

(vii.) *Land Drainage.* Under the Land Drainage Act 1900 the drainage undertaking for the Torbay-Grassmere District is administered by the Department. Undertakings controlled by Boards under the same Act are East Jandakot, Lennox, Koriyekup, Njookenbooroo, Sterling, Saidie, and Wangong.

6. *Tasmania.*—(i.) *Hobart Water Supply.* The original water supply of Hobart was obtained from a stream known as the Hobart Rivulet, flowing from Mount Wellington, the works being carried out in 1831 by the Imperial Government. These works consisted of an aqueduct and a line of cast-iron pipes, the water being distributed to several points known as "wells." By an Act of the State Parliament passed in 1860 the works were

transferred to the municipality. Under this Act certain additional streams flowing from Mount Wellington were acquired as sources of supply, and a storage reservoir containing 40,000,000 gallons was constructed. The catchment area on Mount Wellington at present comprises an area of 4200 acres, the sources of supply having been extended at various times as far as the North West Bay River, fifteen miles from Hobart.

(a) *Storage Reservoirs.* There are three storage reservoirs about 3 miles from the city. One standing 502 feet above sea-level has a capacity of 60,000,000 gallons; the second is 447 feet above sea-level, with a capacity 40,000,000 gallons; while the third, which has been only recently completed, will hold 207,000,000 gallons. The whole of the supply is by gravitation. The water is brought from the various mountain streams by means of pipes to the storage reservoirs, and thence by four 10-inch cast-iron mains, of which three lead to the distributing reservoirs, and one direct to the shipping and southern portion of the city.

The provision of the new reservoir and the laying down of a new concrete intake pipe line from the N.W. Bay River has placed the city in a very good position in respect of water, and the supply is sufficient for a much larger population than is served at present.

(b) *Capital Cost, Tenements Connected, Length of Mains, Revenue and Expenditure.* The total capital cost to the end of 1916 was £332,000, but a considerable amount of reticulation work has been done out of revenue and not charged to capital account. The outstanding loans at the end of 1916 amounted to £270,300. At the same date the number of tenements supplied in the city and suburbs was 8621, the population 35,000, and the length of reticulation mains 94½ miles. The revenue and expenditure for the last six years were as follows:—

#### HOBART WATERWORKS.—REVENUE AND EXPENDITURE, 1911 to 1916.

Particulars.	1911.	1912.	1913.	1914.	1915.	1916.
	£	£	£	£	£	£
Revenue ... ..	31,207	23,858	21,982	22,191	23,382	24,801
Expenditure ... ..	20,381	20,584	21,336	24,550	26,471	27,676

(ii.) *Hobart Sewerage System.* A scheme for the construction of a sewerage system in Hobart was adopted in 1903. The sewage is discharged into the estuary of the River Derwent. Up to the end of the year 1916 about 72½ miles of sewers had been laid at a cost of about £191,000, and 7102 tenements had been connected. The revenue for the year was £12,574. The scheme, which is intended to sewer over 2000 acres so as to serve an estimated population of about 80,000 people, is practically completed. The suburb of Queenborough has recently become incorporated with the city, and arrangements are now being made to extend the system to this district, the work of construction having recently been commenced.

## § 4. Harbour Trusts.

1. *Introduction.*—In the chief ports and harbours of the Commonwealth, administrative bodies have been created, in whom is vested the control and management of the port with respect to dredging, wharf and harbour accommodation, pilotage, harbour dues, etc.

Of these Trusts or Boards some are purely departmental, some are nominated by Government, while others are comprised of members appointed by the municipal and other associations connected with the port. In the latter case, the Government is usually represented on the Board by one or more nominated members. The Boards and Trusts mentioned hereunder are the only ones for which information is at present available.

2. **Sydney Harbour Trust.**—This Trust was established by an Act which came into force on the 11th February, 1901. Its powers and duties have been dealt with in previous issues of this book, together with some of the more important improvements carried out by the Commissioners. (See Year Book No. 5, p. 990.)

(i.) *Revenue, Expenditure, and Capital Cost.* The subjoined table gives particulars of the revenue and expenditure of the Trust, and also shows the total capital debt for properties, etc., vested in the Commissioners, the amount of interest payable on the debt, and the balance of revenue after deducting expenditure, interest, and the amount of the Commissioners' salaries:—

**SYDNEY HARBOUR TRUST.—REVENUE, EXPENDITURE, CAPITAL DEBT,  
INTEREST AND BALANCE, 1901 and 1913-17.**

Year ended the 30th June—	Revenue.				Expenditure.	Total Capital Debt.	Interest.†	Balance.

1917 ...	1,938,130	31,697	3.93	43,847	11,950	65.41

3. **The Melbourne Harbour Trust.**—This Trust was constituted under an Act passed in 1876, as a result of public agitation and demands extending over a period of thirty-four years to the effect that the cost of landing goods should be reduced and the delays in receiving goods should be abolished. Both demands arose from the fact that vessels of a draught greater than twelve feet had to discharge in the bay into lighters.

(i.) *Constitution of the Trust.* The Harbour Trust Act was originally drafted on the lines of similar institutions in Great Britain, such as the Thames Conservancy, the Mersey Harbour Board, and the Clyde Trust. Under the Act of 1876, as amended in 1883, the number of Commissioners was fixed at seventeen. By an Act No. 2449 (1912), the constitution of the Trust was altered to a Commission of five members elected by the

Governor-in-Council, consisting of a chairman, who devotes his whole attention to the business of the Trust, and four others representing the interests of shipowners, exporters, importers, and primary producers.

(ii.) *Works Undertaken by Trust in the River and in the Port.* In 1890 a consolidating Act was passed, and the borrowing powers of the Trust were increased to £2,000,000, and subsequently by Act No. 2449 to £3,000,000. The river was widened from Queen's Bridge to the Bay to about 300 feet, while the depth has been gradually increased until at the present time it is twenty-six feet at low water. A total of 10.39 miles of wharves and piers are in use in the River, Victoria Dock, Williamstown and Port Melbourne. Most of these wharves in the river and dock carry sheds with a total length of 17,394 feet, covering an area of 878,928 square feet. The new pier in Victoria Dock, now complete, is included in these figures.

(a) *The Coode Canal.* In 1889 the canal across the flats below Fishermen's Bend was completed at a cost of £96,000. The length of the canal is 2002 yards, the distance from Queen's Bridge to the river entrance being thereby reduced from seven miles to five and three-quarter miles, and the navigation being greatly facilitated. This channel, which is called the Coode Canal, has been widened 164 feet, thus making its total width 487 feet, and its width at low water 430 feet. At the present time there is a depth of 26 feet at low water for a width of 250 feet.

(b) *The Victoria Dock.* This dock, four miles up the river, and opened in 1892, has an area of eighty-two acres and a depth of thirty feet at low water. The entrance to the dock is 160 feet wide. There are 11,760 feet of wharfage including that of the new central pier, and the total cost, including wharves, sheds, approaches thereto and new pier was, to 31st December, 1917, £705,441. The sheds have a total length of 6818 feet, and cover an area of 381,096 square feet. The new central pier is 1631 feet long and 250 feet wide, with a 57-foot roadway in the centre. There are four cargo sheds on this pier, two being 480 feet by 60 feet, and two 486 feet by 60 feet. It is proposed to erect two others each 486 feet long. The expenditure on this work to 31st December, 1917, amounted to £178,261.

(iii.) *Works in the Bay.* Prior to 1879 all the mail steamers and vessels of heavy draught had to lie at anchor in the bay, and there discharge into lighters. One of the first works undertaken by the Commissioners was to make the railway piers at Williamstown available to these vessels. This work was completed at a cost of £256,160. In 1893 a channel over 8000 feet long and 600 feet wide was dredged, running in a southerly direction from Port Melbourne Railway Pier and having a navigable depth of thirty feet o.l.w. The cost of this work was £218,379. A new railway pier was completed at Port Melbourne in 1915. Its length is 1902 feet, with a width of 185 feet, and the average depth of water is 37 feet. Two shelter sheds provide accommodation, and there are ten travelling gangways to facilitate the landing of passengers so as to avoid crossing the railway lines on the pier level.

(iv.) *Dredging.* The total quantity of material raised by the dredging and excavation done in the improvement of the river and bay amounts to nearly 61 million cubic yards.

During the ten years ending 31st December, 1917, the average cost of dredging per cubic yard was 2.19 pence and the cost of towing and depositing 4.72 pence, not allowing for depreciation of plant. The Trust has expended £334,774 in reclaiming land within its jurisdiction. The amount of material raised annually is now about 2,761,000 cubic yards.

(v.) *Financial Operations.* The revenue of the Trust is obtained from wharfages and tonnage rates, rents and license fees from land and ferries, and other license fees. One-fifth\* of the revenue of the Trust is paid to the consolidated revenue of Victoria. The following table gives particulars of the revenue and expenditure of the Trust from 1913 to 1917 inclusive:—

\* Limited by Act 2449 to £60,000 per annum for five years from 1st January, 1913.

4. **Fremantle Harbour Trust.**—Under the provisions of an Act passed in 1902, a Harbour Trust was constituted for the general administration of Fremantle harbour, and since January, 1903, the Trust has had full control of all the affairs of the harbour,

and undertakes the duties of wharfingers, and the receiving, sorting, storing, delivering, and handling of all cargo between vessels and the owners of the goods. The works, which were commenced in 1892, were designed with the object of forming a safe and commodious harbour within the mouth of the Swan River, so as to admit vessels at all states of the tide, and thus enable cargo to be loaded and discharged at the quays and goods-sheds on the river banks. Two ocean moles have been thrown out from the north and south heads, the former being 3450 feet and the latter 2040 feet long. A channel, 450 feet wide and 30 feet deep at low water, has been blasted and dredged through the rock which formerly crossed the estuary to the river to give access to the harbour basin, which has a width of 1400 feet and a depth of 30 feet at low water and is upwards of a mile in length, and wharves and goods-sheds have been constructed along the reclaimed foreshore on both sides of the harbour. The depth of water in the entrance channel and inner harbour is now being increased to 36 feet, and will eventually be made 40 feet below lowest low water datum. At the present time all the European mail boats and equally large vessels which make Fremantle the first and last port of call in Australia, are able to enter and leave the harbour in all weather and at all tides day or night. The quays on both sides of the inner harbour basin are equipped with electric and steam cranes, and there is also a complete installation of electric elevators and conveyors for stacking and shipping bagged grain and flour. All berths are laid with railway rails. For the year ended 30th June, 1917, the total revenue of the Trust was £176,414, and the expenditure £94,777. The gross amount paid to the Treasury for the year was £83,355, being interest £62,737, sinking fund £17,925, and surplus revenue account £692.

**5. Hobart Marine Board.**—The Hobart Marine Board was established in 1858, and consists of nine wardens, elected by the shipowners, importers and exporters of the port. To meet the requirements of the large steamers visiting the Commonwealth, extensive harbour improvements have been completed. The Ocean wharf and pier has a length of 1150 feet, with a depth of water from 36 feet at the inner to 60 feet at the outer end, while other piers afford accommodation for the largest vessels visiting Australia.

The total capital debt on properties in connection with the Harbour Trust vested in the Board is £106,400. The interest paid in 1917 amounted to £4256, and the contributions to sinking fund, £1020. The Board also transferred £938 from revenue to the Harbour Improvements Account. The receipts and expenditure of the Board for the last five years were as follows :—

#### HOBART MARINE BOARD.—RECEIPTS AND EXPENDITURE, 1913-17.

Year.	RECEIPTS.				EXPENDITURE.			
	General.	Harbour Improvements, Debentures, etc.	Light-house Fund.	Total.	General.	Harbour Improvements.	Light-house Fund.	Total.
	£	£	£	£	£	£	£	£
1913 ...	21,343	138,000	10,634	69,977	<sup>2</sup> 20,453	35,917	11,948	68,318

1917 ...	17,294	6,627	...	23,921	<sup>7</sup> 17,247	5,212	...	22,459

<sup>1</sup> Including £8000 from General Account. <sup>2</sup> Including £4000 voluntary contribution to Sinking Fund. <sup>3</sup> Including £8000 transferred from the General Account to the Harbour Improvements Account. <sup>4</sup> Including £1500 transferred from General Account to Harbour Improvements. <sup>5</sup> The Commonwealth Government took over control of Ocean lights from 1st July, 1915. <sup>6</sup> Including £4000 debentures purchased. <sup>7</sup> Including £938 transferred from General Account to Harbour Improvements.

**6. Launceston Marine Board.**—The Board was formed in 1858 and consists of thirteen members, elected on the municipal franchise, with special residential conditions. The principal work of the Board is in connection with the straightening, deepening, and widening of the River Tamar, the distance from the wharves to the open sea being 40 miles.

Wharves to the length of 6702 feet have been constructed, the depth at some of them being 40 feet s.l.w. The total capital debt on 31st December, 1917, was £204,539, of which £157,301 was incurred on the Tamar Improvement Scheme. The revenue for 1917 was £28,296 and the expenditure £25,880.

**7. Geelong Harbour Trust.**—This Trust was incorporated in 1905, and consists of three Commissioners appointed by the Government of Victoria. To the 31st December, 1917, the Trust had borrowed £575,000. The sinking fund at the same date stood at £17,725. The revenue receipts for the year 1917 were £32,376 and the disbursements £39,380.

**8. Rockhampton Harbour Board.**—The Board consists of eleven members elected by the municipalities and shires of the Central Division of Queensland. The principal items of export by water in 1917 were—wool, 50,100 bales; preserved and frozen meats, 9837 tons; blister copper, and concentrates, 6646 tons; and gold, £326,253 in value. For the year 1917 the receipts were £34,964 and the expenditure was £30,220, including £7048 for redemption and interest. The total of the net registered tonnage entering the port in 1917 was 563,539.

**9. Bundaberg Harbour Board.**—The principal port in Queensland for the shipment of sugar is Bundaberg. The Harbour Board consists of nine members, representing the district shire councils and the shipowners and exporters, with one Government nominee.

The total exports for the year ending 31st December, 1917, amounted to 31,182 tons, as against 22,188 tons for the previous year, shewing an increase of 8994 tons. The principal items of export were:—Raw sugars, 14,471 tons; refined sugars, 12,254 tons; syrups and molasses, 998 tons; rum and spirits, 1705 tons; copper ores, 472 tons. The revenue for 1917 amounted to £5887, as against £5202 for 1916; the expenditure for 1917 was £7138 as compared with £6114 for 1916. Dredging resulted in 89,300 tons of silt, etc., being lifted and deposited at sea, but only about four months of the year were occupied in this work.

**10. Cairns Harbour Board.**—The Cairns Harbour Board consists of twelve members, three representing the town of Cairns and the other nine the surrounding shire councils. For the year ended 31st December, 1917, the cash receipts from harbour and berthage dues and miscellaneous items amounted to £24,315, while the revenue from taxes and fixed rates was £22,502. The total income amounted to £24,343. The principal items of export were:—Raw sugar, timber, maize, copper, and fruit.

**11. Bunbury (Western Australia) Harbour Board.**—The Bunbury Harbour Board was constituted in 1909, and consists of five members appointed by the Government. The jetty has berthage accommodation for eight steamers, and the depth of water for loading thereat ranges from 18 to 27 feet. Electric and steam gantry cranes are available at the deeper berths.

The capital expenditure for the year ending 30th June, 1917, was £37,526, making the total capital expenditure to that date £309,095. The revenue for the year was £11,417 and the expenditure £5790, the balance being paid into Consolidated Revenue to meet interest and sinking fund. The export tonnage for the year was made up as follows:—Jarrah timber, 67,044 loads of 50 cubic feet; wheat, 21,770 tons; Collie coal (bunkers), 8715 tons; wool, 2876 bales; and miscellaneous goods, 676 tons; the total export value being £492,000. The total import tonnage was 6981 tons, the total cargo tonnage dealt with during the year ended 30th June, 1917, amounting to 150,458 tons.

**12. Burnie and Table Cape (Tasmania) Marine Board.**—While the existing works accommodate steamers of 4000 to 5000 tons, which visit the port regularly, they are insufficient for the rapidly increasing traffic in produce, ores and timber from the north-west and west coast district of Tasmania. A scheme is, therefore, being carried out by which the port will eventually be capable of taking any ships trading in the Commonwealth. A breakwater is being constructed 1200 feet in length with a depth alongside of 40 feet at low water. On 31st March, 1917, 1010 feet of this breakwater had been constructed. It is intended later on to increase the length to 4000 feet and to enclose 300 acres of deep

water space, of which 100 acres will have a depth of nearly 45 feet. The expenditure on that portion of the scheme at present under construction will be £200,000, including a wharf 500 feet long, with a depth of 36 feet at low water. The revenue for the year 1917 was £10,415, and the expenditure £14,371, including £8978 interest on construction loan.

### § 5. Fire Brigades.\*

1. **New South Wales.**—Reference has been made in the section of this book dealing with the subject of *Private Finance* (see page 832) to the constitution of the Board of Fire Commissioners of New South Wales, which has now superseded the Metropolitan and all other Fire Brigade Boards in that State.

(i.) *Receipts and Disbursements of Board of Fire Commissioners of New South Wales.* The subjoined table shews the actual receipts and disbursements of the Board for the past five years:—

#### NEW SOUTH WALES BOARD OF FIRE COMMISSIONERS.—RECEIPTS AND DISBURSEMENTS FOR SYDNEY FIRE DISTRICT, 1913-17.

Year.	Receipts.						Disbursements.
	From Government.	From Municipalities.	From Fire Insurance Companies.	From Firms.	From other Sources.	Total.	
	£	£	£	£	£	£	£
1913 ...	25,586	25,586	25,404	182	2,270	79,028	76,853
1914 ...	29,200	29,200	28,966	234	1,773	89,373	88,208
1915 ...	29,071	29,071	28,161	410	1,749	88,462	96,146
1916 ...	29,071	29,071	28,883	188	2,205	89,418	98,934
1917 ...	34,283	34,283	33,562	721	4,103	106,952	103,539

With reference to the preceding table, under the "Fire Brigades Act 1909," by which the New South Wales Board of Fire Commissioners was constituted and which came into operation on 1st January, 1910, insurance companies do not now, as formerly, return the amount of their risks, but give in lieu thereof the amount of premiums received, which forms the basis of their contribution towards the revenue of the Board. By this Act also, firms which effect insurances with companies not registered in New South Wales are likewise required to make contributions on account of the premiums paid to such companies, which is the first instance of this class of insurer being compelled to share the expense of local advantages, which had hitherto been available free of cost. A fuller description of the principal provisions of this Act will be found in previous issues of this book (see Year Book No. 5, page 990). The Sydney fire district includes the City of Sydney and suburbs, comprising a total area of 232 square miles. On the 31st December, 1917, the Board had under its control in this district 62 stations, 320 permanent men, 170 partially paid firemen, 14 steam and 32 motor fire engines, 78 horses, 139,100 feet of hose, and 459 telephone fire-alarms. The length of wire used for telephone lines was 1106 miles.

2. **Victoria.**—Under the Fire Brigades Act of 1890 a metropolitan fire district and nine country fire districts were established, the former being placed under the control of a Metropolitan Fire Brigades Board, and the latter under the control of a Country Fire Brigades Board.

(i.) *Metropolitan Fire Brigades Board.* The metropolitan fire district originally comprised the area included in the several municipalities within a radius of ten miles from the Melbourne General Post Office, but this area has since being extended in certain directions so as to include the greater part of the Shire of Moorabbin and also the township of Mordialloc. The Board is composed of nine members, of whom three are appointed by the Governor-in-Council, three by the municipal councils, and three by the insurance companies. On the 30th June, 1918, the Board had under its control

\* See Section XXI. § 6, Fire Insurance, p 832.

43 stations, 243 permanent men, 111 partially-paid firemen, 39 special service firemen, 9 steam fire engines, 7 petrol motor fire engines, 52 other petrol motor appliances, 9 horses, 111,051 feet of hose, and 314 fire-alarm circuits having 989 street fire alarms, of which 967 contained telephones. The Government, the insurance companies and the municipalities in which the Board operates contribute equally to the cost and maintenance of the brigade. The following table gives particulars as to the financial operations of the Board during each year from 1913 to 1917-18 inclusive :—

**VICTORIA.—REVENUE AND EXPENDITURE OF METROPOLITAN FIRE BRIGADES BOARD, 1913 to 1917-18.**

(ii.) *The Country Fire Brigades Board.* This Board consists of nine members, of whom three are appointed by the Governor-in-Council, two are elected by the municipal councils of the districts where there are brigades registered under the Board, two by the fire insurance companies, and two by the registered fire brigades. At the end of the year 1917 there were 109 municipal councils, and seventy insurance companies included in the operations of the Act. All the brigades are volunteer brigades, but in the large towns permanent station-keepers and watchmen are employed. There were 131 registered brigades and 2985 registered firemen at the end of the year 1917.

For the year 1917 the receipts of the Country Fire Brigades Board amounted to £14,639, and the expenditure to £14,572.

3. *Queensland.*—In the year 1917 there were twenty-nine fire brigades organised in various towns in Queensland. The revenue of these brigades is derived chiefly from grants from the Government, from municipalities, and from the insurance companies, generally in equal proportions, and the following table gives these particulars for the year 1917 :—

**QUEENSLAND.—FIRE BRIGADES, 1917.**

Receipts.	Amount.	Expenditure.	Amount
	£		£
From Government ...	8,625	Salaries and wages ...	14,873
„ Local authorities ...	8,716	Building, repairs, etc....	491
„ Insurance companies ...	8,606	Plant, stores, clothing, etc.	4,501
„ Other sources ...	619	Other ...	5,298
<b>Total ...</b>	<b>26,566</b>	<b>Total ...</b>	<b>25,163</b>

At the end of the year 1917 the fire brigades staffs comprised 82 permanent men, 247 partially paid, and 104 volunteers. The Metropolitan Brigade at Brisbane and the South Brisbane brigade protect an area of  $9\frac{1}{2}$  square miles; their joint staffs comprise 68 men. They have three steam engines, three motor turbines, one chemical motor, nine reels, consisting of four horse, two motor, and three hand reels, and 23,155 feet of hose. There are 14 telephone fire alarms and 198 call points.

4. **South Australia.**—The Fire Brigades of South Australia are managed by a Board consisting of five members, one being nominated by the Government, one by the Adelaide city council, one by the other metropolitan and country municipalities, and the other two by the contributing insurance companies. The Board is incorporated under the Fire Brigades Act 1913. The revenue of the Board is derived by contributions of three-ninths by the Government, four-ninths by the insurance companies, and two-ninths by the city of Adelaide and the other municipalities subject to the Act, the contribution for 1917 amounting to £26,284. Brigades are established in the following municipalities, viz., Adelaide, Kensington and Norwood (including St. Peter's), Unley, Port Adelaide, Glenelg, Gawler, Kapunda, Moonta, Kadina, Port Pirie, Port Augusta and Thebarton. The strength of the brigades consists of 91 permanent firemen and 32 auxiliary firemen. The plant consists of five steam fire engines, one motor engine, nine motor hose carriages, one floating fire engine, 7 hose reels, and 17 horses. The number of calls received during the year 1917 was 325, of which 14 were to fires of a serious nature. Of the total calls, 176 were in the metropolitan district.

5. **Western Australia.**—Under the Fire Brigades Act 1898, fire brigades were established in a number of the more important centres of population in the State. These brigades were under the control of local boards, and were in some cases municipal and in others volunteer.

An Act to make further provision for the protection of life and property from fire came into operation on the 2nd April, 1917, and is called the Fire Brigades Act 1916. It provides that every municipal or road board district shall be a fire district for the purposes of such Act, under the control of the Western Australian Fire Brigades Board. Formerly, under the District Fire Brigades Act 1909, which was repealed by the 1916 Act, the whole State was divided into two fire districts only. Provision is also made in the later Act for the amalgamation of two or more municipal or road board districts into one fire district. The Board is elected biennially and is constituted as follows:—Two members nominated by the Government, one of whom shall be the President; one member elected by the council of the municipality of the City of Perth; one member elected by the municipal and road board districts between Fremantle and Midland Junction, excluding the City of Perth; one member elected by the municipal and road board districts between Southern Cross and Leonora (Eastern Goldfields District); one member elected by the remainder of the municipal and road boards districts in the State under the operation of the Act; two members elected by the insurance companies; and one member elected by the Volunteer Fire Brigades. The income of the Board is derived as follows:—Two-eighths from the Government, three-eighths from the local authorities and three-eighths from the insurance companies. In regard to the revenue derived from the local authorities it is provided that the local authority in each district shall only contribute three-eighths of the expenditure in such district. Under the 1909 Act the amount levied upon each local authority was a pro-rata proportion of the three-eighths of the total estimated expenditure in the State, based on the valuation of the property within each local authority's district. The receipts for the year 1917 amounted to £35,477, and the expenditure to £32,329.

The whole of the brigades throughout the State are now controlled by this Board, and number two purely permanent, ten permanent and partially paid, six permanent and volunteer, one partially paid, and twenty-three purely volunteer brigades; making a total of forty-two. The staff includes a chief officer, deputy-chief officer, third officer, motor engineer, electrical engineer, 12 other officers, 66 permanent firemen, 48 partially-paid firemen, and 399 volunteer firemen.

6. **Tasmania.**—Under the present system, the Government, the City Council, and the Fire Insurance Companies contribute equally to the annual expenditure of the Hobart Fire Brigade. There are volunteer brigades under the control of local boards in most of the larger centres of population. The expenditure for the year amounted to £3474.

### § 6. Local Government Finance.

1. **Introduction.**—In the preceding parts of this section certain particulars have been given regarding local authorities in each individual State. It is proposed to give here in a comparable form for each State particulars regarding the financial operations of local governing bodies. The areas controlled by these bodies are variously known in the several States as cities, towns, boroughs, shires, municipalities, municipal districts, and road districts. The particulars given in the tables in the two next paragraphs relate to financial years ending as follow:—New South Wales: for the calendar year 1916. Victoria: 30th September, 1916, except Melbourne, 31st December, and Geelong, 31st August, 1916. Queensland: calendar year 1916. South Australia: Corporations, 30th November, and district councils, 30th June, 1916. Western Australia: 31st October, 1916, except road districts, 30th June, 1916. Tasmania: calendar year 1916.

2. **Number, Revenue, Expenditure, and Valuation of Local Authorities.**—The following table gives particulars of the number, revenue, expenditure, and valuation of local authorities in each State and in the Commonwealth during the year 1916. It should be noted that, excepting in Tasmania, the metropolitan water supply systems are not under municipal control; the particulars given of revenue and expenditure for the five States other than Tasmania do not, therefore, include revenue and expenditure on account of these systems.

## SECTION XXVII.

## INDUSTRIAL UNIONISM AND INDUSTRIAL LEGISLATION.

## § 1. Development of Trade Unions in Australia.

1. **Historical Development of Trade Unionism in Australia.**—A special article, reviewing the development of trade unionism from its inception, appeared in Year Book No. 9, pp. 937-41.

2. **Registration under Trade Union Acts.**—The benefits conferred by registering trade unions under the Trade Union Acts in force in the various States are not held in much repute; consequently the statistics of registered trade unions of employees not only do not represent the position of unionism, but, in addition, the statistics themselves for past years are so defective as to be practically valueless. The particulars furnish no reliable indication of the numerical and financial position of trade unions. Some of the registered unions fail to supply returns; this non-supply may lead to cancellation of the registration. Some of the unions have obtained the cancellation of their certificates of registration, the apparent reason being that they proposed registering under the Commonwealth Conciliation and Arbitration Act or a State Arbitration Act. In Queensland, some of the largest labour unions withdrew from registration during 1911, mainly on account of the necessity for closer restriction of their objects as set forth in their rules, consequent on legal decisions affecting trade unions. In Victoria, only seven unions of employees are registered, and in South Australia sixteen unions were registered at the end of 1916. Particulars relating to membership and financial position of many of these unions were not furnished. It will be seen, therefore, that the available information is too meagre for statistical purposes. In the last issue of the Official Year Book, a table was published, shewing available particulars regarding the number, membership and financial position of trade unions registered under Trade Unions Acts as at the end of 1915.

3. **Registration under Industrial Arbitration Acts.**—Western Australia and New South Wales up to 30th June, 1908, were the only States with Industrial Arbitration Acts under which industrial associations could be, and actually were, registered. The number of registered unions in New South Wales shewed a gradual increase from 1902 to 1907, the figures in the latter year being 109 unions of employers, with 3165 members, and 119 unions of employees, with 88,075 members. Under the Industrial Disputes Act, which succeeded the Arbitration Act of 1901, it was not necessary to furnish the information. Since the Act of 1908 industrial organisation proceeded rapidly, owing to a

general desire on the part of the workers to obtain the status necessary to entitle them to the advantages offered by the Act. The Act of 1908 was repealed by that of 1912, and in 1912 there were 117 industrial unions of employers and 192 industrial unions of employees on the register. On the 31st August, 1914, there were 105 industrial unions of employers and 160 industrial unions of employees registered. On the 18th April, 1918, there were 109 industrial unions of employers, and 144 industrial unions of employees on the register. Thirty-one employers' unions had been reported "defunct," but had not been formally removed from the register, while the names of 58 employees' unions had not been formally removed from the industrial register, although their registrations as trade unions had been cancelled. In Western Australia, the employers' unions numbered 45, with 441 members, in 1904; 59 unions, with 520 members, in 1905; 57 unions, with 534 members, in 1906; 56 unions, with 552 members, in 1907; 48, with 409 members, in 1908; 47, with 408 members, in 1909; 46, with 444 members, in 1910; 46, with 554 members, in 1911; 49, with 749 members, in 1912; 48, with 581 members, in 1916; and 52, with 810 members, in 1917. From 1904 to 1908 unions of employees were in a fairly stationary condition. Since 1909, however, there has been a rapid expansion. At the end of 1904 and 1905 there were 140 unions, with 15,743 and 15,461 members respectively; in 1906 there were 130 unions, with 16,015 members; in 1907, 121 unions, with 14,544 members; in 1908, 121 unions, with 15,187 members; in 1909, 122 unions, with 17,282 members; in 1910, 130 unions, with 20,429 members; in 1911, 152 unions, with 28,934 members; in 1912, 158 unions, with 30,453 members; in 1916, 134 unions, with 25,403 members, and in 1917, 137 unions, with 26,359 members. These figures include councils and associations. Registration under Commonwealth legislation began in 1906. In that and the four following years, there was but one union of employers; another was registered in 1911. The unions of employees registered were 20 in 1906, with 41,413 members; 24, with 57,306 members, in 1907; 37, with 69,536 members, in 1908; 7, with 14,161 members, in 1909; 10, with 3760 members, in 1910. Twenty-four unions of employees were registered in 1911. The membership given above is that at time of registration. At the end of 1912 there were three employers' organisations, with 351 members, and 96 employees' organisations, with 245,735 members, on the register under the Commonwealth Conciliation and Arbitration Act. On the 31st December, 1916, there were six organisations of employers, with 1375 members, and 106 organisations of employees, with 413,356 members on the register.

**4. Types of Trade Unions in Australia.**—The trade unions in Australia are very diverse in character, and range from the small independent association to the large interstate organisation, which, in its turn, may be merely a branch of a British or international union. Broadly speaking, there are four distinct classes of labour organisations, viz.:—(i.) the *local independent*, (ii.), the *State*, (iii.) the *inter-State*, and (iv.) the *Australasian or International*, but a number of variations occur from each of these classes. The leading characteristics of each of these types were briefly outlined in Labour Report No. 2 (pp. 7 to 9).

**5. Total Number of Unions, 1917.**—As already stated, the figures for trade unions registered under the Acts do not represent the position of unionism in Australia. In 1912 the Labour and Industrial Branch of the Commonwealth Bureau of Census and Statistics was established, and by the cordial co-operation of the officials of the labour organisations, comprehensive figures relating to the development of organised labour are now available. The following table gives particulars of the number of trade unions, the number of branch unions, and the number of members in each State, the Northern Territory and the Commonwealth at the end of 1917:—

**TRADE UNIONS, BRANCH UNIONS, AND MEMBERS, STATES, NORTHERN  
TERRITORY, AND COMMONWEALTH, 1917.**

State or Territory.	Number of Separate Unions.	No. of Branches.	No. of Members.
New South Wales ... ..	220	765	248,851
Victoria ... ..	156	353	148,730
Queensland ... ..	96	291	75,393
South Australia ... ..	93	98	45,400
Western Australia ... ..	108	195	33,263
Tasmania ... ..	71	76	10,886
Northern Territory ... ..	3	...	1,664
<b>Total ... ..</b>	<b>747</b>	<b>1,778</b>	<b>564,187</b>
<b>Commonwealth* ... ..</b>	<b>389†</b>	<b>2,136</b>	<b>564,187</b>

\* Allowing for interstate excess. † Number of distinct organisations and interstate groups of organisations in the Commonwealth—not the total number of organisations, which are practically independent and self-governing. (See below.)

In the preceding table the number of separate unions in each State refers to the number of unions which are represented in each State, exclusive of branches within a State. That is to say, each union represented in a State is only counted once, regardless of the number of branches in that State. Except in the last line, the number of branches indicates the number of branches of State head offices, which may, of course, themselves be branches of an interstate or larger organisation. In taking the total number of separate unions in the Commonwealth (see last line but one), it is obvious that, in the case of interstate and similar unions, there will be duplication, since each such union is counted once in each State in which it has any branches. In the figures given in the last line allowance has been made for this duplication. State branches of interstate or federated unions, as well as sub-branches within a State, are included under the heading "Branches" in the third column—last line. It should be observed, however, that the scheme of organisation of these interstate or federated unions varies greatly in character, and the number of separate Commonwealth unions does not fairly represent the number of practically independent organisations in Australia. In some of these unions the State organisations are bound together under a system of unification with centralised control, while in others the State units are practically independent and self-governing, the federal bond being loose and existing only for one or two specified purposes. It may be seen, therefore, that there are 389 distinct organisations and interstate groups of organisations in the Commonwealth, having 2136 State branches and sub-branches, and a total of 564,187 members.

**6. Number of Unions and Membership in Industrial Groups, 1917.**—The following table shews the number of unions and members thereof in each State at the end of the year 1917. The number of unions specified for each State refers to the number of different unions represented in each State; that is to say, interstate or federated unions are counted once in each State in which they are represented, but sub-branches within a State are not counted. In order to avoid disclosing the affairs of individual unions, in cases where there are only either one or two unions in any group in a State, the membership is not given separately.

\* Not available for publication separately; included in State and Commonwealth totals.  
 † Incomplete, see footnote. ‡ Membership of Groups II., VII., and XIV. included in the South Australian numbers.

Particulars are given in Labour Report No. 8 (pp. 12 and 13) of the number of male and female members of unions and the percentage of such members on the total number of adult wage earners. Information is also given below as to the development of trade unionism since 1901. Other tables shew the classification of unions according to number of members and the number of central labour organisations.

**7. Development of Trade Unions in Australia, 1901 to 1917.**—The following table shews for the years specified the total number of trade unions in the Commonwealth, and the number and membership of those unions for which returns are available. The estimated total membership of all unions for years prior to 1912 is shewn in the last line:

#### NUMBER AND MEMBERSHIP OF TRADE UNIONS IN COMMONWEALTH, 1901 to 1917.

Particulars.	1901.	1906.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
Total number of unions	198	302	482	573	621	710	712	713	705	747
No. of unions for which membership available	139	253	442	542	621	710	712	713	705	747
Membership of these unions ...	68,218	147,049	277,047	344,999	433,224	497,925	523,271	528,031	546,556	564,187
Estimated total membership of all unions	97,174	175,529	302,119	364,732	...	...	...	...	...	...

Note.—Particulars for 1907, 1908, and 1909 are given in Labour Report No. 2, p. 13.

These figures shew that while the number of unions in 1917 was more than double the number in 1906, the estimated membership during the same period increased nearly fourfold. During the last nine years the estimated annual increase in membership was greatest in the year 1912, when it amounted to no less than 68,492, and least in 1915, when it was only 4760.

8. **Interstate or Federated Unions, 1917.**—The following table gives particulars as to the number and membership of interstate or federated unions in 1917 :—

**NUMBER AND MEMBERSHIP OF INTERSTATE OR FEDERATED UNIONS IN THE COMMONWEALTH, 1917.**

Particulars.	Unions Operating in—					Total.
	2 States.	3 States.	4 States.	5 States.	6 States.*	
Number of Unions ...	18	11	18	14	33	94
Number of Members ...	18,286	18,649	76,981	90,068	252,319	456,303

\* Three unions in this group have, in addition to branches in each of the six States, a branch in the Northern Territory.

It appears, therefore, that 94 out of the 389 separate associations and groups of associations in the Commonwealth are organised on an interstate basis. The membership of these 94 unions amounts to 456,303, or no less than 80.9 per cent. on the total membership (564,187) of all unions.

9. **Central Labour Organisations.**—In each of the metropolitan towns, as well as in a number of other industrial centres, delegate organisations, consisting of representatives from a group of trade unions, have been established. Their revenue is raised by means of a per capita tax on the members of each affiliated union. In most of the towns where such central organisations exist, the majority of the local unions are affiliated with the central organisation, which is usually known as the Labour or the Trades Hall Council or the Labour Federation. In Western Australia a unified system of organisation extends over the industrial centres throughout the State. In this State there is a provincial branch of the Australian Labour Federation, having a central council and executive, and metropolitan and branch district councils, to which the local bodies are affiliated. The central council, on which all district councils are represented, meets periodically. In the other five States, however, the organisation is not so close, and though provision usually exists in the rules of the central council at the capital town of each State for the organisation of district councils or for the representation on the central council of the local councils in the smaller industrial centres of the State, the councils in each State are, as a matter of fact, independent bodies.

The table below shews the number of metropolitan and district or local labour councils, together with the number of unions and branches of unions affiliated therewith, in each State at the end of the year 1917 :—

**CENTRAL LABOUR ORGANISATIONS.—NUMBER, AND UNIONS AFFILIATED, 1917.**

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'w'th.
No. of Councils ...	4	5	2	4	11	1	27
No. of Unions and Branch Unions Affiliated ...	163	192	46	82	171	18	672

The figures given in the preceding table as to number of unions do not necessarily represent separate unions, since the branches of a large union may be affiliated to the local trades councils in the several towns in which they are represented.

Between the trade union and the central organisation of unions may be classed certain State or district councils, organised on trade lines and composed of delegates from separate unions, the interests of the members of which are closely connected by reason of the occupations of their members, such, for example, as delegate councils of bakers, bread carters and mill employees, or of unions connected directly or indirectly with the iron, steel, or brass trades, or with the building trades.

## § 2. Laws Relating to Conditions of Labour.

1. **Tabular Statement of Statutes affecting Labour.**—The statutes in force at the end of 1917 in the several States of the Commonwealth, which, more or less directly, affect the general conditions of labour, are shewn in the table below. Where merely an incidental reference to labour conditions is made in a statute, as is the case with, e.g., the Hawkers and Pedlars Act 1892, of Western Australia, or the Firms Registration Act 1899, of South Australia, or the Health Acts generally, the statute is not included in the table.

LABOUR LAWS.—TABLE OF STATUTES IN FORCE IN AUSTRALIAN STATES, 1917.

New South Wales.	Victoria.	Queensland.	South Aust.	Western Aust.	Tasmania.

\* The "Truck" system, as applied to labour, was one by which the master obtained the labour of his servants in exchange for goods or commodities on which it is stated he generally secured a profit. The system is now almost entirely suppressed by the various statutes enacted. + New South Wales Acts unrepealed in Queensland after Separation in 1859.

**2. Provisions and Administration of the Acts.**—For information regarding the benefits sought, and the provisions for the registration, administration, and record-keeping, etc., under these Acts, reference should be made to Year Book No. 9, pp. 949 to 952.

**3. Registered Factories.**—The number of establishments registered under Factories Acts is shewn below:—

**FACTORIES REGISTERED UNDER ACTS, 31st DECEMBER, 1917.**

State.	No. of Registered Factories.	Numbers Employed.		
		Males.	Females.	Total.
New South Wales†...	8,065	63,895	28,757	92,652

Tasmania†	923	6,200	1,566	7,766
Commonwealth ...	22,267	172,716	83,106	255,822

\* At 31st March, 1917.

† At 31st December, 1916.

‡ At 30th June, 1917.

**4. Comparative Statement of Factories Law in Australia.**—The tables on pp. 994-9 shew at a glance the chief provisions of the Factories and Shops Acts in the Commonwealth.

**5. Mining Acts.**—Under the Mining Acts the employment underground of all females and of boys under fourteen years is prohibited. A minimum age, usually seventeen, is fixed for employment as lander or bracedman at plats and landing places; no lander, bracedman, underground worker, or man in charge of motive power may be employed more than eight hours a day. A large number of scientific provisions for the protection of the lives and health of miners is also inserted in the Acts. Enginedrivers must hold certificates of competency. Persons may be licensed to certify to the condition of boilers. Provision is made to enable injured persons or the relatives of persons killed to recover damages if the injury or death results from a breach of the regulations referred to above. Inspection of mines is fully provided for. Sunday labour is forbidden. In New South Wales and (since 1st February, 1910) Victoria still more advanced mining legislation exists; numerous sections are designed to ensure the well-being of the workers, such as limitation of hours, etc.

**6. Employers' Liability and Workmen's Compensation Acts.**—In each of the States, Acts have been passed allowing compensation to workers who have been killed or injured while engaged in industrial occupations. In the Commonwealth, one Act provides for compensation to all workers employed by the Commonwealth, and another to all seamen working on ships registered in Australia. A conspectus of these Acts is given on pages 998 to 1003.

## A.—EMPLOYMENT IN FACTORIES.—COMPARATIVE VIEW OF

HEADING.	NEW SOUTH WALES.	VICTORIA.	QUEENSLAND.
<i>Principal Acts</i>	Factories and Shops 1912.	Factories and Shops 1915.	Factories and Shops 1900. " " 1908. " " 1914†
<i>Application of Acts—Limitations</i>	Whole State proclaimed factories district. Not applicable where all the workers are members of the same family. Not applicable to woolsheds, dairies, or ships. Governor may exempt any factory or class of factory.	Whole State. Not applicable to dairying, agricultural, horticultural, viticultural and pastoral occupations. Not applicable to laundries attached to prisons or religious and charitable institutions.	Only in areas proclaimed. Not applicable to prisons, reformatories, dairies, mines, agricultural buildings, and domestic workshops. Governor may exempt partially or wholly any factory or class of factories in a given district.
<i>Definition of Factory—By Nos. Employed</i>	Four or more.	Four or more.	Two or more (including occupier).
" Asiatics "	One or more Chinese.	One or more Chinese.	One Asiatic.
" Power used "	Steam or mechanical.	Steam or mechanical.	Steam or mechanical.
" Special classes included "	Bakehouses. Laundries and dyeworks.	Bakehouses, laundries, dyeworks, quarries, clay-pits, furniture. Gas and electric light, etc., works.	Bakehouses, laundries.
<i>Administration</i>	Minister of Labour.	Minister of Labour.	Minister for Public Works.
<i>Inspectorate</i>	Inspectors with full powers of entry, examination and enquiry.	Inspectors with full powers of entry, examination and enquiry.	Inspectors with full powers of entry, examination and enquiry.
<i>Registration</i>	Seven days' prior notice.	Fourteen days' notice after occupation. Annual re-registration.	Seven days' prior notice.
<i>Outwork</i>	Occupier of factory to keep record, showing places where work done and rates of payment.	Occupier to keep record of description, quantity, remuneration, names and addresses. Out-workers must register in clothing, wearing-apparel, or boot trades.	Sub-contractors' premises subject to factory regulations. Occupier to keep records showing places, description, and quality of work; nature and amount of remuneration paid. Out-workers must register. Sub-letting forbidden.
<i>Meals in Workroom</i>	Minister may forbid while work is going on; he may require provision of a suitable eating-room.	Forbidden while work going on, unless Chief Inspector permits. Forbidden if dangerous trade conducted.	Inspector may forbid meals being taken in factories; he may require provision of suitable eating room.
<i>Sanitary, Health and Safety Provisions</i>	Factories to be clean, wholesome, and well ventilated. Over-crowding forbidden. Unhealthy persons under sixteen may be suspended from daily work. Avoidance of infection prescribed. Factories to be thoroughly cleaned once in fourteen months. Bakehouses and furniture factories not to be used as sleeping places. Seats to be provided for females. Proper necessary precautions to be taken against fire, and efficient fire escapes to be provided.	Factories to be clean, wholesome, and well ventilated. Over-crowding forbidden. Factories to be thoroughly cleaned once in fourteen months. Bakehouses to be washed once every six months. Factories and bakehouses not to be used as sleeping places. Wet spinners must be protected. Efficient fire escapes to be provided, and fire appliances kept ready. Doors, etc., to be kept free from obstruction.	Factories to be clean, wholesome, and well ventilated. Over-crowding forbidden. Suspension of work by unhealthy persons may be enforced. Avoidance of infection prescribed. Fresh drinking water to be provided. Factories to be thoroughly cleaned once in twelve months. Bakehouses not to be used as sleeping places. Seats to be provided for females. Proper necessary precautions to be taken against fire.
<i>Dangerous Machinery</i>	Must be fenced. Employment of women and boys forbidden at certain machines.	Must be fenced. Employment of women and boys restricted. First-aid ambulance-chest to be kept on premises.	Must be fenced.*
<i>Minimum Wage per week</i>	4s. No premiums or bonus on behalf of apprentices in the making of wearing apparel is permitted.	2s. 6d. No premium is to be demanded from female apprentices and improvers in clothing trades, or any apprentice or improver employed in a shop.	5s. No premium is permitted from apprentices without permission of Inspector.

\* See Machinery and Scaffolding Act 1915.

† Hairdressers' shops only.

## LEADING FEATURES OF ACTS IN FORCE IN AUSTRALIA, 1917.

SOUTH AUSTRALIA.	WESTERN AUSTRALIA.	TASMANIA.
Factories 1907, 1908, 1910, and 1915.	Factories 1904. .. 1911 (2).	Factories 1910, 1911 and 1917.
In metropolitan area and such other places as determined by Parliament. Not applicable to domestic servants and agricultural and pastoral pursuits.	In districts proclaimed. Not applicable to mines, dairies, ships, prisons, reformatories, domestic (other than Asiatic) workshops. Governor may exempt any factory or class of factories.	Whole State. Not applicable to mines, ships, prisons, reformatories, rural industries, charitable institutions. Governor may exempt any factory.
Any one person.  Laundries, dyeworks.	Six or more.  One Asiatic. Steam or mechanical. Bakehouses, laundries.	Four or more.  One Asiatic. Steam or mechanical over 1 h.p. Bakehouses, quarries.
Minister of Industry.	Honorary Minister.	Chief Inspector.
Inspectors with full powers of entry, examination and enquiry.	Inspectors with full powers of entry, examination and enquiry.	Inspectors with full powers of entry, examination and enquiry.
Twenty - one days' after occupation.	Prior notice. Annual re-registration if Asiatics employed	Twenty-one days' prior notice and annual re-registration.
Occupier to keep record. Out-workers to register names and addresses.	Occupier to keep record of names and addresses, and quantity and description of work done. Sub-letting forbidden.	Occupier to keep record of names and addresses, and quantity and description of work done, also of hours worked and wages paid.
Minister may forbid meals in factories carrying on noxious trades; he may require provision of suitable eating-room.	Forbidden for women and boys, except with Inspector's written permission.	Forbidden where employees working. In certain factories meal room to be provided.
Factories to be kept wholesome, clean, and well ventilated. Over-crowding forbidden. Factories to be thoroughly cleaned once in fourteen months. Adequate protection to be made against fire.	Factories and connected yards to be clean, wholesome, and well-ventilated. Over-crowding forbidden. Unhealthy persons may be forced to suspend work. Goods, clothing, etc., to be disinfected where necessary. Fresh drinking water to be provided. Thorough cleaning to be regularly done. Bakehouses not to be used as sleeping places. Efficient fire escapes to be provided and other necessary protection to be made against fire.	Factories to be clean, wholesome, and well ventilated. Overcrowding forbidden. Interior walls and ceiling surfaces in factories may be required to be cleaned once in fourteen months. Factories not to be used as sleeping places. Doors, etc., to be kept clear of obstructions, and fire-prevention appliances kept ready for use. Doors to open outwards. Alternate means of escape to be provided.
Must be fenced. Employment of children under sixteen may be forbidden.	Must be fenced.* Inspector may prohibit as dangerous machine.* Employment of females and boys forbidden?	...
4s. No premium is to be paid by female apprentices in clothing trades.	...	4s. for first year at trade. No premium in respect to employment is permitted.

\* See Inspection of Machinery Act 1904.

# 1002 LEGISLATIVE REGULATION OF WAGES AND TERMS OF CONTRACT.

## CONSPECTUS OF WORKMEN'S

HEADING.	NEW SOUTH WALES.	VICTORIA.	QUEENSLAND.	SOUTH AUSTRALIA.
<i>Period after which lump sum can be substituted for weekly payment.</i>	Six months.	Six months.	Any time.	Six months.
<i>Tribunal, if claim not settled by agreement.</i>	Committee representative of employer and his workmen, if existing, or arbitration, or Judge of District Court.	Judge of County Court or Police Magistrate.	Insurance Commissioner, Industrial Referee, Supreme Court.	Arbitrator. If arbitrator not agreed on within one month, special Magistrate. Appeals to Supreme Court.
<i>Regulations for worker leaving the State in which he was injured.</i>	If permanent incapacity likely, quarterly substituted for weekly payments in case of worker ceasing to reside in the State.	Same as South Australia.	If permanent incapacity proved, 155 times weekly payments substituted for weekly payments in case of worker leaving Commonwealth.	If permanent incapacity likely, quarterly substituted for weekly payments in case of worker leaving State.
<i>Proceedings for compensation not maintainable unless commenced within</i>	Six months.	Six months.	Six months.	Six months.

7. **Other Acts.**—Other legislation regulating conditions of labour has been enacted by the States. The British *Conspiracy and Protection of Property Act* (38 and 39 Vic., c. 86) has been adopted in all the States except New South Wales and Queensland. Servants' registry offices are placed under administrative control, and the rates of commission chargeable are fixed by regulation. Power is given to workmen to attach moneys due to a contractor who employs them, in order to satisfy a claim for wages, such wages being made a first charge on moneys due to a contractor. Workmen are given a lien for wages over material whereon they are working, even if it becomes part of other property. This is in addition to the common law lien, which ceases when possession of the property is parted with. Workmen's wages are protected from attachment. In Victoria, provision is made for the compulsory resumption of suburban lands to provide workmen's homes.

8. **General Results of Industrial Legislation.**—The results of the legislation described must be sought in the Reports of the Inspectors of Factories of the several States. Generally speaking, the perusal of these reports and of the reports of Royal Commissions which have inquired into the working of the Acts, affords satisfactory evidence that the Acts have, on the whole, effected their objects.

## § 3. Legislative Regulation of Wages and Terms of Contract.

1. **General.**—Two systems, based upon different principles, exist in Australia for the regulation of wages and general terms of contracts of employment. A "Wages Board" system exists in Victoria and Tasmania, and an Industrial Arbitration Court in Western Australia. In the industrial legislation of New South Wales, Queensland, and South Australia, both systems are embodied, Industrial or Wages Boards, as well as Industrial Courts, being instituted. In Victoria, Wages Boards' decisions may be reviewed by the Court of Industrial Appeals. In New South Wales, Industrial Arbitration Acts of 1901 and 1905 instituted an Arbitration Court. This court expired on 30th June, 1908, having delivered its last judgment on the previous day. Wages Boards were substituted under the Industrial Disputes Act 1908, and subsequent years; while the Act of 1912 introduced the mixed system. The Industrial Arbitration (Amendment) Act, assented to on 22nd March, 1918, amends the law for the regulation of the conditions of industries and industrial arbitration. The Act provides for the establishment of a Board of Trade and of special and deputy Courts of Industrial Arbitration, and also for the appointment of Industrial Boards on the recommendation of the Court. There is also the Arbitration Court of the Commonwealth, which has power, however, to deal only with matters extending beyond the limits of a single State.

## COMPENSATION ACTS IN AUSTRALIA—Continued.

WESTERN AUSTRALIA.	TASMANIA.	COMMONWEALTH. (Employees.)	COMMONWEALTH. (Seamen.)
Six months.	Two weeks.	Six months.	Six months.
Local Court.	Commissioner (under Local Courts Act 1896) acting as Arbitrator.	Arbitrator or County Court.	Arbitrator or County Court.
Weekly payments continue in case of worker leaving State.	Same as South Australia.	If permanent incapacity likely, quarterly substituted for weekly payments in case of worker leaving Australia.	If permanent incapacity likely, quarterly substituted for weekly payments in case of worker leaving Australia.
Six months.	Six months	Six months.	Six months, or 18 months if ship lost at sea.

The chief aims of the Wages Board system are to regulate hours, wages, and conditions of labour and employment, by the determination of a Board usually brought into existence for any specified industry or group of industries by petition or application. Under the Industrial Arbitration Court system an industry does not technically come under review until a dispute has actually arisen. Most of the Acts, however, have given the President of the Court power to summon a compulsory conference. In Victoria, where the Wages Board system is in force, there is no provision against strikes, but in Tasmania, where that system has also been adopted, penalties are provided for a lock-out or strike on account of any matter in respect of which a Board has made a determination.

Particulars were given as to the historical development, mode of constitution and general provisions of Wages Boards and Arbitration Courts in Year Book No. 9, pages 960 to 966. These refer to the regulation of wages and working conditions, and the prevention and settlement of industrial disputes.

**2. Comparative Statement of Tribunals for Regulating Wages in Australia.**—The table on pages 1004 and 1005 shews at a glance the Acts which operate in fixing wages, the constitution and function of tribunals enacted under them, and the effect and extent of the tribunals' decisions. It will be seen that in all the States there is machinery for the regulation of wages.

**3. Movement Towards Uniformity.**—The wide difference between the development in the several States of the Commonwealth of the regulation by State institutions of the remuneration and conditions of the workers has given rise to a desire on the part of the Commonwealth Government to secure uniformity throughout Australia by any suitable and constitutional action on the part of the Commonwealth. The provisions of States' wages laws vary considerably. In New South Wales, Victoria, and Western Australia, considerable experience has been gained of their working. The system is newer in South Australia, Queensland, and Tasmania. The desirability for uniformity has, as already mentioned, been recognised by the New South Wales Arbitration Court, which refused the Bootmakers' Union an award which would increase the wages of its members to amounts exceeding those paid in Victoria in the same trade, the express ground of the refusal being that New South Wales manufacturers would be handicapped by the payment of a higher rate of wage than that prevailing in Victoria.

## TRIBUNALS FOR THE REGULATION OF

Particulars.	NEW SOUTH WALES.	VICTORIA.	QUEENSLAND.
<i>Name of Acts</i>	Industrial Arbitration Act 1912, 1916†	Factories and Shops Act 1915	Industrial Arbitration Act 1916
<i>Nature of Tribunals</i>	Court of Industrial Arbitration. Industrial Boards	Court of Industrial Appeals. Wages Boards	Industrial Court. Industrial Boards
<i>How Tribunals are brought into existence</i>	Industrial Court (Judge) constituted by Act. Industrial Boards by the Minister on recommendation of Industrial Court.	Court constituted by Acts. Wages Boards by Governor-in-Council on resolution of Parliament	Industrial Court constituted by the Act. Industrial Boards by Minister on recommendation of Court
<i>Scope of Acts</i>	To industrial groups named in Schedule to Act, and those added by Proclamation. Includes Government servants	To any process, trade, business, or occupation specified in a resolution. Government servants are not included	To all callings and all persons (including Government servants) except (1) State children; (2) domestic servants; (3) persons engaged in farming operations on dairy, fruit and agricultural farms
<i>How a trade is brought under review</i>	Reference by Court or Minister, or by application to the Board by employers (having not less than 20 employees) or industrial unions	Usually by petition to Minister	By submission to the Court by (1) the Minister or the Registrar; (2) an employer employing not less than 20 employees in any calling; and (3) not less than 20 employees in any calling
<i>President or Chairman of Tribunal</i>	Appointed by Minister on recommendation of Court.	Appointed by Governor-in-Council on nomination of Board, or failing that on nomination by Minister	Appointed by Governor-in-Council
<i>No. of Members of Tribunal</i>	Chairman, and 2 or 4 other members	Not exceeding 11 (including chairman)	Industrial Court, not exceeding 3, including president. Industrial Boards, 2 or 4 in addition to chairman
<i>How ordinary members are appointed</i>	Appointed by Minister on recommendation of Industrial Court	Nominated by Minister. But if one-fifth of employers or employees object, representatives are elected by them	Members of Industrial Court by Governor-in-Council. Members of Industrial Boards by employers and employees respectively
<i>Decisions — how enforced</i>	By Registrar and Industrial Magistrate	By Factories Department in Courts of Petty Sessions before Police Magistrates.	By Industrial Court on application of any party to the award or agreement, or Registrar, or Industrial Inspector
<i>Duration of decision</i>	For period fixed by Tribunal, but not more than 3 years.	Until altered by Board or Court of Industrial Appeals	12 months and thereafter, until altered by Board or Court
<i>Appeal against decision</i>	To Industrial Court against decision of Boards	To the Court of Industrial Appeals	To Industrial Court
<i>Is suspension of decision possible pending appeal?</i>	No; except by temporary variation of award by the Court	Yes; for not more than 12 months	Yes; for not more than 3 months
<i>Can Preference to Unionists be declared?</i>	Yes	No	Yes
<i>Provision against strikes and lockouts</i>	Strikes, penalty £50, registration as industrial union, and preference to unionists cancelled. Lockouts, penalty £1000, and registration as industrial union cancelled	Determination may be suspended by Governor-in-Council for any period not exceeding 12 months.	Penalties for strikes or lockouts, employer or industrial union, £100; other cases, £10
<i>Special provisions for Conciliation</i>	Special Commissioner.* Conciliation Committees for colliery and other districts. Registered agreements	None	Compulsory Conference. Registered agreements

Yes	No suspension. Court has power to revise an award after the expiration of 12 months from its date	Yes	No appeal
No	No	No	Yes; ordinarily optional, but mandatory if in opinion of Court preference is necessary for maintenance of industrial peace or welfare of society
Penalty £500, or imprisonment for 3 months	Employer or Industrial Union, £100; other cases, £10.	Organisations, £500; individuals, £20	Penalty, £1000.
Compulsory Conference. Industrial Court. Registered agreements	Compulsory Conference. Registered agreements	None	Compulsory Conference. Court may temporarily refer to Conciliation Committee, Registered agreements

(Amendment) Act 1918 was assented to on 22nd March, 1918

**4. Constitution Alteration Proposals.**—Two proposed laws for the alteration of the constitutional powers of the Commonwealth in regard to industries and businesses were submitted to the people for acceptance or rejection on the 26th April, 1911. The first law proposed to amend section 51 of the Constitution Act (see p. 23 hereinbefore) so as to give the Commonwealth Government increased powers to deal with (a) trade and commerce, (b) corporations, (c) industrial matters, and (d) trusts and monopolies. The second law proposed to insert, after section 51 of the Constitution Act, a section empowering the Commonwealth Government to make laws with respect to monopolies. Neither of the proposals was approved by the people. Fuller particulars are given on page 922 of this book. At the general elections, held on 31st May, 1913, these and other matters were again submitted by referendum and again rejected.

## § 4. Operations under Wages Board and Industrial Arbitration Acts.

**1. General.**—Particulars regarding operations under the Commonwealth Arbitration Acts and the various State Acts for the regulation of wages, hours, and conditions of labour, shewing the number of boards authorised and constituted, and which had or which had not made any award or determination in each State; the number and territorial scope of awards or determinations, and the number of industrial agreements in force, were first compiled to the 31st December, 1913.\*

These particulars have from time to time been revised, and reviews to the end of approximately quarterly periods have been published in the periodical Labour Bulletins to the 30th June, 1917, and thereafter in the Quarterly Summaries to the 31st December, 1917. Information has also been compiled and included in the later issues of the Labour Bulletin and Quarterly Summary, respecting the estimated number of work-people affected by awards or determinations and industrial agreements in each State. In addition, a brief quarterly epitome has been given of the number of awards and determinations made and industrial agreements filed under the Act in force in each State and the Commonwealth Conciliation and Arbitration and the Commonwealth (Public Service) Arbitration Acts. The following tabular statement gives particulars of the operations in each State and under the Commonwealth Statutes during each quarter of the years 1916 and 1917 respectively:—

---

\* Information as to the main provisions of the various Acts in force was given in Labour Bulletin No. 1, pp. 57 to 60.

\* Including 1 agreement varied in respect to wages only. † Including 55 separate agreements made between the Australian Saddlery and Leather Workers' Trades Employees' Federation, and various employers.

Owing to the prevailing drought conditions and the advent of war during the year 1914, varying restrictive measures were introduced either for the suspension or curtailment of the operations of industrial tribunals in each of the States. During the second quarter of 1915 these restrictions were somewhat relaxed in New South Wales and Queensland, and early in the third quarter operations gradually assumed normal conditions in all the States. During the third and fourth quarters of 1915 greater activity was evidenced in each State, and this activity continued during the years 1916 and 1917. The number of awards and determinations (319) made by the Commonwealth Conciliation and Arbitration Court, the State Industrial Courts and Wages Boards during the year 1917, was lower than the number made during the previous twelve months, when 426 awards and determinations were issued. The number of industrial agreements entered into during 1917 was 251, as compared with 131 during the year 1916. The number of awards issued by the Commonwealth Conciliation and

## 1008 OPERATIONS UNDER WAGES BOARDS AND INDUSTRIAL ARBITRATION ACTS.

Arbitration Court was 33, as compared with 14 during the previous year. The number of industrial agreements filed under the provisions of the Commonwealth Act also shewed a large increase in comparison with the number filed during the previous year, the number filed during 1917 being 135, as against 21 during the year 1916.

### 2. Boards Authorised, and Awards, Determinations, and Agreements in Force.—

In the following table particulars are given for all States, excepting Western Australia, of the number of boards authorised and constituted, and including operations under the Commonwealth and the Western Australian Arbitration Acts, of the number of awards, determinations, and industrial agreements in force in all States at the 31st December, 1913 and 1914, and at quarterly intervals during the succeeding three years :—

31st December, 1917* ...	478	473	442	744	732

\* Details for each quarter have already been published in the issues of the Labour Bulletin to the 30th June, 1917, and thereafter in the issues of the Quarterly Summary. † Including awards made by Arbitration Courts. ‡ Owing to certain restrictions being imposed on the operations of Industrial Boards in each State, a number of awards which expired in New South Wales during these periods were not immediately reviewed. § Excluding awards or determinations which expired in New South Wales (under the Act of 1908) on 31st December, 1913. ¶ Owing to a number of awards made under the N.S.W. Industrial Disputes Act (1908) being still in force, the Boards constituted for such industries under the Industrial Arbitration Act (1912) had not made any awards. ¶ See remarks with respect to re-authorisation of Boards in New South Wales, Labour Bulletin No. 12, p. 47. \*\* In Queensland in pursuance of the provisions of the Industrial Arbitration Act of 1916 all Industrial Boards appointed under the Industrial Peace Act of 1912 were dissolved on the 12th January, 1917, with the exception of those which had matters pending or partly heard. At the 31st December, 1917, these latter Boards had also been dissolved. The work of the Boards appointed under the Industrial Peace Act is being undertaken by a Court of Arbitration constituted under the new Act.

It will be observed from the particulars set out in the above table that considerable expansion of the principle of the fixation of a legal minimum rate of wage and of working conditions took place during the four years ending 31st December, 1917. At the end of 1917, 169 additional awards or determinations were in force in the Commonwealth. The number of industrial agreements\* made and in force under the various Acts increased during the four years under review by 331.

In the following table, particulars are given for each State and the Commonwealth of the number of Boards authorised, etc., at the 31st December, of the years 1913 to 1917 inclusive :—

\* The registration of industrial agreements is not provided for under the Acts in force in Victoria and Tasmania, but such agreements may be registered and filed under the provisions of the Commonwealth Conciliation and Arbitration Act to operate in any or in all States.

\* The figures for New South Wales are exclusive of Demarcation Boards. † Including one Board subsequently superseded by three boards. ‡ In pursuance of the provisions of the Industrial Arbitration Act of 1916, all Industrial Boards appointed under the Industrial Peace Act of 1913 were dissolved on the 12th January, 1917, with the exception of those which had matters pending or partly heard. At the 31st December, 1917, all of these latter Boards had also been dissolved. The work of the Boards appointed under the Industrial Peace Act is being undertaken by a Court of Arbitration constituted under the new Act.

From the particulars set out in the above table, ready comparison can be made with respect to the progress in each of the States during the years 1913 to 1917, as to the number of Boards operating, and the number of Awards and Determinations, and Industrial Agreements in force at the end of each annual period.

## SECTION XXVIII.

## DEFENCE.

## § 1. Military Defence.

1. **Development of State Military Systems.**—Prior to 1870, the main defence of Australia was entrusted to small garrisons of British troops quartered in the leading cities, whose primary purpose was to serve as a convict guard. From time to time, rumours of wars and of attacks upon Australia deemed imminent as a result of European entanglements, caused the raising of local companies and batteries, which were generally disbanded upon the cessation of hostilities or the quietening of the rumours. The first of such bodies was the "Loyal Association" formed in 1801 as a volunteer corps, on account of the Napoleonic wars, and at the express invitation of the Governor. Half a century later, and at other later dates, fear of Russian aggression drove the colonists to measures of self-defence. Efforts to permanently establish a defence force, however, failed until 1870. In that year, the withdrawal of the last Imperial regiment from Australia, and the sense of insecurity which the Continental wars had engendered, resulted in a definite basis for colonial defence being settled. Small detachments of permanent soldiery were established to act generally as a nucleus about which the citizen soldiery should be shaped, and, generally, to look after the forts and defence works, which were then in course of erection. The system rested upon a volunteer basis, training and service being freely and enthusiastically given by the citizens, the Governments supplying arms and accoutrements and sometimes uniforms. Reward for five years' service frequently took the shape of grants of land. About 1880, Imperial experts advised that the purely volunteer system should be replaced by a "militia" or partially-paid system. The provision of a small annual allowance, generally £10 or £12 per annum for the gunner or private, with a sliding scale for higher ranks, together with arms, accoutrements, ammunition, and all military necessities free, enabled the "militia" system to be introduced about 1883-4. The expenditure was thereby increased, but it was held that the efficiency was greatly enhanced. With reductions in the rates of pay the system remained till the introduction of compulsory military training. The "permanent" forces were from time to time augmented. Cadet corps were also instituted in the larger schools. A detailed historical account of the Australian defence forces prior to federation will be found in the Official Year Book No. 2, pp. 1075-1080.

The strength of the military forces of the several States prior to federation was generally nearly up to establishments. On 31st December, 1900 (the eve of federation), it was:—New South Wales, 9338; Victoria, 6335; Queensland, 4028; South Australia, 2932; Western Australia, 2696; Tasmania, 2024; total for Commonwealth, 27,353. Cadets, reservists, and rifle club members are excluded.

2. **Development of Commonwealth System from 1901 to 1915.**—Under the terms of the Constitution Act 1900, the Commonwealth took over control of defence matters in March, 1901. For four years from that date the land forces were administered by a general officer commanding, under the ministerial headship of the

Minister for Defence. Early in 1905, a Council of Defence (since enlarged) was constituted to deal with questions of policy; also a Military Board, to supervise the administration of the forces. The principal aims in view were:—(i.) continuity of policy and administrative methods; (ii.) effectual parliamentary responsibility; (iii.) continuous inspection by an independent officer, the Inspector-General; (iv.) development of an efficient citizen force; (v.) decentralisation of authority by developing the independence of district commands. The Commonwealth has been divided into six military districts, roughly coterminous with boundaries of the States.

The citizen soldiery, or militia, makes up the main portion of the land forces of the Commonwealth. For administration at central and district headquarters, and for instruction of the citizen forces and assistance in the administration of units, there is an administrative and instructional staff of professional soldiers. Other permanent troops are the regiment of Royal Australian Garrison Artillery, which provides the garrison (with citizen troops as reliefs) for strategic positions and defended ports, and maintains the forts and armament in connection with them; three batteries of Royal Australian Field Artillery; the Royal Australian Engineers; and small detachments of Army Service, Medical, Veterinary and Ordnance Corps. These form a nucleus, each in its own arm, for instruction and administration of the citizen forces. In addition to the active forces, officers who have retired after having passed through a course of training, and members of rifle clubs, who each year fire a prescribed musketry course, are classed as reserves.

The mobile field force, which absorbs the great bulk of the citizen army, consists of two light horse divisions, and six divisions besides two regiments of light horse, two field artillery brigades and two infantry brigades, four companies of engineers, two companies of army service corps and three field ambulances which are not allotted in divisional organisation. The garrison troops find the necessary garrisons for the defended ports. Fuller particulars regarding administration and organisation will be found in Official Year Book No. 6, page 1046.

**3. The Present Military System.**—The defence of Australia at the present time is enacted and prescribed by the Defence Acts 1903-17 of the Federal Parliament. The provisions of the Acts of 1903 and 1904 and the regulations under them contain the main working principles of Australian defence, the necessary expansion being provided for in the amendments of 1909, 1910, 1911, 1912, 1914, 1915 and 1917. The main provisions of the Acts up to 1912 inclusive will be found in Official Year Book No. 6, pp. 1050 *et seq.* The principal provision of the Act of 1909 is the enactment of compulsory military or naval training, with regulations for registration, enrolment, and exemption. Statutes were passed subsequently, extending or modifying the legislative provisions, removing obstacles and difficulties, and, where necessary, providing machinery.

Owing to experience gained during the progress of the present war, many deficiencies and defects were discovered in the Defence Act 1903-15, and in order to adjust these matters, and to embody further provisions necessary in view of the emergencies arising out of a state of war, further legislation was passed in 1917. The principal features of this Amending Act were as follows:—(a) Delegation by Governor-General of power to appoint or promote Officers; (b) Provision for maintenance of additional permanent forces in time of war; (c) Validation of irregular appointments and enlistments; (d) Amendment of definition of "active service"; (e) Application of the Army Act to Australian troops; (f) Powers in relation to Courts Martial and laws applicable thereto; (g) Medals and decorations.

(i.) *Peculiar Position of Australia.* The Acts of 1909 and later years were the direct outcome of the feeling existing in a large majority of the citizens of the community, that Australia was insecure under the voluntary system. Recently, a Minister of State for Defence referred to the fact that if on a map of the world all the countries stained with blood were to be marked, Australia would be the only white spot. It is the national policy to effect a guarantee, by thorough preparation for war, that this exemption shall continue.

(ii.) *Military Population.* In connection with the numbers available, the figures of male population are of interest. The total number at cadet age, i.e., between 12 and 18, at the Census of 1911 (3rd April) was about 260,000; at citizen soldier age, i.e., between 18 and 26, 366,000; these latter, with 330,000 at ages between 26 and 35, give 696,000 as the total males at the best period for military service. In addition, there were about 614,000 between 35 and 60.

(iii.) *Record for Anthropometric Purposes.* In connection with the medical inspection, it has been arranged that the colour and character of hair, and the colour of eyes of those examined, shall be recorded for statistical purposes.

A systematic record of height, weight and chest measurement of each trainee is also made.

It is possible that later the recommendations of the British Anthropometric Committee will be adopted.

The object of the investigation is to study the development of the Australian nation, the necessary statistic for military identification purposes affording a unique opportunity. A possibility exists of co-ordinating anthropometric work in the schools with that done in connection with compulsory military service.

(iv.) *Compulsory Training.* By the Defence Acts of 1903 and 1904 all male inhabitants of Australia between the ages of 18 and 60 years were made liable to serve in the defence forces *in time of war*. The more recent Acts make training and service compulsory *in time of peace*. By the Act of 1909 the principle of universal liability to be trained was made law for the first time in any English-speaking community. It prescribed Junior Cadet training for lads 12 and 13 years of age, followed by Senior Cadet training for lads from 14 to 18 years of age; and thereafter adult training for two years in the citizen forces, to equal 16 days annually, followed by registration (or a muster parade) each year for 6 years. Arrangements for registration, enrolment, inspection, and medical examination of persons liable to be trained were made. The latter Acts introduced necessary modifications, the principal being the extension of adult service to eight years. On 1st January, 1911, by proclamation, compulsory training was established. The already existing militia (voluntarily enlisted) were free to complete the three years for which they had engaged to serve, but conformity to the new system was essential. Officers and non-commissioned officers might re-engage. All male inhabitants of Australia, who are British subjects, and have resided in the Commonwealth for six months, are liable to serve. Exemptions (see *infra*, p. 1014) exist for certain individuals and classes of people, and may be granted in the case of unpopulated and sparsely populated areas. The training is as follows:—

- (a) From 12 to 14 years of age, in the junior cadets.
- (b) From 14 to 18 years of age, in the senior cadets.
- (c) From 18 to 26 years of age, in the citizen forces.

(v.) *Visit and Report of Viscount Kitchener.* At the end of 1909 and before the Act of that year came into operation, the late Field-Marshal Lord Kitchener visited Australia at the invitation of the Government, and after inspection of the military forces and the forts and defence works erected or in course of erection, reported upon the whole scheme of land defence. His scheme was based on the provisions of the Defence Acts 1903-9. The trend and purport of the published report are given in the Official Year Book No. 4, pp. 1085-1088. The adoption of some of Lord Kitchener's recommendations necessitated further amending Acts. The proposed organisation is based upon necessary considerations of (a) the numbers available; (b) the length of service demanded; (c) the proportion of the various arms required. It differs in some of its details from the scheme propounded by Lord Kitchener and includes—

- 28 regiments of light horse;
- 56 batteries of field artillery;
- 92 battalions of infantry;

and a due proportion of engineers, army service, and army medical corps, troops for forts, and other services.

(vi.) *Junior Cadets.* Junior cadet training, lasting for two years, consists of 90 hours each year, and begins on the 1st July in the year in which the trainee reaches the age of 12 years. No registration is made, but when the cadet presents himself for registration in the senior cadets in the year in which he attains the age of 14 years, he is required to shew that he has completed the necessary training in his 13th and 14th years. This training is aimed at developing the cadet's physique. It consists principally of physical training for at least 15 minutes on each schoolday, and elementary marching drill. The following subjects are also taught, viz. :—Miniature rifle shooting; swimming; running exercises in organised games; first aid; and (in schools in naval training areas) mariners' compass and elementary signalling. The junior cadets are not organised as military bodies, and do not wear uniform. The Commonwealth Government maintains a staff of special instructors of physical training, by whom classes are held for school teachers in all districts throughout the Commonwealth. The school teachers, in turn, impart the lessons to the boys. The Inspectors of Schools supervise the training and inspect the cadets of State Schools on behalf of the Defence Department. The instructors of physical training perform these duties for the non-State Schools and are also employed in the training of women teachers; but the instruction of girl scholars rests wholly with the States' Education Departments.

(vii.) *Senior Cadets.* Senior cadet training, lasting for four years, begins on the 1st July of the year in which the trainee reaches the age of 14 years. It consists of 40 drills each year, of which four are classed as whole days of not less than four hours, 12 as half-days of not less than two hours, the remainder being either night drills or quarter-day drills of not less than one hour. To meet special cases (including extremity of weather) modifications and substitutions are permitted, but the minimum efficient service required of senior cadets is invariably 64 hours per annum, a minimum of 36 hours of which is to be done in the employer's time, the remainder in the cadet's leisure time. Registration of every male born in 1894 or subsequently, and who has resided for six months in the Commonwealth, must, if his *bonâ fide* place of residence is within five miles of the nearest place appointed for training, be effected in the first two months of the calendar year in which he completes his 14th year. The four years' training covers the foundation work necessary for service in any arm. It comprises marching, handling of arms, musketry, physical training, guards and sentries, tactical training as a company in elementary field work, and elementary battalion drill. Discipline is strongly inculcated. Senior cadets are not required to attend camp.

Schools containing at least 60 senior cadets may form separate units, and may arrange their parades to suit school time tables, but battalion parades must be attended.

(viii.) *Adult Forces.* Training in the citizen forces, lasting for eight years, begins on 1st July of the year in which the soldier reaches the age of 18 years. Except in the last year of this service (when only one registration muster parade is necessary in normal peace time) the work consists of continuous training in camp for 17 days in the case of the naval forces, artillery, and engineer arms, and eight days for other arms, and eight days (or equivalent) home training for all arms. The total service is thus 25 days per annum for the specialist and technical corps, and 16 days per annum for other corps, the main body of whom are light horse and infantry (see table on p. 1016 *infra*). The home training (total eight days) is divided into whole days, half-days, and nights, the respective minimum duration of these being six, three, and one and a-half hours; two half-days or four nights counting as one whole day.

(ix.) *Allotment to Arms.* Trainees to the number required are first allotted to the naval forces. There is no allotment during senior cadet training to particular branches of the military service. Upon transfer to the citizen soldiery, cadets with special educational or technical qualifications are drafted as recruits to one or other of the specialist

or departmental corps to the required number; the bulk go to infantry. All other arms, except light horse, are maintained by annual quotas transferred from the senior cadets, as laid down in annual establishments. In the light horse, enrolment is not compulsory, since each recruit is required to provide his own horse; and, while every encouragement is given to eligible trainees to enrol, voluntary enlistment by those not liable for compulsory service is continued for the present.

Persons who are forbidden by the doctrines of their religion to bear arms are, as far as possible, allotted to non-combatant duties, as stretcher-bearers in infantry companies, or as members of the Army Medical Corps.

(x.) *Exemptions.* Status, condition, employment, or place of abode, may exempt from service. In time of war the exemptions are as follows:—Aliens and non-Europeans; persons certified as medically unfit; members and officers of Commonwealth and State parliaments; judges and magistrates; clergymen and theological students; police and prison officials; lighthouse-keepers; medical practitioners and nurses in public hospitals; and persons having conscientious objections to bear arms. Medical practitioners, non-Europeans, and conscientious objectors are not exempt from non-combatant duties.

In time of peace the exemptions are:—Persons whose *bona-fide* place of residence is more than five miles from the nearest place appointed for training; those certified as medically unfit; aliens; non-Europeans (exempt from combatant duties only); school teachers qualified as instructors of drill; members of the permanent naval or military forces. Theological students may be exempted from training. Prior to the passing of the Defence Act 1915, all male inhabitants of Australia who had resided therein for six months were required to register for military or naval training in the year in which they became 14 years of age, but the 1915 Act requires only those to register who reside within five miles of a place of training.

Burden of proving exemption rests upon the person claiming it, a final appeal lying to the civil courts. Any person convicted by a court of a disgraceful or infamous crime, or who is a notoriously bad character, is permanently disqualified.

(xi.) *Penalties for Prevention or Evasion.* Employers, parents, and guardians may not, under a heavy penalty, prevent or attempt to prevent any employee, son or ward, who is a trainee, from rendering service; nor may any employer penalise or prejudice any employee in his employment, or attempt to do so, because of the latter's service or liability for service; and the employer is compelled to pay the senior cadet's wages for the time he is away from work for the purpose of training (see Section 134 (1A) of Defence Act 1903-17).

A heavy penalty is enacted for evasion of service as required under the Act by those liable to serve. Penalties take the form of money fine, or detention in military custody under enforced training and discipline. Non-efficient must attend additional training for each year they are non-efficient. Evasion renders the person evading or failing to serve ineligible for employment of any kind in the Commonwealth Public Service.

Children's courts are used where possible for the prosecution of cadets under the age of 16 years.

(xii.) *Efficiency.* Each trainee must be efficient in each year. Parades, as ordered, must be attended, and a standard of efficiency, based on the number of years' training and the work performed, must be attained.

Parades are classed as compulsory, alternative, and voluntary. The former make up the exact amount of training required (25 days per annum for technical arms, 16 days for others), and may not be missed without leave formally given. Alternative drills are

appointed for those absent with leave from compulsory parades, and are allowed to count for pay and efficiency. Voluntary parades are held for those desiring further proficiency, and for candidates for promotion. Any trainee failing to qualify as efficient in any year must do an extra year's training for each failure. Thus, there must be 12 annual entries of efficiency or exemption in each soldier's record before he receives his discharge, four as a senior cadet, and eight as a citizen soldier.

(xiii.) *Pay.* In addition to the remuneration of professional soldiers, pay is provided for all members of the militia. Citizen soldiers who voluntarily enlisted under the old system receive the same rates of pay as formerly, the basis being 8s. per day for gunner, sapper, or private. Trainees under the compulsory system receive 3s. per day during the first year, and 4s. per day during the subsequent years of their training. Higher ranks are paid higher rates. For corporals the daily pay is 9s., for sergeants, 10s., for sergeants-major 10s. 6d. and 11s. Light horse trainees receive in addition £4 per annum for keep of horse. In the commissioned ranks the daily rates of pay are 15s. for lieutenants, 22s. 6d. for captains, 30s. for majors, 37s. 6d. for lieutenant-colonels, and 45s. for colonels. Mounted officers also receive horse allowance.

(xiv.) *Uniform and Equipment.* The uniform is simple and inexpensive, but suitable. It is free, and the principal articles are issuable every second year. The clothing is of universal pattern, and, beyond distinguishing corps' badges and a coloured hat-band, there is no distinction (except rank marks). Uniform is worn on all parades and drills, but its wearing is forbidden when not on military duty. Rifles and free ammunition are provided. Citizen soldiers have their rifles on issue, but arms for senior cadets are stored in local depôts, and are issued as required for drill and musketry. An allowance of free ammunition is made to commanders of units to encourage rifle shooting. The uniform issued to each citizen soldier is such as to enable him to parade (upon notice) with two woollen shirts, two pair breeches, hat, sleeping cap, puttees or leggings, military boots, and kit bag.

The task of fully equipping the rapidly expanding Australian Army has been undertaken. Some of the required technical stores have been indented; but the Commonwealth itself has established factories for the supply of cloth and clothing, small arms, cordite, harness and saddlery.

(xv.) *Reserves.* The reserves consist of (a) certain officers transferred from the active list to the reserve of officers; (b) members of the Australian Army reserve; (c) members of rifle clubs. The reserve of officers includes (i.) officers who have been fully trained and are still capable of serving, but who, being unable to continue on the active list through pressure of business engagements, removal to rural districts or such like causes, have joined the reserve; (ii.) officers of the Australian Army Medical Corps for whom no vacancies exist in the active list, but who are required for medical duties with units and in areas. The Australian Army reserve was formed in November, 1916, with the object of (i.) utilising the experience gained by members of the Expeditionary Forces as a national insurance for the future peace of Australia; (ii.) affording those who have served in any of the Empire's wars prior to the present one an opportunity to give the benefit of their war-won experience should the necessity arise; (iii.) giving the units of citizen forces numbers to preserve the traditions won in Gallipoli and Egypt, and on the Western and other fronts; (iv.) linking up to each of the re-numbered units of the citizen forces a reserve of men to set up before the trainees a standard of self-sacrifice and soldierly conduct. The Australian Army reserve consists of officers, non-commissioned officers and men who have seen active service, not only in the present war, but in all wars in which the Empire has been engaged. Ex-members of the permanent military forces are also eligible for membership. Enlistment is voluntary. Rifle clubs are established in a large number of localities throughout the Commonwealth. On the 31st December, 1917, there were 1512 clubs with a membership of 100,389, and in addition 152 miniature rifle clubs having a membership of 8676. Applications to form rifle clubs are made

to the commandant of a district, and must be signed by not less than thirty male persons between the ages of sixteen and sixty, who are required to be natural-born or naturalised British subjects, and are not undergoing training under the universal clauses of the Defence Act. Persons, however, who are temporarily exempted from universal training may be permitted to join rifle clubs during the period of their temporary exemption. Members of rifle clubs must fire an annual course of musketry, but do not undergo any systematic drill. From the outbreak of the present war until the 31st March, 1917, 24,735 members of rifle clubs enlisted for service abroad with the Expeditionary Forces. Commissions as lieutenants and appointments as non-commissioned officers in the reserve forces may be granted to members of rifle clubs who pass the prescribed examinations and fulfil other conditions in regard to efficiency, etc.

(xvi.) *Allotment of Units to Divisional Brigade, Battalion, and Training Areas.* The organisation is territorial, and the divisions based upon infantry units. There are 92 battalion areas, forming 23 brigades. The areas have approximately equal numbers of males of citizen soldier age (about 1300), and each furnishes a battalion of infantry, and a proportion of other troops. For administrative purposes, areas are subdivided into two or three training districts. Three brigades will form a division. Two brigade areas will each provide four battalions of infantry, one field artillery brigade (with proportion of divisional ammunition column), one field company of engineers, one company army service corps, and one field ambulance. The other brigade area of the division provides four battalions of infantry, two squadrons of divisional light horse, one howitzer brigade, one divisional signal company of engineers, one company army service corps, and one field ambulance. Light horse and field artillery units for light horse brigades will also be furnished by some of the areas. *Personnel* for garrison artillery and submarine and electric engineers for garrison forces will eventually be supplied in the areas nearest to such localities. The average annual contingent of recruits will be about 155 for each battalion area, plus such additions as are required for light horse and field artillery units raised therein. The figures shewn in the following tables are approximate, and include the recruits (18-19 year), but not the 25-26 year men.

#### ULTIMATE ALLOTMENT OF UNITS TO BRIGADE, BATTALION, AND TRAINING AREAS.

(xvii.) *Instructional Staff.* The instructors provided for training consist of 210 officers and 779 warrant and non-commissioned officers of the instructional staff (permanent), and 214 area officers (temporary). They supervise the training of light horse, infantry,

and senior cadet units, and instruct in the non-technical duties of specialist corps. Additional officers and non-commissioned officers in the permanent troops instruct in technical work.

The officers of the instructional staff act as Brigade-Majors, and as such, represent the Commandant in the brigade area. They are responsible for the instruction of officers of the existing citizen forces, conduct local schools of instruction, supervise and instruct the area officers, and allot the non-commissioned officers of their detail to various duties. Assistant Brigade-Majors are also furnished from the instructional staff. The duties of area officers vary both in nature and extent, and comprise registration and organisation of those to be compulsorily trained, and clothing, arming, equipping, and training the senior cadets. They also perform the duties of Adjutant to senior cadet battalions.

The staff instructors (warrant and non-commissioned officers) assist in carrying out the administrative work of their areas or units, and instruct cadets and recruits in light horse and infantry drill.

(xviii.) *Higher Training.* At present there is no institution in Australia corresponding to the staff colleges at Camberley, England, or Quetta, India, for the higher training of officers.

Officers of the permanent forces who pass the required examinations are sent to these institutions from time to time, and on return to Australia are appointed to positions on the General Staff, etc.

The higher training of officers of the citizen forces is, as far as possible, carried out in special schools of instruction, and staff tours held in the various military districts.

Government aid is also furnished to United Service Institutions, which have been established in the larger centres. Lectures of great value are delivered by specialists, and war games, manoeuvres, etc., carried out. Some of the institutions have large and well-selected libraries.

Schools of instruction are also conducted for junior officers.

(xix.) *The Royal Military College, Duntroon, Federal Territory*, is established for the purpose of providing trained officers for the permanent forces. Admission is by open competitive examination, a definite number of vacancies being allotted to each State of the Commonwealth on a population basis. About 30 staff-cadets are thus admitted annually, and, in addition to these, ten staff-cadets from New Zealand are nominated yearly by the Dominion Government, which pays £200 per annum for each. The age for admission is between 16 and 19 years, though there is a provision in the regulations by which members of the citizen forces over 19 years of age who pass the prescribed examination, and are approved by the Governor-General-in-Council, may be admitted. The college was opened in June, 1911.

The normal college course lasts for four years, and is followed by a tour of duty in England or India, after which graduates will be appointed to staffs or permanent troops in Australia and New Zealand.

During the war the course has been temporarily modified. Over 113 staff-cadets have already (June, 1916) been specially graduated, and appointed to units serving at the front with the Australian and New Zealand forces. Schools for the training of junior citizen officers for service with the Australian Imperial Force are also being held at the college as a special measure.

No fees are charged for maintenance and instruction, each staff-cadet being credited with an allowance of 5s. 6d. per diem to meet expenses of necessary uniform, books, instruments, etc.

The full establishment of cadets is 150, but owing to special graduations for active service the strength (31st December, 1917) is at present 127.

The course of instruction comprises both educational and military work, the former being mainly completed in the first two years. Cadets are prepared for light horse, artillery, engineer, and infantry duties.

In December, 1917, the staff numbered—military, 34; civil, 15.

(xx.) *Railways and Defence.* A War Railway Council, consisting of military and railway officers, was instituted in 1911. Its chief duties are to furnish advice and information regarding railway transport for military purposes, and to secure co-operation between the Commonwealth Defence Department and the States' Railway Departments in regards to concentration and mobilisation of troops. To prevent delay in the transport of troops, particularly that caused by the transshipment of baggage and implements of war, the Council has recommended the adoption of a uniform railway gauge on lines linking up the States' capitals. An Engineer and Railway Staff Corps have been instituted, and numbered 55 officers on 1st April, 1917. Fuller details will be found in Official Year Book No. 6, pp. 1070-1.

(xxi.) *The Universal Training System in Operation.*—(a) *Special Instructional Staff.* The first work in the active carrying out of the scheme commenced with the training of 200 non-commissioned officers for the instruction of the projected army in a six months' camp. Area officers were chosen from the citizen forces, and underwent a six weeks' course of instruction. With the year 1911 came the active enrolment of the new cadets, who commenced training on the 1st July following. These comprised all males in training areas who were born in 1894, 1895, 1896, and 1897.

(b) *Stages.* The stages are as follows :—

First stage, January to June, 1911.—Existing junior and senior cadets continued to 30th June, 1911, but all equipment returned by that date; registration, inspection, and medical examination of lads whose 14th, 15th, 16th, and 17th birthdays occurred in 1911; preparations made to clothe and equip the new senior cadets.

Second stage, July, 1911, to June, 1912.—Registration, etc., in January and February, of lads whose 14th birthday occurred in 1912; new junior and senior cadet training from 1st July, 1911. About 17,000 of the latter passed as recruits upon completion of this period, inaugurating the new citizen forces in the third stage (1st July, 1912).

Third stage, July, 1912, to June, 1913.—Registration, etc., in January and February, of lads whose 14th birthday occurred in 1913; new citizen forces :—training began with about 17,000 recruits (18 year-old persons allotted from the new senior cadets). During the third, fourth, and subsequent stages the new senior cadet force, numbering about 90,000, continues. Upon expiry of this period, the second quota of senior cadets (1895 lads) to the number of 17,000 passed as recruits to the citizen forces (1st July, 1913).

Fourth and subsequent stages, after July, 1913 (and each year to 1919).—Registration, etc., of lads whose 14th birthday occurred in 1914, and so on. In the fourth and subsequent stages to the tenth, the new citizen forces will also be increased by eighteen-year-old recruits from senior cadets, numbering about 17,000 each year. In 1909, the 1894 quota, being in their 25th year, will be liable for one registration or muster parade, and will in the following year be free of compulsory service.

(c) *Summary of Working of the System in 1911-12 (Second Stage).* On 31st December, 1911 (six months after commencement of the new senior cadet training), the total registrations in training areas numbered 155,132. Of these, 105,133 had been medically examined, and 93.2 per cent. passed as fit. Exemptions in training areas (generally cases so far from places of training that attendance would involve great hardship) numbered 57,949. Of the total number liable for service 89,138 were actually in training.

The junior cadets do not register, but are medically examined. On 31st December, 1911, 33,767 had been examined, and 97.8 per cent. certified as fit.

(d) *Summary of the Working of the System, 1913 to 1917 (Third, Fourth, and Subsequent Stages).* The numbers up to 31st December, 1917, include the 1894 to 1899 annual quotas, who on 1st July, 1912, and each 1st July thereafter to 1917, passed to the citizen forces. They are shewn hereinafter.

(xxii.) *Success of the System.* A slight amount of opposition has been manifested to the system. Though principally from shirkers, there are also a small number of persons who oppose military service on religious grounds. As already stated, however, conscientious objectors are allotted duties of a non-combatant nature. The prosecutions and penalties for evasion, etc., though not wholly, are mainly operative against shirkers. It is claimed that the scheme, both before its inception and since its successful inauguration, has had the support of leading statesmen of all political views, as well as the vast majority of the citizens of the Commonwealth. In general, the trainees are alert and well disciplined while on parade; and the interest and the enthusiasm of the lads is shewn by the large number of candidates seeking promotion at competitive examinations (practical and oral), after courses of lectures, demonstrations and special parades. Another evidence of enthusiasm is the fact that the applicants for enrolment in the technical arms, where the total service is considerably greater than the absolute minimum of 16 days annually required from infantry and light horse, is always greatly in excess of the requirements of those arms. Further, a great deal of voluntary service is rendered in all branches of the service, and the rifle clubs of the citizen units are well patronised. Many of the regiments have athletic, gymnastic, and swimming clubs, and sports meetings are frequently held. Patriotic citizens in local centres have contributed generously to funds for establishing bands, regimental clubs, annual sports gatherings, etc. Moreover, a marked improvement has quite lately become apparent in the general conduct and bearing of the youths of Australia, and it is claimed that this is the effect of the system of universal training. As a result of inquiries made in 1914, the police authorities in all the States concurred in the opinion that the behaviour of the youths who are subject to the training is vastly improved. It is stated that both mentally and morally, as well as physically, the benefits are very definite, and that "the principal effects of a beneficial nature are increased self-respect, diminution of juvenile cigarette smoking and 'larrikinism,' and generally a tendency towards a sense of responsibility and a desire to become good citizens." In regard to opposition to the system, the figures for prosecutions are interesting:—Percentage of prosecutions to number liable for training was 5.38 in 1914; the average percentage for previous years was 6.90. Thus a marked improvement is shewn. It must be remembered that the figures include persons prosecuted more than once, and that all prosecutions are not against those actually liable for service, but include cases against employers (for penalising in employment, contrary to section 134 of the Act) and parents and guardians (failing to register sons, etc.). The percentages would be substantially reduced if only those liable for training were shewn (parents, employers, and those prosecuted more than once being deducted). Further, a prosecution follows shortage of drills, which, in many cases, is not the result of active opposition.

4. *Strength of Military Forces.*—(i.) *Strength in each District, 1901 to 1917.* There was little alteration in the numbers serving in the Australian military forces from the institution of the Commonwealth to the year of the introduction of the compulsory training system. From 1913, however, the annual increase has been considerable. The following table shews the development:—

## STRENGTH OF MILITARY FORCES, 1901 and 1911 to 1917.

*District.	1901. †1/3/01.	1911. 30/6/11.	1912. 30/6/12.	1913. 30/6/13.	1914. 30/6/14.	1915. 30/6/15.	1916. 30/6/16.	1917. 30/6/17.

## § 2. Naval Defence.

1. *Naval Defence under the States.*—(i.) *Independent State Systems.* Prior to 1890, when arrangements were made with the British Government for the maintenance of an Australian squadron, provision for naval defence had been instituted in New South Wales, Victoria, Queensland, and South Australia, where gunboats, torpedo boats, or small cruisers were commissioned and naval volunteers raised. A fuller historical account of the Australian naval forces under the States is given in the Official Year Book No. 2, pp. 1084-1085.

(ii.) *The Naval Agreement with the British Government.*—(a) *The Original Compact.* The naval defence of Australasia and its trade was entrusted primarily to ships of the Imperial Navy, maintained under an agreement entered into between the British Government and the Governments of the Commonwealth and New Zealand, and at their joint charge. This agreement was embodied in Acts passed by the several Legislatures some ten years prior to Australian federation. According to its terms, a naval force, additional to the vessels of the Australian Naval Station, which were to be maintained at their normal strength, was to act as an auxiliary squadron. It consisted of five fast third-class cruisers and two torpedo gunboats, and its special function was the protection of the floating trade in Australasian waters. The agreement was made for ten years, and was then, or at the end of any subsequent year, to be terminable only upon two years' notice being given. On its termination, the vessels were to remain the property of the Imperial Government. Three cruisers and one gunboat were to be kept continuously in commission, and the remainder in reserve in Australasian ports, but ready for commission whenever occasion might arise. The vessels were to remain within the limits of the Australasian station, and were to be employed, in times of peace or war, within such limits, in the same way as the Sovereign's ships of war, or employed beyond those limits only with the consent of the Colonial Governments. The first cost of the vessels was paid out of Imperial funds, but the Colonial Governments paid interest on the prime cost at 5 per cent. (up to a maximum of £35,000 per annum), and a sum not exceeding £91,000 for annual maintenance of the vessels, or a total annual contribution

of £126,000. In times of emergency or actual war, the cost of commissioning and maintaining the three vessels kept in reserve during peace was to be borne by the Imperial Government, and, in every respect, the vessels were on the same status as the ships of war of the Sovereign, whether in commission or not. The officers and men of those in commission were subject to a triennial change. The tenth annual contribution, which was payable in advance on 1st March, 1900, apportioned on a population basis, was as follows:—New South Wales, £37,973; Victoria, £32,749; New Zealand, £21,304; Queensland, £13,585; South Australia, £10,439; Western Australia, £4816; Tasmania, £4776.

(b) *The Agreement of 1903.* The agreement was not dissolved by the union of six of the contracting colonies; but during the negotiations for its renewal, conducted in England between Sir E. Barton (then Prime Minister) and the Admiralty, it was completely reshaped. The auxiliary squadron for local defence, paid for by Australia and New Zealand, altogether disappeared. The Admiralty guaranteed to maintain on the Australian station during peace time a squadron of a certain strength, and to train in one or two of its vessels a certain number of Australian seamen. The colonial contribution, considerably increased, became a direct subsidy to Imperial defence. The total payment into Imperial funds was now to be £240,000, of which New Zealand was responsible for £40,000, and the Commonwealth for the balance. The agreement, like the earlier one, was for ten years.\* By a subsequent arrangement the strength of the squadron was established at one first-class armoured cruiser, three second-class cruisers, and five third-class cruisers.

2. *Development of Commonwealth System from 1901 to 1914.*—The floating trade of the Commonwealth exceeds £200,000,000 per annum, and (quite apart from any Imperial service) its adequate protection involves corresponding naval provision, with such naval war material as will permit the principal lines of sea communication being kept open, and ensure that Australian ports are fully defended. Australian defence, in both its branches (military and naval), passed to the Commonwealth in 1901. Prior to 1905 a naval officer commanding administered the naval forces under the Minister. When the Council of Defence was established in that year, the Naval Board was constituted and took over the administration of the Commonwealth naval forces, thereby ensuring continuity of policy and administration; whilst efficiency and uniformity were provided for in the scheme of inspection and report by an officer who, as Director of Naval Forces, was appointed to deal with the training of the *personnel*, and the condition of the *matériel*, of naval forces and works.

3. *The Present System.*—(i.) *Australian Naval Policy.* An outline of the development of Australian naval policy will be found in Official Year Book, No. 3, pp. 1060-1061. For the more effective coastal defence of the Commonwealth it was decided in 1909 to create an Australian naval force, to replace the squadron previously maintained under the naval agreement with the British Government. It was agreed at the Imperial Defence Conference in 1909 that Australia should provide a fleet unit, consisting of an armoured cruiser† of the *Indomitable* class, three unarmoured cruisers of the *Bristol* class, six destroyers of the improved "River" class, and three submarines of "C" class‡; also the necessary auxiliaries, such as docks and depot ships. The cost of construction at English prices would be about £3,700,000, and the estimated annual cost about £750,000. Of this sum the Imperial Government offered to contribute £250,000, but the Commonwealth Government decided to bear the whole cost.

(ii.) *The Building of the Australian Fleet.* The building of the fleet and the training of the crews were immediately begun. Skilled artisans were despatched from Australia to gain practical experience in navalshipbuilding, construction proceeding both in Britain and Australia. Sailors of all ratings were also trained for the Commonwealth service. The first.

\* Since modified; see page 1025, *infra*.

† Now called "battle cruiser." ‡ Since altered to two submarines of "E" class.

instalment of the Australian fleet unit consisted of two torpedo boat destroyers, of British construction, commissioned in September 1910, and named *Parramatta* and *Yarra*. A third destroyer, the *Warrego*, was shipped to Sydney in parts, and was re-erected at the Commonwealth dockyard, Cockatoo Island, Sydney, and commissioned on 1st June, 1912. A description of these and the other vessels of the fleet will be found in Official Year Book No 6, pp. 1066-7.

The battle cruiser *Australia* was commissioned in June, 1913, and arrived in Australian waters in the following September. Two light cruisers, the *Melbourne* and *Sydney*, arrived in Australian waters in 1913. A third cruiser, the *Brisbane*, was built at the Commonwealth Naval Dockyard, Sydney. The two submarines arrived in Australian waters in May, 1914. Another cruiser, the *Adelaide*, is now building at the Commonwealth Naval Dockyard, at Cockatoo Island.

The completed vessels of the Australian Navy are participating in the European war. Both submarines have been lost on war service.

(iii.) *Modifications Adopted and Proposed.* Certain modifications have been made in the original scheme. These have been prepared in tabular form, and are as follows:—

#### FLEET UNIT.—ORIGINAL ESTIMATED COST.

(Imperial Defence Conference, 1909.)

1 Battle cruiser	...	...	...	£2,000,000
3 Protected cruisers, £350,000 each	...	...	...	1,050,000
6 Destroyers (including 3 ordered before the Conference),				
£80,000 each	...	...	...	480,000
3 Submarines, "C" class, £55,000 each	...	...	...	165,000
Total	...	...	...	<u>£3,695,000</u>

#### AMENDED ESTIMATED COST.

(Consequent on Alteration of Type of Vessels on Admiralty Recommendation.)

1 Battle cruiser	...	...	...	£2,000,000
3 Protected cruisers, £450,000 each	...	...	...	1,350,000
6 Destroyers, £80,000 each	...	...	...	480,000
2 Submarines, "E" class, £105,000 each	...	...	...	210,000
Total	...	...	...	<u>£4,040,000</u>

#### LATER ESTIMATED COST OF FLEET UNIT, TOGETHER WITH COST OF VESSELS NOT INCLUDED IN ORIGINAL FLEET UNIT.

1 Battle cruiser	...	...	...	£1,705,000
*3 Protected cruisers	...	...	...	1,400,000
*6 Destroyers	...	...	...	653,000
2 Submarines	...	...	...	233,500
Auxiliaries—				
1 Submarine depôt ship	...	...	£160,000	
1 Oil tank vessel	...	...	120,000	
4 Oil fuel storage vessels (building in				
Australia)...	...	...	75,766	
4 Hulks	...	...	25,000	
				<u>380,766</u>
Total	...	...	...	<u>£4,372,266</u>

\* Extra cost of building certain of these vessels in Australia is responsible for increase.

The following additional amount has been approved for new construction outside the original fleet unit and for increase in cost over estimate ... ..

935,563

Total ... .. £5,307,829

(iv.) *Expenditure on Fleet Construction for the Royal Australian Navy.* The following is a statement of expenditure out of sums appropriated for construction of fleet:—

#### EXPENDITURE OUT OF SUMS APPROPRIATED FOR CONSTRUCTION OF FLEET.

Year.	Appropriation.	Expenditure.
		£
1908-9 ...	Act No. 19 of 1908 ... ..	24,855
1909-10 ...	Act No. 19 of 1908 ... ..	223,959
1909-10 ...	Division No. 11A, New Works, etc. ... ..	60,000
1910-11 ...	Act No. 18 of 1910 ... ..	285,863
1910-11 ...	Division No. 12, New Works, etc. ... ..	850,000
1911-12 ...	Act No. 18 of 1910 ... ..	1,108,494
1912-13 ...	Act No. 18 of 1910 ... ..	524,037
1912-13 ...	Division No. 10, New Works, etc. ... ..	
1913-14 ...	Division No. 12, New Works, etc. ... ..	637,606
1914-15 ...	Division No. 13, New Works, etc. ... ..	467,296
1915-16 ...	Division No. 13, New Works, etc. ... ..	396,073
1916-17 ...	Division No. 17, New Works, etc. ... ..	374,249
1917-18 ...	Act No. 30 of 1917, New Works, etc. ... ..	355,397
Total ... ..		5,307,829

(v.) *Visit and Report by Sir Reginald Henderson.* At the invitation of the Government, Admiral Sir Reginald Henderson visited Australia to advise upon naval matters generally. A summary of his report will be found in Official Year Book No. 6, pp. 1067-8. It provided for 52 vessels and 15,000 men; expenditure on construction, works, etc., £40,000,000, with an ultimate annual naval vote of £4,794,000. Six naval bases, and eleven sub-bases, were recommended. The 52 vessels would consist of 8 armoured cruisers, 10 protected cruisers, 18 destroyers, 12 submarines, 3 depot ships, 1 fleet repair-ship, and the construction would extend over 22 years. The annual cost of *personnel* would be £601,000 in 1913-14, and would increase to £2,226,000 in 1933-4. Annual cost of maintenance of ships in commission would be £262,000 in 1913-4, rising to £1,226,000 in 1933-4. Annual expenditure on construction and maintenance of ships would increase from £2,349,000 in 1913-4 to £4,824,000 in 1932-3. The strength of the fleet would be 23 ships in 1918, 42 ships in 1923, 48 ships in 1928, and 52 ships in 1933. In the earlier years portion of the crews would be obtained from Great Britain, but this would cease in the period 1923-8.

(vi.) *The Compact with the Imperial Government.* The Australian Government is building its navy according to the terms of an official paper (cd. 5746-2) submitted to the Imperial Conference held in London in 1911, and on the plan formulated by Admiral Henderson (after an inspection of Australia's capitals and other ports and coast line, in 1911). There is no formal contract or agreement between the British and the Commonwealth Governments. The last actual agreement was that of 1903, already described on p. 1023. Before the expiration of the time for which this agreement was made, the Commonwealth began the work of fleet construction. Up to the year 1911-12, £200,000 was annually paid. For 1912-13, £175,000 was set down in the estimates, and £166,600

paid. The Commonwealth Parliament amended the *Naval Agreement Act 1903*, by No. 10 of 1912 (*Naval Agreement Act 1912*), providing that the Governor-General may, from time to time, arrange with the Imperial Government for the reduction of the Australian squadron, and for reduction in the naval subsidy. No amount under "Naval Agreement Act" will be found in the estimates for 1913-14 and later years. Some departures are made from Admiral Henderson's recommendations, but generally they have been adopted, so far as they relate to the work of the next few years. The Commonwealth is now fulfilling the larger obligation of fleet-building, and is maintaining its own vessels. The establishment of naval bases and sub-bases required for the fleet unit is also proceeding.

As already stated, the present situation is not governed by a formal contract or agreement. The Commonwealth Government has, by regulations and orders, given effect to some, and intends giving effect to others, of the items submitted to the Conference.

(vii.) *Naval College.* A naval college has been established at Captain's Point, Jervis Bay, consisting of numerous buildings necessary for the training of naval officers. The course is similar to that carried out in naval colleges in England. In September, 1918, there were 119 cadet midshipmen under training. There are also 17 officers, including naval instructors, and 68 members of the ship's company in residence at the college. A boy whose thirteenth birthday falls in the year in which the entrance examination is held, is eligible to compete provided he is the son of natural-born or naturalised British subjects. From amongst those qualified the Selection Committee chooses the number required. The Commonwealth Government bears the whole expense of uniforms, victualling, travelling, as well as that of the educational course.

(viii.) *Training Ships.* H.M.A.S. *Tingira*, moored in Rose Bay, Sydney, was commissioned in April, 1912, to train boys for the *personnel* of the Royal Australian Navy. The age of entry is  $14\frac{1}{2}$  to 16 years. Only boys of very good character and physique are accepted, after a strict medical examination. The boys must engage to serve until they reach the age of 25. The training lasts about one year, and they are then drafted to a sea-going warship of the Australian fleet. Recruiting has been satisfactory, there being 235 boys under training on 30th September, 1918.

(ix.) *The Naval Station of the Commonwealth of Australia.* The following are the limits of the Naval Station which, since 1st July, 1913, have been controlled by the Commonwealth Government, acting through the Naval Board:—On the North: From 95 degrees East longitude by the parallel of 13 degrees South to 120 degrees East longitude; thence North to 11 degrees South latitude; thence to the boundary with Dutch New Guinea, on the South coast, in about longitude 141 degrees East; thence along the coast of British New Guinea (Papua) to the boundary with German New Guinea, in latitude 8 degrees South; thence East to 155 degrees East longitude. On the East: By the meridian of 155 degrees East longitude to 15 degrees South latitude; thence to 28 degrees South latitude to the meridian of 170 degrees East longitude; thence South to 30 degrees South latitude; thence west to the meridian of 160 degrees East longitude; thence south. On the South: By the Antarctic Circle. On the West: By the meridian of 95 degrees East longitude.

4. *Vessels and Personnel of the Australian Navy.*—During the war, information is not published regarding the vessels and personnel of the Sea-going Forces of the Royal Australian Navy. The strength of the Permanent Sea-going Forces is approximately 400 officers and 4500 petty officers and men. Besides the Sea-going Forces, there is a R.A.N. Brigade, which is composed of Citizen Naval Trainees and men enlisted for Home Naval Service on shore (mostly returned soldiers). The personnel of the Sea-going Forces, which was originally largely composed of Imperial officers and men is now mainly Australian in character and will become more so as training schools and establishments for the higher and more technical grades are established after the war.

## § 3. Expenditure on Defence.

1. **Expenditure, 1912-13 to 1917-18.**—The following table gives the expenditure of the Department of Defence from 1912-13 to 1916-17, and the estimate for 1917-18:—

## EXPENDITURE ON DEFENCE, 1912-13 to 1917-18.

Branch or Department.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.	1917-18. Estimate

\* Includes £42,782 loan expenditure on works. † Includes £66,840 loan expenditure on works.

‡ Includes £1,075,000 loan expenditure on works. § Includes £291,403 loan expenditure on works.

NOTE.—In the year 1900-1 the approximate Defence Expenditure made by the States was:—

Ordinary Services ... ..	£800,000
Works, Arms, Equipment, etc. ... ..	200,000

Total ... .. £1,000,000

3. **Special War Expenditure.**—The special war expenditure during the present war will be found on page 1033.

4. **Expenditure in Various Countries.**—The total expenditure on defence and the expenditure per inhabitant in various countries according to estimates made immediately prior to the present war, were as follows:—

**ESTIMATED EXPENDITURE ON DEFENCE.—VARIOUS COUNTRIES.**

Country.	Year.	Army.	Navy.	Total.	Per Inhabitant.	
		£.	£	£	s.	d.
Great Britain ...	1913-14	28,220,000	46,309,000	74,529,000	32	3
Germany ...	1913-14	73,833,000	24,012,000	97,845,000	30	2
France ...	1913	38,286,000	18,452,000	56,738,000	28	7
Italy ...	1913-14	14,546,000	9,068,000	23,614,000	13	7

\* Excluding extraordinary expenditure. † Total excluding special war expenditure.

**§ 4. Industrial Establishments and Remount Depot.**

1. **Commonwealth Factories.**—There are five factories established under the authority of the Defence Act in connection with the Defence Department. The Commonwealth Harness, Saddlery, and Leather Accoutrements Factory at Clifton Hill, Victoria, was opened in September, 1911. On 31st March, 1918, there were 158 persons employed, including 58 females. A large quantity of harness and saddlery, and leather and canvas equipment has been turned out for the Defence and Postmaster-General's Departments. The factory is now able to cope with practically the whole of the peace requirements of these departments in the way of leather and canvas equipment. At the Cordite Factory at Maribyrnong, Victoria, cordite is manufactured for the cartridges required for military purposes. On 31st March, 1918, the employees numbered 187. The Clothing Factory at South Melbourne, Victoria, commenced operations on 3rd January, 1912. Since 1st July, 1912, a satisfactory output has been maintained. The number of employees on 31st March, 1918, was 622, of whom 536 were females. The establishment is able to supply the whole of the uniform clothing required for the Defence Forces and the Postmaster-General's Department. The Small Arms Factory at Lithgow, N.S.W., was opened on 1st June, 1912. The first instalment of Australian arms was delivered in May, 1913. Employees numbered 1300 on 31st March, 1918. A fifth Commonwealth factory has been established at Geelong, Victoria, for uniform materials and woollen fabrics, and commenced operations the latter part of 1915. 249 persons were employed on 31st March, 1918, including 119 females.

2. **Expenditure.**—The value on 30th June, 1917, of land, machinery and plant, factory fittings, and furniture in connection with the factories now in operation, was approximately as follows:—

Small Arms Factory...	...	...	...	£230,082
Cordite Factory ...	...	...	...	140,882
Clothing Factory ...	...	...	...	24,985
Harness Factory ...	...	...	...	16,273
Woollen Cloth Factory ...	...	...	...	156,811

**3. Remount Depot.**—The Act of 1910 authorised the establishment and maintenance of horse depots, farms, and stations for the breeding of horses. Up to the present nearly 2000 remounts have been purchased. They are primarily to supply the requirements of the Field Artillery Batteries, but are also available for the use of other mounted units. Remount depots have been purchased or are leased in each of the military districts, and veterinary hospitals have also been established in the larger States. In Victoria and South Australia stables have been built. A remount section of the Army Service Corps has been formed for the purpose of breaking, training and looking after remounts generally. These sections were so organised as to be capable of rapid expansion in case of emergency, and when war was declared in 1914 little difficulty was experienced by the Remount Service in coping with the enormous task of obtaining and training horses for the mounted units of the A.I.F. and in providing for the shipment of horses to Egypt and India as required.

### § 5. Australian Contingents.

**1. New Zealand and Sudan Campaigns.**—Many colonists served with the Imperial forces in the New Zealand war. Fuller particulars will be found in Official Year Book No. 6, p. 1071. In 1885 a field battery, an infantry battalion, and an ambulance corps, numbering in all 770, with 218 horses, left New South Wales to take part in the Suakin campaign.

**2. South African War.**—In 1899 the outbreak of war with the Boers led to the several colonies offering contingents. This service was continued when, on 1st March, 1901, the control of the defence forces passed over to the Commonwealth. Besides the troops officially organised, many Australians served as members of units raised in Great Britain and South Africa. The following table shews the strength of the military contingents sent at various times from Australia to South Africa:—

**STRENGTH OF MILITARY CONTINGENTS SENT FROM AUSTRALIA TO SOUTH AFRICA.**

State.	State Troops at State Expense.			State Troops at Imperial Expense.			Commonwealth Troops.			Grand Total.		
	Officers.	Other Ranks.	Horses.	Officers.	Other Ranks.	Horses.	Officers.	Other Ranks.	Horses.	Officers.	Other Ranks.	Horses.
New South Wales ...	160	3,217	3,135	76	1,308	1,443	78	1,271	1,294	314	5,796	5,873
Victoria ...	47	751	830	77	1,569	1,877	69	1,052	1,118	193	3,372	3,825
Queensland ...	39	694	868	73	1,346	1,803	37	699	736	149	2,739	3,207
South Australia ...	20	326	258	46	644	696	23	467	490	89	1,437	1,444
Western Australia ...	18	331	269	34	540	608	15	291	306	67	1,162	1,183
Tasmania ...	6	173	58	17	358	422	13	290	303	36	821	783
<b>Total ...</b>	<b>290</b>	<b>5,492</b>	<b>5,418</b>	<b>323</b>	<b>5,765</b>	<b>6,649</b>	<b>235</b>	<b>4,070</b>	<b>4,247</b>	<b>848</b>	<b>15,327</b>	<b>16,314</b>

There were, in addition, several special service officers attached, at the request of the colonial Governments, to the British forces; these officers served with the Imperial troops with a view to aiding the development of the Commonwealth forces, particularly in regard to the routine and administration of troops on service.

**3. The China War.**—The Home Government also accepted the offer of contingents from Australia on the outbreak of the Boxer rebellion in China. Naval volunteers were furnished by New South Wales and Victoria, and South Australia equipped a gunboat for the Imperial service. The strength of the New South Wales contingent was 260, and that of the Victorian 200, of all ranks.

**4. The European War, 1914.**—Upon the imminence of war between Great Britain and Germany, but prior to its actual outbreak, viz., on 3rd August, 1914, the Commonwealth Government notified Great Britain of its readiness, in the event of war, to place

the vessels of the Australian Navy under the control of the British Admiralty when desired, and to despatch an expeditionary force of 20,000 men of any suggested composition to any destination desired by the Home Government, cost of despatch and maintenance to be borne by the Commonwealth. On 10th August, war having meanwhile been declared on the 4th August, all vessels and all officers and seamen of the Royal Australian Naval Forces were transferred to the King's Naval Forces. The transfer is to continue in force until proclamation is issued that war no longer exists. Upon the suggestion of the Imperial authorities it was decided that the composition of the expeditionary force of 20,000 should be a division, on the basis of the Imperial Army (of staff, three brigades, and divisional troops, but without howitzer brigade and heavy battery), and one light-horse brigade. After this force had been raised, the Commonwealth notified the Home Government that a further body of troops, comprising lines of communication units, supply units, and hospitals (about 2000), first reinforcements (about 3000), two additional light-horse brigades (about 4000), an additional infantry brigade (about 4500), and certain veterinary units, would be despatched. The first convoy left the rendezvous in Australian waters on 1st November, and landed in Egypt on 5th December, for the defence of that country—which had been proclaimed a British protectorate—and to undergo war training in the vicinity of Cairo. The second convoy left Australia late in December. After the departure of the second convoy, the system of despatching troops in convoys was discontinued.

(i.) *Australian Imperial Force.* Up to 31st March, 1918, the troops despatched from Australia for active service numbered 315,326. These were organised chiefly into the undermentioned units, some of which have since been disbanded or absorbed into other units:—

(a) *Army Corps Troops—*

- 2 Army Corps Mounted Regiments.
- 2 Corps Cyclist Battalions.
- 3 Army Field Artillery Brigades.
- Army Corps Engineers.
- Army Corps Wireless Telegraph Section.
- Entrenching Battalion.
- Topographical Section.
- Police Corps.

(b) *Mounted Division—*

- 4 Light Horse Brigades (12 Regiments).
- 4 Machine Gun Squadrons.
- Field Squadron Engineers.
- 2 Field Troops                   ,,
- Signal Squadron               ,,
- 4 Signal Troops               ,,
- Mounted Divisional Train (A.S.C.).
- 2 Depot Units of Supply.
- 4 Mobile Veterinary Sections.

(c) *5 Divisions—*

- 15 Infantry Brigades (60 Battalions).
- 5 Pioneer Battalions.
- 15 Machine Gun Companies.
- 10 Field Artillery Brigades (40 Batteries).
- 5 Divisional Ammunition Columns.
- 45 Trench Mortar Batteries.
- 15 Field Companies Engineers.
- 5 Divisional Signal Companies.
- Wireless Signal Sections.
- 5 Divisional Trains, 20 Companies (A.S.C.)
- 5 Field Bakeries.

- 5 Field Butcheries.
- 25 Depot Units of Supply.
- Motor Ambulance Workshop.
- 5 Mobile Veterinary Sections.
- 15 Field Ambulances.
- 5 Sanitary Sections.
- 5 Infantry Base Depots.

(d) *Miscellaneous Units—*

- Siege Artillery Brigade (2 Batteries).
- 4 Service Flying Squadrons.
- 3 Training Flying Squadrons.
- Aeroplane Squadron ( $\frac{1}{2}$  Flight) for service in Mesopotamia.
- Mining Corps (3 Companies).
- 3 Tunnelling Companies.
- Electrical and Mechanical Mining and Boring Company.
- Naval Bridging Train.
- Divisional Ammunition Park.
- 5 Divisional Supply Columns.
- Reserve Park.
- Armoured Motor Car Section.
- Railway Supply Detachment.
- 5 Railway Sections.
- 2 Remount Units.
- Remount Section.
- 2 Veterinary Sections.
- Veterinary Hospital.
- Wireless Signal Squadron for service in Mesopotamia.
- 3 Battalions Imperial Camel Corps (12 Companies).
- Camel Brigade Field Ambulance.
- Cavalry Divisional Signal Squadron for service in Mesopotamia.
- 4 General Hospitals.
- 3 Casualty Clearing Stations.
- 3 Auxiliary Hospitals.
- 2 Stationary Hospitals.
- Dermatological Hospital.
- Salvage Corps.
- Army Ordnance Corps.
- Army Ordnance Corps (I.O.M. Section).
- 2 Hospital Ships.
- Dental Services.
- Nursing Services.
- Other Administrative, Training and Departmental Units.
- Naval and Military Expeditionary Force (for service in New Guinea).

*Troops in Training.*—In addition to the above units, on the 31st March, 1918, there were 7397 troops in training throughout Australia in preparation for despatch to the front.

*Reinforcements.*—Reinforcements are despatched monthly for all units of the A.I.F. and from time to time as required, for the troops serving in Mesopotamia and German New Guinea.

*Enlistment.*—Enlistment is for General Service, except for technical arms such as Flying Corps, Siege Artillery, Railway Sections, Wireless and Skilled Medical details.

(ii.) Towards the end of April, 1915, a body of Australian troops left Egypt for the Dardanelles, and on the 25th April came under fire. Acting in conjunction with British, Indian, and French troops, and under the command of General Sir Ian Hamilton, who,

as Inspector-General of Oversea Forces, had visited Australia shortly before the outbreak of war (see Official Year Book No. 7, p. 1067), they attacked positions on the Gallipoli Peninsula (Dardanelles). The operation is regarded as having been exceedingly difficult, but the allied troops effected a landing in the face of determined resistance. Towards the end of December, 1915, it was decided to evacuate the Gallipoli Peninsula. This difficult operation was successfully carried out, and the main portion of the Australian Imperial Force has since been transferred to other spheres of activity. The number of casualties announced by the Defence Department to 31st March, 1918, are as follows:—

#### CASUALTIES IN AUSTRALIAN IMPERIAL FORCE TO 31st MARCH, 1918.

						All Ranks.
Deaths from wounds or disease	...	...	...	...	...	*43,475
Missing and prisoners	...	...	...	...	...	*3,627
Casualties from wounds or gas	...	...	...	...	...	116,594
Sick	...	...	...	...	...	68,414
Casualties not specified	...	...	...	...	...	*214
Total	...	...	...	...	...	232,324

The figures marked \* represent actual net totals after all corrections consequent upon erroneous and later advices, etc., have been taken into account. The wounded and sick represent totals reported by cable and are in excess of the actual number of men affected, because many are admitted to hospital more than once.

(iii.) Upon suggestion of the Imperial Government, the Commonwealth also despatched an expeditionary force against certain German possessions in the Pacific Ocean. The force contained both naval and military details, and consisted of six companies of the Royal Australian Naval Reserve, one battalion (eight companies) of infantry, two sections of machine guns, a signalling section, and army medical details.

The main objects of the expedition were to seize German wireless stations in the Pacific, to occupy German territory and hoist the British flag, and to arrange for temporary administration.

A complete self-contained force of the above-named units, fully armed and equipped, left Sydney on 19th August, 1914, under escort of vessels of the Royal Australian Navy.

The Naval Board, besides distributing the orders and instructions of the Admiralty, under whose control the Royal Australian Navy was placed, arranged for the supply of coal, oil, stores, munitions, etc., and for the dissemination of intelligence. The task of the Australian Navy was of a three-fold nature: (a) to police the seas and ensure that they should be uninterruptedly free to commerce; (b) to co-operate in ridding the seas of the enemy's cruisers and in destroying his bases and sources of supply; (c) to assist in conveying the expeditionary forces to Europe and to the German Pacific possessions.

The operations against the German colonial troops resulted, within two months, in the capture of the whole of the enemy's possessions in the Pacific. The German Pacific wireless chain was broken. Several of her ships were captured. Samoa was occupied by a force from New Zealand. The German Pacific Protectorate (*Das Deutsches Südsee Schutzgebiet*) was terminated. It comprised German New Guinea, the Bismarck Archipelago, the two northernmost islands of the Solomon group (Bougainville and Buka), the choicest island of the Samoan group (now occupied by New Zealand), the Marshall Islands, the Carolines, Pelew, and the Ladrões (except Guam, which belongs to America). Of these groups, the Bismarck Archipelago is the most important. It includes New Britain, New Ireland, New Hanover, and several small islands—the Admiralty, Natty, Exchequer, Hermit, Anchorite, French, Gervit Denys, Sir Charles Hardy, St. John, St. Mathias, Squally Islands, and others.

For the various actions in which the Australian Navy was thus employed, and in order to make possible the efficient patrolling of the vast sea-area involved, it was necessary that ample supplies of coal and oil should be available at the various advanced bases. It is stated that the large chartered fleet of colliers and oilers conducted their operations without any delay. From 30th July, 1914, to 31st December, 1914, the ships of the Australian Navy steamed in the aggregate upwards of 100,000 miles. It was necessary, to enable them to do so, to convey, over great distances of ocean, 76,000 tons of coal, and 12,000 tons of oil.

Further, not a single British merchant vessel was captured by the enemy in Australian waters. No Australian port was attacked, nor were coastal towns terrorised. But 19 German steamers, aggregating 89,000 tons; one Austrian steamer of 3530 tons; and five German sailing vessels, aggregating 12,200 tons—in all 25 vessels, aggregating 104,730 tons—were interned. Also, 11 vessels, aggregating 12,000 tons, and including the German Government's vessels *Komet*, *Nusa*, etc., were captured.

During 1915 the battle cruiser *Australia* joined the Grand Fleet in the North Sea, and was made flagship of a battle cruiser division. The other ships of the Australian Navy, with the exception of Submarine AE2, which was lost during the operations at the Dardanelles, are taking their part in the war as and where the Imperial authorities find them most useful.

(iv.) *Special War Expenditure, 1914-18.* The estimate of special war expenditure as given in the annual estimates, 1917-18, is shown below. The war expenditure for the three previous years is also given. Reference to War Finance will be found in Section XIX., Commonwealth Finance, pp. 775 and 782.

SPECIAL WAR EXPENDITURE, 1914-18.

Particulars.	1914-15.	1915-16.	1916-17.	1917-18.*
	£	£	£	£
Special expenditure on Expeditionary and Australian forces—

Total ... ..	15,011,335	41,201,946	61,535,891	97,160,581

\* Estimate. † Included in the estimate for 1917-18 are amounts of £3,850,000, advances to States for construction and erection of silos for wheat storage (to be recovered); and £2,000,000, advances to States for settlement of returned soldiers on the land.

(v.) *War Pensions.* Pensions payable under the War Pensions Act 1914 in case of death or incapacity are on the following scale:—

### SCALE OF PENSIONS PAYABLE.

(a) To widow on death of member of forces, or to member upon total incapacity:—

Rate of Pay of Member per day at date of Death or Incapacity.	Pension Payable to Widow per fortnight.	Pension Payable to Member upon Total Incapacity per fortnight.	Rate of Pay of Member per day at date of Death or Incapacity.	Pension Payable to Widow per fortnight.	Pension Payable to Member upon Total Incapacity per fortnight.
s. d.	£ s. d.	£ s. d.	s. d.	£ s. d.	£ s. d.
6 0	2 0 0	3 0 0	13 0	2 19 0	3 14 0
7 0	2 3 0	3 2 0	17 6	3 10 0	4 0 0
9 0	2 9 0	3 6 0	22 6	3 17 6	4 5 0
10 0	2 12 3	3 8 0	30 0	4 9 0	4 15 0
10 6	2 13 9	3 9 0	37 6	5 0 9	5 5 0
11 6	2 16 0	3 11 0	45 0	5 12 3	5 15 0
12 0	2 17 3	3 12 0	50 0	6 0 0	6 0 0
			and upwards		

(b) To each child (son, daughter, stepson, stepdaughter, or adopted child of member of forces, under 16):—Twenty shillings per fortnight for the first child, fifteen shillings per fortnight for the second child, and ten shillings per fortnight for the third and each subsequent child.

(c) To other dependents (dependent members of family of deceased or incapacitated member of forces):—Rates as assessed by Commissioner or Deputy-Commissioner, but not exceeding for one person the rate specified in the second column above as payable to the widow, and not exceeding in the aggregate that sum, plus £2 per fortnight.

(d) To wife of member of forces upon his total incapacity:—50 per cent. of rate payable to husband.

(e) To each child of member upon his total incapacity:—Same as (ii.) above.

(f) To member upon partial incapacity:—Loss of leg or foot or hand or arm—maximum rate for six months, thereafter three-fourths of the maximum rate. Loss of one eye—half the maximum rate. Loss of both legs or both feet, or both arms or both hands, or arm and leg or hand and foot, or both eyes, or one eye together with loss of leg, foot, hand or arm—the maximum rate.

## § 6. Special Defence Legislation.

1. *War Precautions Act 1914.*—On the outbreak of war in Europe, the Federal Parliament passed an Act to enable the Governor-General to make regulations and orders for the safety of the Commonwealth during the state of war. The provisions of this Act, which was assented to on 29th October, 1914, will be found in Official Year Book No. 8, page 1092. Particulars of the *Enemy Contracts Annulment Act* will be found in the same issue of the Year Book, page 1095.

2. *War Precautions Acts 1914-16 and War Precautions Regulations 1915.*—The *War Precautions Act 1914* abovementioned, as amended by the *War Precautions Act 1915*, the *War Precautions Act No. 2 1915*, and the *War Precautions Act 1916*, empowers the Governor-General to make regulations and orders for securing the public safety and the defences of the Commonwealth. Any person who contravenes or fails to comply with any provision of any regulation or order is guilty of an offence, the punishment for which is, if prosecuted summarily, a fine not exceeding £100, or imprisonment for a term not exceeding six months, or both; if the offence is prosecuted by indictment, a fine of any amount or imprisonment for any term, or both or if the offence is prosecuted by Court Martial, the same punishment as if the person had been subject to military law, and had on active service committed an offence under section 5 of the Army Act.

Under the powers conferred by the above Acts, the *War Precautions Regulations 1915* have been made. These regulations provide for the appointment of competent naval or military authorities to exercise certain powers under the regulations. The principal provisions of the regulations are as follows:—

Regulation 3. The ordinary avocations of life and the enjoyment of property are to be interfered with as little as may be permitted by the exigencies of the measures required to be taken for securing the public safety and the defence of the Commonwealth, and ordinary civil offences are to be dealt with by the civil tribunals in the ordinary course of law.

4. The competent authorities are authorised to take possession of land, buildings, equipment, and warlike stores, to construct works, to destroy buildings, and to do any act involving interference with private rights of property which may be necessary for securing the public safety or defence of the Commonwealth.

5. Competent authorities are given the right of access to any land or buildings.

6. Land may be used for training the forces.

7. Roads may be stopped up.

8. The removal of vehicles, boats, vessels, aircraft, animals, foodstuffs, equipment, and warlike stores from any area may be ordered.

9. A census may be taken of all goods, animals, and other commodities.

10 and 11. The Minister may requisition the output of factories manufacturing arms, ammunition, etc., and may take possession of such factories.

12, 12A and 12B. Premises licensed for the sale of intoxicating liquor may be closed and the sale of liquor in specified areas may be prohibited.

13 and 14. The extinguishment or obscuring of lights in any area may be ordered.

15. Inhabitants may be ordered to remove from any area if necessary for naval or military reasons.

15A. Persons may be removed from the vicinity of military camps, forts, hospitals, or posts if their presence is prejudicial to the maintenance of discipline or to the health, training, or administration of the troops.

16. Inhabitants may be required to remain indoors.

16A. Meeting of associations, clubs, etc., the members of which consist mainly of persons of enemy origin or descent, may be prohibited.

17. Ships may be removed from specified areas.

17A. Entrance to British merchant ships in harbours or alongside wharves without permission is forbidden.

17B. Entrance to enclosed wharves without permission is forbidden.

17D. Members of the forces may be prevented from entering any premises specified in an order of the competent authority.

17E. Persons who are defaulters from military service in New Zealand may be required to return to that Dominion.

17EA. Reservists of Allied Powers who refuse to render military service when called upon by their Consuls may be punished.

17EE. Power is given to the Naval Board to provide for the enclosure, light and provision of buildings on wharves.

17F. Power is given to search persons and goods on ships and wharves.

17G. Orders may be given for the removal of dangerous goods, etc., from wharves.

18. Harbour authorities may be required to prepare schemes for destruction of harbour works.

19. The obtaining and communicating of naval and military information without permission is prohibited.

19A. Communication with enemy agents is prohibited; communication with spies is prohibited.

19B. Postal articles intended for enemy countries to bear endorsement that they are so intended.

19C. The unlawful possession, etc., of official documents is made an offence.

20. The photographing of naval or military works without permission is prohibited.
21. Tampering with telegraphic apparatus is prohibited.
- 21A. Telephone conversations not in the English language are prohibited.
22. The possession of carrier pigeons in any area prescribed by order of the competent authority is prohibited.
23. The possession of wireless telegraphic apparatus without the permission of the Minister for the Navy is prohibited.
- 23A. The possession of ciphers, codes, or other means of secretly communicating naval or military information is prohibited, unless intended and used solely for commercial or other legitimate purpose.
24. The embarkation of persons suspected of communicating with the enemy may be prohibited.
25. The transmission of letters to or from the Commonwealth otherwise than through the post is prohibited.
- 25A. The conveyance of letters to or from interned persons without the authority of the officer commanding the place of internment is prohibited.
- 25B. Persons carrying on the business of receiving for reward letters or postal packets for delivery to other persons are required to register with the Censor.
- 25C. Books published in Australia and newspapers, magazines or periodicals wherever published may not be sent out of the Commonwealth to neutral or enemy countries except by publishers or newsagents who have obtained permission from the censorship.
26. The use of searchlights, semaphores, or other apparatus intended for signalling is prohibited.
- 26A. Notice must be given to the Military Commandant before aircraft are navigated for a distance of more than 50 miles.
27. The display of fireworks or the lighting of fires in such a manner as would serve as a signal, guide, or landmark is prohibited.
- 27A. Persons who advocate disloyalty or hostility to the British Empire may be punished.
- 27B. Persons who wear or display any badge, flag, banner, emblem or symbol of an enemy country, or of a disaffected body or association, or of the Sinn Fein movement, may be punished.
- 27C. Power is given to close places of public resort and clubs, the use of which is prejudicial to the public safety or the defence of the Commonwealth.
28. The spreading of false reports, or the making of false statements, or reports or statements likely to cause disaffection to His Majesty, or public alarm, or to interfere with the success of His Majesty's forces by land or sea, or to prejudice His Majesty's relations with foreign powers, and the spreading of reports or making of statements likely to prejudice the recruiting, training, discipline, or administration of His Majesty's forces, is prohibited.
- 28A. Power is given to require newspapers to submit to the Censor matter relating to the war before printing or publication.
- 28AA. Power is given to require writers of pamphlets to submit to the Censor before publication matter relating to recruiting.
- 28AB. Power is given to declare publications to be prohibited, and the possession of any prohibited publication is made an offence.
- 28AC. Power is given to seize injurious printed matter.
- 28AD. Persons who print, publish, sell or distribute any matter forbidden by the censorship, may be punished.
- 28B. Newspapers and other publications published in foreign languages may be suppressed.
- 28C. Alterations made by the censorship in matters submitted to it are not to be shewn in print without permission.
- 28D. The submission of cinematograph films relating to the war may be required before they are exhibited.

29. Trespassing on or loitering in the vicinity of tunnels, viaducts, or culverts, and injuring or being upon railways, or on, under, or near railway works with intent to injure them, is prohibited.

30. Approaching military works in respect of which orders prohibiting approach have been issued is an offence.

31. The manufacture or sale of firearms, ammunition, or explosives within any specified area may be prohibited.

32. The importation of firearms, ammunition, or explosives without permission is prohibited.

33. Any person who, by discharging firearms or otherwise, endangers the safety of any member of the forces, is guilty of an offence.

34. Any person who, without permission, is in possession of firearms, explosives, or inflammable liquids in the vicinity of any railway, dock, or harbour, or in the vicinity of any specified area, is guilty of an offence.

35. Restrictions are placed on the storage of inflammable liquids in any area specified in an order of the competent authorities.

36. The possession of celluloid or cinematograph films in any prescribed area without permission is prohibited.

37. Masters of vessels are required to comply with any directions given for navigation in harbours.

38. Vessels are required to comply with any directions as to navigation issued by the Naval Board.

39. Vessels may be prohibited from entering dangerous areas.

40. The Naval Board may issue orders as to pilotage.

40A. Any person who by act or default endangers the safety of any vessel is guilty of an offence.

40B. Seamen on ships chartered, etc., by the Commonwealth or Imperial Government who desert, are declared guilty of an offence against the Act.

40C. Persons who interfere with the discharge, loading, etc., of ships may be punished.

40D. Persons who interfere with shearing may be punished.

41. The supplying of intoxicants to members of His Majesty's forces, when on duty or when not on duty, with intent to elicit information, is prohibited.

41A. Intoxicating liquors in camps, forts, hospitals, or military posts are prohibited.

41B. The use of drugs interfering with medical examination of recruits is prohibited.

41C. Persons who make false statements on attestation papers may be punished.

41D. Power is given to State Recruiting Committees to compel the exhibition of recruiting films in picture theatres.

42. The unauthorised use of naval or military uniforms is prohibited.

42A. The sale of uniforms or parts of uniforms without permission is prohibited.

42AA. Power is given to prohibit the sale of articles of equipment the use of which may be dangerous, or in respect of which untrue or misleading statements are made.

42B. Use, without permission of Minister, of badges, etc., intended to indicate that the wearer is a person rejected for active service, is forbidden.

42C. Sale of phosphorus without permission is prohibited.

42D. Dyeing military clothing is prohibited.

43. Persons attempting to cause mutiny, sedition, or disaffection among the forces or the civil population are guilty of an offence.

44. Persons obstructing, misleading, or interfering with or withholding information from officers or persons carrying out the orders of the competent authorities, are guilty of an offence.

44A. Persons who supply short quantities or short weight for the Forces may be punished.

45. Falsifying reports, etc., is an offence.

45A. The making of untrue statements in applications for separation allowances, etc., is made an offence.

45B. Falsely pretending to be a returned soldier or sailor is made an offence.

46. The forging of certain official documents, and personating persons to whom such documents have been issued, is an offence.

46A. Assisting the escape of prisoners of war is an offence.

47. Persons in possession of false passports or letters of safe conduct, and alien enemies passing under assumed names, are guilty of an offence.

47A. The right of any relative or dependant of a soldier to receive allotments of his pay or separation allowance is made incapable of assignment.

47B. Allotment of soldiers' pay and separation allowance is declared to be non-assignable.

47C. Defacing posters, etc., issued by the Department of Defence or the Department of the Navy is prohibited.

47D. Articles supplied or issued by the Red Cross are not to be sold.

48. All persons affected by any orders issued under the Regulations are required to comply therewith.

49. Attempting to commit an offence, aiding or abetting an offence, or harbouring any person who has committed an offence, is forbidden.

49E. The sale of sugar at a price exceeding 3½d. per lb., plus such sum as represents the cost of delivery to the seller, is forbidden.

50, 50A, and 50B. Powers are given to search premises and persons, and to seize articles found thereon.

51. Power is given to stop and search vehicles.

52. Power is given to require answers to questions relative to any matter affecting the public safety or the defence of the Commonwealth, and to require the production of documents, books, and papers relative to any such matter.

53. Powers are given for preventing the conveyance of letters into or out of the Commonwealth otherwise than through the post.

54. Powers of arrest are given.

54A. The embarkation of suspected persons may be prohibited.

55. The Minister is authorised to direct the detention, in military custody, of any naturalised person who is disaffected or disloyal.

56. The Minister is authorised to direct the detention, in military custody, of any natural-born British subject, one at least of whose parents was, or is, a subject of a State which is at war with the King.

56A. The Minister is authorised to direct the detention, in military custody, of any person if, in his opinion, for securing the public safety and the defence of the Commonwealth, it is expedient, in view of the hostile origin or association of such person, that he should be so detained.

56B. Male British subjects between the ages of 17 and 45 years are prohibited from leaving the Commonwealth, unless in possession of a passport issued by the Department of External Affairs.

56C. Persons detained in military custody, under the warrant of the Minister, are declared to be subject to the rules of discipline applicable to prisoners of war.

57 and 58. Provision is made for trial of offences.

58A. Provision is made for the punishment of offences by corporate bodies.

59. Provision is made for forfeiture of goods in respect of which an offence has been committed.

59A. The burden of proof of lawful authority for any act, which, if done without such authority is an offence, is placed upon the accused.

59B-59E. Provision is made for the proof in legal proceedings of orders or instruments issued by competent authorities under the regulations, of printing or publication or authorship of printed matter, and of certain formal matters.

60. The powers conferred by the regulations are declared to be in addition to, and not in derogation of, any other powers exercisable for securing the public safety and the defence of the Commonwealth.

61. Provision is made for the giving of notices pursuant to the regulations.

62. Persons claiming to act under any permit granted under the regulations are required to produce such permit when directed.

63. The Naval Board and the Military Board are authorised to appoint competent authorities to carry out the regulations.

63A. Competent authorities and senior officers of police are authorised to extend to any natural-born subject, whose father or whose father's father was a subject of a sovereign or State at war with His Majesty, all or any of the restrictions imposed on aliens or on alien enemies by any order made under the Act.

63B. The provisions of the Aliens Restriction Order 1915, with reference to alien enemies, are declared to apply to any British subject who is also a subject of a sovereign or State which is at war with His Majesty.

63C. Naturalised persons of enemy origin, if their naturalisation is cancelled, are declared to be alien enemies.

64. Persons born in the British dominions, who, by birth, became by the law of any State which is at war with the King subjects of that State, are declared to be subject to the same restrictions with reference to departure from Australia as are imposed on naturalised persons by any order made under the Act.

64A. The payment of moneys to persons interned on the warrant of the Minister is prohibited, except with the permission of the Minister, or of the Secretary or Acting-Secretary of the Department of Defence.

64B. The remitting of money from the Commonwealth without the written permission of the Minister, or of the Secretary or Acting-Secretary of the Department of Defence, to any enemy subject, or to any naturalised British subject who has at any time been the subject of a State at war with the King, is prohibited.

64BA. Persons holding money on behalf of enemy subjects may be required to hand it to the Public Trustee.

64C. Provision is made for the disposal of unclaimed parcels sent to members of forces.

64D. The establishment of a Commonwealth Police Force is authorised.

*The Aliens Restriction Order 1915*, made under the authority of the *War Precautions Act*, contains restrictions as to aliens entering and leaving the Commonwealth, and as to alien enemies resident in the Commonwealth. The principal provisions are as follows:—

Aliens are permitted to enter and leave the Commonwealth only at Darwin, Thursday Island, Brisbane, Newcastle, Sydney, Melbourne, Port Adelaide, Albany, Fremantle, Broome, and Hobart.

The deportation of any alien may be ordered by the Minister.

Masters of ships about to sail from a Commonwealth port may be required to give passages to aliens.

Alien enemies and naturalised subjects of enemy origin are forbidden to leave the Commonwealth without permission.

Aliens entering and leaving the Commonwealth are required to have passports.

Alien enemies may be required to reside in any specified area, and may be forbidden to enter prohibited areas.

Alien enemies are required to register with the police, and to report at such intervals as may be required. They are forbidden to change their places of residence or travel without permission, and are required to report on arrival at a new place of residence.

Naturalised subjects of enemy origin may be required to report themselves to the police, and may be forbidden to change their place of residence or travel unless they first give notice to the police.

Alien enemies and naturalised subjects of enemy origin are forbidden to enter British ships, or wharves, or docks.

Alien enemies are forbidden to be in possession of firearms or other weapons, ammunition, or explosives suitable for use in war.

They are also forbidden, without permission of the police, to be in possession of other firearms, ammunition, or explosives, of inflammable liquids in quantities exceeding three gallons, of signalling apparatus, carrier or homing pigeons, motor vehicles or boats,

ciphers or codes, telephones, photographic apparatus, or military or naval maps, charts, or handbooks.

Naturalised subjects of enemy origin are forbidden, without permission of the police, to be in possession of firearms, ammunition, or explosives.

The circulation among alien enemies of any newspaper published in Australia wholly or mainly in the language of a State at war with His Majesty is prohibited, unless permission has been obtained.

Alien enemies are prohibited from carrying arms.

Alien enemies and naturalised subjects of enemy origin are prohibited from changing their names without permission.

Provision is made for exempting from certain provisions of the Order subjects of enemy powers who belong to races opposed to the rule of such powers.

The competent authorities may direct that any of the provisions of this Order as to alien enemies or naturalised subjects of enemy origin shall, in particular cases, be applicable to other aliens or naturalised subjects.

The competent authorities may also direct that any restrictions imposed on aliens or on alien enemies by the Order shall apply to any naturalised subject of enemy origin.

*The War Precautions (Aliens Registration) Regulations 1916* provide that all aliens entering Australia, and all aliens in Australia over the age of 16 years, shall register with the police. In their applications for registration they are required to state their name in full, nationality, birth-place, date of birth, place of residence, place of business (if any), occupation and date of entry to the Commonwealth. On registration they receive a certificate which states the nationality claimed by them, their date of birth and place of abode, and contains a personal description.

Aliens resident in the Commonwealth are required to inform the police before they change their place of abode, and to report to the police on taking up a new place of abode.

Aliens who wish to change their names are required to give notice to the police.

The keepers of hotels, inns, boarding-houses and lodging-houses are required to keep registers of aliens staying on their premises, containing the name, nationality, date of arrival, previous place of abode, date of departure, destination on departure, and other particulars of aliens.

*The War Precautions (Passports) Regulations 1916* provide that persons over the age of 16 years entering or leaving the Commonwealth must be in possession of passports issued or renewed not more than two years previously, containing a personal description and having a photograph attached. The following classes of persons are exempt from the regulations :—

- (a) Members of the Naval or Military Forces entering or leaving the Commonwealth on duty.
- (b) Crews of ships if signed on in the Commonwealth.
- (c) Crews of ships if entering and leaving the Commonwealth on the same ship.
- (d) Persons going to New Zealand and other adjacent British possessions, subject to certain limitations.
- (e) Holders of certificates of exemption from the dictation test under the Immigration Acts 1901-1912.
- (f) Holders of emergency permits to leave the Commonwealth.
- (g) Persons entering or leaving the Commonwealth in the custody of the law.
- (h) Persons ordered by the Government of the Commonwealth or by any State to leave the Commonwealth.
- (i) Aboriginal natives of Asia or of any island in the East Indies or in the Indian or Pacific Ocean leaving the Commonwealth.

All persons entering the Commonwealth are required to give up their passports before landing. If they subsequently leave, their passports are returned to them on departure.

Other regulations made under the Act are :—

*The War Precautions (Active Service Moratorium) Regulations 1916*, which provide for the postponement until six months after the expiration of the War of payment of principal money (but not interest) secured by mortgages, and payments of purchase money under agreement for the purchase of land, due by members of Forces serving abroad or their female dependents.

These Regulations also contain a provision that chattels used by any female dependent of a soldier to support or assist in supporting herself or any of the family of the soldier, and furniture or wearing apparel belonging to any such soldier or female dependent, not exceeding £50 in value, shall be protected from distress, or seizure under a bill of sale, writ of execution or other process of a Court, or under the provisions of hire purchase agreements.

*The War Precautions (Coal Tar) Regulations 1916*, which provide for the supervision of the distillation of coal tar, and forbid the use of crude tar except with the permission of the Minister.

*The War Precautions (Coaling Battalions) Regulations 1916*, which provide for the raising of Coaling Battalions to coal Transports.

*The War Precautions (Coinage) Regulations 1916*, which forbid the defacing or destroying of gold coins.

*The War Precautions (Companies, Firms and Businesses) Regulations 1916*, which restrict the issue of new capital by Companies, Associations, etc., prohibit the voluntary liquidation of Companies without the consent of the Treasurer, and provide that the consent of the Treasurer must be obtained for the erection of buildings for amusement purposes.

*The War Precautions (Enemy Shareholders) Regulations 1916*, which restrict the holding of shares in companies by persons of enemy descent.

*The War Precautions (Glycerine) Regulations 1916*, which provide for the requisitioning of glycerine.

*The War Precautions (Hides) Regulations 1916*, which give power to regulate the purchase or sale of hides.

*The War Precautions (Land) Regulations 1916*, which restrict the acquisition of land by persons who are not natural-born British subjects.

*The War Precautions (Land Transfer) Regulations 1916*, which restrict the transfer of land in regard to persons of enemy descent.

*The War Precautions (Moratorium) Regulations 1916*, which restrict the right of mortgagees to enforce payment of mortgages.

*The War Precautions (Patents) Regulations 1916*, which provide for the establishment of a Patents Inquiry Board to investigate applications for patents, publication of which might be detrimental to the public safety or the defence of the Commonwealth.

*The War Precautions (Prices) Regulations 1916*, which provide for the regulation of the prices of commodities.

*The War Precautions (Rabbit Skins) Regulations 1916*, which give power to regulate the purchase or sale of rabbit skins.

*The War Precautions (Sheep Skins) Regulations 1916*, which give power to regulate the purchase or sale of sheepskins.

*The War Precautions (Shipping) Regulations 1916*, which restrict the departure of shipping from the Commonwealth without the permission of the Comptroller-General of Customs.

*The War Precautions (Mining) Regulations 1916*, which enact that no contract of agreement for the purchase or acquisition of any mining or metallurgical company or business or of any security issued by any mining or metallurgical company or business for the purpose of raising money, by or on behalf of any person other than a natural born British subject shall be entered into unless consent has been first obtained.

*The War Precautions (Galvanized Iron) Regulations 1917*, prohibiting the use of galvanized iron for certain purposes.

*The War Precautions (Control of Sports) Regulations 1917*, regulating the holding of any race meeting for horses, or any competition or contest in boxing, football, or other athletic game or sport.

*The War Precautions (Leather Industries) Regulations 1917*, establishing local committees having power to determine quantities of hides for tanning and export and to determine the classes, quantity and output of leather.

*The War Precautions (Luxuries Restriction) Regulations 1917*, providing for the appointment of a committee to enquire into and make recommendations in relation to goods or classes of goods, the importation of which should be prohibited or restricted as being articles of luxury, or any article the importation of which is not essential to the general comfort, health or welfare of the community.

*The War Precautions (Meat) Regulations 1917*, requiring persons to furnish returns of all live stock and meat owned or possessed by them.

*The War Precautions (Stocks of Goods) Regulations 1917*, providing that no person, firm or company shall purchase goods (gazetted as prescribed goods) without consent in writing. Returns of stocks to be furnished when required. Persons may also be required to sell such goods.

*The War Precautions (Wharf) Regulations 1917*, which provide that the Commonwealth may enter upon and take possession of the wharf at Port Pirie (South Australia).

*The War Precautions (Winter Butter Pool) Regulations 1918*, for determining quantities, purchase and delivery, and general trade of butter.

*The War Precautions (Flax) Regulations 1918*, providing for the appointment of a committee to collect particulars of stocks, price, cultivation, distribution, sale, quality, etc., of flax.

*The War Precautions (Tallow) Regulations, 1918*, giving the Minister for Defence, or authorised officer, power to requisition on stocks of tallow held by factories or works.

*The War Precautions (Supplementary) Regulations 1916*, which contain provisions:—

- (a) Prohibiting the use in trade of the word "Anzac" and similar words.
- (b) Restricting actions on contracts in cases in which the defendant is supplying munitions.
- (c) Giving power to clubs to suspend or cancel the membership of persons of enemy origin.
- (d) Giving power to requisition goods for munitions.
- (e) Giving power to requisition vessels for the carriage of foodstuffs.
- (f) Restricting proceedings for defamation by persons alleged to be enemy subjects.
- (g) Restricting proceedings arising out of the refusal of any person to employ or work with persons alleged to be enemy subjects.
- (h) Restricting the manufacture or sale of buttons, etc., for patriotic purposes without the consent of a State War Council.
- (i) Prohibiting the use of the word "Repatriation" in connection with any fund without the authority of the trustees appointed by the Australian Soldiers' Repatriation Fund Act 1916, or a State War Council.
- (j) Prohibiting the raising of funds for patriotic purposes in relation to the war without the consent of a State War Council.
- (k) Giving power to refer disputes relating to the Colliery Industry to Arbitration.
- (l) Prohibiting the mortgaging or pledging of goods, etc., advanced, or provided by a State War Council under the powers conferred by the Australian Soldiers' Repatriation Fund Act 1916.
- (m) Prohibiting the transmission of parcels to British prisoners of war abroad.
- (n) Giving power to extend contracts for the supply of goods or services to any Department of the Commonwealth, the supply of which is affected by circumstances arising out of the war.
- (o) Prohibiting unlawful assemblies and the obstruction of officers of Parliament.
- (p) Giving power to close licensed premises in any area notified in the "Gazette."

- (g) Giving power to deregister industrial organisations which cease work and to cancel provisions in industrial agreements relating to preference in employment.
- (r) Providing that persons charged with offences under the War Precautions Act 1914-16 or the Unlawful Associations Act 1915-17 may not be released on bail except by special magistrate.
- (s) Giving power to the Interstate Commissioner to make investigation relating to prices and rent.
- (t) Giving power to inspect bank accounts of enemy subjects and naturalised persons of enemy origin.
- (u) Prohibiting the making of agreements the object of which is to fix or determine the minimum price for supplies for the Commonwealth.
- (v) Exempting members of "Wool Committees" and others from serving as jurors.
- (w) Providing for the investment of trust funds in war loans and making other provisions in regard to war loans.
- (x) Providing for the enforcement of recognizances entered into under the War Precautions Regulations.

*The War Precautions (Tin Plates) Regulations 1916*, which give power to regulate the use of tin plates.

*The War Precautions (Wool) Regulations 1916*, which give power to regulate the purchase or sale of wool.

### § 7. Persons of Enemy Birthplace.

The following table shews the estimated number of males of enemy birthplace (natives of Germany, Austria-Hungary, Turkey, and Bulgaria, whether naturalised or otherwise, but exclusive of persons of British parentage), in each State at the 31st July, 1915, and the estimated number naturalised. While the States and military districts are not quite conterminous, they approximate sufficiently to admit of the comparison :—

#### MALES OF ENEMY BIRTHPLACE IN THE COMMONWEALTH AT 31st JULY, 1915.

State and Military District.				Male Enemy Subjects.*	Number Naturalised.*	Number not Naturalised.*
Queensland	1st Military District	...	...	8,080	6,640	1,440
New South Wales	2nd " "	...	...	6,460	4,330	2,130
Victoria	3rd " "	...	...	4,920	3,300	1,620
South Australia	4th " "	...	...	3,270	2,630	640
Western Australia	5th " "	...	...	3,190	1,280	1,910
Tasmania	6th " "	...	...	380	320	60
Total	...	...	...	26,300	18,500	7,800

\* These figures are based on Census returns, and can only be considered as a rough approximation.

The number of females of enemy birthplace in the Commonwealth at 31st July, 1915, is estimated at about 12,000.

### § 8. Repatriation.

1. **General.**—In common with all the warring countries of the world, Australia has to face the problem of the returned soldier—to find employment for the fit, to re-establish the disabled, and to provide for the dependents of those who have died or of those who are no longer able to support themselves.

During the early stages of the war this work was carried out mainly by voluntary effort, assisted by Government funds, and supplemented by private contributions. Disconnected and divergent schemes were extemporised to meet the pressing needs of

soldiers and their families, with the result that there was overlapping in some directions and insufficiency in others. The Commonwealth Parliament therefore decided that Repatriation should become a national undertaking, and that a comprehensive scheme should be designed to meet the various claims in connection therewith. On 8th April, 1918, the Department of Repatriation, charged with this responsibility, was established, the first Minister being Senator the Hon. E. D. Millen.

**2. Organisation of Department.**—The organisation of the Department provides for a Central Administrative Commission of seven members, termed the Repatriation Commission, of which the Minister is chairman, and upon which returned soldiers are represented. The Commission acts in an honorary capacity. Its duties are to prescribe by regulation the nature and extent of the assistance that may be granted, and to hear appeals from decisions of the State Boards. The permanent head of the Department is the Comptroller. Repatriation headquarters are in Melbourne. District branches have been established in the capital city of each State, and associated with these branches are State Boards, comprising seven members, and providing for the representation of returned soldiers. Members of these Boards act also in an honorary capacity. The permanent official at the head of each State organisation is termed Deputy-Comptroller. A network of local committees is connected with the district branches. The local committees are voluntary organisations possessing dual functions. They act as sub-agents under the control and direction of the Department so far as the disbursement of assistance specifically provided by the Department is concerned; and they are vested with discretionary powers in regard to the disbursement of supplementary assistance, organised and raised locally. Local Committees work within clearly defined territorial boundaries. Under this scheme every square mile of the whole continent of Australia is brought directly under the operation of the departmental policy.

**3. Policy of the Department.**—The policy of the Department is based upon three main principles:—

- (a) To secure the re-establishment of returned soldiers in the industrial life of the community to the fullest extent that circumstances permit;
- (b) To sustain these soldiers until an opportunity for such re-establishment is assured; and
- (c) To provide for the care of the dependents of soldiers who have died on active service, as well as the dependents of soldiers who, on account of injuries sustained, are unable to provide for those formerly dependent upon them.

To give effect to these principles the Department undertakes:—

- (1) To provide suitable employment for those who are able to follow their previous occupation or one similar to it, and to pay sustenance until such opportunities are presented;
- (2) To restore to the fullest degree of efficiency possible, by means of vocational training, those who on account of war service are unable to follow their pre-war occupations, and during the period of such training to assure trainees adequate sustenance;
- (3) To maintain totally and permanently incapacitated soldiers and their dependents, and soldiers' widows with children.

An important feature of the scheme is the means taken to get into touch with soldiers returning to Australia, and to ascertain as far as possible, prior to their discharge, what assistance they will require, and so make preparations in advance for dealing with applications. Information regarding the activities of the Department is given to the men on board transports coming to Australia, and at the same time information is obtained from them, or concerning them, regarding their pre-war occupations, their physical condition and other matters essential to expeditious treatment.

4. **Activities of the Department.**—The activities of the Department are classified under three sections—employment, vocational training, and assistance. Under assistance, a wide variety of benefits, including the provision of surgical aids, medical treatment, establishment in small businesses, furniture loans and grants, relief from onerous mortgages, educational grants, and equipment with tools of trade are provided.

5. **Sustenance Rates.**—The sustenance rate that may be granted to applicants awaiting fulfilment by the Department of certain specified obligations is :—

- (a) To a soldier without dependents a weekly income inclusive of pension of £2 2s.;
- (b) To a soldier with a wife a weekly income inclusive of their combined pensions of £2 12s.

An additional allowance of 3s. 6d. per week is made for each child up to four, the maximum sum payable being £3 6s. per week.

Those who are eligible for this benefit are applicants awaiting employment; approved applicants waiting to take up land; blind soldiers undergoing training; students receiving training in commercial or professional occupations; trainees in technical schools; convalescents; and soldiers receiving medical treatment.

Living allowances payable to totally and permanently incapacitated soldiers and to soldiers' widows with children are on the following scale :—

Soldier and wife (inclusive of pensions)	...	s.	d.	
	...	60	0	per week
Soldier, wife, and 1 child (inclusive of pensions)	...	63	6	"
" " 2 children " "	...	67	0	"
" " 3 " " "	...	70	6	"
" " 4 " " "	...	74	0	"
" " 5 or more " "	...	77	6	"

*Widows with Children—*

Widow with 1 child (inclusive of pensions)	...	51	0	"
" 2 children " "	...	54	6	"
" 3 " " "	...	58	0	"
" 4 " " "	...	61	6	"
" 5 or more " "	...	65	0	"

6. **Summary of Five Months' Work of Department.**—The following is a summary of the work done by the Department during the first five months of its existence :—

*Employment—*

Number of applications	...	...	...	17,298
Number of positions filled	...	...	...	14,089
Lapsed applications	...	...	...	1,133
Waiting at 31/8/18	...	...	...	2,076

*Vocational Training—*Vocational training is designed for—

- (a) Apprentices whose apprenticeship has been interrupted by war service.
- (b) Those who, owing to war service, are unable to follow their pre-war occupations.
- (c) Those who, while able to follow their pre-war occupations, are unable, owing to injuries, to command immediately the full wage of the trade or calling.

Classes representing 80 trades and callings have been established :—

Number completed training	...	...	...	545
" in training	...	...	...	1,767
Applications pending	...	...	...	350

*Assistance—*

Applications received	...	...	...	37,371
" approved	...	...	...	29,492
" refused	...	...	...	2,539
" withdrawn	...	...	...	995
" pending	...	...	...	1,589

7. Assistance Granted.—The table hereunder shews the sums granted by way of assistance in each State during the period from 8th April to 31st August, 1918:—

**DEPARTMENT OF REPATRIATION.—ASSISTANCE GRANTED FROM 8th APRIL to 31st AUGUST, 1918.**

\* The scale of living allowances, although approved by the Commission, had not come into operation on 31st August. Up to that date rental allowances were made to widows and to totally and permanently incapacitated soldiers. Living allowances are in lieu thereof.

The scheme also provides for the creation of "reserve employments" in national reproductive works such as forestry, and for the establishment of national workshops in which industries will be carried on for the permanent benefit of the severely maimed.

† These cases were approved by State War Councils prior to establishment of the Department of Repatriation.

## SECTION XXIX.

## PAPUA (BRITISH NEW GUINEA).

## § 1. New Guinea.

1. **Geographical Situation of New Guinea.**—New Guinea, frequently described as the largest island in the world, lies to the north of Australia, between  $0^{\circ} 25'$  and  $10^{\circ} 40'$  S. latitudes, and between  $130^{\circ} 50'$  and  $150^{\circ} 35'$  E. longitudes. Its estimated area exceeds 300,000 square miles, the greatest length being 1490 miles and the greatest breadth 430 miles.

2. **Discovery.**—The island was probably sighted by Abreus in A.D. 1511. The first visit by Europeans was apparently either that by the Portuguese Don Jorge de Meneses on his way from Goa to Ternate in 1526, or that by the Spaniard Alvaro de Saavedra in 1528. In 1606 Torres, having parted company with De Quiros at the New Hebrides, sailed, on his way to the Philippines, through the strait which separates the island from Australia, and which now bears his name.

3. **Colonisation.**—Little progress was made for many years in exploration and settlement. First the Portuguese, and afterwards the Dutch, who to a great extent replaced them as the principal European traders in the East, seem to have jealously excluded other traders and adventurers, and to have kept the knowledge of their discoveries to themselves. The coasts were visited by Roda, Schouten, Lemaire, Tasman, Dampier, Torres, Bougainville, and Cook; but the difficulties of navigation, the savagery of the islanders, and the tempting fields for enterprise in the more temperate regions further south, diverted the energy of traders and voyagers. Forrest describes a voyage by himself in 1774. In 1793, New Guinea was annexed by two commanders in the East India Company's service. Since that date the Dutch have made extensive surveys of the western portion, and the British and Germans have occupied and colonised the eastern. In September, 1914, German New Guinea was seized and occupied by Great Britain by means of a force raised and despatched by the Australian Government.

4. **Partition.**—The three colonising powers agreed to the partition of New Guinea, each having suzerainty over islands adjoining its own territory. The whole of the portion west of the 141st degree of latitude, comprising about 150,000 square miles, or nearly half the island, belongs to the Dutch. The eastern half was divided in almost equal portions between Great Britain and Germany, the area possessed by each (with adjacent islands) being about 90,000 square miles. An Anglo-German boundary commission, appointed for the purpose of defining the boundary between the territories of the two nations, started operations on 26th December, 1908, and completed the field-work on 27th October, 1909. The total length of boundary delimited was  $66\frac{1}{2}$  miles. The work was both important and difficult. For a considerable portion of the survey, the country was exceedingly rough and mountainous, and the natives hostile. In one instance, the line was carried over a range at an elevation of 11,110 feet. The Dutch colony forms part of the residency of Ternate in the Moluccas, and has not been extensively developed. The German protectorate, where considerable commercial development had taken place, included the northern part of the eastern half of the mainland, known as Kaiser Wilhelm Land, and the large islands of the Bismarck Archipelago and the Solomon Group, as well as nearly 200 smaller islands. The south-eastern portion of New Guinea, nearest Australia, is a dependency of the Commonwealth of Australia. The German Pacific protectorate was terminated in 1914.

## § 2. The Australian Dependency of Papua.

**1. Australian Dependency of Papua.**—Surveys of the east coast of New Guinea by Stanley, Yule, Blackwood, Moresby, and others, brought home to Queensland, and to Australia generally, the danger to her commerce which would result from foreign possession of the islands and coasts opposite to Cape York, and from the holding by a hostile power of the entrance to the splendid waterway inside the Barrier Reef. The mainland opposite the shores of Queensland east of the 141st meridian was therefore annexed by that colony in 1883, but the action was disallowed by the British Government. In 1884, however, a British protectorate was authoritatively proclaimed by Commodore Erskine over the region lying east of the 141st meridian as far as East Cape, with the adjacent islands as far as Kosman Island. In the year following, an agreement with Germany fixed the boundaries between the possessions of the two countries, and to Great Britain was assigned the portion now known as Papua, lying between the extreme limits of 5° and 12° S., and 141° and 155° E. The British protectorate was subsidised by Queensland, New South Wales, and Victoria, and lasted until 30th September, 1888, when it was proclaimed a possession of the Empire. Its constitution was then that of a Crown colony, in association, however, with Queensland. Administration was in the hands of a Lieutenant-Governor, aided by an Executive and a Legislative Council, and advised by a Native Regulation Board. Port Moresby, on the south coast, was made the headquarters of the official establishment; a supreme court was established there, and magisterial courts in the districts; and an armed native constabulary force (numbering 343 on the 30th June, 1917), under a European officer, was instituted for the maintenance of order. There were also, on the same date, 741 native village constables employed by the Crown.

**2. Annexation by Commonwealth.**—The territory was placed under the authority of the Commonwealth on 1st September, 1906, by proclamation issued in pursuance of Letters Patent of the 18th March, 1902, and was accepted by the Commonwealth by the Papua Act 1905, which came into force by virtue of the proclamation aforesaid. The transfer was made under the authority of section 122 of the Constitution (see p. 33 hereinbefore). The territory is now under the administration of the Commonwealth, but not included within it, and is divided into eleven magisterial districts.

**3. Physical Characteristics.**—Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Sudest and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Strait. The length of Papua from east to west is upwards of 800 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerably narrower. The territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. The length of coast-line is computed at 3664 miles—1728 on the mainland, and 1936 on the islands. The total area is about 90,540 square miles, of which 87,786 are on the mainland, and 2754 on the islands. From the eastern end of the territory rises a chain of mountains, which forms a great central ridge and attains its greatest altitude, as it extends westwards, in the Owen Stanley Range, the highest points of which are Mount Victoria (13,200 feet), Mount Scratchley, the Wharton Range, and Mount Albert Edward. The western end of the possession is for nearly 300 miles generally low and swampy for some distance along the coast. The whole territory is well watered. The great mountains and a great portion of the lower country are covered with forest. The islands are mountainous, and, with the exception of the low coral islands of the Trobriand Group, part of Murua, and a few others of small dimensions, principally of volcanic formation. The highest is Goodenough Island, 8000 feet. The largest rivers of the mainland flow into the Gulf of Papua. The Fly River, with its tributaries, drains an extensive area of the territory of the Netherlands, as well as the British. Its length in British territory is about 620 miles, and it is navigable by a steam launch for over 500 miles. Other important rivers are the Turama and the Purari. There are many excellent harbours.

### § 3. Population.

The total white population of Papua on 30th June, 1917, was 1036, made up of 698 adult males and 228 adult females (adults being persons over 16 years of age), and 59 male and 5 female children. The following table gives the population of Papua for the last five years:—

#### WHITE POPULATION OF PAPUA, 1913-1917.

YEAR ENDED 30TH JUNE.

1913.	1914.	1915.	1916.	1917.
1,219	1,186	1,037	992	1,036

The chief occupations of adult male Europeans were:—Planters (including managers and assistants), 139; miners, 116; Government officials and employees, 119. The number of missionaries is stated as 70.

It is not possible to make a reliable estimate of the number of natives, owing to the fact that much of the interior country is unexplored. It is generally assumed to be somewhere between 400,000 and 500,000. These speak many languages and dialects. The coloured population, other than Papuans, numbered on 30th June, 1917, 328, of whom 217 were mission teachers principally from Samoa, Fiji, Solomon Islands, and other South Sea Islands. On the same date, half-castes, including Papuan half-castes, totalled 338. An Immigration Restriction Ordinance prohibits the immigration into the territory of persons who fail to pass the dictation test, or who are persons of bad character, or likely to become a charge upon the public. Exemptions may, however, be granted by the Lieutenant-Governor to persons of special skill whom it is desired to employ as overseers or foremen.

### § 4. Native Labour.

The rights of both employer and labourer are conserved by the Native Labour Ordinances. Service on the part of the native is voluntary, and he must be justly treated, and properly housed and fed. Employers may recruit personally, or obtain their natives through a licensed recruiter. Contracts of service must be in writing, entered into before a magistrate or other qualified officer, and the natives must be returned to their homes on completion of engagement. The labour question is complicated by the communistic system which prevails in the villages. Native custom demands that the friends or fellow-clansmen of the returned labourer receive a share in whatever he gets. The result is that the stimulus of individual interest is largely absent. During the period of service the recruiter or employer is personally responsible for the native's welfare. Refusal to work after engagement, or desertion from service, renders the labourer liable to imprisonment. On the other hand, a magistrate may terminate an engagement where unjust or harsh treatment by the employer is proved. The term of indenture must never exceed three years, and in the case of miners and carriers eighteen months is the limit, but re-engagements may be made. The magistrate must satisfy himself that the remuneration is fair, that the native is willing to undertake the service, and that there is no probability of unfair treatment or detention. Wages must be paid in the presence of an officer. A medicine chest, stocked with necessary drugs and first aid instruments, must be kept by all employers.

Just treatment, good food, and satisfactory remuneration for his labour have made the Papuan savage an excellent servant. With considerable natural aptitude and intelligence, he is able to understand readily what is required by his employer; consequently native labour is very largely engaged by the Administration for the construction of roads and public works, and by the private employer for the clearing and upkeep of plantations. In some districts, however, the natives manifest a marked unwillingness to work. Actual ill-treatment of native employees may be said to be non-existent.

The number engaged under contract of service during the year ended 30th June, 1917, was 7892. In addition, there were 2520 natives employed who were not under contract of service, and 1724 employed as armed constabulary, village constables, boat crews, on public works, plantations, etc., making a total employed of 12,136 for the year, as against 9582 in the preceding year.

## § 5. Production.

1. **Papuan Products.**—The products of the territory are obtained from its agricultural, forestal, fishing, mining, and manufacturing industries. There is a Papuan Court at the Imperial Institute, London, where, beside maps, handbooks and reports, a representative collection of products is shewn, additions being made to the exhibits from time to time. Displays of Papuan produce are also made at exhibitions held in the Commonwealth. The industries of Papua are not numerous, but they are becoming more diversified. In many cases, some years must elapse before the raw material is available or commerce.

2. **Agriculture.**—(i.) *Soil and Rainfall.* The physical features of Papua are favourable to agriculture. Rich soils at varying elevations, and heavy and evenly-distributed rainfall, have ensured success in cultivating almost every tropical product of value. The territory comprises immense areas of rich alluvial and volcanic soils along the coast, and equally fertile land at elevations up to 6000 feet. Splendid rainfalls are recorded, except over a belt of country which runs back from the coast to the hills, and which has its dry season from May to November. This "dry" area is admirably suited for the production of tobacco, fibres, cotton, etc. There are 22 meteorological stations throughout the territory. An economic museum and agricultural library have been established. By anticipating and removing many of the pioneering difficulties, the Government has made the task of the colonist an easy one. The feature of recent years has been the steady investment of capital in the development of large areas previously acquired. One of the principal difficulties of planters is the heavy growth of weeds, and the Government has undertaken experiments with the planting of grasses to take the place of weeds, and so keep down rank vegetation.

(ii.) *Plantations.* On 30th June, 1917, there were 254 plantations. Agricultural settlement has been mostly in the Central and Eastern Divisions, though plantations are rapidly spreading in other districts. The total area planted was 47,819 acres, or an average of 186 acres for each plantation. The principal plantation industries entered upon up to the present are coconuts, rubber, sisal hemp, and tobacco. Secondary agricultural industries are the cultivation of bowstring hemp, coffee, vanilla, kapok, cocoa, tapioca, cinnamon, tea, and maize. The natives are compelled by an ordinance to plant coconuts for food supply, and there are now over 50 village plantations in existence. In addition to the coconuts in these plantations many more are planted over small and widely scattered areas by the older natives in accordance with custom. The following table shews the areas under the different cultures on 30th June, 1917:—

							Acres.
Coconuts	...	...	...	...	...	...	34,686
Rubber	...	...	...	...	...	...	7,760
Hemp	...	...	...	...	...	...	3,942
Cotton	...	...	...	...	...	...	5
Tobacco	...	...	...	...	...	...	232
Maize	...	...	...	...	...	...	68
Other cultures (including fruit trees)	...	...	...	...	...	...	626
Total	...	...	...	...	...	...	47,319

It is estimated that over £1,000,000 has been expended in plantations, and, with the exception of two large British companies, practically the whole of the capital has been subscribed in Australia and locally.

(iii.) *Government Plantations and Experimental Stations.* There are five Government plantations with a total area under cultivation of 1634 acres. The table hereunder shews their distribution. The expenditure on these from loan funds to the 30th June, 1917, was £25,366.

#### PAPUAN GOVERNMENT PLANTATIONS AND EXPERIMENTAL STATIONS.

Locality.	Nature of Cultivation.						Area.
							Acres.
Orangerie Bay	...	...	...	Coconuts	...	...	823
Kemp-Welch River	...	...	...	Rubber, coconuts, etc.	...	...	420
Milne Bay	...	...	...	Coconuts, etc.	...	...	59
Hombron Bluff	...	...	...	Rubber, etc.	...	...	160
Nari Island	...	...	...	Coconuts	...	...	235

Sylvicultural nurseries have been established in connection with the plantations with the object of supplying settlers with seeds and plants, which have been imported from the East and West Indies, Central America, tropical Australia, Ceylon, the Malay States, and the Solomon Islands. At the experimental stations, the suitability of the soil and climate for different products is tested, and correct methods of cultivation demonstrated. Large quantities of plants and seeds have been distributed to planters. A Government orchard, for supplying fresh fruit and vegetables, has been established at one of the stations, and yields considerable quantities of European fruit-foods.

(iv.) *Indigenous Products.* There are many indigenous plants of great economic value. These comprise sandalwood and other timber trees, sugar-cane, cotton plants, rubber—both vine, nutmegs, ginger, bamboos, palms, bananas, bread-fruit, edible nuts, sago-palms, fruits, and vegetables.

3. **Live Stock.**—On 30th June, 1917, the live stock in the territory consisted of 362 horses, 6 donkeys, 1109 head of cattle, 91 mules, 91 sheep, 555 goats, 347 pigs, and 5872 fowls. A Government stud farm has been established for the breeding of horses, and the stock at the end of June, 1917, numbered 69. The introduction of rabbits, foxes, hares, and monkeys is prohibited.

4. **Forest Products.**—There is a large diversity of useful timbers in Papua. Of 120 varieties that have been catalogued, 16 are adapted to resisting heavy strains, and are suitable for girders, railway waggons, etc.; 10 for railway carriage and coach building; 15 for joinery, lining, flooring, etc.; 14 for butter boxes; 5 for boat building; 4 for piles, and 15 for cabinet work. Sandalwood is indigenous. It is largely used for cabinet work,

and santal oil is distilled from its roots. Ebony is also produced for export. Rubber is a promising industry. There are considerable areas of native rubber (*Ficus Rigo*); but the planters generally prefer the imported Para rubber. Guttapercha is obtained from a species of *palaquium*, which grows on the hills. Drugs, dyewoods, and spices are also obtained from indigenous plants. Saw mills have been established, but the output has not been sufficient to supply the local demand for building and other timber, and large quantities of sawn timber have been imported from Australia. Contracts have been made by residents to ship timber to Great Britain. The timber licenses in force during 1917 covered 51,215 acres.

5. **Fisheries.**—Pearl-shell fishing occupies an important place in the industries of Papua. A considerable number of luggers is licensed, but the returns are mostly credited to Queensland, whose boundary approaches to within a few miles of the Papuan coast. The species of tortoise which supplies the commercial tortoise-shell is also a native of the territory. Bêche-de-mer and trochus are found along the shores and reefs. There is a dugong fishery on the coast of the Western Division. The value of fisheries exports in 1916-17 was £13,274, of which bêche-de-mer accounted for £2521, pearls £2400, trochus shell £8050, and shell, other, £303.

6. **Mining.**—(i.) *Variety of Minerals.* Minerals have been discovered in many places, and over an extremely wide range. Those discovered so far are—gold, copper, tin, lead, zinc, cinnabar, iron, osmiridium, gypsum, manganese, sulphur, graphite, chromite, brown coal, lignite, and petroleum. With regard to the last-mentioned mineral it may be noted that petroleum of good quality has been secured at Vailala, and a small quantity was raised in 1915. Boring operations are still in progress. The area of petroliferous country has been estimated at 300 square miles, but it is stated that the search for oil has been hampered by the lack of knowledge regarding the deeper geological strata. Other difficulties to be surmounted arise out of the isolation of the field and the climatic conditions in its vicinity. Since the 16th January, 1913, seven bores have been put down, of which No. 7, the deepest, reached 1800 feet. About 2000 gallons of crude oil have so far been raised. Expenditure on the field up to June, 1918, amounted to £84,000, of which drilling plants absorbed £12,000. Of precious stones, only the topaz and beryl have been obtained. Large beds of apparently good coal also exist. A geologist was added to the Government service at the beginning of the year 1911.

(ii.) *Gold.* In 1888 the first gold was discovered. The search has now spread over every division, and finds have been recorded wherever the explorers have gone. Prospecting parties are subsidised by the Government. There are 107 white miners and 1064 indentured labourers; the majority of the whites are working on the Murua, Louisiade and Lakekamu fields. The quantity, in fine ounces, and value of the gold yield for five years are given below:—

GOLD YIELD, PAPUA, 1912-13 to 1916-17.

1912-13.		1913-14.		1914-15.		1915-16.		1916-17.	
Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
fine ozs.	£	fine ozs.	£	fine ozs.	£	fine ozs.	£	fine ozs.	£
15,094	64,115	11,797	50,110	12,058	51,221	10,181	43,248	8,943	37,988

Most of the rivers, with the exception of those flowing into the Gulf of Papua, have been declared open to gold-dredging, and good yields have been obtained from many of the rivers thus dredged. The total value of gold won to 30th June, 1917, was £1,474,237.

(iii.) *Copper.* Rich and extensive deposits of cupriferous ore have been located, and prospecting is still in progress. Owing to heavy transport charges, only the richest ore is, at present, shipped. The principal copper mining areas are the Astrolabe and Woodlark Island. During 1916-17, the production of ore amounted to 1323 tons, valued at £14,050, the bulk of which was raised at the Dubuna mine in the Astrolabe field. The total amount shipped to the end of June, 1917, was 6766 tons, valued at £99,780.

(iv.) *Other Minerals.* Some good samples of galena (sulphide of lead) have been obtained. Small quantities of cinnabar (sulphide of mercury), graphite (or plumbago), osmiridium (or iridosmine), zinc-blende, native sulphur and other minerals are also found.

A mineral laboratory and museum has been fitted up, and is available to prospectors and others interested.

## § 6. Statistical Summary.

1. **Revenue and Expenditure.**—The revenue and expenditure for 1916-17, under principal heads, are given below; also a summary covering a period of five years. In addition to the revenue collected during the year, amounting to £63,568, a sum of £30,000 was granted by the Commonwealth Government.

### REVENUE AND EXPENDITURE OF PAPUA, 1916-17.

REVENUE.				EXPENDITURE.			
Customs and Excise...	...	£45,353		Lieutenant-Governor and Civil list	£3,349		
Post Office	...	2,147		Government Secretary	...	34,432	
Native labour fees	...	2,424		Treasury	...	11,547	
Hospital fees	...	893		Lands and Agriculture	...	7,772	
Mining receipts	...	1,419		Public Works	...	12,916	
Land leases	...	1,402		Medical	...	8,380	
Harbour dues	...	1,807		Department of Native Affairs	...	1,575	
Miscellaneous receipts	...	8,123		Central Court	...	1,514	
				Legislative Council	...	433	
				Government Vessel	...	1,822	
Total	...	£63,568		Total	...	£83,740	

### REVENUE AND EXPENDITURE OF PAPUA, 1912-13 to 1916-17.

Item.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
Revenue	52,335	54,704	51,960	49,311	63,568
Expenditure	89,170	81,095	82,535	77,913	83,740

2. **Imports and Exports.**—The value of imports and exports for the last five years is shewn in the table below:—

### VALUE OF IMPORTS AND EXPORTS OF PAPUA, 1912-13 to 1916-17.

Particulars.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£
Imports	218,323	212,134	202,055	223,040	271,640
Exports	128,016	123,140	94,354	125,428	156,535
Total trade	346,339	335,274	296,409	348,468	428,175

As in all new countries, the imports consist chiefly of articles necessary for the primal needs of the community. Thus in 1916-17 the imports of agricultural products and groceries came to £84,000; drapery, £37,000; hardware, ironmongery and machinery,

£49,000; tobacco, £15,000; kerosene and other oils, paints, etc., £12,000. The chief items of export during the last five years are as follows:—

### EXPORTS OF PAPUA, 1912-13 to 1916-17.

Article.					1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
					£	£	£	£	£
Gold	...	...	...	...	62,332	47,233	50,889	43,249	37,988
Copra	...	...	...	...	16,912	26,063	12,693	19,051	40,882
Rubber	...	...	...	...	517	1,536	1,501	14,846	26,682
Hemp	...	...	...	...	3,039	3,633	1,269	11,999	11,463
Copper Ore	...	...	...	...	18,997	19,733	5,607	9,971	14,050
Pearl Shell and Trochus Shell...	...	...	...	...	8,512	11,212	4,292	6,770	8,050
Pearls	...	...	...	...	9,284	4,602	6,113	1,000	2,400
Bêche-de-Mer	...	...	...	...	1,871	2,857	3,853	3,229	2,521

The development of the plantations is reflected above in the increased exports of copra, rubber and hemp, and as greater areas come into bearing, these figures will, of course, increase. Up to the end of 1914-15 the copra exports were almost wholly native products.

**3. Postal and Shipping.**—Considerable development has been shewn in means of communication—the postal returns, and the tonnage of vessels entered and cleared at ports, having largely increased. Particulars regarding postal matter are given hereunder:

### POSTAL STATISTICS OF PAPUA, 1912-13 to 1916-17.

Year.	Letters.		Packets.		Newspapers.		Parcels.	
	Received.	Des-patched.	Received.	Des-patched.	Received.	Des-patched.	Received.	Des-patched.
1912-13	136,585	111,574	23,088	5,338	112,931	37,030	2,935	1,049
1913-14	158,760	124,353	24,458	8,347	130,620	35,011	3,305	1,367
1914-15	144,193	98,158	23,878	7,215	111,011	37,393	3,220	1,004
1915-16	157,218	112,572	30,054	2,460	100,464	13,302	2,904	876
1916-17	127,296	106,836	14,724	4,476	98,016	33,900	3,108	1,044

The value of money orders issued in 1912-13 was £7166; of those paid, £793. In 1916-17, the respective values were £6207 and £1146.

The following table shews the number, tonnage, and nationality of vessels entered and cleared at ports during the years 1912-13 to 1916-17:—

### SHIPPING.—FOREIGN-GOING VESSELS ENTERED AND CLEARED AT PORTS OF PAPUA, 1912-13 to 1916-17.

Nationality.	Vessels.									
	Number.					Tonnage.				
	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
British...	1,721	863	610	166	121	182,676	159,776	262,897	96,753	72,414

Total...	1,777	929	643	214	171	306,478	358,506	362,626	247,887	231,008

The preponderance in number of British vessels in 1912-13 was caused by the inclusion in the returns, for that year only, of small fishing and recruiting vessels. Throughout, the figures are exclusive of ships of war and Government vessels.

## § 7. Land Tenure.

**1. Method of Obtaining Land.**—(i.) *The Land Laws.* The broad principles upon which the land laws of Papua are based are:—(a) No land can be alienated in fee simple; (b) the rental of the land leased is assessed on the unimproved value of the land, and is subject to reassessment at fixed periods.

A detailed account of the method of obtaining land was given in Official Year Book No. 6, pp. 1088-4.

(ii.) *The Leasehold System.*—With a view of attracting pioneer settlers, an ordinance was passed in 1906 under which leases were granted on very liberal terms. No rent was payable for the first ten years, the heavy expense of survey was borne by the Government, and no charge was made for the preparation and registration of the leases; that is to say, no payments whatever had to be made to the Government for 10 years. Under this system, the area under lease increased in four years from 2089 acres to 363,425 acres; about 140 plantations were started, and nearly 1000 acres planted during that period.

After allowing free survey for three years, it was decided that all future applicants for agricultural leases exceeding in area 100 acres should be required to pay the cost of survey. It was also found desirable to check a tendency amongst a proportion of land applicants to obtain areas so great that the improvement conditions could not be carried out. It was therefore enacted that no leases should be granted after 1st June, 1910, exceeding 5000 acres in extent, and that rent at the rate of 3d. per acre must be paid from the commencement on all leases exceeding 1000 acres in area. As a result of these enactments, several leases have been forfeited. On the other hand, a stricter enforcement of improvement conditions has resulted in a substantial raising of the standard.

**2. Land Tenures.**—On 30th June, 1917, the lands of the territory were held as follows:—

	Acres.			
Area of land held by the natives	...	...	...	57,064,636
Area of Crown land ...	...	...	...	630,403
Area of freehold land	...	...	...	23,085
Area of leasehold land	...	...	...	227,476
Area of territory	...	...	...	57,945,600

Private sales of land in the territory have now practically ceased. The Government buys from the natives, and then leases to planters, who are forbidden to have direct dealings in land with Papuans. The position as regards leasehold tenures may be seen from the following table:—

### AREA HELD UNDER LEASE IN PAPUA, 1912-13 to 1916-17.

Year ended 30th June.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
Land held under lease ... acres (as recorded).	290,936	230,879	235,072	228,013	227,476

Of the total area of 227,476 acres shewn above, nearly 200,000 acres were agricultural leases, and about 27,000 acres were held under pastoral lease.

In 1916-17, the area of leases granted was 14,746 acres; that of leases surrendered, revoked, and forfeited was 15,191 acres. The area of land acquired by the Crown from the natives was 34,427 acres.

The total area surveyed in the Territory is 22,523 acres of freehold, and 258,120 acres of leasehold.

## § 8. Progress of the Territory.

1. **Statistical View of Ten Years' Progress.**—As already stated (§ 2, *supra*) the territory was placed under Commonwealth control on 1st September, 1906. The following table indicates the progress that has been made since that date :—

## STATISTICAL SUMMARY, PAPUA, 1907-1917.

Items.	Year ended 30th June.	
	1907.	1917.
White population ... ..	690	1,036
Native labourers employed (exclusive of Crown servants) ...	2,000	10,412

Cattle ... ..	648	1,109
Mules ... ..	40	91

## SECTION XXX.

## PUBLIC HYGIENE.

## § 1. Introduction.

1. **General.**—Though the safeguarding of the public health as an organised department of administration is of comparatively modern growth, few branches of law have expanded more rapidly than the one relating to that subject. The loss of potential wealth incurred through preventable diseases and deaths is of grave concern to the nation, and is a matter which has received an increased amount of attention during the last few years both from the Commonwealth and State Governments and from the Health and other authorities in Australia. Numerous Acts of Parliament have been passed dealing with various aspects of the subject of public hygiene.

2. **State Legislation.**—In the first place there is a number of statutes, passed by the State Legislatures, such as Public Health Acts, Pure Food Acts, and Milk and Dairy Supervision Acts, providing, *inter alia*, for the constitution of Central Health Authorities, vested with definite powers, and furnishing the machinery necessary to enforce these powers. The general effect of this legislation has been to place local sanitary regulations and the execution of the Acts in the hands of the local authorities, subject to a general superintendence by a Government department.

3. **Commonwealth Legislation.**—Secondly, by the enactment of the Commerce (Trade Descriptions) Act 1905, the Quarantine Act 1908-1912, and the Customs Act 1910, the Commonwealth Government has taken the first steps towards the exercise of its constitutional powers for the protection of the public health. All these Acts are administered by the Department of Trade and Customs.

4. **Scope of Enquiry.**—In addition to the statutes already referred to, account should be taken of a large body of legislation which relates more or less indirectly to the subject of public hygiene. It deals with a great variety of subjects and matters, such as factories, conditions of employment, mines, merchant shipping, prevention of fire, buildings, dangerous performances, and other matters. There is also a number of statutes which have been passed with the object of protecting and supervising infant life. Owing to exigencies of space it is not possible in this section to do more than give a brief description of the scope and results of the legislation relating to public hygiene in its more important aspects.

## § 2. The Public Health Acts.

1. **General.**—The most important statutes relating generally to the subject of public hygiene are the Health Acts which have been passed in each State. While the scope of these Acts differs considerably in some of the States, there is a general similarity in their chief provisions and range of operation. The administration of the Acts is carried on by either a Central Board or a Commissioner of Health under Ministerial control, while their actual execution is imposed on local Boards of Health or on the local authorities constituted under the various Local Government Acts. Ordinarily the central authority has general supervisory powers over local Boards and authorities, and has power to

act in case of default by or in the absence of a local Board or authority as to any duty under the Act, and to recover all expenses incurred. The central authority may also make regulations, and the central and local Boards may make by-laws for various purposes generally specified in the Health Acts. It may be said that the chief functions of the Central Health Authorities are:—(a) the collection and dissemination of useful information relating to health and the prevention of disease, and (b) to control, stimulate, and, where necessary, to supplement the efforts of the local authorities.

Inspectors are sent to make reports on the hygienic conditions of country towns or districts with a view to assisting the local authorities with advice, and keeping the central department posted as to the activity or otherwise of these various bodies.

Rating powers for sanitary purposes are conferred on local authorities by the Local Government Acts.

The general powers of local authorities under the Acts extend to a variety of subjects and matters, including:—sewers and drains, sanitary conveniences, scavenging, cleansing, privies and cesspools, abatement of nuisances generally, offensive trades, public buildings, dwelling-houses and lodging-houses, hospitals, mortuaries, cemeteries and burial grounds, prevention of adulteration of food and drugs, unsound food, pollution of water, supervision of abattoirs and dairies, prevention of infectious diseases, and infant life protection.

**2. New South Wales.**—The Department of Public Health is controlled by the Minister of Public Health. The Director-General of Public Health is the chief executive officer, and is assisted by various staffs—medical, bacteriological, chemical, veterinary, dairy inspection, meat inspection, sanitary, pure food, and clerical. Briefly put, the work of the Department extends over the whole of the State, and embraces all matters relating to public health and the general medical work of the Government; the Director-General of Public Health holding the position of Chief Medical Officer of the Government as well as being permanent head of the department.

The Board of Health has certain statutory duties imposed upon it by various Acts of Parliament, and the Director-General is President of the Board. These duties consist largely in supervision of the work of local authorities (Municipal and Shire Councils), so far as that work touches upon public health matters connected with the following Acts:—Public Health Act 1902, Public Health (Amendment) Act 1915, Dairies Supervision Act 1901, Noxious Trades Act 1902, Cattle Slaughtering and Diseased Animals and Meat Act 1902, Pure Food Act 1908, and Private Hospitals Act 1908. The Board further possesses certain powers connected with public health matters under the Local Government Act 1906. It may be mentioned that the Board of Health is a nominee Board, created in 1881 and incorporated in 1894.

The Director-General of Public Health acts independently of the Board of Health as regards the State hospitals and asylums, and the various public hospitals throughout the State which receive subsidies from the Government.

**3. Victoria.**—In this State the Public Health Acts are administered by a Board composed of two members nominated by the Governor-in-Council and of seven members elected by the municipal councils. The medical and sanitary staffs of the Board consist of (a) the medical inspector, who is also chairman, (b) one assistant medical inspector, (c) two engineering inspectors, (d) three building inspectors, and (e) five health inspectors. The main function of the Board is to enforce the execution of the Health Acts by the local municipalities, but it has been found advisable to supplement this supervisory function by an active policy of inspection as to the sanitary condition of various districts, and the sampling of articles of food. The supervision of the sanitary

condition of milk production is under the Dairy Supervision Branch of the Department of Agriculture, but distribution is supervised by the Board of Health. Acts administered by the Department of Public Health are:—The Health Acts, the Cemeteries Act, and the Meat Supervision Act. The Consolidated Health Act 1915 includes the Adulteration of Wine Act and the Pure Food Act. The Cremation Act is now included under the Cemeteries Act 1915. The Department administers also the Midwives Act and the Venereal Diseases Act 1916. Under the last-mentioned Act it has been made compulsory for all persons affected with venereal disease to place themselves under the care of a duly qualified medical practitioner. Persons other than medical practitioners are prohibited from treating these diseases, or from supplying drugs or medicines. Registered pharmaceutical chemists may, however, dispense prescriptions to patients of medical practitioners. The Act contains various sections—with appended penalties for contravention—designed to check the spread of venereal diseases. A special clinic for the treatment of infected persons was opened in Melbourne in June, 1918. During that month the male patients treated numbered 182, and in July, 278 males were under treatment. Twenty-five women patients were also examined. Over 32 per cent. of those treated in June were alcoholic. It may be mentioned that the Act provides a heavy penalty in the event of a medical practitioner failing to notify cases of these diseases.

4. **Queensland.**—The Public Health Acts 1900 to 1917 are administered by the Commissioner of Public Health under the Home Secretary. The executive staff of the Department includes a health officer, a medical officer for the tuberculosis bureau, a medical officer for enthetic diseases, twelve food and sanitary inspectors, 2 staff nurses, in addition to rat squads in Brisbane. Northern offices, in charge of inspectors, are located at Rockhampton, Townsville, and Cairns. A laboratory of microbiology and pathology, in charge of a medical director, is controlled by the Department, and performs a wide range of microbiological work for the assistance of medical practitioners and the Department.

One function of the Department is to stimulate and advise local sanitary authorities on matters pertaining to the Health Acts, and, where necessary, to rectify or compel rectification, at the cost of the local authority, of sanitary evils produced by local inefficiency or apathy. Its powers and responsibilities were widely increased by the Health Act of 1911-17.

A scheme for the limitation of venereal disease in the metropolitan area is in operation in Brisbane under statutory powers. It includes compulsory notification, free treatment, and the free supply of salvarsan and allied remedies at all public hospitals. Compulsory segregation of venereally infective persons, of either sex, may be effected on occasion. The Health Acts Amendment Act 1917, has extended the venereal clauses to the whole State.

5. **South Australia.**—The Central Board of Health in South Australia consists of five members, three of whom (including the chairman, who is permanent head of the Department) are appointed by the Governor, while one each is elected by the city and suburban local Boards and the country local Boards. The Health Act 1898 provides that the municipal and district councils are to act as local Boards of Health for their respective districts. There are 183 of these local Boards under the general control and supervision of the Central Board. A chief inspector and two inspectors under the Health, Food, and Drugs Acts periodically visit the local districts, and see generally that the Boards are carrying out their duties. There is also a chief inspector of food and drugs (under the Food and Drugs Act 1908), who, in company with an analyst, visits country districts, and takes samples of milk, which are analysed on the spot. There are

two nurse inspectors employed in advising and assisting local Boards in connection with outbreaks of infectious diseases. In the outlying districts there are fourteen inspectors directly responsible to the Board.

**6. Western Australia.**—The legislation in this State is the Health Act 1911, with three amending Acts 1912 (2) and 1915. The central authority is the Department of Public Health, controlled by a Commissioner, who must be a qualified medical practitioner. The local authorities constitute:—(a) Municipal Councils, (b) Road Boards which may be appointed as such, (c) Local Boards of Health, composed of persons appointed by the Governor for a certain period. These Local Boards are only utilised where neither Municipal Councils nor Road Boards are available. Generally speaking, the Act is administered by the local authorities, but the Commissioner has supervisory powers, also power to compel local authorities to carry out the provisions of the Act. In cases of emergency the Commissioner may exercise all the powers of a local health authority in any part of the State.

All the usual provisions for public health legislation are contained in the Act, and in addition, provision is made for the registration of midwifery nurses, and the medical examination of school children.

The amending Act of 1915 deals exclusively with venereal diseases. The main features are:—(1) that none but qualified medical practitioners shall treat these diseases; (2) that all patients shall promptly place themselves under skilled treatment; and (3) that advertisements of medicines and appliances for the treatment of these diseases, of sexual infirmities, etc., shall no longer be published. For the carrying out of these objects, the Act provides, *inter alia*:—

- (a) For the notification (without name and address) of cases to the Commissioner of Public Health;
- (b) For the notification to the Commissioner of patients who discontinue treatment before receiving a certificate of cure;
- (c) For the exercise by the Commissioner, in certain circumstances, of compulsory powers against persons who neglect treatment;
- (d) For the provision of free treatment at hospitals, and at the hands of salaried or subsidised medical practitioners.

A penalty of £50, or imprisonment with hard labour for six months, is provided for any person who knowingly infects any other with any venereal disease, or does anything likely to lead to that result.

**7. Tasmania.**—The Public Health Act 1903 vests central control in the Chief Health Officer, who is the permanent head of the Department of Public Health. He is charged with very wide functions and powers, and in the event of the appearance of dangerous infectious disease (smallpox, plague, etc.) in the State, is vested with supreme power, the entire responsibility of dealing with such an outbreak being taken over by him from the local authorities. Local executive is vested in local authorities, who possess all legal requirement for the efficient sanitary regulation of their districts. Controlling and supervisory powers over these bodies are possessed by the Department of Public Health, whereby many of the powers conferred upon them may be converted into positive duties. One function of the Department is to advise local authorities on matters pertaining to the Health Act, and, where necessary, to rectify sanitary evils produced by local inefficiency or apathy. The department has three full-time inspectors, who assist and instruct the local sanitary inspectors, but full-time district health officers are not provided for. The

number of local authorities under the Public Health Act has been reduced to fifty-one since the Local Government Act 1906 came into force. All parts of Tasmania are now furnished with the administrative machinery for local sanitary government.

The Public Health Act 1917 deals with venereal diseases. Medical practitioners are required to report persons suffering from such diseases, but such notification, however, does not disclose the names or addresses of the patients.

Regulations under the Public Health Act 1903, as amended, for checking or preventing the spread of any infectious disease, came into force in February, 1918.

### § 3. Inspection and Sale of Food and Drugs.

1. **Introduction.**—The importance of securing a pure and wholesome supply of food and drugs is recognised by both the Commonwealth and State Parliaments. Under the Acts referred to later, and the regulations made thereunder, the importation of articles used for food or drink, of medicines, and of other goods enumerated, is prohibited, as also is the export of certain specified articles, unless there is applied to the goods a "trade description" in accordance with the Act. Provision is made for the inspection of all prescribed goods which are imported, or which are entered for export.

2. **Commonwealth Jurisdiction.**—Under Section 51 (i.) of the Commonwealth Constitution Act 1900, the Commonwealth Parliament has power to make laws with respect to trade and commerce with other countries and among the States. By virtue of that power, the Commerce (Trade Descriptions) Act 1905, and the Customs Act 1910, to which reference has already been made in another part of this book (see pp. 557, 558), were passed.

3. **State Jurisdiction.**—The inspection and sale of food and drugs is also dealt with in each State, either under the Health Acts or under Pure Food Acts. There is, in addition, in the several States, a number of Acts dealing with special matters, such as the adulteration of wine and the supervision of meat. The sanitary condition of the milk supply is also subject to special regulations or to the provisions of special Acts.

(i.) *General Objects of Acts.* The general objects of the Acts dealing with the inspection and sale of food and drugs are to secure the wholesomeness, cleanliness, and freedom from contamination or adulteration of any food, drug, or article, and for securing the cleanliness of receptacles, places, and vehicles used for their manufacture, storage, or carriage. The sale of any article of food or any drug which is adulterated or falsely described is prohibited, as also is the mixing or selling of food or drugs so as to be injurious to the health. A more detailed account of the various State Acts and of their administration and enforcement is given in previous issues of the Year Book (see No. 6, p. 1090).

(ii.) *Inspection and Analysis.* Power is given to any authorised officer to enter any place for the purpose of inspecting any article intended to be used as a food or drug and also to inspect articles being conveyed through the streets, by water or by rail. He may take samples for examination or analysis, and may seize for destruction articles which are injurious to health or unwholesome. Chemical analyses and bacteriological examinations are made by qualified officers. Special provision is generally made in the Acts with regard to the sale of preservatives and disinfectants.

(iii.) *Advisory Committees.* In New South Wales, Victoria, and South Australia Advisory Committees have been appointed for the purpose of prescribing food standards and for making recommendations generally with a view to carrying out the provisions of the Acts. The duty of enforcing these regulations is entrusted to the local authorities, but it is stated that up to the present comparatively few of the local councils seem to have realised the importance of guarding the food supplies of the people.

**4. Food and Drug Standardisation.**—With the object of securing uniformity of food and drug standards of the principal manufactured products sold in the Commonwealth, a conference, which was attended by representatives of the Commonwealth and all the individual States except Western Australia, was opened in Sydney on 8th June, 1910. The result of this conference was that several adoptions of standards of food and drugs, and labelling of articles for consumption were made, so as to obtain uniformity in the several States. In June, 1913, a second conference of the principal Health Officers of the Commonwealth and States was held in Melbourne. Emphasis was laid on the importance of fixing uniform standards throughout the Commonwealth for food and drugs, and of also securing uniformity of administration of the laws relating thereto. It was also urged that, as the uniform enforcement of standards throughout the Commonwealth depends to a great extent on the methods of analysis, the Commonwealth and State analysts should prepare standard methods for determination of the chemical standards adopted. The resolutions of the conference were submitted to the Premiers' Conference held in Melbourne in March, 1914. As a result of resolutions then adopted, each State has issued new regulations which have had the effect of ensuring uniformity throughout the Commonwealth.

**5. The Sale of Poisons.**—In Victoria, New South Wales, Western Australia, and Tasmania, the enactments for regulating the sale and use of poisons are administered by the Pharmacy Boards in the respective States. In South Australia, the sale of poisons is provided for by regulations under "The Food and Drugs Act 1908," administered by the Central Board of Health. In Queensland, the Poisons Act was formerly administered by the Police, but it is now administered by the Health Department.

In all the States the necessity of responsible control of poisons has been realised. The preamble to the Victorian Act, which State alone retains it, emphasises this necessity, and contains the key to the objects sought to be obtained. The preamble is as follows:—

"Whereas the unrestricted sale of poisons often leads to fatal accidents and the commission of crime: And whereas large quantities of arsenic, strychnine, and other poisons are used in Victoria for pastoral, agricultural, and other purposes, and fatal accidents occur by reason of the careless custody and use of such poisons by the owners thereof, or persons in their employ: And whereas it is expedient for the safety of the public to regulate the sale of poisons, and to make provision for the exercise of proper precautions in the use of same: Be it therefore enacted, etc., etc."

In New South Wales and Victoria the Government subsidises the Pharmacy Board, in order to enable it to carry out the provisions of the Poisons Act. The subsidy is granted on the ground that the Act is passed for the public safety.

Generally, the poisons legislation throughout the Commonwealth seeks to protect the public, and aims at the prevention and detection of crime by restricting the class of persons allowed to deal in poisons, and by imposing conditions of sale. No persons, other than legally qualified medical practitioners and registered pharmaceutical chemists, are permitted to sell poisons without special license from the bodies administering the legislation in the respective States. These licenses are issued to persons in business

distant from four to five miles from a registered chemist, on production of certificates from medical practitioners, police, or special magistrates or justices as to the applicant's character and fitness to deal in poisons. Annual license fees, ranging from 5s. to 20s., are charged in the several States.

Special conditions are imposed which must be observed by sellers of poisons, namely:—special labelling, the use of special containers, entry in the poisons book of sales of the more dangerous poisons, presentation of a doctor's order by the purchaser where hypnotic and narcotic drugs are required, colouring of arsenic and strychnine, prohibition of sale of certain poisons to persons unknown to the seller. In South Australia, the regulations provide that vendors other than legally qualified medical practitioners, wholesale dealers, and registered pharmaceutical chemists, shall keep all poisons in a cupboard or room with the word "poisons" printed on the door. In Victoria, such vendors must keep poisons in the original package or container. The South Australian regulations also provide that poisons are to be delivered in bottles distinguished by touch from ordinary medicine bottles or from bottles ordinarily used for beverages.

Poisons may be sold by correspondence. In such cases the letter ordering the poisons shall be preserved by the vendor and a memorandum of the date of the letter, by whom it is written, and the quantity and particulars of the poison therein ordered shall be entered in the poisons book, and no person shall sell any such poison so ordered to any person with whose signature he is not acquainted, unless such signature has been witnessed or purports to have been witnessed by a justice, clergyman, or public officer, or is authenticated by some person known to the vendor.

In Victoria and New South Wales, arsenic and strychnine or uncoloured preparations thereof are not permitted to be sold unless—in the case of arsenic or such preparation thereof—it is before the sale mixed with soot or indigo in the proportion of at least one ounce of soot in Victoria, and one ounce of soot or half an ounce of indigo in New South Wales, to one pound of arsenic—and in the case of strychnine or such preparation thereof—it is before the sale mixed with Armenian bole or other colouring matter.

Exemptions from the regulations are made in some States in the case of sales of poisons for agricultural, horticultural and photographic purposes in so far that any person may sell them subject to the restrictions as to the class of container and the manner in which they may be sold. The sale of what are generally known as industrial poisons, such as sulphuric acid, nitric acid, hydrochloric acid, soluble salts of oxalic acid, etc., is governed by regulations, as also is the sale of poisons for the destruction of rats, vermin, etc.

In each State provision is made for the infliction of stringent penalties in all cases of non-observance of the law.

#### § 4. Milk Supply and Dairy Supervision.

1. **Introduction.**—Milk is pre-eminently the food which needs most careful protection at each successive stage of its production, carriage, storage, and delivery, from exposure to infection from extraneous matter. The problem of obtaining a pure and clean milk supply has accordingly, during the last few years, demanded an increasing amount of attention from the Health authorities, and in each State special laws and regulations have been passed governing the supervision of dairy farms and dairies.

(i.) *General Provisions of Acts and Regulations.* In general, it may be said that it is not lawful to sell or offer for sale any milk which is not fresh or wholesome, or which has been watered, adulterated, reduced, or changed in any respect by the addition of water or any other substance, or by the removal of cream. Regulations made under the Acts provide for the carrying-on of dairy farms, dairies, factories, and creameries, under proper and wholesome conditions; and supervisors and inspectors are appointed to enforce these provisions. Generally, the execution and enforcement of the Acts are left to the local authorities.

(ii.) *Registration of Dairymen and Milk Vendors.* Dairymen, milk vendors, and dairy-factory or creamery proprietors are required, under penalty, to be registered. In some States registration must be applied for before commencing to trade; in other States it must be applied for within a specified time after the premises are first used.

(iii.) *Inspection of Premises.* Dairy inspectors employed by the central departments traverse the principal dairying districts, and inspect dairy premises, dairy herds, appliances, and utensils, and ascertain in what fashion the various local authorities carry out the duties imposed on them. Regulations and instructions are issued by the central departments for the information and guidance of local authorities, dairymen, milk vendors, and others, as to precautions to be observed in order to protect milk from contamination, and to ensure cleanliness as to the structural arrangements, dimensions and ventilation of premises, and as to the care and health of dairy cattle. If an inspector is satisfied that any premises or apparatus used therein are unclean, or unfit for the purposes of dairy produce, he may require the owner to put the same in a proper and wholesome condition.

(iv.) *Notification of Diseases.* Every dairyman or milk vendor is required to report immediately any case of certain prescribed infectious diseases occurring in any human being engaged at or residing on his premises. It is the duty of the local authority to take care that communication between all persons belonging to the infected household and the milk business in all its details is prevented. Cases of notifiable diseases occurring in animals at a dairy farm or dairy must also be reported immediately, and the owner must at once isolate the diseased animal. The sale of milk from an infected cow is prohibited, and, under certain circumstances, an inspector may order an infected animal to be branded or destroyed.

(v.) *Analysis of Dairy Produce.* The local authority generally has power to enter premises and to take away samples of the milk, cream, butter, or cheese there found, and of the water supply therein, for the purpose of examination or analysis.

2. **Number of Dairy Premises Registered.**—The following table shews so far as the particulars are available the number of dairy premises registered and the number of cattle thereon during the year 1916-17.

**DAIRY PREMISES REGISTERED AND CATTLE THEREON, 1916-17.**

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.
Premises registered ...	17,751	12,662	9,716	1,112	307	307
Cattle thereon ...	743,751	107,949	235,742	6,765	5,743	*

\* Not available.

3. **New South Wales.**—The provisions of the Dairies Supervision Act 1901 extend to the whole of the Eastern and Central Divisions of this State and to all important dairying districts further inland. Other districts are brought under the operation of the Act by proclamation from time to time. Every dairyman, milk vendor, and dairy factory or creamery proprietor is required, under penalty, to apply for registration to the local authority for the district in which he resides, and also to the local authority of every other district in which he trades. Registrations must be applied for before commencing to trade and must be renewed annually. The Chief Veterinary Inspector is in charge of all inspectorial work under the Dairies Supervision Act 1901, and has assisting him one assistant veterinary inspector and 14 qualified dairy inspectors, each in charge of a district.

4. **Victoria.**—The inspection and supervision in Victoria of dairies, dairy farms, dairy produce, milk stores, milk shops, milk vessels, dairy cattle and grazing grounds are provided for by the Dairy Supervision Act 1915, administered by the Minister of Agriculture. Under the Health Act 1890 and the Pure Food Act 1905, however, the Department of Public Health is empowered to take samples of food (including milk, cream, butter, cheese, and other dairy products) for examination or analysis, to institute prosecutions in case of adulterated or unwholesome food, and to carry out inspection of dairies, etc., in districts not yet proclaimed under the Act. By the end of the year 1917, 106 municipal districts, comprising about one-third of the area of the State, had been brought under the operation of the Dairy Supervision Act. The municipal councils have the option of carrying out the execution of the Act themselves or of electing for execution by the Department of Agriculture; up to the present all but one of the municipalities in which the Act has been proclaimed have elected for Departmental execution.

5. **Queensland.**—The control and supervision of the milk supply and of dairies and the manufacture, sale, and export of dairy produce in Queensland are provided for by the Dairy Produce Acts 1904 and 1911, administered by the Department of Agriculture and Stock. These Acts and the regulations made thereunder apply only to prescribed districts, which comprise the whole of the coastal district from Rockhampton down to the New South Wales border, and the Darling Downs, Maranoa, Mackay, and Cairns districts.

6. **South Australia.**—The Food and Drugs Act 1908, and the Regulations made thereunder, provide for the licensing of vendors of milk and the registration of dairies, milk stores and milk shops. The Metropolitan County Board carries out the requirements of the metropolitan area. In the country, the majority of local authorities have not made statutory provision for the licensing of vendors of milk and the registration of dairy premises; and, in consequence, the Central Board of Health provides for such under the Act.

7. **Western Australia.**—Control of dairies throughout the State is in the hands of the Public Health authorities under the provisions of the Health Act. The inspectors under the Act supervise all sanitary conditions of the premises, the examination of herds being carried out by officers of the Department of Agriculture for the Health Department. This inspection of herds is regularly carried out, and in the case of such animals as arouse suspicion, the tuberculin test is applied. Regular inspection of premises from a sanitary point of view is also maintained.

8. **Tasmania.**—Local authorities are responsible for the dairies in their respective districts. By-laws for the registration and regulation of dairies have been drafted by the Public Health Department, and in the majority of cases have been adopted by the

local authorities. By the Food and Drug Act, which came into force March, 1911, milk sampling is carried out by the local authorities. During 1913, attention was drawn by circular to the requirements of local authorities with regard to dairies, and a special report is now required before licenses are granted. An Act also provides for the registration and inspection of dairies and other premises where dairy produce is prepared, and regulates the manufacture, sale, and export of dairy produce.

## § 5. Prevention of Infectious and Contagious Diseases.

1. **General.**—The provisions of the various Acts as to precautions against the spread and the compulsory notification of infectious diseases may be conveniently dealt with under the headings—(a) Quarantine; (b) Notifiable Diseases; and (c) Vaccination.

2. **Quarantine.\***—Under the Commonwealth Quarantine Act 1908, the systems of State quarantine formerly in operation were abolished, and a branch of the Department of Trade and Customs, under the immediate control of a Director of Quarantine, was created on 1st July, 1909. Amending Quarantine Acts were passed in 1912 and 1915, correcting certain imperfections in the original Act, and conferring additional powers. Uniformity of procedure has been established throughout the Commonwealth in respect of all vessels, persons, and goods arriving from overseas ports or proceeding from one State to another, and in respect of all animals and plants brought from any place outside Australia. In regard to interstate movements of animals and plants, the Act becomes operative only if the Governor-General be of opinion that Federal action is necessary for the protection of any State or States; in the meantime the administration of interstate quarantine of animals and plants is left in the hands of the States.

(i.) *Transfer of Quarantine Stations.* The transfer from the States to the Commonwealth of the quarantine stations, for the purposes of human quarantine, at the following places, has been effected:—(a) *New South Wales.* North Head (near Sydney). (b) *Victoria.* Point Nepean (near Melbourne). (c) *Queensland.* Colmslie and Lytton (near Brisbane), and Thursday Island. (d) *South Australia.* Torrens Island (near Adelaide). (e) *Western Australia.* Woodman's Point (near Fremantle), Albany, and Broome. (f) *Tasmania.* Bruny Island (near Hobart). Animal quarantine stations in each of the States have also been transferred, and steps are being taken for the taking over by the Commonwealth of other stations. New buildings and improvements are in course of construction at several of the transferred stations. New stations have been constructed at Townsville in Queensland, and at Bunbury, Western Australia.

(ii.) *Administration of Act.* The administration of the Act in respect of the general division, *i.e.*, vessels, persons, and goods, and human diseases, is under the direct control of the Commonwealth in all States except Tasmania. A medical chief quarantine officer, with assistant quarantine officers, has been appointed in each State. This officer is charged with responsible duties, and is under the control of the Director of Quarantine. In Tasmania, the chief health officer of the State acts as chief quarantine officer, and payment is made to the State for his services. The administration of the Act in the Northern Territory has been combined with that of Queensland under the chief quarantine officer for the North-eastern Division. The administration of the Acts and regulations relating to overseas animal and plant inspection and quarantine is also carried out by the officers of the State Agricultural Departments acting as quarantine officers.

---

\* From information furnished by the Federal Director of Quarantine.

(iii.) *Chief Provisions of Act.* The Act provides for the inspection of all vessels from overseas, for the quarantine, isolation, or continued surveillance of infected or suspected vessels, persons, and goods, and for the quarantining and, if considered necessary, the destruction of imported goods, animals, and plants. The obligations of masters, owners, and medical officers of vessels are defined, and penalties for breaches of the law are prescribed. Power is given to the Governor-General to take action in regard to various matters by proclamation, and to make regulations to give effect to the provisions of the Act. Quarantinable diseases are defined as small-pox, plague, cholera, yellow fever, typhus fever, leprosy, or any other disease declared by the Governor-General, by proclamation, to be quarantinable. "Disease" in relation to animals means certain specified diseases, or "any disease declared by the Governor-General, by proclamation, to be a disease affecting animals." "Disease" in relation to plants means "any disease or pest declared by the Governor-General, by proclamation, to be a disease affecting plants." The term "plants" is defined as meaning "trees or plants, and includes cuttings and slips of trees and plants and all live parts of trees or plants and fruit."

(iv.) *Proclamations.* The proclamations so far issued specify the diseases to be regarded as diseases affecting animals and plants; appoint first ports of landing for imported animals and plants and first ports of entry for overseas vessels; declare certain places beyond Australia to be places infected, or as places to be regarded as infected with plague; prohibit the importation (a) of certain noxious insects, pests, diseases, germs, or agents, (b) of certain goods likely to act as fomites, and (c) of certain animals and plants from any or from certain parts of the world; and fix the quarantine lines in certain ports of Australia.

(v.) *Regulations.* Regulations have been made prescribing the quarantine signal; the hours of clearance of vessels; forms of notices, orders, reports, and bonds to be used by masters, medical officers, quarantine officers, and importers; the period of detention of vaccinated and unvaccinated persons in quarantine; the conditions of removal of goods and mails; the method of disinfection of persons, animals, and infected or suspected articles; the notification of certain diseases, including venereal diseases; the conditions under which certain animals not prohibited may be imported; the sustenance charges for quarantine animals; the conditions of importations of hides, skins, wool, hair, bones, and animal manure; the method of carrying out the quarantining, disinfection, fumigation, and treatment of plants and packages. Regulations have also been made with the object of preventing the ingress to and the egress from vessels of rats and mice, and for the destruction of rats, mice, and other vermin.

(vi.) *General.* The procedure has already been greatly simplified. Instead of all overseas vessels being examined in every State, as was formerly the case, those arriving from the south and west are now examined only at the first port of call, and pratique is given for the whole of the Commonwealth, except in cases of suspicious circumstances, while vessels arriving from the northern routes are examined only at the first and last ports. It is expected that the restrictions placed upon overseas vessels will be further removed as the machinery of quarantine is improved. The present freedom from certain diseases which are endemic in other parts of the world, would, however, appear to justify the Commonwealth in adopting precautionary measures not perhaps warranted in the already infected countries of the old world.

3. *Notifiable Diseases.*—Provision exists in the Health Acts of all the States for precautions against the spread and for the compulsory notification of infectious diseases. When any such disease occurs, the Health Department and the local authorities must at once be notified. In some States notification need only be made to the latter body. The duty of giving this notification is generally imposed, first, on the head

of the house to which the patient belongs, failing whom on the nearest relative present, and on his default on the person in charge of or in attendance on the patient, and on his default on the occupier of the building. Any medical practitioner visiting the patient is also bound to give notice.

(i.) *Notifiable Diseases Prescribed in each State.* In the following statement those diseases which are notifiable in each State are indicated by a cross:—

#### DISEASES NOTIFIABLE UNDER THE HEALTH ACTS IN EACH STATE.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.(d)	Tas.(e)

Whooping cough ...	...	+	...	+	...	...
Yellow fever...	...	+	+	+	+	...

(a) In metropolitan and certain proclaimed districts. (b) Under the Venereal Diseases Acts. (c) Thursday Island area only. (d) Other diseases enumerated as notifiable under "The Health Act 1911" of this State are pyæmia, and Malta, dengue, low and Colonial fevers. (e) Venereal diseases are notifiable under The Public Health Act 1917. (f) Chicken-pox has been declared a notifiable disease to render certain its differential diagnosis from small-pox.

(ii.) *Duties of Authorities.* As a rule the local authorities are required to report from time to time to the Central Board of Health in each State as to the health, cleanliness, and general sanitary state of their several districts, and must report the appearance of certain diseases. Regulations are prescribed for the disinfection and cleansing of

premises, and for the disinfection and destruction of bedding, clothing, or other articles which have been exposed to infection. Bacteriological examinations for the detection of plague, diphtheria, tuberculosis, typhoid, and other infectious diseases within the meaning of the Health Acts are continually being carried out. Regulations are provided in most of the States for the treatment and custody of persons suffering from certain dangerous infectious diseases, such as small-pox and leprosy.

(iii.) *New South Wales.* The proclamation and notification of infectious diseases are dealt with in Part III. of the Public Health Act 1902. Special provision is made by that Act for the notification of small-pox and leprosy, and for the custody and treatment of lepers. Special reports dealing with outbreaks and the ætiology of plague, leprosy and smallpox have been published.

(iv.) *Victoria.* Under Part VI. of the Public Health Act 1915, the notification of cerebro-spinal fever or meningitis, continued, enteric and scarlet fever, diphtheria, infantile paralysis, membranous croup, poliomyelitis anterior acuta, pulmonary tuberculosis, scarlatina, and typhoid is compulsory. An infectious disease cannot be declared notifiable unless it is prevalent; hence smallpox, cholera, etc., are not notifiable diseases. An Act, passed in 1907, requires medical practitioners and registrars to report all cases of notifiable diseases coming under their notice in any proclaimed district, and not merely those cases which occur in the district in which the practitioner or registrar is resident.

(v.) *Queensland.* Under Part VII. of the Health Act 1900-1917, all cases of infectious diseases must be notified; special provision is made for notification of small-pox. No case of plague has occurred since 1908. Provision is made for the diagnosis of leprosy, and lepers are sent to Peel Island, Moreton Bay.

(vi.) *South Australia.* In this State cases of infectious diseases must be reported to the local Board, under the provisions of Part VIII. of the Health Act 1898. The onus of notification is placed primarily on the head of the family, and, failing him, the nearest relative, the person in charge, or the occupier of the house; in any case, notification must be given by the medical practitioner attending.

(vii.) *Western Australia.* The necessity for providing hospital treatment for infectious cases has been recognised by the Boards of Health, and in several instances wards for the treatment of these cases have been erected.

(viii.) *Tasmania.* Provisions regarding the prevention and notification of infectious diseases are contained in the Public Health Act 1903, as amended in 1908.

4. *Vaccination.*—In the State of New South Wales there is no statutory provision for compulsory vaccination, though such exists in all the other States of the Commonwealth. With the exception of Victoria, the Vaccination Acts are, however, not generally enforced. The Calf Lymph Depot of the State of Victoria was transferred to the Commonwealth in October, 1911. It is now designated "The Commonwealth Vaccine Depot," and is under the control of the Director of Quarantine. Lymph is prepared in this depot to meet the requirements of the Quarantine Service and of all the States. A considerable demand exists for lymph in the State of Victoria, where infantile vaccination is compulsory, but in the other States the normal requirements are small. During the years 1912, 1913, and 1914, the output of lymph in doses from the depot was respectively 65,000, 570,000, and 146,000. The number of doses issued in 1913 was, however, abnormal, and was due to the epidemic of small-pox which broke out in Sydney at the end of June, this being followed by large numbers of vaccinations in each State.

The following table shews, so far as particulars are available, the number of persons vaccinated in each State from 1911 to 1917 inclusive:—

NUMBER OF PERSONS VACCINATED IN EACH STATE, 1911 to 1917.

Year.	N.S.W.*	Victoria.†	Q'land.	S. Aust.	W. Aust.	Tasmania.
1911	20	20,562	†	1,431	†	†
1912	...	21,548	†	†	†	†
1913	520,000	24,562	33,500	†	12,000	3,204
1914	6,629§	23,536	30,000	940	3,017	†
1915	4,080§	24,186	58	854	†	†
1916	2,618	20,916	†	531	†	†
1917	4,663	19,759	†	251	†	†

\* By officers of the Health Department and at public depots. † Children only, who were vaccinated under the Act, see (ii.) below. ‡ Returns not available. § Exclusive of the military. || At Health Department, Brisbane.

(i.) *New South Wales.* Although there is no provision for compulsory vaccination in this State, public vaccinators have been appointed. The large number of vaccinations in 1913 was due to the epidemic of small-pox in New South Wales, 1073 cases of the disease being recorded. No statistics are available as to the proportion of the population who have been vaccinated, but a report of the Principal Medical Officer of the Education Department states that out of 94,918 children medically examined during 1914, 33,109, or 35 per cent., had been vaccinated.

(ii.) *Victoria.* Compulsory vaccination is enforced throughout the State, under Part IX. of the Health Act 1890. From the year 1873 up to the present time, it is estimated that 72 per cent. of the children whose births were registered have been vaccinated. Free lymph is provided. As a result of the small-pox epidemic in New South Wales in 1913, it is estimated that, exclusive of the vaccinations of children given in the above table, about 40 per cent. of the adult population were vaccinated or re-vaccinated in 1913. The number of children vaccinated in Victoria during 1917 was 19,759.

(iii.) *Queensland.* Although compulsory vaccination is provided for in this State, under Part VII. of the Health Act 1900-1917, its operation has not been gazetted in force. Vaccination thus being purely voluntary, medical practitioners do not notify vaccinations. In the early part of 1912, the Queensland Government sent a medical expedition to the islands in Torres Straits. Over 1200 natives were vaccinated with a view to reducing the risk of the introduction of small-pox from New Guinea. As a result of the small-pox epidemic in Sydney, approximately 33,500 people were vaccinated in Queensland during 1913. Information as to vaccinations in 1917 is not available.

(iv.) *South Australia.* The Vaccination Act 1882, which applies to South Australia and the Northern Territory, is administered by the vaccination officer of the State. Under this Act vaccination was compulsory, but in 1917 an Act to abolish compulsory vaccination was passed. It is estimated that about 15 per cent. of the children born are vaccinated. The total number of vaccinations in 1917 was 251.

(v.) *Western Australia.* In this State vaccination is compulsory under the Vaccination Act 1878, which, however, remains almost a dead letter. Seeing that under the Health Act 1911, a "conscientious objection" clause was inserted, which is availed of by the majority of parents, the number of children vaccinated is very small. All district medical officers are public vaccinators, but they receive no fee for vaccinations. Owing to the outbreak of small-pox in Sydney during 1913, it is estimated that not less than 12,000 children and adults were vaccinated in that year, while nearly 3000 vaccinations were effected during 1914 at Bunbury owing to an outbreak of small-pox, which occurred there in May of that year.

(vi.) *Tasmania*. All infants in Tasmania are nominally required, under the Vaccination Act 1898, to be vaccinated before the age of 12 months, unless either (a) a statutory declaration of conscientious objection is made, or (b) a medical certificate of unfitness is received. The Act has not been enforced, and upto June, 1913, practically no vaccination of infants had been performed since the small-pox outbreak in Launceston in 1903, when 66 cases occurred with 19 deaths. During that year 24,857 were vaccinated in Tasmania. In 1913, owing to the outbreak of small-pox in New South Wales, there were 3204 cases of vaccination by public vaccinators. Information in regard to vaccinations in recent years is not available.

5. **Commonwealth Serum Laboratories.**—It is proposed to extend the establishment for the preparation of calf lymph, situated at Royal Park, near Melbourne, and to prepare thereat the recognised serum products and vaccines for the treatment of human diseases. It is hoped that the enlarged institution will be in full operation during 1919.

## § 6. Tropical Diseases.

1. **Introduction.**—The remarkable development of parasitology in recent years and the increase in knowledge of the part played by parasites in human and animal diseases have shewn that the difficulties in the way of tropical colonisation, in so far as these arise from the prevalence of diseases characteristic of tropical countries, are largely removable by preventive and remedial measures. Malaria and other tropical diseases are coming more and more under control, and the improvements in hygiene which science has accomplished lend an entirely new aspect to the question of white settlement in countries formerly regarded as unsuitable for colonisation by European races. In Australia the most important aspect of this matter is at present in relation to such diseases as filariasis, malaria, and dengue fever, which, although practically unknown in the southern States, are of common occurrence in many of the tropical and sub-tropical parts of the Commonwealth.

2. **Queensland.**—(i.) *Transmission of Disease by Mosquitoes.* The existence of filariasis in Queensland was first discovered about thirty-four years ago. The parasite of this disease (and probably of dengue fever also), is transmitted by *Culex fatigans*, the mosquito most prevalent in Queensland. The *Stegomyia fasciata*, conveyor of yellow fever, is another common domestic mosquito throughout Eastern Queensland during the summer, but so far has never been infected from abroad. Occasional limited outbreaks of malaria occur in the northern parts of the State; one at Kidston, in 1910, resulted in 24 deaths. The infection was traced to newcomers from New Guinea. For many years efforts were made to deal with the mosquito question in the larger centres, but owing to the absence of statutory powers, these had only limited success. Special provisions of the Health Act Amendment Act of 1911 remedied this defect, and extensive operations, involving oiling, drainage, tank screening, the use of larvivorous fish, and other measures were organised by the Department of Public Health. The actual cost of the work during 1913 amounted to £795, of which the metropolitan local authorities contributed £420. Some 50,000 square yards of natural breeding places were attended to weekly by a special mosquito squad, over 2000 street gullies were oiled, and tank screening with fine wire gauze was steadily enforced on owners and occupiers. The work was continued through the winter, in order to reach the eggs and larvæ at their period of lowest vitality. Operations have been, however, partly discontinued from May, 1914, owing to the unwillingness of the municipal councils to incur the expenditure entailed. It is hoped, however, by the Health Department, that a rigorous campaign will again be conducted against this pest, not only in Brisbane, but in every other closely inhabited part of the State, as it is considered that closer communication between the State and other countries, brought about through war conditions, is resulting in the return to Queensland of soldiers and sailors suffering from malaria.

(ii.) *Institute of Tropical Medicine, Townsville.* In January, 1910, the Australian Institute of Tropical Medicine was inaugurated by the Commonwealth Government at Townsville. A special staff was appointed to carry out both the hospital and research work necessary. Owing to the scarcity of suitable laboratory animals for experimental purposes, and also to the absence of any systematic scheme of collaboration with other medical men throughout the tropical parts of Queensland, the initial difficulties confronting the director were considerable. These difficulties are, however, being overcome, and much valuable research has been carried out. At the present time an important examination is being carried out of the blood conditions of children born and reared in North Queensland, with a view of proving whether the blood of the children was normal as far as the formed elements are concerned, or whether deterioration had taken place, effecting an anemia which could be attributed to climatic conditions only. A large amount of work is in progress regarding physiological changes occurring in the white races under the tropical conditions prevalent in North Queensland, especial attention being devoted in connection therewith to metabolism, etc. It is hoped that the result of the work of the institute on these lines will decide the question of the climatic influence on the white man in the tropics, and will indicate whether the great experiment of populating tropical Australia with a white working community can be accomplished. The staff of the institute has for some time been carrying out researches on diseases prevalent in North Queensland, such as malaria, sprue, filariasis, etc., and the results thereof have been published in various medical and scientific journals.

An entomological survey of Tropical Australia as to the prevalence and distribution of biting flies, mosquitoes, and other biting insects, known or likely to be disease-transmitters, has been in progress for several years.

The staff of the institute consists of the director, and a biochemist, bacteriologist, and entomologist.

3. **Northern Territory.**—While the Territory is conspicuously free from most of the diseases which cause such devastation in other tropical countries, a slight amount of malaria exists, and, although such cases as occur very rarely end fatally, the Administrator is taking measures for the destruction of mosquito larvæ wherever settlements or permanent camps are formed, while precautions are being taken to prevent the collection of stagnant water in such localities.

4. **Other States.**—In Western Australia it is stated that malaria is not known to exist south of the 20th parallel, while filariasis has not been discovered at all. No mosquito-borne diseases are known to exist in Victoria, South Australia or Tasmania, and it is stated that filariasis is uncommon in New South Wales, the only cases known being imported ones. Kerosene and petroleum have been successfully used to destroy mosquitoes at various places in these States, both by municipalities and private individuals.

## § 7. Supervision of Infant Life.

It has been frequently stated in recent years that when the social, climatic, and industrial conditions are taken into consideration, the infantile mortality of Australia, particularly in the large towns, is much higher than it should be. It is now generally recognised, however, that infant mortality is largely attributable to parental ignorance and neglect, and that, in particular, improper feeding is accountable for perhaps the majority of infant deaths. In all the States of the Commonwealth, Acts have been passed with the object of generally supervising the conditions of infant life and of reducing the rate of infantile mortality, and in many of the large towns measures have been adopted by private individuals to spread among the mothers a knowledge of the best methods of feeding and caring for their infants. Milk institutes have also been established after the manner of the *Gouttes de Lait*\* in Europe, with the object of reducing the number of deaths of infants from milk poisoning in the summer months.

\* Organised action in this direction commenced in 1894 in Belgium. The original Belgian Society is known as the "*Société des Gouttes de Lait*." The movement has become an international one, and branches of the Society have been founded all over Europe. Similar philanthropic work was commenced in the United States of America before 1894.

*Queensland Hookworm Campaign.* It has recently been found that infection by the hookworm (*Ankylostoma duodenale*) is more widely spread in Queensland than was popularly realised. Of 13,720 whites and 401 aboriginals examined,\* 20.3 per cent. and 76.3 per cent. respectively were found to be infected, the examination embracing the region between Cooktown and Townsville. The detailed results were as follow:—Cooktown 10.8 per cent.; Mossman, 16.4 per cent.; Cairns, 17.7 per cent. of the persons examined: Townsville, 8.4 per cent. of the school children examined. In the sugar districts, the Cairns district shewed 25.2 per cent. cases of infection; Johnstone River, 24.7 per cent.; Cardwell, 43.1 per cent. and Herbert River, 32.1 per cent.

Analysed according to age, it was found that from 6 to 18 years of age the infection was 41.9 per cent. of the cases examined, and for all other ages, 11.7 per cent. According to race, aboriginals shewed 76.3 per cent. of infection; Italians, 43.7 per cent.; other white races, 20.3 per cent. The severity of the disease, as indicated by the resulting anæmia, was shewn by 1322 cases of examinations of hæmoglobin: these gave an average of 72.9 per cent. of the normal, and a minimum of 20 per cent. of the normal. The effect of the disease was to produce marked dwarfing, retardation—both physical and mental, sexual immaturity, and impotence. The mental retardation in children was found to increase with age as follows:—

Age last birthday	... 10	11	12	13	14	15
Retardation in years	... 1.6	2.2	2.5	3.2	3.5	4.5

In the case of children growth and development took place in quite a remarkable way as soon as cure was effected. Instruction given as to the necessary sanitation methods to safeguard the population from infection was appreciated and responded to. Since the hookworm can penetrate the skin very readily, it is essential that where the temperatures admit of its development, great care should be taken not to pollute the soil with human excreta. Experience has shewn that proper demonstrations of the origin and harmful effects of the disease are very effective in bringing about the personal hygiene through which the sources of infection can be minimised. (The above figures are provisional and may finally be modified.)

---

\* By Dr. J. H. Waite of the Rockefeller Institute, U.S.A., who has supplied the particulars given, and is conducting a research upon the ravages of the disease and a campaign for its elimination. His report will appear shortly in the "Medical Journal of Australia."

Reference has been made in a previous part of this book (see page 189) to the number of infantile deaths and the rates of infantile mortality in each State, and it will be convenient to here shew corresponding particulars for the year 1917, classified according to metropolitan and other districts in each State:—

### INFANTILE DEATHS AND RATES OF INFANTILE MORTALITY FOR METROPOLITAN AND OTHER DISTRICTS, 1917.

Districts.	N.S.W.	Victoria.	Queensland.	S.A.	W.A.	Tasmania.	C'wealth.
NUMBER OF INFANTILE DEATHS.							
Metropolitan	1,221	1,129	361	326	245	81	3,363
Other ...	1,765	748	705	275	205	200	3,898
RATE OF INFANTILE MORTALITY.*							
Metropolitan	59.12	65.84	63.21	60.13	63.54	60.45	62.13
Other ...	55.51	47.09	50.09	46.58	50.92	49.55	51.48

\* i.e., the number of deaths of infants under one year of age per thousand births.

It may be seen that in each State the rates of mortality are higher in the metropolitan than in other districts. The causes of "preventable" deaths may generally be attributed to milk poisoning, want of knowledge on the part of mothers, inability to nurse, and lack of the necessary medical facilities.

The figures in the foregoing table do not, however, completely represent the hygienic aspect of the question. For every infant death recorded there are probably three or four survivors who have sustained more or less serious permanent physical damage, quite apart from injuries at birth or congenital causes. It is stated that the far-reaching influence of the first year or two of life upon the whole subsequent physical welfare of the individual cannot be recognised too clearly, and it has been alleged that many serious defects and diseases occurring in later life may be credited to results ensuing from infantile disease. This is particularly the case in respect of digestive diseases.

The conditions regulating the employment of boys and girls in shops and factories are referred to in the section of this book dealing with *Industrial Unionism and Industrial Legislation* (Section XXVII.). Certain particulars have also been given in Section XXIV. (pages 902 to 904) of this book regarding Orphanages and Industrial and Reformatory Schools in Australia. In previous issues a short account has been given of the principal Acts which have been passed in each State dealing with the subject of child-life, and of the principal functions of the States' Children's Departments. (See Year Book No. 6, p. 1101.)

## § 8. Medical Inspection of State School Children.

1. **Introduction.**—For many years medical officers of health and many others concerned in education generally have, from time to time, suggested the desirability of a medical inspection of school children. The State, which enforces school attendance under penalties, is also under the obligation of securing a satisfactory hygiene for the child during such attendance. Moreover, efficiency in education demands several things, viz., that the conditions under which the studies are made shall be physically and hygienically satisfactory; that there shall be no undue concentration of nervous effort on school work, and that the child shall be reasonably safeguarded against infection, etc. Only by an adequate scheme of medical supervision can these results be attained. It appears certain, from the results of the work so far undertaken in the several States by the Medical Inspectors, that, had the supervision of the children's health, more particularly with regard to dental and optic defects, been commenced some years previously, the number of rejects by the military authorities since the outbreak of war would have been very materially reduced.

Several limited and isolated surveys of the physical proportions of Australian children have been made during the past 30 years in the various States. The first important systematic survey, however, was made in Sydney in 1901, and the results were reported by the Government Statistician of New South Wales to the Australasian Association for the Advancement of Science Conference in Hobart in 1902, and shewed that the Sydney boy was taller than the English boy, but that his chest expansion was small in comparison with European figures.

A series of measurements on 500 boys took place concurrently but independently in Hobart during 1901, which also gave similar results. It was recognised that the figures were based on limited numbers, but they at least challenged attention. The 1901 survey in Sydney, though small, was a valuable and suggestive contribution to anthropometric research in Australia, and may be regarded as the beginning of a systematic attempt to ascertain what characteristics of bodily form are exhibited in Australia. This enquiry roused considerable interest in the other States, and series of measurements have since been made in Western Australia, Tasmania, and South Australia, by various authorities, and in Victoria by the Education Department's medical officers. Each year since 1907 the Department of Education of New South Wales has carried out regular anthropometric measurements of the height and weight of school children. A card for each child allows his measurements for successive years to be recorded. The department perambulated the apparatus, each set serving about 20 schools, and the visits recur in the same month of each succeeding year. Data for the whole State have now been collected, and it is anticipated that a complete analysis of the results will shortly be published.

**2. Co-ordination of Effort.**—So far as it has been carried out, the medical inspection of school children goes to shew that in Australia, as in other lands, the hygiene, both of the schools and of the pupils therein, is more defective than is ordinarily recognised, and that not only preventable physical injury to the rising generation from school conditions can be avoided, but also instruction itself can be made more efficient by a proper regard to the demands of a good school hygiene. With a view to securing uniformity of procedure in the several States, the Commonwealth Government in 1907 formulated a scheme and communicated with the States asking their co-operation in obtaining measurements of school children with a view to establishing the relations between age, weight and height, chest measurement, etc. Delays occurred from various causes, but in a paper read at the Science Congress in Sydney in 1911, the subject was again brought under notice, and this led to the appointment by the congress of a committee of experts to encourage anthropometric research and to consider the organisation of a systematic survey of school children throughout Australia. The scheme was essentially identical with the former proposal of the Federal Government, but in the interim the report of the British Anthropometric Committee became available, thus making possible a method uniform with that of Great Britain, and making the results immediately comparable with those of Europe.

The Australian Anthropometric Committee drew up a memorandum setting forth the importance and object of the survey, and suggestions as to method for the use of teachers, physical trainers and others interested.

A description of the proposed survey will be found in previous issues of the Year Book (see No. 6, p. 1104).

On the coming into operation of the Defence Act of 1910, military training became compulsory in the Commonwealth, and advantage has been taken of the prescribed medical examination to make a systematic record of the height, weight and chest measurement of each trainee. There can be no doubt that these anthropometric records will in time furnish valuable data for the study of Australian physical development. Further reference is made to this subject in the section dealing with "Defence."

**3. New South Wales.**—In this State, arrangements were made in May, 1907, for the medical inspection of school children in Sydney, and later in the year the work was extended to Newcastle.

In 1913, the scheme of school medical inspection was re-organised so as to embrace every pupil in the State whose parents desired such medical inspection of their children. The employment of part-time medical officers was discontinued, and a staff consisting of a principal medical officer and nine full-time medical officers was appointed. Arrangements were made to provide facilities whereby all school children found physically defective will have an opportunity of being treated by the Department's officers. With the proposed additions, the staff of the medical branch will consist of twenty full-time medical officers, three part-time medical officers, seven full-time and six part-time dentists, besides nurses, dental assistants, and clerks. The work now being carried on by the medical branch may be classified under the following heads:—

(1) The medical inspection of all school children in the State, whether attending public or non-State schools; (2) The investigation of epidemics of infectious diseases affecting school children; (3) Inspection of school buildings; (4) Delivering of systematic courses of lectures at the training college; (5) Delivering lectures to the senior girls in all metropolitan schools on the care of babies, personal cleanliness, home hygiene, sick nursing, etc.; (6) Delivering lectures to parents; (7) The medical examination of candidates for admission to the teaching service; (8) Giving first treatment in the back country schools to the eyes of scholars suffering from ophthalmia, and instructing the children and parents regarding future treatment and prevention; also supplying those children with sufficient drugs to carry on the treatment; (9) Visiting the parents of defective children by nurses to better secure the treatment of those children; (10) Preparation and publication of books, pamphlets, etc., dealing with important aspects of hygiene. Since the reorganization alluded to above, 247,385 children have been examined, and of these, 147,079, or nearly 60 per cent., were found to be suffering from physical defects needing treatment. It is stated that considerably less than half of these received treatment.

During the year 1916, 72,918 children were medically examined, exclusive of the number examined by the Travelling Hospital and Travelling Clinics, referred to hereafter. Of these children, 41,445, or 56.8 per cent., were found suffering from physical defects, and of these, 35,294 were treated, 19,909 being attended to by the Departmental officers, while 15,385 were treated by outside agencies, including hospitals, lodge doctors, private practitioners, and dentists.

During the year 1914 a Travelling Hospital and a Travelling Ophthalmic Clinic were inaugurated, being followed by the Metropolitan Dental Clinic and the Travelling Dental Clinic in 1915. At the end of 1916 the treatment schemes in operation consisted of (1) a Travelling Hospital, staffed by two medical officers, a dentist, and a nurse; (2) six Travelling Dental Clinics, each staffed by a dentist and a dental assistant; (3) a Travelling Ophthalmic Clinic; (4) a Dental Clinic in Sydney, staffed by six half-time dentists and three full-time dental assistants. Provision was made for further extensions, but owing chiefly to the war it was not found possible to obtain suitable officers. The Travelling Hospital works in those parts of the State where there are no resident doctors or dentists. The number of children treated by the Department's treatment schemes during 1916 was as follows:—Travelling Hospital, 2614 children; Travelling Dental Clinic, 10,871 children; Metropolitan Dental Clinic, 3764 children; and Travelling Ophthalmic Clinic, 2660 children, or a total of 19,909.

The Sydney University has established a special course for the training of school medical officers. It is expected that a supply of school medical officers, trained to meet the special requirements, will always be available in the future.

4. **Victoria.**—In Victoria three medical inspectors were appointed by the Education Department at the end of 1909, and a fourth was added in 1915. Owing to war requirements, however, the staff has been reduced to two. Medical inspection in this State now includes (a) Medical examination of pupils in State high schools, higher elementary schools and elementary schools; (b) Medical examination of teachers; (c) Lectures on hygiene to teachers; (d) Reports on school buildings and equipment; (e) Investigations *re* epidemic diseases; (f) Supervision of work of school nurses, bush

nurses, special schools, and of the cleansing and disinfecting of schools. Arrangements have been made to examine children four times during their eight years of school life, beginning with children at their entrance to the infant schools. Complete records are kept of the various measurements made and physical and mental defects noted. Notices regarding defects and advice as to consultation of doctor, oculist, etc., are forwarded to parents. After an interval of six weeks the head teachers inquire as to what course of action parents have pursued, and a further inquiry is made four months later. Prior to the long vacation in December, urgent notice is sent to all parents or guardians of children who need treatment, calling attention to the necessity and importance of having defects remedied. In the metropolitan area the School Nurse visits parents, urges treatment, and makes arrangements for visits to public hospitals of children needing attention. During the year ended 30th June, 1917, 6243 children were examined, of whom 1662 boys and 994 girls attended elementary and special schools, and 1787 boys and 1800 girls attended high schools. Teachers examined numbered 475, all of whom were women.

The appointment of bush nurses has proved a boon in remote localities beyond convenient reach of medical aid.

5. **Queensland.**—In this State a systematic scheme for the inspection of State school children came into operation on 1st January, 1911, under which a Medical Branch of the Department of Public Instruction was created, consisting of a Medical Inspector of Schools, a School Nurse, and a Dental Inspector. To this staff were added an assistant Medical Inspector, an Ophthalmic Inspector, two assistant Dental Inspectors, and three part-time Medical Inspectors. Owing to difficulties resulting from war conditions certain modifications have been rendered necessary. The services of both medical inspectors were requisitioned by the military authorities, and the Ophthalmic Inspector, who volunteered for active service, was killed while on duty in France. During 1916, thirteen part-time medical inspectors were engaged, three of whom were stationed in the Brisbane district and the balance in the chief country centres. Three full-time School Nurses are also employed. While careful attention is given to the ordinary medical examination, special effort is directed to what is known as the "follow-up" scheme. This consists in keeping in close touch with all cases of physical defect until the necessary treatment has been given. In cases where parents are unable to pay for private treatment, arrangements are made to have the children attended to at a hospital.

The staff of Dental Inspectors now consists of a Chief Inspector, two male and three female assistants. At present the principal work undertaken is the inspection of the teeth of pupils between the ages of 6 and 8 years, although special cases brought under notice by head teachers are attended to, and in the smaller schools the whole of the children are dealt with. It is proposed to follow, if possible, all children throughout the period of their school existence, and to take effective action to remove dental defects.

While adenoids and enlarged tonsils appear to be the principal defect throughout all the State schools, the children in the Northern and Western districts suffer largely from defective vision and trachoma. The work of the Ophthalmic Inspector is chiefly confined to these districts. The conclusion has been arrived at, as a result of the examinations, that such climatic conditions as dust, glare, heat, etc., so prevalent in the Western districts, which are often looked upon as the direct cause of serious blight or trachoma, are only predisposing causes, and can be safely ignored, provided elementary precautions are taken. The report of the Dental Inspectors, while still disclosing an appalling percentage of defects in the teeth of the children, shews, even in the short time in which the scheme has been in existence, a marked improvement in the schools that were examined twelve months previously.

6. **South Australia.**—In 1909, at the desire of the Government, Dr. Rogers examined 1000 school-going children in different parts of the State. No children under seven years nor over 15 years of age were examined. Investigations were made with regard to personal appearance, cleanliness, height, weight, chest measurements, teeth, eyesight, hearing, nose and throat, etc., and the report was presented to the Minister for Education in September, 1910, the results being, on the whole, satisfactory. A summary of this

report, which contains statistical details exhibiting many interesting comparisons between various States in the Commonwealth and other parts of the world, was given in a previous issue of this book (see vol. No. 5, pp. 1132 to 1138).

No State medical supervision of its school children was, however, undertaken in South Australia until 1913, when a medical officer, a fully trained nurse, and a health inspector were appointed for the work. Under the system adopted, the children are weighed and measured, their sight and hearing tested, and their chests, throats, and teeth examined. After examination, a notice is sent to the parents of any child who is found defective to an extent likely to interfere with its educational progress. No treatment is undertaken by the State. During the year 1916, 2646 children were examined. Of these, there were 551, or 21.15 per cent., with defects of sight or hearing, or adenoids, sufficiently serious to interfere with their educational progress. In addition, the teeth of 1897 children required attention, 490 having teeth in so bad a condition as to affect their general health. It was found that, while teeth were bad in all the schools examined, the other defects mentioned were exhibited in a considerably greater degree among the city children as compared with those living in country districts.

**7. Western Australia.**—Until the year 1911 no general scheme for school medical inspection existed in Western Australia, although examination in a few metropolitan schools had been intermittently carried on. During the latter part of 1906 and the first half of 1907, an extended examination of about 3300 children was conducted by the Department of State Medicine and Public Health with the co-operation of the Education Department. Many physical defects among the children were detected, and the co-operation of the Inspector-General of Schools resulted in steps being taken, where possible, to provide better hygienic conditions. The system followed during 1909 was that, wherever possible, a visit was made to a school, the teacher bringing up all children who appeared to be suffering from any physical defects or bodily ailments. The exact condition of the child having been determined, a notice was sent to the parents calling attention to the necessity of obtaining treatment for the defect. Under the Health Act 1911, Medical Officers of Health become medical officers of schools and school children. Unfortunately, during 1916, the system of inspection under this Act broke down owing to lack of funds. About 600 children only were examined during the year, and there was no regular officer engaged in the work.

In the Metropolitan District the members of the Dental Society have carried out a regular system of examination of children's teeth. In connection with this, and also in connection with the general system of medical inspection, free treatment is provided for those children whose parents are unable to pay.

**8. Tasmania.**—The credit of being the first State in the Commonwealth to provide for the medical inspection of schools and school children in a systematic way rests with Tasmania, where, under the direction of the Chief Health Officer and the Director of Education, about 1200 children attending schools in Hobart were inspected in 1906.

Medical inspection of school children as now existing in Tasmania is carried out by four medical officers, each controlling respectively one of four areas, which for medical inspection purposes are known as Hobart District, Launceston District, the Southern Country and Northern Country Districts of the State. Additional assistants in the persons of school nurses have been appointed to follow up the work of the Medical Inspectors. Reports on the physical condition of the children are furnished, and parents advised when medical attention is considered necessary, and in the case of parents unable to pay for such attention, orders are given for free treatment at the hospital. The system of medical inspection of school children was extended during 1916 to the pupils of private primary schools, where the teacher makes application for such inspection to be made. Under the scheme in operation, practically all of the primary school children of the State come under medical examination at least once in every two years. The examination in 1916 covered 209 country, State, and private schools, and dealt with 8710 children. During 1916 school dental clinics were established in Hobart and Launceston, and 3282 individual children were examined.

## SECTION XXXI.

## THE COMMONWEALTH SEAT OF GOVERNMENT.

1. **Introductory.**—In Year Books Nos. 4 and 5, information was given in this section as to the events leading to the selection of the Federal Capital Territory, and as to the necessary legislation and the progress of operations in connection with the establishment of the capital city. The physiography of the Territory was dealt with *in extenso*, and topographical and contour maps accompanied the letterpress, as well as reproductions of the premiated designs for the laying out of the city. Considerations of space, however, preclude the repetition of this information. On the 12th March, 1913, the official ceremony to mark the initiation of operations in connection with the establishment of the Seat of Government was carried out. At this ceremony the selection of "Canberra" as the name of the capital city was announced.

2. **Progress of Work.**—The design for the laying out of the capital city having been approved, the survey of the main axial lines has been completed, and the marking on the ground, grading, and construction of portion of the roads are proceeding. Considerable progress has been made with the nursery in connection with the afforestation scheme, and the horticultural work undertaken includes cultivating plants for the Continental Arboretum, red park plantation for Narrabundah, pink park plantation for Mount Ainslie, yellow park plantation for Mount Black, and white forest on Mugga-Mugga, for the extensive redwood, pinetum, cedar, and cork oak economic forests. In addition, the previous pine, wattle, and eucalypt plantations have been maintained, and the propagation of native trees in quantities for parkway embellishment undertaken. The power plant is supplying current to all the important points. Active progress with construction has been restricted for the present, and operations are practically being confined to maintenance works.

The following figures indicate the actual work done in road development since the roads were taken over:—

Forming and finishing ...	...	...	...	93½ miles
Gravelling and metalling ...	...	...	...	95½ miles
Clearing out, repairing culverts, etc.	...	...	...	162½ miles
General road repairs ...	...	...	...	178½ miles
Cutting water tables, drains, etc.	...	...	...	146½ miles

3. **Lands in the Territory.**—As a considerable portion of the Commonwealth lands within the Territory is not required in connection with the establishment of the city, such areas are being made available for leasing under certain conditions. A large number of leases have been disposed of under conditions requiring the extermination of rabbits, and the lessees are proceeding with the erection of rabbit-proof fencing in a satisfactory manner. 13,300 sheep and 220 head of large stock are on agistment on land that will be required for departmental use at a later date. Reference has already been made on page 304 to the area of alienated, acquired and leased land within the Territory. All areas are classified into three classes of agricultural and three classes of grazing lands.

4. **Lands at Jervis Bay.**—Sovereign rights over certain lands, comprising about 18,000 acres, and water, at Jervis Bay, to be used for the Naval College and other Federal purposes, has been granted by the New South Wales Government and accepted by the Commonwealth.

5. **Railways.**—The line from Queanbeyan to Canberra, 4 miles 75 chains long, was opened for goods traffic on 25th May, 1914, and is being worked by the New South Wales Railway Commissioners. The construction of a tramway for the carriage of material from the depot yards and power house into the city area is proceeding. The trial survey of the Canberra-Jervis Bay line has been completed, and plans have been prepared sufficient to enable an estimate of the cost of the line to be arrived at. The trial survey from Canberra to the boundary of the Federal Territory (towards Yass), a distance of 11 miles, has been completed, as well as the survey of the line by the New South Wales Government from Yass to the Territory boundary, 32 miles.

6. **Population and Live Stock.**—A complete count of the population was taken on 31st December, 1917, when a total of 1801 was enumerated. It is estimated that 284 persons were absent from the Territory on the date in question. The live stock in the Territory, according to the latest returns, comprises:—horses, 1300; cattle, 6500; sheep, 150,000; and pigs, 200.

7. **Educational Facilities.**—As the result of a conference between the Administrator of the Territory and the New South Wales Education Department, it is proposed that the latter shall, for the time being, continue the administration of education in the Territory, the expenditure involved to be refunded annually by the Commonwealth to the State. A school has been opened at the Royal Military College, Duntroon. (See also page 844.)

8. **Revenue and Expenditure.**—The expenditure in the Federal Territory subsequent to the passing of the "Seat of Government Acceptance Act 1909," and up to the 30th June, 1918, was for 1910-11 £20,319, 1911-12 £64,772, 1912-13 £135,270, 1913-14 £251,669, 1914-15 £212,506, 1915-16 £166,052, 1916-17 £105,971, 1917-18 £32,111, making a total of £988,670. A detailed statement of the various items of expenditure was received too late to be incorporated herewith and is therefore given in the Appendix.

The revenue of the Federal Territory for the year ended 30th June, 1918, was £31,221, including £754 from rates.

9. **Military College.**—In June, 1911, a Military College was opened at Duntroon for occupation by the cadets and staff. Particulars regarding the establishment of this College may be found in Year Book No. 4 (p. 1159). Previous reference has been made to it in the section of this book dealing with Defence (see page 1017).

10. **Naval College at Jervis Bay.**—See section of this book dealing with Defence, page 1026.

## SECTION XXXII.

## THE NORTHERN TERRITORY.

## § 1. Area and Population.

1. **Introductory.**—Upon the extension of New South Wales westward to the 129th meridian in 1827, the Northern Territory was comprised within that colony (see Year Book No. 4, page 16), and in 1863 was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1st January, 1911.

2. **Area and Boundaries.**—The total area of this Territory is 523,620 square miles, or 335,116,800 acres. Its length from north to south is about 900 miles, while its breadth from east to west is 560 miles. Its eastern boundary, dividing it from Queensland, is the 138th meridian of east longitude; and its western boundary, separating it from Western Australia, the 129th meridian. Its southern boundary is the 26th parallel of south latitude, dividing it from South Australia. The northern boundary is the coast line of those parts of the Indian Ocean known as the Timor and Arafura Seas. Near the mouth of the Wentworth River, in the Gulf of Carpentaria, the coast line is met by the eastern boundary; at Cape Domett, near Cambridge Gulf, the western boundary cuts the northern coast line. The length of coast line is about 1040 miles, or 503 square miles of area to one mile of coast line; an exact survey has, however, not yet been made.

3. **Population.**—(i.) *Character.* In 1881 there were 670 Europeans in the Territory, and at the end of 1913 the number was estimated at 2143. The Chinese population, at its maximum during the years of railway construction, 1887 and 1888, has gradually dwindled, the estimate for 1914 being 1033. Japanese, first recorded in 1884, increased up to the year 1898, falling again after five years. The highest recorded population, excluding aborigines, was 7533 in 1888; the estimate for 1917 was 4908. The year 1911 was the first in which the population was dominated by the European race. A thirty years table of population, distinguishing races, will be found on page 1156 of the Commonwealth Official Year Book No. 5. Subsequent to the Census of 1911, a revision of the estimates, back to 1901, was made. The results are incorporated in the following table:—

## POPULATION OF NORTHERN TERRITORY (EXCLUSIVE OF ABORIGINES), 1901 to 1917.

Year ended 31st December.	Male.	Female.	Total.	Year ended 31st December.	Male.	Female.	Total.
1901 ...	3,999	674	4,673	1910 ...	2,738	563	3,301
1902 ...	3,847	627	4,474	1911 ...	2,662	586	3,248
1903 ...	3,582	652	4,234	1912 ...	2,854	621	3,475
1904 ...	3,514	692	4,206	1913 ...	2,995	677	3,672
1905 ...	3,368	678	4,046	1914 ...	3,252	721	3,973
1906 ...	3,248	656	3,904	1915 ...	3,687	876	4,563
1907 ...	3,095	642	3,737	1916 ...	3,839	928	4,767
1908 ...	2,963	609	3,572	1917 ...	3,886	1,022	4,908
1909 ...	2,927	576	3,503				

The census population (3rd April, 1911) was 2734 males, 576 females; total, 3310. The estimate for 31st December, 1917, gives 3886 males, 1022 females, a total of 4908.

(ii.) *Movement of Population.* The following is a summary of movement of population in 1917 (excluding overland migration):—

**MOVEMENT OF POPULATION, NORTHERN TERRITORY, 1917.**

Europeans—		Europeans—		Excess of immigration over emigration	
Inwards ...	1,410	Outwards ...	1,156	Europeans ...	254
Births ...	59	Deaths ...	39	Others ...	(-)119
Others—		Others—		Excess of births over deaths	
Inwards ...	91	Outwards ...	210	Europeans ...	20
Births ...	10	Deaths ...	24	Others ...	(-)14
Increase ...	1,570	Decrease ...	1,429	Net gain ...	141

Note (—) signifies decrease.

The immigration and emigration of the Territory in five-year periods from 1881 to 1910, and for each of the years 1911 to 1917, are shewn in the following table:—

**MIGRATION, NORTHERN TERRITORY, 1881 to 1917.**

Year.	Immigration.	Emigration.	Year.	Immigration.	Emigration.	Year.	Immigration.	Emigration.
1881-5	3,683	3,787	1901-5	2,211	2,932	1914	1,102	778
1886-90	9,208	7,250	1906-10	2,559	3,125	1915	1,904	1,278
1891-5	1,958	2,353	1911	412	431	1916	1,389	1,137
1896-1900	2,538	2,259	1912	846	585	1917	1,501	1,366
			1913	1,033	824			

(iii.) *The Aborigines.* An account of the Australian aborigines, by Dr. W. Ramsay-Smith, was given in Year Book No. 3 (pp. 158-176). The interior of the continent is the most thickly populated by the natives, but it is believed that they are rapidly dying out. In these regions, remote from contact with other races, the native has maintained his primitive simplicity, and furnishes an interesting subject of study to the anthropologist and ethnologist. At the census of 1911, full-blooded aboriginals in the employ of whites, and those who were living in a civilised or semi-civilised condition in the vicinity of European settlements, were enumerated—the males being 743, females 480; total, 1223. Estimates of the total black population of the Territory vary from 20,000 to 50,000.

**§ 2. Legislation and Administration.**

1. *Transfer to Commonwealth.*—(i.) *The Northern Territory Acceptance Act.* A short historical sketch is given in Year Book No. 6, pp. 1113-4. On 1st January, 1911, the Territory was transferred by South Australia to the Commonwealth, upon terms previously agreed upon by the respective cabinets, and ratified by the Commonwealth *Northern Territory Acceptance Act* (No. 20 of 1910). It is enacted that laws and courts of justice remain in operation, powers and functions of magistrates and officials remain vested; estates and interests continue upon the same terms; trade with Australian States is declared free. The Commonwealth assumes responsibility for the State loans in respect of the Territory, paying the interest yearly to the State, providing a sinking fund to pay off the loans at maturity, and paying off the deficit in respect of the Territory. It also purchases the Port Augusta to Oodnadatta railway, and agrees to complete the construction of the transcontinental railway from Port Darwin to Port Augusta.

(ii.) *The South Australian Surrender Act.* The State Act approves and ratifies the agreement surrendering the Territory.

(iii.) *The Northern Territory (Administration) Act 1910.* The Act provides for Government authorising the appointment of an Administrator and officials. South Australian laws are declared to continue in force as laws of the Territory, and certain Commonwealth Acts to apply. Power is given to the Governor-General to make Ordinances having the force of law.

(iv.) *Administration.* A Resident Administrator, vested with supreme authority in internal affairs, was appointed in the Department of the Minister for External Affairs in February, 1912. Many other important administrative offices have also been filled.

(v.) *Legislation.* The main provisions of the Ordinances passed are as follows:—The powers and duties of the Administrator vested in the appointee, include custody of the public seal, appointment and suspension of officials, and execution of leases of crown lands. A Supreme Court with original and appellate jurisdiction is instituted, the method of appointment of the Judge is prescribed, and provision is made for trial by jury, and for the registration and summoning of jurors. A Sheriff, a Registrar-General, and a Health Officer are provided for, also the registration of births, marriages and deaths, and of deeds and documents. Custody and control of aborigines, with extensive powers of supervision, are vested in the Chief Protector. Provision is made for the control of fisheries. Birds protected during the whole or part of the year are scheduled. Crown lands are classified, and their mode of acquisition, entry and holding defined. Shop assistants are to have a weekly half-holiday, and the establishments must be closed at a certain time. A town council has been constituted for Darwin, and provision made for assessments, rates, etc. Mining is encouraged by the provision of rewards for the invention of new processes, and the discovery of valuable deposits and of new mineral fields; subsidisation of the industry and the issue of prospecting licenses are also provided for. Licenses to search for mineral oil, and leases for working, are available. A Board is constituted for the purpose of making advances to settlers who intend to improve and stock their holdings, to purchase farm implements, plant, etc., or to pay off mortgages, the rate of interest and terms of repayment being set out. Reference to the Liquor Ordinance will be found hereunder.

(vi.) *Liquor Traffic.* By the Liquor Ordinance of 1915, the Commonwealth Government assumed the control of the importation, manufacture, and sale of liquor in the Territory. The hotels in Darwin and Pine Creek have been taken over, and a supervisor of hotels has been appointed to oversee the liquor business generally. Extensive additions and improvements to the hotels have been effected. A good profit has been made as far as the sale of liquor is concerned, but the board and lodging part of the catering has shewn a considerable loss.

(vii.) *Schedule of Ordinances.* A schedule of the ordinances promulgated up to the end of 1917 is given hereunder:—

1911.—1, Northern Territory Government; 2, Council of Advice; 3, Sheriff; 4, Tin Dredging; 5, Marine; 6, Registration of Births, Marriages, and Deaths; 7, Interpretation; 8, Stamp Duties Abolition; 9, Supreme Court; 10, Registration; 11, District Council Assessment; 12, Registration; 13, Fisheries; 14, Lands Acquisition; 15, Interpretation; 16, Aborigines.

1912.—1, Native Birds Protection; 2, District Council Assessment; 3, Crown Lands; 4, Supreme Court; 5, Health; 6, Thorngate Estate; 7, Jury; 8, Crown Lands; 9, Early Closing.

- 1913.—1, Mineral Oil; 2, Birds Protection; 3, Registration of Births; 4, Encouragement of Mining; 5, Advances to Settlers; 6, Public Service; 7, Crown Lands; 8, Marriage Validating.
- 1914.—1, Brands; 2, Crown Lands.
- 1915.—1, Licensing; 2, Birds Protection; 3, Roads; 4, District Council; 5, Health; 6, District Council Amendment; 7, Darwin Town Council; 8, Liquor.
- 1916.—1, Liquor Amendment; 2, Eradication of Noxious Weeds.
- 1917.—1, Crown Lands Amendment; 2, Darwin Town Council Amendment; 3, Marriage; 4, Appointment of Acting Administrator; 5, Education; 6, Crown Lands Amendment; 7, Prevention and Eradication of Diseases in Plants; 8, Liquor Amendment; 9, Stamp; 10, Darwin Pound; 11, Crown Lands Amendment.

### § 3. Physiography.

1. **Tropical Nature of the Country.**—The Territory is within the torrid zone, with the exception of a strip  $2\frac{1}{2}$  degrees wide, which lies south of the Tropic of Capricorn.

2. **Contour and Physical Characteristics.**—The low flat coast line seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl, and ironstone form the occasional cliffy headlands. The sea frontage of more than 1000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries.

The principal features of the coast line are enumerated in Year Book No. 1, p. 66; the rivers in Year Book No. 2, p. 76; the mountains in Year Book No. 3, p. 67; the lakes in Year Book No. 4, p. 77; the islands in Year Book No. 5, pp. 71, 72, and the mineral springs in Year Book No. 6, p. 65.

Inland, the country generally is destitute of conspicuous landmarks. From the coast there is a general rise southwards to the vicinity of the 17th or 18th parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea, and those that form the scanty supply of the interior systems. Towards the centre of the continent, the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

### § 4. Climate, Fauna and Flora.

1. **The Seasons.**—There are two main climatic divisions—the wet season, November to April, and the dry season, May to October, with uniform and regular changes of season. Nearly the whole of the rainfall occurs in the summer months. Fuller particulars will be found in Year Book No. 6, p. 1116.

2. **Fauna.**—The ordinary types of native Australian fauna inhabit the territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous), and frogs abound. There are many varieties of freshwater fish and littoral mollusca. Butterflies and beetles are strongly represented. The white ant is a pest, anthills in the Territory sometimes attaining great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Native fauna are in some cases protected. The domesticated animals have been introduced, and buffalo also exist in large herds.

3. **Flora.**—The vegetation is North Australian in type, but a number of the forms belong to the Malayan and Oceanic regions. The timber trees are not of great commercial value, but in the coastal regions tropical vegetation grows luxuriantly to the water's

edge. On the wide expanses of plain country of the interior, there is little vegetation. The principal orders represented in the Territory are:—*Euphorbiaceæ*, *Compositæ*, *Convolvulaceæ*, *Rubiaceæ*, *Goodenoviaceæ*, *Leguminosæ*, *Urticææ*.

Fuller particulars regarding fauna and flora are given in Year Book No. 6, pp. 1116-7.

## § 5. Production.

1. **Agriculture.**—Up to the present, agriculture has made little progress in the Territory, although it has been demonstrated that rice may be grown as an ordinary crop suitable for chaff as fodder, and in certain situations for milling; while maize, cowpeas, sorghum, amercane, millets of various kinds, and sugar-cane can also be cultivated. The drawbacks to success at the present are lack of suitable labour, and deficient means of communication. Purely tropical products such as cotton, tea, coffee, sisal hemp and cigar tobacco can also flourish, but their profitable cultivation depends on a supply of cheap labour, which is unobtainable. The Commonwealth Government has established demonstration farms at Daly River and Batchelor.

2. **Stock.**—(i.) The spacious, well-grassed “runs” of the Territory are, with adequate water supply, suitable for horse and cattle breeding. Large numbers of cattle are overlanded to neighbouring States, which also take considerable quantities of horse hides. The Government has a small experimental sheep station at Mataranka on the head waters of the Roper River, the flock consisting of about 2700 merino sheep. The total area fenced in with dingo and marsupial proof fencing is about 8000 acres, including two small home paddocks. The fencing of a large horse and cattle paddock comprising about 45 square miles is nearing completion. The total area of the Mataranka Station is about 770 square miles. The estimated number of stock in the Territory on 31st December, 1916, is given in the appended statement:—

### LIVE STOCK, NORTHERN TERRITORY, 31st DECEMBER, 1916.

Horses.		Cattle.		Sheep.		Pigs.
21,674	...	420,362	...	47,520	...	500

The dairying industry has not been developed, although it has been shewn that it is possible to make butter of good quality. Fresh milk is procurable in Darwin from the Government dairy, which was leased to a private supplier in 1914. It is found that the rank indigenous grasses in some localities are greatly improved by constant stocking, and become largely replaced by shorter and sweeter varieties.

Herd of wild buffaloes are found on the mainland and on Melville Island, and are descendants of swamp buffaloes, introduced in the early part of last century. They have no value beyond that of their hides, of which large quantities are exported annually.

(ii.) **Meat Preserving Works.** Extensive Meat Preserving works capable of dealing with all the stock available for export have been established in the vicinity of Darwin. Although the works are privately owned, the Government has arranged reasonable terms under which the proprietors have agreed to treat with stock owners. The works commenced operations in April, 1917. For further information see section XIII. §8, 12, page 519.

3. **Mining.**—Small quantities of the precious and commercial metals are mined. The discovery of gold and tin in various localities, and the measure of success that has attended their working, indicate scope for development. An important discovery of tin at Maranboy Springs was made in 1913, and this field is now the most productive in the Territory; up to 30th June, 1916, 1690 tons have been obtained, producing 84 tons of concentrates, this being an average of 4.79 per cent. tin oxide.

(i.) **Mineral Production.** Both alluvial and reef gold are found, and there are several batteries and cyanide plants. Other minerals are also raised. The following table shews the total mineral production for the last five years:—

## VALUE OF MINERAL PRODUCTION, NORTHERN TERRITORY, 1912 to 1916.

Year.	Gold.	Tin Ore.	Wolfram.	Silver Lead Ore.	Copper Ore.	Total Value.
	£	£	£	£	£	£
1912 ... ..	22,671	27,001	3,330	820	3,998	57,820
1913 ... ..	13,250	25,526	3,140	2,228	482	44,626
1914 ... ..	10,757	15,200	4,025	545	4,860	35,807*
1915 ... ..	4,182	13,245	5,278	1,073	10,710	34,498†
1916 ... ..	2,554	27,120	20,269	275	5,517	55,780‡

\* Includes mica valued at £420. † Molybdenite, £10. ‡ Molybdenite, £45.

(ii.) *Employment of Miners, 1911 to 1915-16.* The following table shows the average number employed in mining during the last five years, distinguishing Chinese:—

## MINERS, NORTHERN TERRITORY, 1911 to 1915-16.

Year.	Europeans.	Chinese.	Total.
1911 ... ..	101	575	676
1912 ... ..	84	542	626
1913 ... ..	90	530	620
1914 ... ..	136	462	598
1915-16 ... ..	112	364	476

(iii.) *Mining Accidents, 1900 to 1916.* In 1911 five mining accidents were recorded, four resulting in death. There were no serious accidents in 1910, 1912, and 1913, and only one, resulting in death, in 1914, and one in each of the years 1915 and 1916. During the nine years preceding (1901-1909), nine fatal accidents and seven cases of serious injury were recorded. The majority of the victims were Chinese.

4. *Pearl Fishing.*—In 1884 mother-of-pearl shell was discovered in the harbour of Port Darwin. Difficulty in working, principally through heavy tides and muddy water, retarded the development of the industry for many years. Latterly, however, the opening up of new patches led to a revival, but the outbreak of war has given the industry a setback for a time. The latest figures available are for 1915, in that year, 25 boats were engaged, valued, with their equipment, at about £6250; 150 men were employed. Forty-two tons of pearl shell were obtained, valued at £6135. The value of pearls produced was not stated. About 100 lbs. of tortoise-shell, valued at £50, and bêche-de-mer, valued at £160, were also raised. The above figures give only a partial view of the value of the fishing industry, as large quantities of pearlshell and bêche-de-mer are sent away unrecorded.

## § 6. Commerce and Shipping.

1. *Trade.*—The following table shows the total trade of the Territory for 10 years from 1901 to 1910:—

## VALUE OF TOTAL IMPORTS AND EXPORTS, NORTHERN TERRITORY, 1901 to 1910.

Items.	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
	£	£	£	£	£	£	£	£	£	£
Imports ... ..	108,686	107,217	125,244	113,461	86,878	74,659	78,996	68,905	57,994	52,398
Exports ... ..	302,931	191,558	178,266	235,650	216,279	254,222	345,721	241,023	278,555	269,063
Total Trade	411,617	298,775	303,510	349,111	303,157	328,881	424,717	309,933	336,549	321,461

No record is now kept of the direction of trade between the Commonwealth States and Territories. It is, therefore, impossible to give the total imports and exports of the Northern Territory for years later than 1910. The value of the direct oversea trade for 1901, and for each of the years 1911 to 1916-17 is given hereunder :—

**VALUE OF DIRECT OVERSEA TRADE, NORTHERN TERRITORY,  
1901 and 1912 to 1916-17.**

Items.	1901.	1912.	1913.	1914-15.	1915-16.	1916-17.
	£	£	£	£	£	£
Imports ...	37,539	18,130	20,977	83,708	74,424	82,775
Exports ...	29,191	59,106	67,911	13,319	20,953	13,251
Total ...	66,730	77,236	88,888	97,027	95,377	96,026

The principal items of oversea export in 1916-17 were tin, £11,447, and dried fish £1346.

2. **Shipping.**—The Territory's oversea commerce is carried chiefly in British bottoms, but the Royal Dutch Packet Co. steamers now call monthly. One of the British lines maintains a monthly service, others are irregular. The following table shews the shipping of the Territory :—

**SHIPPING, NORTHERN TERRITORY, 1881 to 1916-17.**

Period.	Arrivals.		Departures.	
	No. of Vessels.	Tonnage.	No. of Vessels.	Tonnage.
1881—1885 (Annual Average)	72	71,814	72	71,692
1886—1890	95	94,452	103	94,724
1891—1895	75	81,128	73	81,090
1896—1900	71	88,284	70	88,244
1901—1905	63	93,751	63	91,556
1906—1910	87	128,502	86	128,408
1911 ...	71	130,178	71	130,178
1912 ...	74	138,052	74	138,052
1913 ...	83	171,504	84	171,594
1914-15 ...	82	173,943	81	172,482
1915-16 ...	91	208,441	91	208,441
1916-17 ...	70	161,636	68	161,313

## § 7. Internal Communication.

1. **Railways.**—Under the agreement ratified by the Act, the Commonwealth is to construct the Northern Territory portion of the transcontinental railway line (connecting Adelaide and Darwin, *via* Port Augusta).

The Northern line from Adelaide terminates at Oodnadatta, about 100 miles south of the southern boundary of the Territory. The only line at present in the Territory is one from Darwin to Katherine, a length of 200 miles, of 3 ft. 6 in. gauge. The line to connect Katherine River with Oodnadatta (about 1010 miles) is in course of survey, the work having been completed as far south as Daly Waters Telegraph Station. It is stated that this transcontinental railway would bring London within seventeen days of Adelaide. The Commonwealth also acquired on 1st January, 1911, the property in the line from Port Augusta to Oodnadatta (478 miles).

2. **Posts.**—The principal mail services are as follows:—

(i.) *Marine.* Postal communication is maintained between Sydney, Melbourne, and Adelaide, *via* North Queensland ports. The service extends to China and Japan. There is also a regular service between Darwin and Boroloola by Government auxiliary vessel, calling at Roper River; and a service every two months between Darwin and Wyndham, on the estuary of Ord River, in the north-east of Western Australia, by the Western Australian Government steamers.

(ii.) *Inland.* Posts are also despatched into the interior of the Continent. One route is from the Katherine Telegraph Station southwards as far as Alice Springs; others are from Katherine to Boroloola, from Camooweal to Boroloola, from Katherine to Victoria River and Wave Hill, and from Oodnadatta to Alice Springs.

3. **Telegraphs.**—The transcontinental telegraph line, covering a length of 2230 miles, was completed on 2nd August, 1872, at a cost of nearly half-a-million sterling. The line runs in a northerly direction from Adelaide to Darwin, whence telegraphic communication is provided with Asia and Europe, *via* Banjoewangie (Java), Singapore, and Madras.

Between Darwin and Banjoewangie the submarine cable is duplicated.

## § 8. Finance.

1. **Revenue and Expenditure, 1916-17.**—In the Commonwealth finance statement for 1916-17, separate accounts are given for Northern Territory administration. The following shews the receipts and expenditure for the financial year named:—

### REVENUE AND EXPENDITURE, NORTHERN TERRITORY, 1916-17.

REVENUE.	£	EXPENDITURE (CHIEF ITEMS.—cont.	£
Customs and Excise... ..	19,156	Port Augusta Railway Loans (Interest, etc.) ... ..	77,436
Postal, Telegraph & Telephone	8,160	Interest on South Australian Rolling Stock ... ..	5,720
Railways ... ..	32,605	New Works ... ..	171,349
Territorial ... ..	18,617	Railways and Transport—Salaries, etc. ... ..	61,016
Land and Income Tax ... ..	10,788	Gold Fields and Mining—Salaries, etc. ... ..	31,837
Miscellaneous ... ..	11,245	Land and Surveys—Salaries, etc. ... ..	10,988
Quarantine ... ..	21	Loss on Railway Working ... ..	30,551
Lighthouses and Light Dues...	1,009	Postal Department... ..	19,437
Port Augusta - Oodnadatta Railway ... ..	1,379	Interest and Sinking Fund on Stock and Treasury Bills in aid of Loans and Railways	56,041
Deficiency on year's transactions	702,385	Redemption of Loans ... ..	137,128
	805,365	Miscellaneous ... ..	15,417
		Total ... ..	805,365
EXPENDITURE (CHIEF ITEMS).	£		
Northern Territory Loans (excluding Port Augusta Railway) ... ..	119,215		
Administrator's Office ... ..	69,230		

2. **Loans.**—The first loan on Northern Territory account was floated in London in 1876; the nominal amount was £75,000, at 4 per cent., due date 1st January, 1916. The public debt on 30th June, 1917, was £2,772,516. The following is a summary:—

## PUBLIC DEBT, NORTHERN TERRITORY, 30th JUNE, 1917.

Principal. £		Rate. %		Annual Interest. £
27,216	...	3	...	816
154,992	...	3½	...	5,425
1,394,008	...	3½	...	52,275
1,196,300	...	4	...	47,852
Total ... 2,772,516	...	—	...	106,368

## § 9. Land Tenure.

1. **Present Policy.**—A description of the system of land settlement in force in the Territory will be found in the chapter "Land Tenure and Settlement," see pages 270, 271 *supra*. Prior to the transfer of the Territory to the Commonwealth on 1st January, 1911, the sale and occupation of lands were regulated by the South Australian Legislature in Statutes applying particularly to the Territory. Under the Commonwealth Government, a complete reorganisation was effected, and the system adopted was embodied in the Crown Lands Ordinances of 1912, 1913, and 1914. A leasehold system only is provided for, and no further alienation of Crown lands is permitted, except in pursuance of existing agreements. The land is classified and appraised, and leased in blocks, the maximum areas ranging from 300 square miles of first class pastoral, to 1280 acres of first class agricultural land. The terms of pastoral leases are for Class 1, 21 years; Classes 2 and 3, 42 years; and for any miscellaneous lease, 21 years. All other leases are to be in perpetuity, making them almost equivalent to freeholds, but with re-appraisal of rent values every 14 years in the case of town lands, and every 21 years in the case of agricultural and pastoral lands. The conditions are of a very favourable nature, with low rents and elastic conditions of tenure. In order to provide for cases where allottees on inspection of their blocks have reasonable grounds for preferring another block, the Administrator is empowered to revoke leases, under certain conditions. Under the Advances to Settlers Ordinance 1913, provision was made for giving settlers financial assistance in the pioneering years. Repayment of loans can be extended over a period of 30 years. Owing to the high evaporation rate, the surface waters in the Territory dwindle rapidly during the dry season, and, except in favoured localities, sub-artesian supplies must be resorted to where obtainable. In order to encourage the provision of water supply, it is proposed, in granting leases, to allow minimum rentals in the case of lessees who make satisfactory provision by means of bores, wells, or dams.

2. **Number of Holdings.**—The table on page 271 *supra* shews the total area under lease, license, and permit in 1901 and in each year from 1912 to 1916. At the end of 1916 there were in existence, under South Australian Acts, 234 pastoral leases covering 64,682,880 acres, and 80 pastoral permits covering 12,072,370 acres. Under the Crown Lands Ordinance of 1912, there were 124 grazing licenses covering 24,605,440 acres, and 51 pastoral leases covering 9,136,129 acres.

## SECTION XXXIII.

## LABOUR AND INDUSTRIAL STATISTICS.

## § 1. Introductory.

1. **General.**—In Year Book No. 7 (pages 992-3), a *résumé* was given of the functions and scope of the Labour and Industrial Branch of the Commonwealth Bureau of Census and Statistics. Owing to considerations of space, that information is not repeated in the present issue of the Year Book.

## § 2. Fluctuations in Employment and Unemployment.

1. **General.**—In Australia, but few of the trade unions pay any form of unemployment benefit, and consequently accurate and complete records of unemployment are difficult to obtain. For that reason the investigation for past years was advisedly limited to a record of the numbers unemployed at the end of each year. The results are, therefore, subject to certain limitations, inasmuch as they do not take into account variations in employment and unemployment throughout the year due to seasonal activity and other causes.

For the above reasons it is not safe to conclude that the actual percentage returned as unemployed in past years by trade unions at the end of each year is equal to the average percentage unemployed during the year. Nevertheless, for the purpose of making comparisons and shewing tendencies over a period of years, the percentages returned as unemployed, though not exact, are the most satisfactory figures available, and the average percentages and index-numbers computed for the several States and groups of unions may be taken as denoting the true course of events with substantial accuracy.

It may be mentioned that, in order to overcome the difficulties alluded to in regard to seasonal fluctuations, returns as to numbers unemployed have been collected from trade unions for each quarter since the beginning of the year 1913.

2. **Number Unemployed in Various Industries, 1891 to 1917.**—The following table shews for each of the years specified :—

- (a) The number of unions for which returns as to unemployment are available.
- (b) The number of members of such unions.
- (c) The number of members unemployed, and
- (d) The percentage of members unemployed on the total number of members of those unions for which returns are available.

The information given in this table obviously does not furnish a complete register of unemployment. In the first place, with the exception of the years 1913 to 1917 it relates only to the number unemployed at the end of the year (see preceding paragraph hereof), and, secondly, it does not cover more than a part of the industrial field. Attention should here be drawn to the fact that the value of the comparisons which can be made is, to some extent, vitiated by the fact that returns are not available for the same unions throughout. For most of the important industries, returns have been available for a considerable number of unions and members since 1912. It is not unlikely, however, that particulars of unemployment are, on the whole, more generally available for those trades in which liability to unemployment is above the average

of skilled occupations. Thus the building and engineering industries are heavily represented in the returns, while such comparatively stable industries as railway service are hardly represented at all. On the other hand, unskilled casual labour cannot, in the nature of the case, be well represented in the returns, which relate mainly to skilled workmen.

Thus, for some reasons, the percentage given is likely to be greater, and for other reasons, less than the true average percentage unemployed throughout the country.

**UNEMPLOYMENT.—NUMBER OF UNIONS AND MEMBERS REPORTING AND NUMBER AND PERCENTAGE UNEMPLOYED, 1891 to 1917 (4th QUARTER).**

Particulars.					Unions.	Membership.	Unemployed.	
							Number.	Percentage.

\* For years prior to 1913 the figures refer to the end of the year only, and not to separate quarters. The quarterly figures shew the number of persons who were out of work for three days or more during a specified week in each quarter; they do not include persons out of work through strikes or lockouts.

The figures shew that the percentage of unemployment was higher in the fourth than in the third quarter of the current year, and also higher than in the corresponding quarter of last year.

**3. Unemployment in Different Industries, 1917.**—The following table shews the percentages unemployed in several of the fourteen industrial groups. It may be observed that for those industries in which unemployment is either unusually stable or, on the other hand, exceptionally casual, information as to unemployment cannot ordinarily be obtained from trade unions. Hence, certain industries such as railways, shipping,

agricultural, pastoral, etc., and domestic, hotels, etc., are insufficiently represented in the returns. Particulars are not, therefore, shewn separately for these groups, such returns as are available being included in the last group, "Other and Miscellaneous."

### UNEMPLOYMENT IN DIFFERENT INDUSTRIES AT THE END OF YEAR 1917.

Industrial Group.	Number Reporting.		Unemployed.	
	Unions.	Members.	Number.	Percentage.
I. Wood, Furniture, etc. ...	19	14,833	1,496	10.1
II. Engineering, Metal Works, etc.	57	35,514	3,969	11.2
III. Food, Drink, Tobacco, etc. ...	60	23,473	2,280	9.7
IV. Clothing, Hats, Boots, etc. ...	23	27,054	1,141	4.2
V. Books, Printing, etc. ...	27	10,173	281	2.8
VI. Other Manufacturing...	69	24,431	1,954	8.0
VII. Building ...	56	30,754	2,539	8.3
VIII. Mining, Quarrying, etc. ...	21	30,210	2,232	7.4
X. Other Land Transport ...	16	9,773	255	2.6
IX., XI., XII., XIII. and XIV., Other and Miscellaneous ...	111	90,722	5,842	6.4
All Groups ...	459	296,937	21,989	7.4

4. **Unemployment in each State, 1917.**—Any deductions which can be drawn from the data collected as to the relative degree of unemployment in the several States are subject to certain qualifications (in addition to those already stated on page 1089), inasmuch as the industries included in the trade union returns are not uniform for each State. In comparing the results for the individual States, it must therefore be borne in mind that, to some extent at least, comparisons are being drawn between different industries and not only between different States. Nevertheless, since the industrial occupations of the people vary considerably in the several States, all comparisons between the States based on comprehensive data as to unemployment must, to some extent, suffer from the defect indicated.

### UNEMPLOYMENT IN DIFFERENT STATES AT THE END OF YEAR 1917.

State.	Number Reporting.		Unemployed.	
	Unions.	Members.	Number.	Percentage.
New South Wales ...	136	135,141	8,706	6.4
Victoria ...	100	82,186	8,751	10.6
Queensland ...	56	40,996	3,068	7.5
South Australia ...	50	16,425	434	2.6
Western Australia ...	77	17,333	892	5.1
Tasmania ...	40	4,856	138	2.8
Commonwealth...	459	296,937	21,989	7.4

### § 3. Variations in Nominal and Effective Wages.

1. **Variations in Wage Index-Numbers in Various Industries, 1901 to 1917.**—The total number of different occupations for which particulars as to wages are available back to 1891 is 652. In 1913 the number of occupations was increased to 3948. These wages relate generally to award rates, but in a few cases, more especially for the earlier years, when there were no award rates fixed, predominant or most frequent rates have been taken. The occupations have been distributed over the fourteen industrial groups already specified, and index-numbers computed for each group for the whole Commonwealth. The wages refer generally to the capital town of each State, but in industries such as mining and agriculture, the rates in the more important industrial centres have been taken.

The following table shews wage index-numbers for the whole Commonwealth in each of the fourteen industrial groups during the years specified. Rates of wages for females are not included. The index-numbers are "weighted" according to the number of persons engaged in different industrial groups in each State and the Commonwealth (see Report No. 8, page 67). In the tables of index-numbers given in this Section, the weighted average wage in 1911 for all States or industries, as the case may be, is taken as base (= 1000). The result is that the index-numbers are comparable in all respects, that is to say, they shew not only the variations in wages from year to year in each State or industrial group, but they also furnish comparisons as to the relative wages in each State or industry, either in any particular year, or as between one year and another, and one State or industry and another.

#### VARIATIONS IN NOMINAL WAGE INDEX-NUMBERS IN DIFFERENT INDUSTRIES IN THE COMMONWEALTH, 1901 to 1917. (WEIGHTED AVERAGE FOR ALL GROUPS IN 1911 = 1000).

Particulars.	No. of Occupations included.		1901.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
	1901 to 1912.	1913 to 1917.											
I. Wood, Furniture, etc.	27	270	1,019	1,051	1,055	1,097	1,125	1,144	1,142	1,161	1,174	1,245	1,288
II. Engineering, Metal Works, etc.	101	636	945	989	995	1,006	1,064	1,104	1,113	1,127	1,174	1,211	1,268
III. Food, Drink, etc.	34	576	871	905	914	928	991	1,038	1,074	1,085	1,127	1,194	1,241
IV. Cloth'g, Hats, Boots, etc.	13	124	708	867	935	976	981	990	1,019	1,034	1,037	1,104	1,163
V. Books, Printing, etc.	25	205	996	1,021	1,070	1,102	1,149	1,188	1,234	1,246	1,259	1,328	1,376
VI. Other Manufactur'g	102	875	907	915	923	947	1,013	1,037	1,076	1,093	1,125	1,203	1,245
VII. Building	67	190	1,050	1,114	1,130	1,163	1,213	1,245	1,270	1,276	1,285	1,359	1,413
VIII. Mining, Quarries, etc.	71	161	1,067	1,116	1,120	1,168	1,194	1,216	1,270	1,272	1,299	1,420	1,528
IX. Rail & Tram Services	68	224	1,021	1,031	1,064	1,074	1,113	1,164	1,165	1,165	1,187	1,236	1,286
X. Other Land Transp't	9	70	795	836	836	889	910	993	996	1,026	1,041	1,128	1,210
XI. Shipping, etc.	74	198	761	787	856	857	871	942	953	972	1,026	1,153	1,194
XII. Agriculture, Pastoral, etc.	8	72	627	736	787	798	839	944	965	965	969	1,073	1,192
XIII. Domestic, Hotels, etc.	17	114	598	626	727	743	887	894	918	935	948	995	1,052
XIV. Miscellaneous	36	233	759	820	843	889	929	1,015	1,045	1,054	1,065	1,137	1,185
All Groups*	652	3,948	848	900	923	955	1,000	1,051	1,076	1,085	1,102	1,184	1,252

NOTE.—The figures in the above table are comparable both horizontally and vertically.  
 \* Weighted average: see graph on page 1105 hereof. † The decrease in this group is due to a reduction in the award rates in the furniture trade resulting from an appeal made by employers.

It may be seen that the index-numbers increased during the whole period under review from 848 in 1901, 1051 in 1911, 1051 in 1912 to 1184 in 1916, and to 1252 in 1917.

It was pointed out in Report No. 2 (see pages 25 and 26) that the index-numbers given in the preceding table are readily *reversible*, that is to say, any year other than the year 1911 can be taken as base, and an example was given, shewing the amount of wages payable in 1901, 1911 and 1912 in each industrial group for every £1 payable in 1891.

2. **Variations in Wage Index-Numbers in Different States, 1901 to 1917.**—The following table shews the progress in rates of wages for all industries in each State, the weighted average wage for the Commonwealth in 1911 being taken as the base (= 1000). These results are based generally upon rates of wages prevailing in the capital town of each State, but in certain industries, such as mining, rates are necessarily taken for places other than the capital towns.

These index-numbers are, of course, also reversible, and an illustration was given in Report No. 2 (see page 27).

### VARIATIONS IN NOMINAL WAGE INDEX-NUMBERS, IN DIFFERENT STATES, 1901 to 1917.

(WEIGHTED AVERAGE WAGE FOR COMMONWEALTH IN 1911=1000.)

States.	No. of Occupations included.		1901.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
	1901 to 1912.	1913 to 1917											
New South Wales	158	874	858	913	943	968	1,003	1,058	1,088	1,096	1,124	1,208	1,257
Victoria ...	150	909	796	871	887	924	985	1,038	1,058	1,065	1,078	1,148	1,229
Queensland ...	87	627	901	925	946	960	997	1,010	1,027	1,042	1,060	1,177	1,273
South Australia ...	134	567	819	868	905	951	1,013	1,048	1,061	1,063	1,067	1,151	1,231
Western Australia	69	489	1,052	1,061	1,068	1,116	1,152	1,191	1,214	1,226	1,236	1,272	1,345
Tasmania ...	54	482	719	725	732	772	799	934	1,025	1,028	1,039	1,112	1,163
Commonwealth*	652	3,948	848	900	923	955	1,000	1,051	1,076	1,085	1,102	1,184	1,252

\* Weighted average.

NOTE.—The figures in the above table are comparable both horizontally and vertically.

The significance of the above figures since 1906 can be better appreciated by reference to the graph on page 1105, which shews, of course, not only variations in wages in each State from year to year, but also the difference in wage level as between the several States. From this graph it is clearly seen that, excluding Western Australia, the difference between nominal wages in the several States has decreased very considerably since 1906. This difference is shewn at any point by the vertical distance between the graphs. Wages in Queensland increased since 1914 at a higher rate than in any other State, and the general level in that State is now higher than in any other State except Western Australia. The graphs for Victoria and South Australia lie very close together throughout the period. In Tasmania the first determination under the Wages Boards Acts 1910 and 1911 came into force in 1911. Since then wages in that State have increased rapidly, and their general level is now not far below those of the other States, except Western Australia.

3. **Variations in Effective Wages.**—In order to obtain an accurate measure of the progress of wage-earners, regard must be had to the purchasing power of wages, and the index-numbers based merely upon records of rates of wages must consequently be

subject to some correction, inasmuch as they take no account of variations in the purchasing-power of money. In computing these effective wage index-numbers, the nominal wage index-numbers given in sub-section 2 hereof have been divided by the purchasing-power-of-money index-numbers in Section IV., paragraph 5 of Report No. 8, p. 27. The resulting index-numbers shew for each State and for the Commonwealth for the years specified the variations in *effective* wages.

The following table shews the effective wage index-numbers for each State for each of the years indicated from 1901 to 1917.

**VARIATIONS IN EFFECTIVE WAGES IN EACH STATE AND COMMONWEALTH,  
1901 to 1917.\***

Particulars.	1901.	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
New South Wales ...	961	983	926	952	973	973	922	924	909	850	867	893
Victoria ...	915	979	941	980	981	1,037	981	1,007	964	844	877	950
Queensland ...	1,172	1,151	1,081	1,112	1,035	1,090	1,032	1,060	1,045	912	991	1,078
South Australia ...	948	960	911	914	943	957	906	947	929	847	896	989
Western Australia ...	1,024	1,068	1,060	1,081	1,091	1,023	1,032	1,076	1,073	1,011	1,005	1,079
Tasmania ...	827	818	788	769	812	838	896	976	943	843	870	894
Commonwealth...	964	996	946	974	985	1,000	955	975	952	862	894	950

\* As to the effect in abnormal periods, see Labour Report No. 6, pp. 20-2, Section IV., par. 3.

The figures in the above table from the year 1907 onwards are shewn in the graph on page 1106. A comparison between this graph and that on the opposite page shews that the difference between nominal and effective wages is very marked. In the first place, the whole nature of the graphs is entirely different. Instead of having a series of lines shewing a practically continuous and rapid upward trend, the effective wages shew (except for Tasmania) a series of fluctuating points, in which no very marked tendency is immediately discernible. It will be seen that, generally speaking, the years 1907, 1909, 1910, 1911, 1913, 1916 and 1917 were marked by increases in effective wages, but that in each of the years 1908, 1912, 1914 and 1915, there were rapid decreases. In each of these years in which effective wages declined there was a rapid increase in cost of food and groceries. In 1914 wages increased 0.9 per cent., but the purchasing-power-of-money index-number went up 3.1 per cent., with the result that effective wages decreased 2.3 per cent. In 1915 the nominal wage index-number increased 1.6 per cent., while the purchasing-power-of-money index-number increased 12.1 per cent., resulting in a decrease of 9.5 per cent. in the effective wage. In 1916 the nominal wage index-number increased 7.4 per cent., and the purchasing-power-of-money index-number only 3.6 per cent., which resulted in the effective wage index-number shewing an increase of 3.7 per cent. In 1917 the nominal wage index-number increased 5.7 per cent., and the purchasing-power-of-money index-number decreased 0.5 per cent., resulting in an increase in the effective wage index-number of 6.3 per cent.

One important feature common to both graphs (nominal and effective wages) is the manner in which the graphs for the individual States have, on the whole, approached more closely together. With the adoption of differential rates of wages fixed according to the relative purchasing-power of money, it appears probable that this tendency will continue in the future.

**4. Variations in Effective Wages and Standard of Comfort, 1901 to 1917.**—In the preceding paragraph particulars are given as to variations in effective wages in each State, due allowance having been made for variations in purchasing-power of money, though not for unemployment. Attention has also been drawn to the limitations to which they are subject in abnormal times.

For years prior to 1913 the data available as to unemployment are so meagre that comparative results allowing for variations both in purchasing-power of money and in unemployment cannot be accurately computed for the several States. In the subjoined

table, however, the percentage of unemployment for the whole Commonwealth at the end of the years specified has been used in order to obtain results shewing the variations in unemployment upon effective wages. Column I. shews the nominal rate of wage index-numbers, and Column II. the relative percentages unemployed. Applying these percentages to the numbers shewn in Column I., and deducting the results from each corresponding index-number, so as to allow for relative loss of time, the figures in Column III. are obtained. These figures are then re-computed with the year 1911 as base, and are shewn in Column IV. In Column V. the purchasing-power-of-money index-numbers is shewn, and in Columns VI. and VII. the effective wage index-numbers are given, firstly, for full work, and, secondly, allowing for lost time. These are obtained by dividing the figures in Columns I. and IV., respectively, by the corresponding figures in Column V. The resulting index-numbers shew for the Commonwealth for the years specified, the variations in *effective* wages, or in what may be called the "standard of comfort."\*

A comparison between the figures in Columns I. and VI. shews the relation between the nominal rates of wages and the purchasing efficiency of these rates. The figures in Column VII. shew variations in *effective* wages after allowing not only for variations in purchasing-power of money, but also for the relative extent of unemployment.

#### UNEMPLOYMENT, PURCHASING-POWER-OF-MONEY AND NOMINAL AND EFFECTIVE WAGE-INDEX NUMBERS, 1901 to 1917†.

Year.	I. Nominal Wages Index- Numbers.	II. Percentage Unem- ployed.	Rate of Wages Index- Numbers, allowing for Lost Time.		V. Purchas- ing-power- of-money Index- Numbers.	Effective Wage Index-Numbers.		
			III. Actual.	IV. Re-com- puted. (1911 =1,000).		VI. Full Work.	VII. Allowing for Unemploy- ment.	
1901	...	848	6.6	793	832	880	964	945
1906	...	866	6.7	808	848	902	960	940
1907	...	893	5.7	842	884	897	996	986
1908	...	900	6.0	846	888	951	946	934
1909	...	923	5.8	870	913	948	974	963
1910	...	955	5.6	901	945	970	985	974
1911	...	1,000	4.7	953	1,000	1,000	1,000	1,000
1912	...	1,051	5.5	993	1,042	1,101	955	946
1913	...	1,076	5.3	1,021	1,071	1,104	975	970
1914	...	1,085	11.0	966	1,014	1,140	952	889
1915	...	1,102	6.8	1,027	1,078	1,278	862	844
1916	...	1,184	6.7	1,105	1,159	1,324	894	875
1917	...	1,252	7.4	1,159	1,216	1,318	950	923

† As to the effect in abnormal periods, see Section iv., par. 3, of Labour Report No. 6.

It may be seen that the nominal wage index-number has steadily increased, and that the increase has been at a somewhat greater rate (except in the years 1908, 1912, 1914 and 1915) than the increase in the cost of food, groceries and house rent. Owing to the decreases in these years the effective wage index-numbers (both "Full Work" and "Allowing for Unemployment") do not, on the whole, shew any general increase, but fluctuate between a range which reached its maximum in 1911, and its minimum in 1915. In 1916 and 1917, the effective wage index-numbers both for "Full Work and Allowing for Unemployment" exhibit an increase. This is due to the fact that the increase in the nominal wage index-number has been greater than the increase in the index-number which embraces cost of food, groceries, and house rent.

\* This expression must not be confused with "standard of living." A change in the standard of living necessarily involves a change in regimen (see Labour Report No. 1), that is, a change in the nature or in the relative quantity of commodities purchased, or both. A change in the "standard of comfort" merely implies a variation in effective wages, which variation may, or may not, result in, or be accompanied by, a change in the "standard of living."

#### § 4. Changes in Rates of Wage.

1. **General.**—The collection of information regarding changes in rates of wage throughout the Commonwealth dates from the 1st January, 1913.

(i.) *Definition of a Change in Rate of Wage.* For the purpose of these statistics a change in rate of wage is defined as a change in the weekly rates of remuneration of a certain class of employees, apart from any change in the nature of the work performed or apart from any revision of rates due to increased length of service or experience. It is obvious that under this definition certain classes of changes are excluded, such, for example, as (a) changes in rates of pay due to promotion, progressive increments, or, on the other hand, to reduction in pay or grade to inefficient workers, and (b) changes in average earnings in an occupation due to a change in the proportions which higher paid classes of workers bear to lower paid classes. Bonuses to employees have not been taken into account in the tabulations. Each single change recorded relates to a change in the rates of wage effected in a specific industry or calling, and includes any and all changes to workers in that industry, irrespective of the different number of separate occupations or trades affected. Further, it should be observed that in some instances a change may relate to the employees of a single employer or to those of a number of employers, according to the instrument or method operating to bring about the change.

(ii.) *Sources of Information.* Primary information merely as to the fact that a change in rate of wage has occurred is obtained through the following channels :—(a) the Industrial Registrar or Chief Inspector of Factories in each State ; (b) Reports from Labour Agents and Correspondents ; (c) Quarterly reports from Secretaries of Trade Unions ; (d) Returns relating to industrial disputes which resulted in changes in rates of wage ; (e) Reports in newspapers, labour and trade reviews, and other publications.

(iii.) *Collection of Particulars concerning Changes.* On the occurrence of a change in rate of wage, forms\* (prescribed under the Census and Statistics Act 1905) are issued to employers and employers' associations (if any) and also to the secretaries of the trade unions, the members of which are affected by the change. In certain cases forms are also issued, if necessary, to individual employers. The particulars which have to be inserted in these forms furnish information regarding the occupations of the workers affected, the number of workers in each occupation, the rates of wage paid before and after the change, the locality affected, and the date on which the change took effect. Information must also be furnished regarding employers and employers' associations concerned (if any), and the method by which the change was effected.

When the forms are returned from the various persons who are required to complete them, the returns are checked and compared with each other and with copies of awards, determinations, and agreements. In all cases when the information furnished on the forms is incomplete or unsatisfactory, further inquiries are made, and the figures checked by reference to census results, industrial statistics, factory reports, etc.

2. **Comparative Summary of Changes in Rates of Wage in each State for 1913, 1914, 1915, 1916 and 1917.**—The following table gives particulars of changes which occurred in each State of the Commonwealth during the years specified. As regards the number of persons affected, the particulars given refer to the total number of persons ordinarily engaged in the various industries. The results as to the amount of increase in wages are computed for a full week's work for all persons ordinarily engaged in the several industries and occupations affected, and in cases of changes in existing minimum rates under awards

---

\* Since these forms are issued under the authority of the Census and Statistics Act 1905, it is compulsory upon prescribed persons to furnish the information required.

or determinations of industrial tribunals, it has ordinarily been assumed (in the absence of any definite information to the contrary) that the whole of the employees in each occupation received the minimum rates of wage before and after the change.

It should be clearly understood that the figures given in the third division of the following table (amount of increase per week) do not relate to the increase each week, but only to the increase in a single week on the assumption that the full number of persons ordinarily engaged in the particular trade or occupation affected by the change were employed during that week. It is obvious, therefore, that the aggregate effect per annum cannot be obtained without making due allowance for unemployment and for occupations in which employment is seasonal or intermittent. It is also obvious that since unemployment and activity in all branches of industry may vary from year to year, and in many branches from season to season also, no accurate estimate of the actual effect of the changes in the total amount of wages received or paid *per annum* can be made, until the determining factors have been investigated. These factors are (a) the amount of unemployment, and (b) the period of employment in seasonal industries.

It should be observed that changes brought about by awards and agreements under the Commonwealth Conciliation and Arbitration Act 1904-15 are necessarily included hereunder as changes in each State to which such awards and agreements apply. The average increase per head per week is computed to the nearest penny.

### CHANGES IN RATES OF WAGE.—NUMBER AND EFFECT OF CHANGES IN EACH STATE AND TERRITORY, 1913, 1914, 1915, 1916 and 1917.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	N.T.	F.C.T.	C'wealth.

\* Including one change (common to all States) of £143 per week to 390 workpeople, brought about by agreement made pursuant to Section 24 of the Commonwealth Conciliation and Arbitration Act. † Including two changes (common to all States) which resulted in an increase in wages of £2938 per week to 10,000 workpeople. ‡ Including six changes (common to all States), which resulted in an increase in wages of £1593 per week to 3546 workpeople. § Including one change (common to all States) which resulted in an increase in wages of £4800 per week to 11,000 workpeople. The particulars relating to the numbers of workpeople who were affected by these changes, and the net amount of increase per week in each State were not ascertainable.

In point of number of changes in each State, New South Wales has been first, Victoria second, and Queensland third, in each of the years specified, with the exception that, during the year 1917, the number of changes in Queensland exceeded the number recorded in Victoria. Some little variation has occurred in the position of the remaining States. The relative position of the States in point of the numbers of workers affected in each year is, of course, largely due to the magnitude of the different industries and callings in which changes took place.

Included in the particulars contained in the foregoing table are those relating to seven decreases during the year 1915, eight during the year 1916, and eleven during the year 1917. The States in which these decreases were recorded were, in 1915: New South Wales two, Tasmania two, and in Victoria, South Australia and Western Australia one each, affecting in all 494 workers to the extent of a decrease of £81 per week; in 1916: New South Wales six, Victoria and Western Australia one each, affecting in all 1730 workers to the extent of a decrease of £286 per week; and in 1917: New South Wales seven, Queensland two, and one each in Victoria and South Australia. The total number of workpeople affected by these changes was 12,828, and the amount of decrease per week was £3267.

**3. Number and Magnitude of Changes in Rates of Wage in the Commonwealth Classified according to Industrial Groups, 1916 and 1917.**—In the following table particulars are given of the number of changes, the number of persons affected, the total amount of increase per week, and the average increase per head per week, classified according to Industrial Groups throughout the Commonwealth during the years 1916 and 1917.

**CHANGES IN RATES OF WAGE IN COMMONWEALTH CLASSIFIED IN INDUSTRIAL GROUPS, 1916 and 1917.\***

Industrial Group.	No. of Changes.		No. of Persons Affected.		Total Net Amount of Increase per week.		Average Increase per Head per week.

Total, Commonwealth ...	821	574	492,487	292,910	142,923	81,007	5 10	5 6

\* In this table an Industrial Award or Agreement under the Commonwealth Conciliation and Arbitration Act is counted as one change only, although such Award or Agreement may be operative in more than one State.

In point of number of persons affected by changes in 1917, Group XIV. (Miscellaneous), with 144 changes, affecting 74,898 persons, comes first. This is followed in the order named by IX. (Rail and Tramway Services); III. (Food, Drink, Tobacco, etc.); IV. (Clothing, Hats, Boots, etc.); VIII. (Mines, Quarries, etc.); II. (Engineering, Metal Works, etc.); down to Group XII. (Pastoral, etc.), with ten changes, affecting 3440 persons only. In point of individual increase per head per week, Industrial Group VII. (Mines, Quarries, etc.), with an average increase of 10s. 0d. per week, comes first, followed by Group XI. (Shipping, etc.), 8s. 11d. per week. The average increase per head per week for all groups was 5s. 6d., which amount is slightly lower than the average for the previous twelve months, 5s. 10d. per week.

4. **Changes in Rates of Wage in Female Occupations.—Number and Effect of Changes in each State, 1913-1917.**—Included in the changes in rates of wage recorded in the tables on pages 1097-1098 are those which in the whole or part thereof affected female occupations. Particulars in respect to these changes in so far as they relate to the numbers of female workers affected, etc., are set out hereunder.

(i.) *Changes in Rates of Wage according to States.* In the following table, particulars are given of the effect of changes in rates of wage to female workers, as recorded for each State during the years 1913 to 1917 inclusive:—

**CHANGES IN RATES OF WAGE.—FEMALE OCCUPATIONS.—EFFECT OF CHANGES IN EACH STATE, 1913-1917.**

Year.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'wealth.

1916	4 1	3 8	2 11	2 5	2 11	2 6	3 9
1917	3 4	4 0	6 1	4 11	7 6	4 1	4 3

\* Including effect of one change which affected nine female employees in the Northern Territory.

It will be seen that the number of females affected by changes in rates of wage during 1917 is greatly in excess of the number recorded during any previous year.

The figures for Queensland and South Australia shew comparatively large increases. In Victoria the number of persons is slightly lower, while in the remaining States there are small increases. In all States with the exception of New South Wales, the amounts shewing the net amount of increase per week and the average increase per head per week are higher than those for the year 1916. The average increase per head per week for all changes throughout the Commonwealth during the year 1917 was 4s. 3d. per week, which is higher than the average increase for any previous year.

(ii.) *Changes in Rates of Wage in Female Occupations according to Industrial Groups.* The particulars set out in the immediately preceding table are further analysed and classified according to the industrial groups in which the changes took place in each State.

**CHANGES IN RATES OF WAGE IN FEMALE OCCUPATIONS IN EACH STATE,

\* Decrease.

Of the total number of female employees (52,573) who were affected by changes in rates of wage during the year 1917, 23,115 were engaged in the manufacture of clothing, hats, etc. (Group IV.); 14,558 in various occupations classified in Group XIV. (Miscellaneous); 10,310 were working in hotels, restaurants, etc. (Group XIII.); 2059 were

engaged in the preparation or distribution of food and drink (Group III.), while 962 were employed in printing and bookbinding establishments (Group V.). In the other groups, with the exception of Groups VI. (Other Manufacturing), and IX. (Rail and Tram Services), the number who received increased wages during the year was comparatively small.

5. **Methods by which Changes were Effected.**—In the following table particulars are given for the Commonwealth of the number of changes in rates of wage, the number of workpeople affected, and the total net amount of increase to the weekly wage distribution, brought about either without, or after, stoppage of work, during the years 1916 and 1917 respectively, as a result of the application of one or other of the methods set out in the tables:—

\* In this section of the table an Award or Agreement under the Commonwealth Conciliation and Arbitration Act, the Commonwealth (Public Service) Arbitration Act or an Order of the War Precautions Coal Board is counted as one change only, although such Award, Agreement, or Order may be operative in more than one State.

The total number of changes recorded during the year 1917 was 574, of which 310, or 57 per cent. of the total number, were brought about by award or determination under State Industrial Act. The number of changes brought about by this method was considerably lower in 1917 than in 1916, but the percentage of the total for each year was 57 per cent. The number of awards made by the Commonwealth Court of Conciliation and Arbitration shows an increase compared with previous years. The number of changes brought about by direct negotiations between employers and employees is considerably lower than those settled by this method during the previous twelve months.

## § 5. Current Rates of Wage in Different Occupations and States.

1. **Comparative Table of Minimum Rates of Wage, 31st December, 1917.**—The collection of material respecting the current rate of wage payable in different callings and in occupations in various industries carried on in each State of the Commonwealth was first undertaken by this Bureau in the early part of the year 1913. The particulars acquired were obtained primarily from awards, determinations and agreements under Commonwealth and State Acts, and therefore shew the minimum rates prescribed. In cases where no award, determination, or agreement was in force, particulars are given, where possible, of the ruling union or predominant rate as furnished by employers or Secretaries of Trade Unions. All particulars obtained from this source are marked with an asterisk. It will be seen that for convenience of comparison *the wages are in nearly all cases presented as a weekly rate*, though in many industries they are actually based on daily or hourly rates, as specified in awards, determinations, or agreements. This caution is necessary, in view of the fact that it is often in those industries and occupations in which employment is of an exceptionally casual or intermittent nature that wages are fixed or paid at a daily or hourly rate. Hence the average weekly earnings in such occupations will probably fall considerably short of the weekly rates specified in the table. These particulars furnished the necessary data for the computation of average rates of wage in various industrial groups, and in each State and all States.

Since the 30th April, 1914, the number of occupations included in comparative computations have been kept constant, but the particulars of wages contained in the tables on p. 1109 *et seq.* include those for many additional occupations. In most instances these have been taken from awards or determinations made subsequent to that date by industrial tribunals or from agreements registered under Commonwealth or State Acts, or as a result of direct inquiry.

The rates specified refer generally to the capital town of each State, but in industries such as mining and agriculture, rates are necessarily taken for places other than the capital towns. *The figures given in the tables on p. 1109 et seq. relate to adult male workers, and in the second part to adult female workers, and in each case represent (except where otherwise specified in the footnotes) the amounts payable for a full week's work of 48 hours.* In every case where the hours of labour constituting a full week's work are other than 48, the number of hours is indicated in the footnotes.

2. **Weighted Average Nominal Rate of Wage Payable to Adult Male Workers in each State, 31st December, 1917.**—The following table shews the weighted average nominal weekly rate of wage payable to adult male workers for a full week's work in each State and the Commonwealth. Taking the average for the whole Commonwealth as the base (=1000), index-numbers for each State are also shewn. The number of occupations upon which these results are based amounts in the aggregate to no fewer than 3948.

### WEIGHTED AVERAGE NOMINAL WEEKLY RATE OF WAGE PAYABLE TO ADULT MALE WORKERS FOR A FULL WEEK'S WORK, AND WAGE INDEX-NUMBERS IN EACH STATE AND COMMONWEALTH, 31st DECEMBER, 1917.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'wlth.
Number of Occupations included ...	874	909	627	567	489	492	3,948
Weighted Average Weekly Rates of Wages ...	64s. 6d.	63s. 0d.	65s. 3d.	63s. 1d.	68s. 11d.	59s. 7d.	64s. 2d.*
Index-Numbers ...	1,003	982	1,017	983	1,074	929	1,000*

\* Weighted average.

The results shew that the weighted average nominal rate of wage was highest in Western Australia, followed in the order named by Queensland, New South Wales, South Australia, Victoria, and Tasmania.

3. **Weighted Average Nominal Weekly Rate of Wage Payable to Adult Male Workers in each Industrial Group, 31st December, 1917.**—The following table gives similar particulars in regard to the several industrial groups and to the weighted average for all groups combined. In computing the index-numbers the weighted average for all groups is taken as base (=1000).

**WEIGHTED AVERAGE NOMINAL WEEKLY RATE OF WAGE PAYABLE TO ADULT MALE WORKERS FOR A FULL WEEK'S WORK, AND WAGE INDEX-NUMBERS IN EACH INDUSTRIAL GROUP, 31st DECEMBER, 1917.**

Industrial Group.	No. of Rates Included.	Weighted Aver. Weekly Wage (for Full Week's Work).	Index-Numbers.
		s. d.	
I. Wood, Furniture, etc. ...	270	66 0	1,028
II. Engineering, Metal Works, etc. ...	636	65 0	1,013
III. Food, Drink, etc. ...	576	63 7	991
IV. Clothing, Boots, etc. ...	124	59 7	928
V. Books, Printing, etc. ...	205	70 6	1,098
VI. Other Manufacturing ...	875	63 10	994
VII. Building ...	190	72 5	1,129
VIII. Mining, etc. ...	161	78 4	1,221
IX. Rail and Tram Services, etc. ...	224	65 11	1,027
X. Other Land Transport ...	70	62 0	966
XI. Shipping, etc. ...	198	61 2†	954
XII. Agricultural, Pastoral, etc. ...	72	61 1‡	951

XIV. Miscellaneous ...	233	60 9	947
All Groups ...	3,948	64 2	1,000*

\* Weighted average. † Including the value of victualling and accommodation (estimated at 45s. per month) where supplied. ‡ Including the value of Board and Lodging where supplied as follows:—In the agricultural industry, 14s. per week in Victoria, and 15s. in the remaining States; in the pastoral industry, 15s. in West Australia; 17s. in Tasmania, and 20s. in the remaining States. § Including the value of Board and Lodging where supplied as follows:—In Sydney 15s. 6d. to 19s.; in Melbourne 14s.; in Brisbane 14s. and 15s.; in Perth 22s., and in Adelaide and Hobart 15s. per week.

From the above table it may be seen that the highest weighted average wage was that paid in Group VIII. (Mining), 78s. 4d. per week, or approximately 22 per cent. above the weighted average for all groups. The rates of wage range from 78s. 4d. per week down to 53s. 11d. per week, the lowest being in Group XIII. (Hotels, etc.), which is nearly 16 per cent. below the average of all groups.

4. **Weighted Average Nominal Rate of Wage Payable to Adult Female Workers in each State, 31st December, 1917.**—The following table shews the weighted average nominal weekly rate of wage payable to adult female workers for a full week's work in each State and the Commonwealth. Taking the average for the whole Commonwealth as the base (=1000), index-numbers for each State are also shewn:—

**WEIGHTED AVERAGE NOMINAL WEEKLY RATE OF WAGE PAYABLE TO ADULT FEMALE WORKERS FOR A FULL WEEK'S WORK, AND WAGE INDEX-NUMBERS IN EACH STATE AND COMMONWEALTH, 31st DECEMBER, 1917.**

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'wlth.

Weighted Average Weekly Rate of Wage ...	30s. 5d.	30s. 4d.	30s. 5d.	27s. 9d.	38s. 10d.	28s. 5d.	30s. 5d.*
Index-Numbers ...	998	996	999	910	1,276	932	1,000*

\* Weighted average.

NOMINAL WAGE INDEX-NUMBERS IN EACH STATE AND COMMONWEALTH,  
1906 to 1917.

EFFECTIVE WAGE INDEX-NUMBERS IN EACH STATE AND COMMONWEALTH.  
1906 to 1917.

(See page 1094.)

It will be seen that the weighted average nominal rate of wage for adult female workers was highest in Western Australia, followed in the order named by New South Wales and Queensland (equal), Victoria, Tasmania, and South Australia.

**5. Weighted Average Nominal Rates of Wage Payable to Adult Female Workers in Industrial Groups, 31st December, 1917.**—The following table gives separate particulars regarding the weighted average nominal rates of wage of females in the chief industrial groups in which they are employed, and also shows the weighted average for all groups combined. Index-numbers based on the average for the Commonwealth as the base (=1000) are also given :—

**WEIGHTED AVERAGE NOMINAL WEEKLY RATES OF WAGE PAYABLE TO ADULT FEMALE WORKERS FOR A FULL WEEK'S WORK, AND WAGE INDEX-NUMBERS IN INDUSTRIAL GROUPS, 31st DECEMBER, 1917.**

Industrial Group.	No. of Rates Included.	Weighted Average Weekly Wage (for Full Week's Work).		Index-Numbers.

XIII. Domestic, Hotels, etc. ... ..	57	33	5*	1,098
XIV. Shop Assistants, Clerks, etc. ... ..	18	30	6	1,001
All Groups ... ..	308	30	5	1,000†

\* Including the value of Board and Lodging where supplied as follows :—In Sydney, 15s. 6d. to 19s.; in Melbourne, 14s.; in Brisbane, 14s. and 15s.; in Perth, 22s., and in Adelaide and Hobart, 15s. per week. † Weighted average.

**6. Relative Hours of Labour and Hourly Rates of Wage, 1914, 1915, 1916 and 1917.**—The rates of wage referred to in the preceding paragraphs of this section relate to the minimum rates payable for a full week's work. It should be observed, however, that the number of hours which constitutes a full week's work differs in many instances, not only as between various trades and occupations in each individual State, but also as between the same trades and occupations in the several States. In order to secure what may be for some purposes a more adequate standard of comparison, it is desirable to reduce the comparison to a common basis, viz., the rate of wage per hour. Particulars are given in the following table, classified according to States, for male and female occupations separately, at 30th April and 31st December, 1914, at 31st December, 1915, at 31st December, 1916, and at 31st December, 1917.† These particulars relate to (a) the weighted average nominal weekly wage, (b) the weighted average number of working hours constituting a full week's work, and (c) the weighted average hourly wage. It should be observed that the weighted average weekly wage relates to all industrial classes combined, and includes the value of board and lodging, where supplied, in land occupations, and the value of victualling in marine occupations,§ whereas the number of working hours and the hourly wage relate to all industrial classes other than

† Details with respect to particulars in industrial classes have been published as follows:—To 30th April, 1914 (Labour Report No. 5, pp. 49-50); to 31st March, 1915 (Labour Bulletin No. 9, pp. 72-3); to 30th June, 1915 (Labour Bulletin No. 10, pp. 175-6); to 30th September, 1915 (Labour Bulletin No. 11, pp. 264-5); to 31st December, 1915 (Labour Bulletin No. 12, pp. 413-4); to 31st March, 1916 (Labour Bulletin No. 13, pp. 81-2); to 30th June, 1916 (Labour Bulletin No. 14, pp. 189-90); to 30th September, 1916 (Labour Bulletin No. 15, pp. 299-300); to 31st December, 1916 (Labour Report No. 7, pp. 423-4); to 31st March, 1917 (Labour Bulletin No. 17, pp. 70-1); to 30th June, 1917 (Labour Bulletin No. 18, pp. 170-1) and to 31st December, 1917 (Labour Report No. 8, pp. 76-7.) § See footnote to previous table. The value of victualling in ships has been assessed by the Commonwealth Arbitration Court at 45s. per month.

Groups XI. (Shipping), and XII. (Agricultural, Pastoral, etc.). Owing to the fact that many of the occupations included in these two groups are of a casual or seasonal nature, and that the hours of labour in these occupations are not generally regulated either by awards or determinations of industrial tribunals or otherwise, the necessary data for the computation of the average number of working hours are not available.

The general effect of reducing the rates of wage to a common basis (i.e., per hour) is to decrease the amount of the difference shewn when comparing the weekly wage in the several States.

**WEIGHTED AVERAGE NOMINAL WEEKLY AND HOURLY RATES OF WAGE PAYABLE TO ADULT WORKERS, AND WEEKLY HOURS OF LABOUR, 30th APRIL, 1914, 31st DECEMBER, 1914, 1915, 1916, and 1917.**

	Working Hours	48.98	48.32	48.99	48.73	48.78	49.83	48.71
	Hourly Wage ...	7.45d.	7.53d.	7.45d.	6.82d.	9.56d.	6.83d.	7.50d.

\* Weighted average weekly wage in all industrial classes combined. † Weighted average working hours per week, and computed hourly rates of wage for all industrial classes excepting Classes XI. (Shipping, etc.), and XII. (Agricultural, Pastoral, etc.). Working hours have not been generally regulated by industrial tribunals for occupations classified in industrial Classes XI. and XII.

From the foregoing table it may be seen that, with the exception of Western Australia, there has been a diminution in the number of working hours constituting a full week's work in both male and female occupations. The effect of these changes on the hourly rate of wage as compared with the general increase in the weekly wage is readily seen from the comparative index-numbers given in the following table. In each instance (male and female occupations separately) the basis taken is the weighted average for the Commonwealth at the 30th April, 1914, as base (= 1000).

**RELATIVE INDEX-NUMBERS FOR WEEKLY AND HOURLY WEIGHTED AVERAGE  
WAGE, 30th APRIL, 1914, 31st DECEMBER, 1914, 1915, 1916 and 1917.**

NOTE.—Weighted Average for the Commonwealth at 30th April, 1914, as base (=1000).

7. Rates of Wage of Adult Males and Females.—In the tabular statement on pages 1110 *et seq.* particulars are shewn for adult males and females separately of the minimum rates of wage fixed by awards, determinations, or agreements, at 31st December, 1917. (See § 5, 1.)

# **MINIMUM RATES OF WAGE FOR ADULT MALE WORKERS IN THE MAIN OCCUPATIONS IN THE CAPITAL TOWN OF EACH STATE FOR A FULL WEEK'S WORK, AT 31st DECEMBER, 1917.**

NOTE.—Ruling or predominant rates of wage are distinguished from Award, Determination, or Industrial Agreement rates of wage by an asterisk (\*). Except where otherwise specified by a numerical prefix in small type, the hours of labour constituting a full week's work are forty-eight. Award, Determination, or Agreement rates are quoted from the latest Awards, Determinations, or Agreements made, but which were not invariably in force on the 31st December, 1917. It is found, however, that in those States in which Awards, Determinations, or Industrial Agreements are made for a specified period, that pending further review of the rates of wage and hours of labour, those previously determined or agreed upon are usually maintained. Where two or more Award, Determination, or Agreement rates are quoted, the reason for such is that different rates of wage have been fixed for various classes or grades of work. It will be seen that in certain cases of this nature the wages are shewn in the form, say, 50s. to 57s., indicating that in addition to the two rates specified, there are also certain intermediate rates in force. In other cases the rates are shewn in the form 54s. and 60s., indicating that there are only two minimum or standard rates in force for different classes and grades of work, and that there are, of course, no intermediate minimum or standard rates.

† The rates of wage quoted are those awarded by the special tribunal appointed under the War Precautions Act. The rates came into force on the 1st January, 1917. The hours of labour for coal miners in the Commonwealth were fixed by the tribunal, as follows:—Eight hours bank to bank, inclusive of one half hour for meal time, on Monday, Tuesday, Wednesday, Thursday and Friday, and six hours bank to bank, inclusive of one half-hour for meal time on Saturday, Sundays and holidays. The customary number of shifts per fortnight is eleven, the collieries not working on pay Saturday.

See also explanatory notes on page 1110.

† Contract work. § The number of working hours constituting a full week's work in Queensland have been fixed by awards, as follows:—Central Division, underground work shall be done in three shifts of 48, 44, and 40 hours each week; payment to be made as though 48 hours had been worked in each week; Cloncurry and Cooktown, 44 hours per week. In Victoria the hours of labour for underground workers are 44 per week; and in South Australia 44½ hours for the day and 40 hours for the afternoon and night shifts. In Tasmania both 44 and 48 hours per week are worked by underground employees. See also explanatory notes on page 1110.

† Contract work.

† The hours of labour for Railway Employees are 48 per week (in N.S.W. 96 per fortnight) except in the following cases:—VICTORIA—Porters, 54 hours per week; SOUTH AUSTRALIA—Signalmen, 48 to 57 hours per week; and TASMANIA—Guards, Porters, Shunters, and Signalmen, 54 hours per week. Owing to the difference in the classification of grades of Railway Employees in the various States, only minimum and maximum rates are quoted, excluding those for Foremen. § In N.S.W. the rates of wage for 1st class Locomotive Drivers correspond to those fixed for Drivers driving express passenger or mail trains; 2nd to 5th class correspond to the rates of wage fixed for different lengths of service. The classification of Locomotive Drivers and Firemen employed in the Victorian Railway Service fixes different rates of wage for the following grades of service:—(1) Country Passenger Service; (2) First-grade Suburban Passenger Service; (3) Second-grade Passenger Service; and (4) Goods or Switching Service. The rates of wage for these services have been taken as corresponding to the 1st, 2nd, 3rd, and 4th class classification in the other States, with the exception that firemen for only three classes of service are graded. See also explanatory notes on page 1110.

§ Rates of wage quoted are in addition to board and lodging provided.

## GROUP XIII.—DOMESTIC, HOTELS, ETC.

NOTE.—Except where otherwise specified the rates of wage mentioned for Employees in Clubs, Hotels, and Restaurants represent the weekly cash payment where Board and Lodging are provided. If Board and Lodging are not provided, payment has to be made, in lieu thereof, upon an estimated value, fixed by Industrial Tribunals for the Capital Towns as follows: Sydney, 15s. 6d. to 19s.; Melbourne, 14s.; Brisbane, 15s.; Adelaide, 15s.; Perth, 22s.; and Hobart, 15s. per week. Of this sum 10s. per week is allocated as value of Board in each instance, with the exception of Sydney and Perth. In Sydney the allowance for Board varies from 10s. 6d. to 14s., according to class of establishment in which worker is employed. In Perth the allowance for Board is 17s. per week.

## § 6. Industrial Disputes.

1. **General.**—Information with regard to the collection of particulars and methods of tabulation of industrial disputes has appeared in previous issues of the Year Book, and is also given in the Annual Reports of the Labour and Industrial Branch of this Bureau.

In the following tabulations particulars are included only with respect to the industrial disputes which commenced during any calendar year.\* This course requires the

\* Any tabulations as to causes, duration, etc., based on disputes which were in existence in any given year, and not on those which commenced in that year, would inevitably result in confusion, seeing that particulars relating to the same dispute would probably occur in two successive years.

elimination of such data as relate to disputes which commenced during an earlier period, but which remained unsettled during some portion of the succeeding year. On the other hand it necessitates the inclusion of the number of working days and wages lost during the following year in connection with disputes commenced during the calendar year to which the statistics relate.

2. **Comparative Summary of Disputes in 1913 to 1917.**—The systematic collection of information as to industrial disputes (causing a stoppage of work) throughout the Commonwealth was first undertaken as from the 1st January, 1913, and particulars concerning disputes occurring during the year 1913 were published in Labour Report No. 5. The following table gives particulars of the number of industrial disputes which began in the years 1913, 1914, 1915, 1916, and 1917 respectively, together with the number of workpeople involved, the number of working days lost, and the total estimated loss in wages in each State and Territory comprising the Commonwealth:—

† These figures do not include establishments affected by the anti-conscription stop-work meetings, as definite particulars as to the number of establishments were not ascertainable.

It may be seen from the foregoing table that industrial disputes throughout the Commonwealth were most frequent during the year 1916. The number of workpeople involved in disputes during 1916 and 1917 increased to an enormous extent, while the losses in working days and wages were considerably in excess of such losses during any previous yearly period. It may be mentioned, however, that the figures for 1914 and 1916 include particulars of abnormal disputes which occurred in the coal mining industry during those years, while particulars relating to the "card system" dispute at the Government Railway Workshops in New South Wales are included in the figures for the year 1917.

The prevalence of industrial disputes in New South Wales, as compared with the other States, continued during the year 1917. The proportion of disputes in each State is best expressed in a percentage of the aggregate number recorded for all States and Territories. Thus the disputes in New South Wales represented 64 per cent. in 1913, 70 per cent. in 1914, 76 per cent. in 1915, 66 per cent. in 1916, and nearly 67 per cent. in 1917. The disputes in Victoria equalled 14, 13, 11, 11, and 12 per cent. of the total industrial disputes in the respective years, while Queensland disputes represented approximately 8, 5, 5, 13 and 9 per cent. of the total disputes during the same periods. In the other States and Territories the number of disputes recorded formed but a small proportion of the aggregate number.

The position which New South Wales occupies in comparison with the other States is practically wholly due to the prevalence of disputes in connection with coal mining. Apart from these stoppages the number of disputes in all other industries, whilst still in excess of that for each of the other States, does not compare unfavourably when the number of workpeople in each State is taken into consideration.

It is, of course, obvious that the mere number of disputes cannot by itself be accepted as a proper basis of comparison, nor does the number of workpeople involved afford a satisfactory basis. A better idea as to the significance and effect of industrial disputes may be obtained from the number of working days lost and the estimated loss in wages.

The number of working days lost on account of disputes which commenced during the year 1917, totalled 4,599,658, as compared with 1,678,930 during 1916, 583,225 during 1915, 1,090,395 during 1914, and 623,528 for 1913. It has already been mentioned that the figures for the years 1914, 1916 and 1917 include the heavy losses in working days and wages caused by exceptionally serious disputes which occurred during those years.

Particulars relating to the "card system" dispute at the Government Railway Workshops in New South Wales in August 1917 are included in the tabulations for the year 1917. The dispute, which commenced on the 2nd August, when the employees at the workshops ceased work, such action, according to statements of their representatives, being a protest against the introduction of a time-card system, rapidly extended to other industries throughout the Commonwealth. Railway employees in other branches of the service, coal and metalliferous miners, seamen, waterside workers and others left work, most of them stating that they did so in sympathy with the railway men, while other bodies of workers, including carters, storemen and artificial manure makers, stated that they refused to handle "black" goods and coal, and acted accordingly. The various disputes throughout the Commonwealth which followed on the action of the railway workshops' employees have been summarised and tabulated with a view to ascertaining the total number of workpeople involved and also the consequent losses in wages and working days.

After careful consideration of the data it was ascertained that 79 disputes throughout the various States were directly associated with the action of the employees at the railway workshops. Of these 79 disputes, 52 occurred in New South Wales; 18 in Victoria; 3 in South Australia; and 2 in each of the remaining States. The total number of workpeople involved in these dislocations was 97,507, the loss in working days was 3,982,250, with a consequent estimated loss in wages of £2,233,000. In New South Wales the loss of wages is estimated at £1,780,000; in Victoria, £325,500; in Queensland, £62,000; in South Australia, £7400; in Western Australia, £42,300; and in Tasmania, £15,800.

Of the total number of workpeople involved (97,507), 77,357, or 79 per cent., were resident in New South Wales; 14,200, or 15 per cent., in Victoria; 2350, or 2 per cent., in Queensland; and the remaining 3600, or 4 per cent., in the other States. In New South Wales the loss in working days was 3,071,000, or 77 per cent. of the total number (3,982,250); in Victoria, 637,300, or 16 per cent.; in Queensland, 123,600, or 3 per cent.; in West Australia, 84,100, or 2 per cent. The number of working days lost in South Australia and Tasmania was 14,100 and 32,150 respectively.

Owing to the action of the workpeople engaged in transport and coal-mining, the dispute became one of a far-reaching character, and practically all industries in New South Wales and Victoria were affected to a certain extent, the most serious cases being the railway and tramway services, coal and metalliferous mining, shipping and water-side working, general transport, engineering and metal working and the timber trade. The number of workpeople in railway and tramway services (including the railway workshops' employees, who initiated the strike) was 22,851, or 23 per cent. of the total number involved. Coal and metalliferous mining employees affected numbered 22,570, or 23 per cent.; seamen, wharf labourers, coal lumpers and others engaged in the shipping industry, 22,757, or 23 per cent.; while 22,009 persons engaged in various manufacturing industries, including engineers, metal workers, timber workers, artificial manure makers, rubber workers and rope and cordage makers, were involved. Carters, lorry drivers, and others engaged in the transport of goods to the number of 6050 were also directly affected by the dislocation.

In connection with the estimated loss of wages (£2,233,000) in various industries, workpeople in the mining section suffered to the greatest extent, no less than £781,250, or 35 per cent. of the total estimated loss, being recorded as the loss to employees engaged in coal and other mining. Other industries in which the workpeople lost large sums in wages were shipping and wharf labouring (£609,690, or 27 per cent.); railway and tramway services (£354,310, or 16 per cent.); general transport of goods (£124,000, or 6 per cent.); and manufacturing industries, including engineering and timber working (£244,690, or 11 per cent.).

The figures and particulars given in the preceding paragraphs concerning the "card system" dispute relate to losses in working days and wages incurred by workpeople *directly* involved in the dispute, and regarding which definite information was obtainable. In addition, however, there was considerable dislocation of employment in various industries, although the workpeople engaged in such industries were taking no direct action in connection with the dispute. It may be said that these industries and workpeople were *involuntarily* involved. This effect was very far-reaching, and various industries were stopped completely, or were compelled to reduce hands or working time. In the majority of cases the restriction placed upon the use of coal, gas, and electricity was the main cause of reducing employment; in others it was the lack of transport facilities, while in others, again, work was discontinued owing to the fact that the consumption or use of certain classes of manufactured goods was considerably curtailed, and employers discontinued manufacture owing to the lack of storage accommodation and the unsettled state of industry.

Special enquiries were instituted to ascertain the number of working days and amount of wages lost by persons who were *indirectly* or *involuntarily* affected by the dispute. The results of the enquiries, however, were unsatisfactory, as the particulars collected were so vague and qualified that it was not considered advisable to use the data for computing the losses in working days and wages by such workpeople.

The dislocation of work following on the "card system" dispute is the most extensive which has been recorded by the Bureau since the systematic collection of particulars was undertaken at the beginning of the year 1913. In 1914, a protracted dispute occurred in the coal mining industry in New South Wales over the refusal of the miners to work the afternoon shift. The number of working days lost owing to this dislocation was 523,000, and the estimated loss in wages was approximately £259,000. Another dispute of considerable magnitude was recorded in the year 1916, when coal mining employees in New South Wales, Victoria, Queensland, and Tasmania ceased work over

the question of "eight hours bank to bank." The total losses caused by the stoppages were 409,000 working days and £240,850 in wages. It will be seen, therefore, that the losses occasioned by the "card system" dispute greatly exceed any previously recorded.

In regard to extensive dislocations of industry which occurred prior to the institution of systematic enquiries by the Bureau, efforts have been made to obtain statistical data relating to the shearers' disputes in 1890, 1891 and 1894, and also concerning the number of workpeople involved and the losses caused by the maritime dispute in the early part of 1891, but precise information which could be utilised for statistical purposes regarding such particulars was not obtainable.

**3. Number and Magnitude of Industrial Disputes in the Commonwealth, Classified according to Industrial Groups.—Comparative Particulars for 1916 and 1917.**—The following table gives particulars of disputes in the Commonwealth during the years 1916 and 1917, classified according to industrial groups. The system of classification selected is similar to that adopted in connection with labour organisations, unemployment, rates of wage, etc. (see Report No. 8, Labour and Industrial Branch, page 8).

**INDUSTRIAL DISPUTES IN THE COMMONWEALTH, CLASSIFIED ACCORDING TO INDUSTRIAL GROUPS, 1916 AND 1917.**

Industrial Group.	No. of Disputes.		No. of Work-people involved in Disputes.		No. of Working Days Lost.		Total Estimated Loss in Wages.	
	1916.	1917.	1916.	1917.	1916.	1917.	1916.	1917.

<b>Commonwealth, All Groups</b>	<b>508</b>	<b>444</b>	<b>170,683</b>	<b>173,970</b>	<b>1678,930</b>	<b>4599,658</b>	<b>967,604</b>	<b>2594,808</b>

Comparison as to the frequency of industrial disputes in classified industries can only be reasonably made after omitting those which are recorded for mining, quarrying, etc. (Group VIII.). For the year 1914 the proportion of disputes in those industries represented practically 55 per cent. of the total number recorded. During the year 1915 this proportion rose to 57 per cent. In 1916 and also in 1917, however, the proportion of disputes in Group VIII. shewed a decrease, the figures representing 47 and 45 per cent. of the total number of disputes during the respective years. Attention has frequently been drawn to the preponderating influence contributed in this direction by the coal-mining industry in New South Wales. In making any comparison as to the number of disputes in this industrial class in each State, it should be observed that the number of workers engaged in the mining industry is very much larger in New South Wales than in any of the other States. The number of disputes recorded is, however, in excess of a similar proportion.

**4. Duration of Industrial Disputes in the Commonwealth, 1913-17.**—In the following table comparative particulars are given with respect to the number of disputes, workpeople directly and indirectly involved, working days lost, and estimated amount of loss in wages respectively, consequent on the cessations of work which were recorded for the Commonwealth during the years 1913, 1914, 1915, 1916, and 1917, classified under the adopted limits of duration :—

## DURATION OF INDUSTRIAL DISPUTES IN THE COMMONWEALTH, 1913-17.

Limits of Duration.	Year.	No. of Disputes.	No. of Workpeople Involved.			Number of Working Days Lost.	Total Estimated Loss in Wages.
			Directly.	Indirectly.	Total.		
1 day and less ...	1913	66	9,698	5,075	14,773	14,773	£ 8,168

	1917	49	45,338	1,823	47,161	1,615,954	821,402
8 weeks and over ...	1913	12	889	336	1,225	153,211	67,632
	1914	14	3,807	3,912	7,719	724,259	365,545
	1915	15	1,734	560	2,294	194,187	100,829
	1916	33	3,755	1,705	5,460	498,567	259,928
	1917	26	44,620	2,611	47,231	2,598,209	1,542,412
Total ...	1913	208	33,493	16,790	50,283	623,528	287,739
	1914	337	43,073	27,976	71,049	1,090,395	551,228
	1915	358	57,005	24,287	81,292	583,225	299,633
	1916	508	128,546	42,137	170,683	1,678,930	967,604
	1917	444	154,061	19,909	173,970	4,599,658	2,594,808

It will be seen from the above table that disputes lasting for one day or less were the most frequent during each of the years for which figures are furnished. In the year 1917, stoppages of one day or less represented nearly 36 per cent. of the total number, while 61 per cent. of the stoppages during the year were terminated in less than one week. The disputes which continued for four weeks or over represented 17 per cent.

of the total number of dislocations recorded, were responsible for 92 per cent. of the total number of working days lost, and were the cause of 91 per cent. of the estimated loss in wages during the year.

5. **Industrial Disputes, Classified as to Causes and Results.**—The following table shews the number of disputes, number of workpeople involved, and the total number of working days lost in disputes which commenced in a State or Territory of the Commonwealth during the years 1916 and 1917, classified according to principal cause and result:—

### INDUSTRIAL DISPUTES, CLASSIFIED ACCORDING TO CAUSES AND RESULTS.

NOTE.—For corresponding particulars for 1913 see Labour Report No. 5, pp. 78-9; and for 1914 and 1915, see Labour Report No. 6, p. 119.

In the above table it will be seen that 147 of the 444 disputes, recorded during the year 1917, were classified as terminating in favour of the workpeople involved; 188 in favour of the employers; while 100 resulted in a compromise. In New South Wales, Victoria and South Australia the results were in favour of the employers, while in the remaining States and the Northern Territory the results favoured the employees. The effect of the unsuccessful dispute over the introduction of the "Card System" into the Government Railway Workshops in New South Wales is noticeable when the figures shewing the number of workpeople involved in disputes which resulted in favour of the employers is scrutinised. No less than 119,589 workpeople, or 69 per cent. of the total number, were involved in unsuccessful disputes during the year. The greater part of these employees were implicated in disputes which arose out of the trouble at the railway workshops.

## § 7.—Retail Prices, House Rents, and Cost of Living.

1. **Introduction.**—In Report No. 1, issued in December, 1912, the results of certain investigations into the subjects of Prices, Price-Indexes and Cost of Living in past years were published, and some account was given of the methods employed for the collection of the data and of the technique adopted in the computation of the results. An important discussion of the theory upon which the calculation of the index-numbers is based was given, but being necessarily too technical for the ordinary reader, was relegated to Appendixes. In Reports Nos. 2, 5, 6, 7 and 8, results of further investigations were given, and in those Reports, and in Labour Bulletins Nos. 1 to 18, information was given as to variations in retail and wholesale prices, house-rent, and purchasing-power of money up to the end of 1917.

It must here suffice to state that the method adopted for the computation of the index-numbers is what may very properly be called the "aggregate expenditure" method. The first process is, of course, to work out the average price of each commodity included, and numbers (called "mass-units") representing the *relative* extent to which each commodity was on the average used or consumed are then computed. The price in any year of each commodity multiplied by its corresponding "mass-unit" represents, therefore, the relative total expenditure on that commodity in that year *on the basis of the adopted regimen*. It follows, therefore, that by taking for any year the sum of the price of each commodity multiplied by its corresponding "mass-unit," a figure is obtained which represents the relative aggregate or total expenditure of the community in that year on all the commodities, etc., included. By computing these aggregate expenditures for a series of years and taking the expenditure in any desired year as "base," that is, making the expenditure in that year equal to 1000 units, the relative expenditure in any other year, that is to say, the "index-numbers," are readily ascertained. A numerical example of the technique and methods adopted for the computation of index-numbers was given in Report No. 2 (pp. 44 and 45).

2. **Scope of Investigation.**—It was pointed out in Report No. 1, that, in any investigation into the question of change in cost of living of a community, a careful distinction must be drawn between two things, viz:—

- (a) Variations in the *purchasing-power* of money, and
- (b) Variations in the *standard of living*.

In Report No. 2, attention was drawn to the fact that the second element (b) *can* be limited, at any rate to some extent, by the exercise of self denial and thrift, and that such

limitation is at the disposal of each individual; the former (a) is not subject to this possibility. Thus, from this aspect, social economics are concerned *primarily* with an accurate estimation of variations in the purchasing-power of money and only secondarily with the question of the general standard of living which has been reached. The first desideratum demands the selection of a suitable list of commodities, the quantities of each being taken in due proportion to their relative average consumption. The quantities in this list being kept constant, the cost of the whole group must then be ascertained. In this way a comparison may be made of the cost in different areas or districts at the same time, as well as the variation in any one place from time to time. This is the "aggregate expenditure" method explained above.

As explained in Report No. 1, special steps were taken to conduct the investigation back as far as 1901 for the capital towns only. The collection of current monthly returns as to prices and of quarterly returns of house rents commenced in thirty of the more important towns of the Commonwealth in January, 1912.

**3. Commodities and Requirements Included.**—The 47 items of expenditure included are divided into four groups, viz.:—(i.) groceries and bread, (ii.) dairy produce, (iii.) meat, and (iv.) house rent. These items cover about 60 per cent. of the total expenditure of a normal family. There are very cogent reasons for the restriction of the enquiries to the items mentioned. If the comparisons made are to be satisfactory, no confusion must arise between changes in the standard of living and changes arising from a variation of the purchasing-power of money. In order to avoid such confusion the items selected are such as are sensibly identical and identifiable in the various localities. The most important group of expenditure which is not included is clothing, the cost of which amounts to about 13 per cent. of the total expenditure. Owing to influences of individual taste, fashion, and the enormous variety of production, articles included in this group are practically not comparable and identifiable. As regards fuel and light, the cost of which amounts to about 4 per cent. of the total expenditure, while these commodities are comparable and identifiable, the usage or relative consumption in the towns included in the inquiries varies to such an extent that their inclusion on an assumed constant regimen would tend to produce a fictitious result in so far as variations in the purchasing-power of money are concerned.

In Report No. 8 (page 24), a tabular statement was given furnishing particulars of the commodities and items included, the units of measurement for which prices are collected, and the mass-units shewing the relative extent to which each item is used or consumed.

**4. Variations in the Purchasing-Power of Money in each Metropolitan Town, 1901 to 1917.**—In Reports Nos. 1, 2, 5, 6, 7, and 8, and Labour Bulletins Nos. 1 to 18, index-numbers were given for each of the four groups, and for all groups combined, for each capital town since 1901, the expenditure in 1911 being taken in each case as base (=1000). In this section only summarised results are given. Firstly, for food and groceries; secondly, for house rent; and thirdly, for all groups combined—the weighted average expenditure for all capital towns in 1911 being taken in each case as base (=1000). The index-numbers in each table are fully comparable with each other, that is to say, they shew not only the variations from year to year in each capital town, but also the relative cost as between the towns.

(i.) *Food and Groceries.* The index-numbers thus computed for the three groups comprising groceries and food are shewn in the following table:—

**RETAIL PRICES IN METROPOLITAN TOWNS, INDEX-NUMBERS FOR GROCERIES  
AND FOOD (GROUPS I., II., and III.), 1901 and 1907 to 1917.**

Weighted Average*	972	955	1,031	1,006	1,005	1,000	1,129	1,095	1,144	1,416	1,495	1,472

\* For all capital towns.

The above figures are directly comparable in every respect; thus it will be seen that the same quantity of food and groceries, which cost £1000 in the capital towns considered as a whole in 1911, would have cost £917 in Sydney in 1901, £1346 in Perth in 1911, or £1412 in Melbourne in 1917.

(ii.) *House Rent.*—In the following table, index-numbers are given computed for the weighted average house rent in each of the capital towns from 1901 to 1917, taking the average rent for the six capital towns in 1911 as the base (= 1000). The average rent has been obtained for each town separately by multiplying the average predominant rent for each class of house (i.e., houses having less than 4 rooms, 4 rooms, 5 rooms, 6 rooms, 7 rooms, and over 7 rooms) by a number ("weight") representing the relative number of houses of that class in the particular town. The sum of the products thus obtained, divided by the sum of the weights, gives the weighted average for all houses. The number of houses in each class for each town was obtained from the results of the 1911 census. It should be observed, therefore, that these index-numbers are based on the weighted average rents for all houses, and that they do not refer to any particular class of houses. The actual predominant rents for each class were given in appendixes to Reports Nos. 1, 2, 5, 6, 7 and 8, and an examination of these figures shews that for some classes of houses the increase has been greater, and in some less, than the general increase indicated in the following table:—

**HOUSE RENTS IN METROPOLITAN TOWNS.—INDEX-NUMBERS SHEWING WEIGHTED  
AVERAGE RENTS (GROUP IV.), 1901 and 1907 to 1917.**

Town.	1901.	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
Sydney ...	858	911	922	955	988	1,090	1,183	1,246	1,279	1,220	1,212	1,215
Melbourne ...	733	804	828	842	916	970	1,016	1,089	1,126	1,085	1,089	1,124
Brisbane ...	488	575	616	662	700	767	804	863	882	859	847	859

Hobart ...	667	708	727	749	776	805	829	887	914	928	928	951
Weighted Average*	751	816	839	867	919	1,000	1,063	1,118	1,135	1,081	1,081	1,098

\* For all capital towns.

NOTE.—The above figures are directly comparable in every respect.

It may be seen that there was a uniform increase in each metropolitan town from 1901 to 1914. The increase was greater in Adelaide and Brisbane than in the other

towns. It should be observed, however, that at the commencement of the period, rents were exceptionally low in Brisbane, and were comparatively low in Adelaide (see Appendix IV. to Report No. 1). The index-numbers for Perth present features entirely different from those for the other towns. During 1915, there was a decrease in house rents in all the capital towns except Hobart, and in 1916 rents increased slightly in Melbourne and Perth, and decreased slightly in Sydney, Brisbane, and Adelaide. The index-number for Hobart was the same in 1916 as in 1915. The index-numbers for 1917 shew that there was an increase in all capital cities during that year.

(iii.) *Food, Groceries, and House Rent combined.* The weighted averages for all four groups are of importance, as indicating the general results of this investigation so far as the purchasing-power of money is concerned. The following table shews the index-numbers for groceries, food, and house rent for each metropolitan town, the weighted average cost for the six capital towns in 1911 being taken as base (= 1000):—

**PURCHASING-POWER OF MONEY IN METROPOLITAN TOWNS.—INDEX-NUMBERS SHEWING WEIGHTED AVERAGE RESULTS FOR ALL GROUPS (GROCERIES, DAIRY PRODUCE, MEAT, AND HOUSE RENT), 1901 and 1907 to 1917.**

TOWN.	1901.	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
Sydney ...	893	926	986	989	995	1,031	1,148	1,178	1,206	1,323	1,394	1,406

Hobart ...	869	886	920	932	951	954	1,042	1,050	1,090	1,233	1,278	1,301
Weighted Average*	880	897	951	948	970	1,000	1,101	1,104	1,140	1,278	1,324	1,318

\* For all capital towns.

NOTE.—The above figures are directly comparable in every respect.

The index-number for 1914 was 3.3 per cent. higher than for 1913. There was a further increase in 1915 in each of the towns, the weighted average index-number shewing an increase of 12.1 per cent. compared with 1914. There was a further increase in each of the towns in 1916, the weighted average index-number for 1916 shewing an increase of 3.6 per cent. compared with the year 1915. The index-number for 1917 shews a decrease of 0.5 per cent. compared with the immediately preceding year. Index-numbers for the years 1901 to 1906 inclusive, omitted from the three preceding tables are given in Labour Report No. 5, page 23.

**5. Relative Cost of Food, Groceries, and House Rent in Different Towns, 1917.—**

The index-numbers given in the preceding paragraphs shew *changes in the cost of food, groceries, and house rent separately for each capital town during the years 1901 to 1917.* The figures given in the table on the next page shew *the relative cost of food, groceries, and house rent in 1917 in the thirty towns for which particulars are now being collected.* The weighted aggregate expenditure for the six capital towns for the year 1911 has been taken as base and made equal to 1000, hence the columns are comparable both horizontally and vertically.

**INDEX-NUMBERS, SHEWING RELATIVE COST IN EACH OF THIRTY TOWNS, OF FOOD AND GROCERIES AND HOUSE RENT COMPARED WITH WEIGHTED AVERAGE EXPENDITURE ON GROCERIES, FOOD, AND RENT IN THE SIX CAPITAL TOWNS IN 1911 AS BASE (= 1000), 1917.**

\* See remarks on page 41 of Labour Report No. 8, with reference to House Rents.

6. Variation in Purchasing-Power of Money, 1901 to 1917.—The tables in paragraph 4 give the relative cost of food, groceries, and house rent in the six capital towns from 1901 to 1917 in the form of index-numbers. In the following tables similar information is given as regards variations in cost of food, groceries, and house rent, the base being taken as 20s. for the weighted average in the six capital towns in 1911. The figures therefore shew the sums which would have to be paid in each town and in each year in order to purchase such relative quantities (indicated by the mass-units) of the several commodities, and to pay such sums for house-rent as would in the aggregate cost £1, according to the weighted average prices and rents in the six capital towns in 1911.

**PURCHASING-POWER OF MONEY (FOOD, GROCERIES, AND HOUSE RENT).—AMOUNT NECESSARY ON THE AVERAGE IN EACH YEAR FROM 1901 TO 1917 TO PURCHASE IN EACH CAPITAL TOWN WHAT WOULD HAVE COST ON THE AVERAGE £1 IN 1911 IN THE AUSTRALIAN CAPITALS REGARDED AS A WHOLE.**

EXPLANATORY NOTE.—The scale for each of the graphs for groups 1, 3, 5, and 7 is shewn by the figures on the right of the diagram, and that of the graphs for groups 2, 4, 6, and 8 on the left of the diagram, the line marked 1000 shewing the base line (for the year 1911) in each case. The heavy line in each graph represents the index-numbers for all groups combined, the light line indicating in each case the index-numbers for the separate group. (See page 1159.)

(ii.) *House Rent only.* The following table gives similar particulars for *house rent only*, the average for the six capital towns in 1911 being again taken as the basis of the table (= 20 shillings).

**PURCHASING-POWER OF MONEY.—HOUSE RENT.—AMOUNT PAYABLE ON THE AVERAGE IN EACH YEAR FROM 1901 TO 1917 FOR HOUSE RENT IN EACH CAPITAL TOWN, COMPARED WITH A RENT OF £1 IN 1911 IN THE AUSTRALIAN CAPITALS REGARDED AS A WHOLE.**

\* Basis of Table.

**7. Monthly Fluctuations in Retail Prices of Food and Groceries, July, 1914, to June, 1918.**—The following table has been prepared in order to shew the variations in retail prices of food and groceries since July, 1914, the last month prior to the outbreak of war. Particulars for each town are given in the form of index-numbers for food and groceries in each of the months specified. In the last column the percentage increase is shewn for each town in June, 1918, compared with July, 1914.

The aggregate result for the thirty towns covered by the investigations shews that prices were 32.4 per cent. higher in June, 1918, than in July, 1914.

**RETAIL PRICES INDEX-NUMBERS (FOOD AND GROCERIES), FOR EACH OF THIRTY TOWNS FOR THE MONTHS SPECIFIED, WITH WEIGHTED AVERAGE FOR SIX CAPITAL TOWNS IN 1911 AS BASE (=1000).†**

\* Average for the five towns. † Average for thirty towns.

† See remarks on page 31 of Labour Report No. 6, with reference to change of base period.

NOTE.—Corresponding index-numbers for the intervening months are given in Labour Reports Nos. 6 and 7; in Labour Bulletins Nos. 17 and 18, and in the Quarterly Summary of Statistics Nos. 70 and 71.

## § 8. Investigation into Purchasing-Power of Money in 150 Towns in Commonwealth.

1. **Introduction.**—In order to supplement the information as to variations in the purchasing-power of money, which is collected each month for the thirty towns specified in the preceding section, a special investigation was initiated in November, 1913, as to the purchasing-power of money in seventy additional towns in the Commonwealth. This investigation was repeated in November, 1914, November, 1915, November, 1916, and November, 1917. At the three latter periods the number of additional towns from which returns are collected annually was increased to 120. It is intended to carry it out in that month each year, thus making information available annually for 150 towns.

2. **Map shewing relative Purchasing-Power of Money.**—On the map on page 1155 each town is shewn by means of a number, the reference list at the side of the map indicating the town corresponding to each number and its relative index-numbers for the years 1913, 1914, 1915, 1916 and 1917. The figures in black type relate to the cost of food, groceries and rent of 5-roomed houses, while those in light type refer to food and groceries only. A glance at the map shews that the distribution of the 150 towns selected is in close approximation to the density of population (indicated by hatching). The weighted average cost for 100 towns in 1913 is taken as base, and the index-numbers are comparable in all respects.

## § 9. Wholesale Prices.

1. **General.**—The results of an investigation into wholesale prices in Melbourne were given in some detail in Report No. 1, from 1871 to the end of September, 1912. In Report No. 2 summarised results were included for the whole of the latter year; in Report No. 5 those for the year 1913; in Report No. 6 those for the years 1914 and 1915, in Report No. 7 those for the year 1916, and in Report No. 8 those for the year 1917.

The index-numbers up to the year 1911 are based on the prices of eighty commodities, but since that year the number has been increased to ninety-two.\* The methods followed for the computation of the wholesale price index-numbers are the same as those adopted in regard to retail prices. The commodities included, the units of measurement for which the prices are taken, and the mass-units, indicating the relative extent to which each commodity, in the units of measurement specified, is used or consumed, are shewn in a tabular statement in Report No. 8 (page 59).

2. **Index-Numbers and Graphs.**—Index-numbers have been computed for each group of commodities, as well as for all groups together. The index-numbers for the several groups, and for all groups together, are shewn in the following table.

(i.) *Table of Index-numbers.*—The index-numbers have in each case been computed with the prices in the year 1911 as base; that is to say, *they shew the amount which would have had to be expended in each of the years specified in order to purchase what would have cost £1000 in 1911, distributed in purchasing the relative quantities (indicated by the mass-units), of the several commodities included in each group, and in all groups respectively.* Thus, in the last column it may be seen that the cost of the relative quantities of the various commodities was 1229 in 1871, and 974 in 1901, as compared with 1000 in 1911, 1170 in 1912, 1088 in 1913, 1149 in 1914, 1604 in 1915, and 1662 in 1917. In other words, prices were lower in 1911 than in either 1871, 1914, 1915, or 1916 or 1917, and the purchasing-power of money in 1911 was, accordingly, greater. Again, prices were lower in 1901 than in 1911, and the purchasing-power of money in the former year was, therefore, greater.

---

\* In the computation of the index-numbers for years prior to 1911, the aggregate expenditure on 80 commodities in 1911 is taken as base (=1000), while for later years the aggregate expenditure on 92 commodities is taken.

1917 ...	2,129	2,008	1,157	1,423	1,343	2,403	1,884	2,171	<b>1,682</b>

NOTE.—The figures given in this table are comparable in the vertical columns, but are not directly comparable horizontally. The index-numbers are reversible.

(ii.) *Graphs.*—The index-numbers are shewn for each group and for all groups combined in the graphs on page 1156. The heavy line, repeated on each graph, represents the index-numbers for the weighted average for all groups, and is shewn so that comparison may be made between the price levels for all commodities and those for the commodities comprised in each group separately. The index-numbers for the individual groups are represented by the light lines. The broken lines at the commencement of each graph shew the index-numbers for the separate years 1861 and 1866, the continuous records commencing with the year 1871. The actual index-numbers for the whole period were given in Report No. 1.

3. **Seasonal Fluctuations and Tables of Prices.**—Information as to seasonal fluctuations in wholesale prices was given in Report No. 2 (page 64) and tables of prices of each commodity were given in Appendixes to Reports Nos. 1, 2, 5, 6, 7, and 8.

4. **Fluctuations in Wholesale Prices, July, 1914, to March, 1918.**—Since the outbreak of war, prices of many commodities have increased considerably. This is shewn in the following table in which the index-numbers are given for each group for the month of March, 1918, taking July, 1914, the last month before the outbreak of war, as base (= 1000) for each group :—

**MELBOURNE WHOLESALE PRICES.—VARIATIONS BETWEEN JULY, 1914,  
AND MARCH, 1918.**

Particulars.	I. Metals and Coal.	II. Jute, Leather, etc.	III. Agricultural Produce, etc.	IV. Dairy Produce.	V. Groceries	VI. Meat.	VII. Building Materials.	VIII. Chem- icals.	All Groups.
July, 1914 ...	<b>1,000</b>	<b>1,000</b>	<b>1,000</b>	<b>1,000</b>	<b>1,000</b>	<b>1,000</b>	<b>1,000</b>	<b>1,000</b>	<b>1,000</b>
March, 1918 ...	2,161	2,463	1,232	1,188	1,324	1,556	2,107	3,275	1,668

It may be seen that there has been an aggregate increase in prices during the period specified of no less than 34.4 per cent. The greatest increase, 227.5 per cent., is recorded in Group VIII. (Chemicals), and the least, 18.8 per cent., in Group IV. (Dairy Produce).

## § 10. Control of Trade and Prices during War.

1. **General.**—Shortly after the outbreak of war, a conference of Federal and State Ministers met to discuss the financial position and other matters, and it was decided that for the purpose of controlling the prices of foodstuffs, each State should introduce *uniform* legislation, since it was obvious that this was necessary in view of all the circumstances.

Particulars of the various Acts passed by the State Governments will be found in Labour Bulletin No. 6, September, 1914, pages 132-147.

As a further outcome of this conference, in addition to the various State Boards and Commissions, a Federal Royal Commission, consisting of the Hon. Alfred Deakin (chairman), the Hon. Dugald Thomson, formerly Minister for Home Affairs, and Mr. G. H. Knibbs, C.M.G., Commonwealth Statistician, was appointed to collect information and report upon such matters as the supply of foodstuffs and other necessities required by and available for Australia during the war; the amount then available and likely to be so for export, having due regard to the requirements of Australia; the development of fresh sources of supply; and any other important matters relating to conditions of trade and industry arising from the war. This commission ceased to exercise its functions after the 30th October, 1914.

There has been great diversity in regard to the operations of the various authorities created in the different States. In New South Wales and Queensland prices have been fixed for a large number of commodities, whereas in Victoria only a comparatively few commodities were dealt with, and these only during the latter half of 1914 and early in 1915. In South Australia it was not until the latter part of 1915 that the Necessary Commodities Commission began to fix prices. In Western Australia the Food Stuffs Commission fixed the price of some commodities, and refused to sanction proposed advances in others. The commission was revoked in October, 1915. In Tasmania the Legislative Council rejected the Bill creating a Necessaries of Life Control Bill, and consequently no action has been taken in that State to deal with prices of commodities in the manner adopted by the other States.

2. **Federal Control of Prices.**—In March, 1916, the Federal Government created a Prices Adjustment Board with authority to fix the prices of flour, bread, bran, and pollard. The Board made investigations, and fixed the prices of flour, bran, and pollard in every milling centre of Australia. Prices of bread were fixed in upwards of 1000 separate towns, after investigations had been made as to the cost of manufacture, distribution, etc. An important judgment of the High Court, as to the powers of Government to fix prices, was obtained as the result of the conviction of a Melbourne suburban baker, by the local magistrate, for selling bread at a higher rate than that fixed by the Prices Adjustment Board. This conviction was appealed against, but the High Court, by a majority decision, affirmed that in matters affecting the safety of Australia the Government, under the War Precautions Act, had plenary powers, and that the decision as to what is necessary rests with the Executive and not with the judicial authority.

After this judgment, the scope of the investigations and activities of the Prices Adjustment Board were considerably enlarged, and an exhaustive list of commodities were declared to be necessary commodities. Later, a Commissioner was appointed in each State to make investigations, and to make recommendations to the Minister as to the necessity for fixing maximum selling prices of various commodities.

Shortly after the appointment of these Commissioners, the members of the Prices Adjustment Board resigned in a body, and since then the control of prices has been in the hands of the Minister acting upon the recommendations of the State Commissioners. The Commissioner for Victoria acts also as Chief Prices Commissioner. Prices have been fixed, by regulations under the War Precautions Act, for a large number of commodities.

## SECTION XXXIV.

## MISCELLANEOUS.

## § 1. Immigration.

## (A) The Encouragement of Immigration into Australia.

1. **Introduction.**—Various measures have from time to time been adopted by the Commonwealth and State Governments, as well as by private societies and individuals, with a view to promoting the immigration of suitable classes of settlers into Australia. Since the outbreak of war, however, little is being done. The activities of the Commonwealth Government (which is vested with constitutional powers in regard to immigration under Sec. 51, xxvii., of the Constitution Act 1900) with respect to the encouragement of immigration, have hitherto practically been confined to advertising the resources and attractions of Australia in handbooks, newspapers, and periodicals.

2. **State Immigration.**—The advertising in the United Kingdom of the resources of the individual States has been carried out by their Agents-General in London. During 1910 and the three subsequent years, a great advance was made in Australian immigration generally, the State Governments having adopted more active and direct means than had hitherto existed for making the advantages and opportunities of their respective States better known to the people of the United Kingdom, Europe, and America. At the present time, however, owing to war, no State action is being taken in the matter of immigration. In previous issues of the Year Book will be found in detail the various methods under which intending immigrants could obtain information and assistance (see Year Book No. 8, p. 1053).

Particulars of the net immigration to the Commonwealth are given on page 116, and of assisted immigration on page 129 hereinbefore.

3. **Commonwealth Scheme of Immigration.**—It is the function of the Commonwealth Department of Home and Territories to advertise the attractions of Australia for settlers, farm workers, and tourists. The Commonwealth carries on the general advertising of Australia by means of paragraphs and illustrated articles in British, European, and American publications, while the several States advertise for the class of immigrants they specially require. Bioscope films are utilised for the illustration of lectures. Exhibitions are held throughout the chief rural districts and at the important agricultural shows in Great Britain, and handbooks for settlers and tourists, as well as folders and other publications, have been issued. Pictorial posters are also utilised. The outbreak of war, however, interrupted the vigorous campaign that had been initiated, and for the present, the matter of advertising and recruiting for immigrants is practically at a standstill.

4. **The High Commissioner for Australia and the Agents-General.**—Intending settlers or immigrants may, on application, obtain information from the High Commissioner for Australia—

THE RIGHT HON. A. FISHER, P.C.,

AUSTRALIA HOUSE,

STRAND,

LONDON, W.C. .

Information regarding individual States may be obtained from the officials specified below:—

### AUSTRALIAN AGENTS-GENERAL.

<i>New South Wales</i>	Hon. C. G. WADE, K.C. ...	123-125 Cannon St., London, E.C.

<i>Western Australia</i>	Hon. J. W. CONNOLLY ...	Savoy House, Strand, London.
<i>Tasmania</i> ...	Major the Hon. SIR J. MCCALL, M.D. ...	56 Victoria St., Westminster, London

### (B) The Regulation of Immigration into Australia.

1. **Pre-Federal Restrictions.**—(i.) *Alien Races.* The several States of Australia had regarded it as desirable, long prior to Federation, to impose certain restrictions upon the admission of persons wishing to become inhabitants of those States. The influx of Chinese, for example, was limited by stringent statutes, and later, general Acts were passed in some of the States which had the effect of restricting the immigration of other—principally Asiatic—races.

(ii.) *Undesirable Immigrants.* Further restrictions were placed upon the admission of persons who were undesirable as inhabitants, either for medical or moral reasons, or who were likely to be an economic burden upon the community.

2. **Powers and Legislation of the Commonwealth.**—(i.) *Constitutional Powers.* By Chap. I., Pt. V., Sec. 51, xxvii. and xxviii. of the Commonwealth Constitution Act the Parliament of the Commonwealth is empowered to make laws with respect to immigration and emigration and the influx of criminals. (See page 24 herein.)

(ii.) *Legislation.* The powers above specified have now been exercised by the Commonwealth Government, and the laws passed in pursuance thereof supersede the previously existing State laws.

The first Act passed, dealing with this matter, was the Immigration Restriction Act 1901, which contained provisions restricting the immigration of the classes of persons previously mentioned, and also persons under contract to perform manual labour. The provisions regarding contract labour were repealed and amended by the Contract Immigrants Act 1905, and the principal Act was also amended by the Immigration Restriction Amendment Act 1905, and subsequently by the Immigration Restriction Acts of 1908 and 1910, and the Immigration Act of 1912. The immigration of alien races and undesirable persons is now regulated by the Immigration Act 1901-12. Admission of immigrants under contract to perform manual labour is, however, still controlled by the provisions of the Contract Immigrants Act 1905, and will be permitted if the contract is in writing, is made by or on behalf of some person named, who must be resident in Australia, and approved by the Minister. Such approval, which must be obtained before the immigrant lands in Australia, will not be given if the contract is made with the view to affecting an industrial dispute, or if the remuneration and other terms are not as advantageous to the contract immigrant as those current for workers of the same class at the place where the contract is to be carried out.

There is an additional provision where the proposed immigrant is not a British subject born in the United Kingdom or descendant of such a person. In such case it has to be proved that there is a difficulty in the employers obtaining in the Commonwealth a worker of at least equal skill and ability.

In case of infraction of the law it is provided that the contract is absolutely void and the immigrant and employer are both liable to penalties, the employer is also liable to compensate the immigrant until he obtains employment, or, at the option of the immigrant, to provide expenses for his return to the country whence he came.

**3. Prohibited Immigrants.**—(i.) *Provisions of the Act.* Persons comprised in the following classes are prohibited from entering the Commonwealth:—(a) Any person who fails to pass the dictation test; that is to say, who fails to write out not less than fifty words of a language prescribed by regulation when dictated to him by an officer administering the Act. (b) Any person not possessed of the prescribed certificate of health. (c) Any idiot, imbecile, feeble-minded person, or epileptic. (d) Any person suffering from a serious transmissible disease or defect. (e) Any person suffering from pulmonary tuberculosis, trachoma, or from any loathsome or dangerous communicable disease, either general or local. (f) Any person suffering from any other disease or mental or physical defect, which from its nature is, in the opinion of an officer, liable to render the person concerned a charge upon the public or upon any public or charitable institution. (g) Any person suffering from any other disease, disability, or disqualification which is prescribed. (h) Any person who has been convicted of a crime and sentenced to imprisonment for one year or more, unless five years have elapsed since the termination of the imprisonment. (i) Any person who has been convicted of any crime involving moral turpitude, but whose sentence has been suspended or shortened conditionally on his emigration, unless five years have elapsed since the expiration of the term for which he was sentenced. (j) Any prostitute, procurer, or person living on the prostitution of others.

Regarding (a) it may be stated that the Act of 1901 provided for the dictation of not less than fifty words of a European language. The Act of 1905 provided for the retention of this test until regulations be passed prescribing the languages to be employed. No such regulations have yet been made, and the provision of the Act of 1901 is therefore *de facto* still in force. It may be stated that in general practice the dictation test is not imposed upon persons of European race.

Regarding (b), the Amending Act of 1912 provides for the establishment of Commonwealth Medical Bureaux at places outside the Commonwealth, and the appointment of medical referees to examine intending immigrants and issue certificates of health in the prescribed form, on payment of a prescribed fee. A chief medical officer has already been appointed to take charge of the Bureaux attached to the High Commissioner's Office in London. This officer arranges for the selection of suitable medical referees for appointment to act at various centres throughout the United Kingdom.

Provision is also made for the medical examination of, and the issues of certificates of health to intending immigrants who embark at a port where there is no medical referee, or who arrive in the Commonwealth without a certificate in the prescribed form.

Pending the proper organisation in the United Kingdom of the Medical Bureaux and the appointment of medical referees, the requirement that immigrants must produce a certificate of health on arrival in Australia will not be enforced.

(ii.) *Exemptions.* From these restrictions the following persons are exempted:—(a) Any person holding an exemption certificate. (b) Members of the King's regular land and sea forces. (c) The master and crew of any public vessel of any Government. (d) The master and crew of any other vessel landing during the stay of the vessel in a Commonwealth port. The exemption of members of a crew during the vessel's stay in port is subject to the production of identification cards to an officer on demand. This provision will not be enforced in respect of white members of a crew, but there is a further provision which empowers an officer to refuse any member of a crew permission to land unless he is satisfied that such person is free from a communicable disease. Before the ship can obtain her outward clearance the crew must, at the demand of an officer administering the Act, be mustered, and if any member of the crew be missing,

and would otherwise, in the opinion of the officer, have been a prohibited immigrant, then such person is deemed to be a prohibited immigrant, and until the contrary be proved, to have entered the Commonwealth contrary to the Act. (e) Any Commissioner of, or other person accredited from the Imperial or any other Government.

(iii.) *General Provisions.* An immigrant may be required to pass the dictation test at any time within two years after he has entered the Commonwealth. This applies particularly to coloured persons, but any immigrant found within three years of entering the Commonwealth to be suffering from a prohibitory disease or defect may be deemed to be a prohibited immigrant unless it is proved to the Minister's satisfaction that he was free from the disease or disability at the time of his arrival in Australia.

A prohibited immigrant within the meaning of (a) above may, at the discretion of an officer, be allowed to enter the Commonwealth, or to remain within it, upon depositing £100 and within thirty days either obtaining an exemption certificate or departing from the Commonwealth; in either case the deposit is returned.

The punishment for breach of the Act by a prohibited immigrant is imprisonment for six months and deportation in addition to or in substitution for such imprisonment, if so ordered.

4. *Liabilities of Shipmasters and Others.*—The master, owners, agents, and charterers of a vessel from which a prohibited immigrant enters the Commonwealth are jointly and severally liable to a penalty of £100 for each entrant. The vessel may be detained as security, but may be released upon the giving of a bond with two sureties for the payment of any penalties; it may also be seized and sold in default of payment of penalties. The master, owners, agents, and charterers may be required to provide a return passage for the prohibited emigrant and to pay for his maintenance during his detention prior to deportation. Masters of the vessels are authorised to prevent such a person from landing, and to obtain any necessary assistance.

Under the Immigration Restriction Act 1908, any person on board a vessel at the time of her arrival from any place outside Australia at any port in Australia who is not (a) a *bonâ fide* passenger of the vessel, or (b) a member of the crew of the vessel whose name is on the articles, is deemed to be a stowaway, unless the master gives notice that the person is on board the vessel, and does not permit him to land until an officer has had an opportunity of satisfying himself that the person is not a prohibited immigrant. The master, owners, agents, and charterers of a vessel are jointly and severally liable to a penalty of £100 for each stowaway brought into any port in Australia. The Immigration Act 1912 provides for a penalty of £200 for each stowaway in cases where the master has been convicted of a similar offence within the preceding twelve months. Power is given to search vessels for stowaways. The Immigration Restriction Act 1910 provides penalties for being concerned in bringing immigrants secretly to the Commonwealth.

5. *Agreements with other Countries.*—Arrangements may be made with the Government of any country regulating the admission into Australia of the subjects or citizens of such country, such subjects not being, during the subsistence of the arrangement, required to pass the dictation test.

Persons who have resided either continuously or from time to time in the Commonwealth for a period of five years in the whole, and who are about to depart from it, being persons, who, if they return, would be prohibited immigrants, may obtain a certificate of exemption entitling them to return.

Certificates of exemption are granted by the Minister for Home and Territories, whose department administers the Act, and by the Collector of Customs in each State.

6. *Statistics.*—The following tables shew the number of persons who desired but were not permitted to land, those who were allowed to land, and the nationality of the persons admitted.

**PERSONS ADMITTED OR REFUSED ADMISSION TO COMMONWEALTH UNDER  
PROVISIONS OF IMMIGRATION RESTRICTION ACT, 1909 to 1917.**

## § 2. Patents, Trade Marks, and Designs.

**1. Devolution of Jurisdiction upon the Commonwealth.**—Prior to the establishment of Federation, and for a few years thereafter, each Australian State possessed independent jurisdiction in respect of patents, copyrights, trade marks, and designs, and had, with the exception of Tasmania in regard to copyrights, enacted its own laws. Any person, therefore, who desired to obtain the grant of a patent, or the registration of any copyright, trade mark, or design had necessarily, with the exception aforesaid, to incur the trouble and expense of making separate applications in each State. The Commonwealth Constitution Act conferred upon the Federal Parliament power to legislate respecting these matters. (See page 24 hereinbefore.) The Patents Act of 1909 applied the laws relating to patents for inventions to the Territory of Papua.

The State Acts, though in general based upon the Imperial Statutes dealing with these subjects, were not wholly governed by them. The Commonwealth Acts, both in regard to principle and practice, have the same general foundation as the Imperial Statutes, but in some respects have been modified and brought into line in accordance with Australian experience.

**2. Patents.**—The first Commonwealth Patents Act was passed in 1903, and was amended in 1906, 1909, 1910, 1915 and 1916. (See page 42 *ante*.) Under these Acts, which are administered by a "Commissioner of Patents," the powers and functions vested under the States Acts became vested in the Commonwealth. A single Commonwealth patent now gives throughout the Commonwealth and the Territory of Papua that protection which formerly could only be obtained by procuring a patent in each State and the said Territory. The rights of State patentees or the patentees in the Territory of Papua are in all cases reserved to them. The holder of a State patent in force may obtain, for a period not exceeding the unexpired time thereof, a Commonwealth patent for the invention comprised in the State patent; provided, however, that any State other than the State in which the patent under the States Patent Act was granted may be excepted from the patent if the Commissioner of Patents is satisfied that the invention either (a) is not novel, (b) has been made the subject of a pending application, or (c) has been published in such State. Comparatively small fees, totalling £3, are now sufficient to obtain for an inventor protection throughout the Commonwealth and the Territory of Papua, and the only renewal fee (£5) is payable before the expiration of the seventh year of the patent, or within such extended time, not exceeding one year, and upon payment of further fees as may be allowed.

(i.) *Applications for Patents.* Any of the following persons may make application for a patent :—(a) The actual inventor. (b) His assignee, agent, attorney, or nominee. (c) The actual inventor or his nominee jointly with the assignee of a part interest in the invention. (d) The legal representative of a deceased actual inventor or of his assignee. (e) Any person resident in the Commonwealth to whom the invention has been communicated by the actual inventor, his legal representative, or assignee (if the actual inventor, his legal representative, or assignee is not resident in the Commonwealth). An application for a patent must be for one invention only, and must be made in the form prescribed, and lodged by being left at or sent by post to the Patent Office at Melbourne. It must be accompanied either by a provisional or a complete specification. The application must contain a declaration in the prescribed form setting out the facts relied on to support the application, and must be signed by the applicant before a witness.

(ii.) *Term for which Granted.* The term for the duration of every patent is limited to fourteen years from the date of application. A patent ceases if the patentee fails to pay the renewal fee within the prescribed time.

(iii.) *Opposition to Grant of Patent.* Within three months of the advertisement of the acceptance of a complete specification, or within such further time, not exceeding one month, as the Commissioner on application made within the three months allows, any person may give notice at the Patent Office of opposition to the grant on any of the following grounds :—(a) That the applicant has obtained the invention from the opponent or from a person of whom he is the legal representative or assignee or nominee. (b) That the invention has not been communicated to the applicant by the actual inventor, his legal representative or assignee (if the actual inventor, his legal representative or assignee is not resident in the Commonwealth). (c) That the invention has been patented in the Commonwealth on an application of prior date or has been patented in a State. (d) That the complete specification describes or claims an invention other than that described in the provisional specification, and that the opponent has applied for a patent for such other invention in the interval between the leaving of the provisional and complete specifications. (e) Want of novelty. (f) Prior publication.

The case is heard and decided by the Commissioner, from whose decision an appeal lies to the High Court or to the Supreme Court of the State in which the Patent Office is situated.

(iv.) *Single Patent for Cognate Inventions, etc.* The provisions of the Act relative to single patents for cognate inventions, patents of addition and revocation of patents, will be found in detail in previous issues of the Year Book. (See No. 6, p. 1163.)

(v.) *Compulsory Working and Licenses.* At any time not less than four years after the date of a patent, and not less than two years after the 13th December, 1911, any person may apply to the High Court or the Supreme Court of the State in which the Patent Office is situated for an order declaring that the patent article or process is not manufactured or carried on to an adequate extent in the Commonwealth. From and after the time when any such order may take effect, the patent is not deemed to be infringed by the manufacture or carrying on in the Commonwealth of the patented article or process, or by the vending within the Commonwealth of the patented article made within the Commonwealth. By Act No. 13 of 1916, section 87(a), which provides for compulsory working, has been suspended during the continuance of the present war and for a period of six months thereafter, and in reckoning the said period of four years, the period during which section 87(a) is suspended shall not be taken into account. Any person interested may, after the expiration of two years from the granting of the patent, present a petition to the Commissioner alleging that the reasonable requirements of the public with respect to a patented invention have not been satisfied and praying for the grant of a compulsory license or, in the alternative, for the revocation of a patent. If the parties do not come to an arrangement between themselves, the Commissioner, on being satisfied that a *prima*

*facie* case has been made out, must refer the petition to the High Court or the Supreme Court of the State in which the Patent Office is situated. If the Commissioner is not satisfied that a *prima facie* case has been made out he may dismiss the petition.

(vi.) *Restoration and Surrender of Patents, and Contracts and Proceedings.* The provisions of the Act with reference to restoration and surrender of patents, contracts, etc., are given in detail in previous issues of the Year Book. (See No. 6, p. 1164.)

(vii.) *International Protection of Patents.* The Patents Act contains provisions under which the international arrangements for the protection of patents contained in the Imperial Acts can be made applicable to the Commonwealth by order of the King-in-Council. Applicants for patents, subject to the country in which first application is made being a party to the arrangement, are now, if they apply in Australia within twelve months of their first foreign application, entitled to make application for patents for their inventions in priority to other applicants, and such patents have the same date as the date of the first application abroad. Corresponding arrangements have also been made by the Commonwealth with New Zealand.

(viii.) *Patent Attorneys.* Any person on passing the prescribed examination, and on paying a fee of £5, may be registered by the Commissioner as a patent attorney. A solicitor may practise as a patent attorney without passing the prescribed examination and without being registered as a patent attorney. No person may describe himself as a patent attorney, or as a patent agent, or as an agent for obtaining patents unless he is registered or entitled to practise as a patent attorney.

(ix.) *Patent Office Publications.* Complete specifications are printed shortly after they become open to public inspection by advertisement of acceptance, or under Section 121 of the Act, provided the complete specification is not accepted and advertised. Each specification is open to public inspection. A number of publications, of which a list may be found in the Australian Official Journal of Patents, is on sale at the Government Printing Office, Melbourne.

The *Australian Official Journal of Patents* is issued weekly, and contains lists of applications and proceedings, with illustrated notes of accepted complete specifications. A supplementary annual volume contains statistics, indexes to names of persons concerned, classified indexes to subject matter of applications lodged, and a numerical index to proceedings on Commonwealth applications which have been advertised during the year; there are also names and number indexes to proceedings on State applications.

(x.) *Applications Filed, Provisional Specifications Accepted, and Letters Patent Sealed.* The numbers of individual inventions in respect of which applications were filed in the States or Commonwealth during each year from 1910 to 1917 inclusive are shewn in the following table. The number of applications accompanied by provisional specifications and the number of patents sealed in respect of applications made in each year are also shewn.

3. **Trade Marks.**—The remarks made concerning the unification of the patent system of the Commonwealth apply equally to trade marks. Under the Trade Marks Act 1905, which came into force on the 2nd July, 1906, the Commissioner of Patents is appointed to act also as “Registrar of Trade Marks.” The Trade Marks Act of 1905 was amended by the Patents, Trade Marks, and Designs Act 1910, assented to on the 14th November, 1910, and by the Trade Marks Act 1912, and is now cited as The Trade Marks Act 1905-1912. The principal objects of the amending Act were to enlarge the scope of marks capable of registration, and repeal the provisions of the Act of 1905 relating to the “Workers Trade Mark,” the provisions regarding which were held to be unconstitutional. Special provisions for the registration of a “Commonwealth Trade Mark” are contained in the Act of 1905 and are applicable to all goods included in or specified by a resolution passed by both Houses of Parliament that in their opinion the conditions as to remuneration of labour in connection with their manufacture are fair and reasonable.

(i.) *Essential Particulars of Trade Marks.*—

Section 15. “A registrable trade mark shall consist of essential particulars with or without additional matter.”

Section 16. (1) “A registrable trade mark must contain or consist of at least one of the following essential particulars:—(a) The name of a company, individual, or firm represented in a special or particular manner; (b) the signature of the applicant for registration or some predecessor in his business; (c) an invented word or invented words; (d) a word or words having no direct reference to the character or quality of the goods, and not being according to its signification a geographical name or a surname; (e) any other distinctive mark, but a name, signature, or word or words, other than such as fall within the descriptions in the above paragraphs (a), (b), (c) and (d) shall not, except by order of the Registrar, Law Officer, or Court, be deemed a distinctive mark.”

(2) “For the purposes of this section ‘distinctive’ means adapted to distinguish goods of the proprietor of the trade mark from those of other persons.”

(3) “In determining whether a trade mark is so adapted, the Registrar, Law Officer, or Court may, in the case of a trade mark in actual use, take into consideration the extent to which such user has rendered such trade mark in fact distinctive for the goods with respect to which it is registered or proposed to be registered.”

(ii.) *State Registrations.* State registrations cease to be in force at the expiration of fourteen years from the date of the Commonwealth Act, or at the time when, under the State Trade Marks Act, the trade mark would, if after the commencement of the Commonwealth Act no fee for the continuance of its registration were paid, first become liable to removal from the register, whichever first happens. It is also provided that no fee shall be receivable nor shall any act be done after the commencement of the Commonwealth Act for the continuance of the registration of a trade mark under a State Act.

Commonwealth registration of a State registered mark may be effected, and the fact of its registration in a State prior to the coming into force of the Commonwealth Act may entitle the registered proprietor in the State to Commonwealth registration, notwithstanding the existence of defects which might be grounds for refusal of an application for the registration of a new trade mark.

(iii.) *Duration of Registration and General Provisions.* The registration of a trade mark is for a period of fourteen years, but may be renewed from time to time. International and intercolonial arrangements for the mutual protection of trade marks may be made in a manner similar to that provided for the protection of patents. In this regard Australia has become a party to the International Convention for the protection of industrial property. Registration may be opposed by any person lodging a notice of opposition at the Trade Marks Office within three months after the advertisement of the application, or such further time, not exceeding three months, as may, on application made within the first three months, be allowed.

(iv.) *Publications.* The *Australian Official Journal of Trade Marks* is issued weekly, and contains lists of applications and proceedings, with representations of marks (when accepted) sought to be registered. Lists of registered owners of designs and the subject matter of applications are also published weekly in this Journal. Indexes to names of applicants and subject matter of applications are compiled and are on sale.

4. **Designs.**—The Designs Act of 1906 came into operation on the 1st January, 1907, being subsequently amended by the Patents, Designs and Trade Marks Act 1910, and the Designs Act 1912, and is now cited as the Designs Act 1906-12. Under this Act a Commonwealth Designs Office has been established and the Commissioner of Patents appointed "Registrar of Designs."

(i.) *Registration.* Any new and original design which has not been published in Australia before the lodging of an application for its registration may be registered in respect of all or any of the articles enumerated in the classification contained in the regulations, which comprise jewellery, paperhangings, carpets, floor-cloths, lace, hosiery, millinery, wearing apparel, textile fabrics, bookbinding, and articles composed wholly or chiefly of a variety of solid substances. A separate application must be made in respect of each class in which the owner of the design desires it to be registered. After an application for the registration of a design has been lodged, the design may be published and used without prejudice to the validity of the registration.

(ii.) *Duration of Copyright in Designs.* The registration takes effect as from the date of the lodging of the application, and, subject to the provisions of the Act, remains in force for a period of five years from that date. Provision is made by the amending Act of 1912 for an extension of the period of registration to fifteen years, subject to applications for extensions being made and the prescribed fees paid before the expiration of five and ten years respectively. The owner of a registered design must within two years after registration substantially use the design, or cause it to be used in Australia, and if he fails to do so the copyright ceases. If, however, such design is used in any manufacture abroad, the above period is limited to six months.

(iii.) *General.* The Act also contains provisions regarding the remedies for infringement of designs and the rectification of the register. Arrangements for the international and intercolonial protection of copyright in designs were made by the same proclamation referred to above with regard to patents and trade marks. The owner of a registered design must cause each article to which the design is applied to be marked before delivery for sale with the prescribed mark to denote that the design is registered.

5. **Applications for Trade Marks and Designs.**—The following table gives particulars of applications for trade marks and designs received and registered under the Commonwealth Acts from 1909 to 1917 inclusive :—

**APPLICATIONS FOR TRADE MARKS AND DESIGNS RECEIVED AND REGISTERED  
UNDER COMMONWEALTH ACTS, 1909 to 1917.**

**6. Enemy Patents and Trade Marks.**—On the outbreak of the European war the Commonwealth Government deemed it advisable to extend the powers of the Governor-General of the Commonwealth during the continuance of hostilities with reference to patents, trade marks, and designs, the property of alien enemies.

Acts Nos. 15 and 16 of 1914 were accordingly passed by the Commonwealth Parliament in November, 1914, giving the Governor-General power to make regulations as follows:—

- (a) for avoiding or suspending in whole or in part any patent or license the person entitled to the benefit of which is the subject of any State at war with the King;
- (b) for avoiding or suspending the registration, and all or any rights conferred by the registration, of any trade mark or design the proprietor whereof is a subject as aforesaid;
- (c) for avoiding or suspending any application made by any such person under any of the Acts referred to in this section;
- (d) for enabling the Minister to grant, in favour of persons other than such persons as aforesaid, on such terms and conditions, and either for the whole term of the patent or registration or for such less period, as the Minister thinks fit, licenses to make, use, exercise or vend patented inventions and registered designs so liable to avoidance or suspension as aforesaid; and
- (e) for extending the time within which any act or thing may or is required to be done under any of the Acts referred to in this section.

The regulations prescribed by the Governor-General for giving effect to the provisions of these Acts may be found in the official journals issued by the Commonwealth Commissioner of Patents (see *Australian Official Journal of Patents*, vol. 20, No. 47 *et seq.*).

To the end of June, 1918, twenty-one applications had been made under these Acts to avoid or suspend patents, of which six were granted and three refused, the others being withdrawn. Thirty-five applications were also made to avoid or suspend trade marks, of which eight were granted and subsequently revoked, twenty-two refused, three withdrawn, and two are still pending. Five hundred and fifty-eight Commonwealth and 319 State registrations of trade marks, and all rights conferred by such registrations, also have been suspended in favour of the Minister of State for Trade and Customs. Two Commonwealth trade marks—"Lysol" and "Aspirin"—were avoided from the 23rd July, 1917, ten patents were suspended in favour of the Minister of State for the Navy, and in addition, four patents were suspended in favour of the Engineer-in-Chief for the Commonwealth Railways and such person or persons as may be licensed by the Minister.

**7. Publication of Inventions during Present State of War.**—Under the War Precautions (Patents) Regulations 1916 (Statutory Rules 140), any person intending to apply for a patent outside the Commonwealth must give notice of his intention to the Commissioner of Patents, who, if he is of the opinion that it is obvious no reason exists for prohibiting publication in the country in which it is intended to make application for a patent, shall notify the applicant that the desired application may be made. In all other cases the Commissioner will refer the notice to the Patents Inquiry Board. If the Board is of opinion that the invention is one which would be of assistance to the enemy, or its publication outside the Commonwealth would be detrimental to the interests of the Commonwealth, the applicant is directed not to publish or communicate his invention.

Under the same regulations every application for a patent, except applications the publication of which in the opinion of the Commissioner of Patents would obviously not be detrimental to the Commonwealth, shall also be referred to the Board. If the Board determines that an invention might be of assistance to the enemy, the applicant shall not, during the continuance of the present state of war, proceed with his application either within or beyond the Commonwealth. It is also forbidden in respect to all applications for patent made since 30th October, 1917, for the applicant to publish his invention either within or outside the Commonwealth until he has received permission from the Commissioner of Patents.

Provision is also made under these regulations for the Attorney-General to give permission in writing for an application to be made abroad under the terms of the International Convention in respect of any invention the subject of an application in the Commonwealth lodged prior to the 12th January, 1916.

### § 3. Copyright.

**1. Copyright Legislation.**—Prior to the 1st January, 1907, the date on which the Commonwealth Copyright Act of 1905 came into operation, the subject of copyright was regulated by the laws of the separate States. In general, the State laws were under the like provisions of the Imperial Copyright law, including the law of 1842 and the earlier unrepealed or subsequent Acts, the most important of which were the Colonial Copyright Act 1847 and the International Copyright Act of 1886. They were also generally included under British international relations embracing the Berne-Paris provisions of the International Copyright Union and the reciprocal relations with the United

States of America, with the exception that in the Austria-Hungary Treaty, New South Wales and Tasmania were not parties, because they did not exercise the right of ratification especially reserved to individual colonies.

Though the Commonwealth Copyright Act of 1905 took the place of the State Copyright Acts formerly in force, it left unaffected existing rights under the State laws, but transferred the administration thereof to the Commonwealth. Provision was also made under the law of 1905 for the registration of International and State copyrights. The principal features of the Act of 1905 are given in previous issues of the Year Book (see No. 9, p. 1119). This Act was repealed by the Copyright Act of 1912, which was assented to and became operative on the 20th November, 1912. Subject to modifications relating to procedure and remedies, the Commonwealth law of 1912 adopted the British Copyright Act of 1911, and declared the latter law to be in force within the Commonwealth as from the 1st July, 1912. The British Act extends throughout the whole of His Majesty's dominions, but it is not to be in force in a self-governing dominion unless enacted by the legislature thereof either in full or with modifications relating exclusively to procedure and remedies necessary to adapt the Act to the circumstances of the dominion.

Under the Commonwealth Law of 1912, copyright subsists in "every original literary, dramatic, musical, and artistic work," first published within parts of His Majesty's dominions to which the British Copyright Act of 1911 extends, and in the case of an unpublished work, the author of which was "at the date of the making of the work," a British subject or a resident domiciled within the aforesaid parts of His Majesty's dominions (or under protection through international copyright provisions). The old Common Law right is abrogated by the Act of 1912, and all copyright property is now the creature of statute from the date when it takes shape, either written in words or in some other material form.

Copyright is defined to mean the sole right to produce or reproduce the work or any substantial part thereof in any material form whatever, or any translation thereof, to publish, perform, or deliver the work in public, to dramatise or novelise it, and in the case of a literary, dramatic or musical work, to make any record, cinematograph film or other contrivance by means of which it may be mechanically performed or delivered, or to authorise any of such acts. Architectural works of art are included as to design, but not as to process or methods of construction.

By an Order-in-Council made by the Government of the Commonwealth of Australia, simultaneously with the issue of a Proclamation by the President of the United States of America on the 15th March, 1918, reciprocal protection was extended to citizens of the respective countries in regard to unpublished literary, dramatic, musical and artistic works in which copyright existed on the date mentioned, or may thereafter subsist under the laws of these countries. The enjoyment of the rights conferred by the Order-in-Council shall be subject to the accomplishment of the conditions and formalities prescribed by law of the United States of America, or, in other words, registration at the Library of Congress, Washington, D.C., U.S.A., is made a condition precedent to the protection of Australian copyright property in the United States of America.

Further details relative to the provisions of the Act of 1912 will be found in previous issues of the Year Book (see No. 8, p. 1066).

**2. Applications for Copyright.**—The following table gives particulars of copyright applications received and registered under the Commonwealth Acts from 1913 to 1917 inclusive:—

APPLICATIONS FOR COPYRIGHT RECEIVED AND REGISTERED UNDER  
COMMONWEALTH ACTS, 1913 to 1917.

Year.	Copyrights.			
	Literary.	Artistic.	International and State.	Total.
APPLICATIONS RECEIVED.				
1913	505	340	...	845
1914	743	219	5	967
1915	740	237	4	981
1916	845	180	...	1,025
1917	835	141	...	976

APPLICATIONS REGISTERED.				
1913	429	245	...	674
1914	693	184	5	882
1915	742	222	3	967
1916	797	168	...	965
1917	793	140	...	933

The revenue from copyright for the years 1913, 1914, 1915, 1916 and 1917, was £169, £239, £252, £268, and £256 respectively.

§ 4. Old-age and Invalid Pensions.

1. General.—In previous issues an account has been given of the introduction of the old-age pension system into Australasia. Then followed a detailed description of the Commonwealth Invalid and Old-age Pensions Act of 1908, which became operative on 1st July, 1909. It is not intended to repeat these sections in the present publication; enquirers into the subject are referred to previous issues (3-8) of the Official Year Book. In view, however, of the interest attaching to the working of the system, the series of statistical tables which have hitherto been published will be continued.

Details of the several States as at 30th June, 1917, are as follows :—

COMMONWEALTH OLD-AGE PENSIONS, YEAR ENDED 30th JUNE, 1917.

	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'w'lth.
Claims examined during year ending 30th June, 1917	4,457	3,331	1,526	1,042	530	443	11,329
Claims rejected	714	199	303	81	39	10	1,346
Claims granted	3,743	3,132	1,223	961	491	433	9,983
Transfers from other States	413	357	135	153	90	58	1,206
Existing 30th June, 1916	33,249	28,446	12,049	9,318	4,199	4,522	91,783
	37,405	31,935	13,407	10,432	4,780	5,013	102,972
To be deducted—							
Deaths	2,727	2,192	808	689	259	303	6,978
Cancellations, and transfers to other States	797	679	286	303	168	144	2,322
	3,464	2,871	1,094	997	427	447	9,300
Old-age Pensions existing on 30th June, 1917	33,941	29,064	12,313	9,435	4,353	4,566	93,672

2. **Sexes of Old-age Pensioners.**—Of the 93,672 persons in receipt of pensions at 30th June, 1917, 38,063 (or 41 per cent.) were males, and 55,609 (or 59 per cent.) were females. Details for the several States are as follows:—

**SEXES OF PENSIONERS, 30th JUNE, 1917.**

State.	Males.	Females.	Total.	*Masculinity.
New South Wales ... ..	14,591	19,350	33,941	75.41
Victoria ... ..	10,931	18,183	29,064	60.28
Queensland ... ..	5,514	6,799	12,313	81.10
South Australia ... ..	3,530	5,905	9,435	59.79
Western Australia ... ..	1,917	2,436	4,353	78.70
Tasmania ... ..	1,580	2,986	4,566	52.91
Total ... ..	38,063	55,609	93,672	68.45

\* Number of males to each 100 females.

3. **Ages and Conjugal Condition of Old-age Pensioners Granted Pensions during 1916-17.**—The recorded ages of the 9983 persons to whom pensions were granted during the year 1916-17 varied considerably, ranging from 2109 at age 60 to two at age 93. Particulars for quinquennial age-groups are as follows:—

**AGES AND CONJUGAL CONDITION OF PERSONS GRANTED PENSIONS DURING 1916-17.**

Age at Admission.	Males.				Females.				Grand Total.
	Single.	Married.	Widowed	Total.	Single.	Married.	Widowed	Total.	
60-64 ... ..	54	160	61	275	386	1,833	1,645	3,864	4,139
65-69 ... ..	619	1,414	560	2,593	82	483	484	1,049	3,642

South Australia ... ..	759	1,094	1,853	69.38
Western Australia ... ..	668	532	1,200	125.56
Tasmania ... ..	761	894	1,655	85.12
Commonwealth ... ..	12,904	13,877	26,781	92.99

\* Number of males per 100 females.

6. **Ages and Conjugal Condition of Persons Granted Invalid Pensions during 1916-17.**—The recorded ages of the 5142 persons who received invalid pensions in the period under review varied from 16 to 90. The following table gives particulars for those up to age 20 and in decennial age-groups after age 20 :—

**AGE AND CONJUGAL CONDITION OF PERSONS GRANTED INVALID PENSIONS IN 1916-17.**

Age at Admission	Males.				Females.				Grand Total.
	Single.	Married.	Widowed	Total.	Single.	Married.	Widowed	Total.	
16-19 ... ..	162	...	...	162	184	...	...	184	346
20-29 ... ..	158	54	...	212	254	12	7	273	485
30-39 ... ..	143	169	6	318	197	47	37	281	599
40-49 ... ..	142	280	21	443	201	124	143	468	911
50-59 ... ..	243	552	102	897	246	328	421	995	1,892
60-69 ... ..	174	381	105	660	28	51	90	169	829
70-79 ... ..	12	13	10	35	3	12	25	40	75
80 and over ... ..	...	1	1	2	...	...	3	3	5
Total ... ..	1,034	1,450	245	2,729	1,113	574	726	2,413	5,142

7. **Cost of Administration.**—Under the State régime the cost of administration differed considerably in the several States, and for 1908-9 represented in New South Wales 4.17 per cent. of the amount actually paid in pensions. In Victoria for the same year the corresponding percentage was 0.70. During the year 1916-17 the total cost to the Commonwealth of administering the Old-age and Invalid Pensions Department was £54,393, or about 1.5 per cent. of the amount actually paid in pensions. Details concerning the cost of administration for 1916-17 are as follows :—

	£
Salaries ... ..	12,196
Temporary assistance ... ..	3,232
Services of magistrates, registrars, clerks of courts, and police ... ..	3,701
Commission to Postmaster-General's Dept., at 12s. 6d. per £100 paid ... ..	21,076
Postage and telegrams ... ..	4,555
Other expenses ... ..	9,633
Total ... ..	£54,393

The actual sum disbursed in Old-age and Invalid Pensions in the financial year 1916-17, apart from the cost of administration, was £3,518,987.

8. **Liability Undertaken in Granting Old-age Pensions.**—As an indication of the extent of the responsibility which an old-age pension scheme involves, it may be mentioned that in connection with the evidence tendered to the Commonwealth Commission on Old-age Pensions a computation was made of the total liability in respect of accrued pensions which the Commonwealth would have incurred if, at 31st March, 1901, the date of the Census, 39 per cent. of the persons aged sixty-five and upwards were entitled to pensions of ten shillings per week. The present value at that date of the liability so computed was £10,415,820. (See Minutes of Evidence of Royal Commission on Old-age Pensions, p. 80.)

The following table gives detailed statistical information concerning the working of the Act since 1st July, 1909:—

#### INVALID AND OLD-AGE PENSIONS.—SUMMARY 1910-17.

Financial Year ended 30th June.	Number of Pensioners.			Amount Paid in Pensions.	Amount Paid to Asylums for Maintenance of Pensioners.	Total Payment to Pensioners and Asylums.	Cost of Administration.	Cost of Administration per £100 paid to Pensioners and Asylums.	Average Fortnightly Pension on last day of Financial Year
	Old-Age.	Invalid.	Total.						
				£	£	£	£	£ s. d.	s. d.
1910	65,492	...	65,492	1,497,330	155	1,497,485	37,146	2 9 7 %	19 1
1911	75,502	7,451	82,953	1,868,648	2,592	1,871,240	39,244	2 1 11 %	19 1
1912	79,071	10,763	89,834	2,148,034	7,447	2,155,481	41,794	1 18 9 %	19 0
1913	82,943	13,739	96,682	2,289,048	13,287	2,302,335	44,523	1 18 8 %	19 6
1914	87,780	16,865	104,645	2,577,965	14,236	2,592,201	47,015	1 16 3 %	19 5
1915	90,892	20,417	111,309	2,704,309	27,630	2,731,939	48,018	1 15 4 %	19 5
1916	91,783	23,439	115,222	2,859,766	31,831	2,891,597	44,401	1 10 9 %	19 4
1917	93,672	26,781	120,453	3,518,987	35,148	3,554,135	54,393	1 10 7 %	24 3

9. **Pensions Act, 1916.**—On 30th September, 1916, an Act was assented to, which amended the original Pensions Act in a very important particular. It had been felt for some time that, owing to the increased cost of living, the grant of ten shillings a week was insufficient. Accordingly amendments were made in the case of the two important sections, twenty-four and twenty-six.

Section 24 of the Invalid and Old-age Pensions Act 1908-1912 originally enacted that the pension "shall not exceed the rate of twenty-six pounds per annum in any event, nor shall it be at such a rate as will make the pensioner's income, together with pension, exceed fifty-two pounds per annum." It was amended (a) by omitting the words "twenty-six pounds," and inserting in their stead the words "thirty-two pounds ten shillings": and (b) by omitting the words "fifty-two pounds" and inserting in their stead the words "fifty-eight pounds ten shillings."

Section 26 originally enacted that if an applicant for pension was in receipt of board or lodging, the actual or estimated value or cost of this should be counted as income, to an extent not exceeding five shillings per week. This has now been amended by omitting the words "five shillings" and inserting in their stead the words "seven shillings and sixpence."

The effect of these amendments is to increase the liability under the heading of Invalid and Old-Age Pensions by about twenty-five per cent. This is the cause of the great increase in the amount paid in pensions in 1916-17. It is also the cause of the fall in the percentage cost of the administration.

### § 5. Maternity Allowance.

The Federal Parliament, during the session of 1912, passed an Act (assented to on 10th October, 1912) providing under certain circumstances for the payment of maternity allowances. The scope and main provisions of the Act will be gathered from the following sections and sub-sections, given in full :—

4. "Subject to this Act, there shall be payable out of the Consolidated Revenue Fund, which is hereby appropriated accordingly, a maternity allowance of Five pounds to every woman who, after the commencement of this Act, gives birth to a child, either in Australia or on board a ship proceeding from one port in the Commonwealth or a Territory of the Commonwealth to another port in the Commonwealth or a Territory of the Commonwealth."
5. (1) "A maternity allowance shall be payable in respect of each occasion on which a birth occurs, and the child is born alive, or is a viable child, but only one allowance shall be payable in cases where more than one child is born at one birth."
6. (1) "The maternity allowance shall be payable only to women who are inhabitants of the Commonwealth or who intend to settle therein."
- (2) "Women who are Asiatics or are aboriginal natives of Australia, Papua, or the islands of the Pacific, shall not be paid a maternity allowance."

The following table gives a statistical summary of the most important points in connection with the working of the Maternity Allowance Act since 10th October, 1912, when the first payments were made :—

**COMMONWEALTH MATERNITY ALLOWANCE.—SUMMARY, 1913-17.**

Year ended 30th June.	Claims Paid.	Claims Rejected.	Amount Paid.	Cost of Administration.	Cost per £100 of allowance paid.
			£	£	£ s. d.
1913 (a)	82,475	619	412,375	6,547	1 11 9
1914	134,998	709	674,990	10,281	1 10 6
1915	138,855	640	694,275	12,900	1 17 2
1916	131,943	504	659,715	12,165	1 16 11
1917	132,407	459	662,035	13,735	2 1 6

(a) From 10th October, 1912.

### § 6. War Pensions.

1. **General.**—An Act for the provision of war pensions was passed in 1914 and amended in 1915 and 1916. Its scope can be determined by the following extract from Section 3. "Upon the death or incapacity of any member of the forces whose death or incapacity results, or has resulted, from his employment in connection with warlike operations in which His Majesty is, or has since the commencement of the present state of war been engaged, the Commonwealth shall, subject to this Act, be liable to pay to the member or his dependents, or both, as the case may be, pensions in accordance with this Act."

A very great latitude is allowed in the interpretation of the word "dependents." It includes the wife or widow of any member of the forces; the widowed mother of an unmarried son; the children (including ex-nuptial children); the parents, if without adequate means of support; and such other members of his family as were wholly or in part dependent upon his earnings at any time within twelve months prior to his enlistment.

**2. Rates of Pension:** (1) The rates of pension payable under this Act are as follows:—

(A) In case of the death of a member of the Forces :

- (i.) To the widow, or the widowed mother of an unmarried son, the rate specified in column two of the first schedule opposite to the rate of pay of the member, and
- (ii.) to each child, the rate of twenty shillings per fortnight for the first child, fifteen shillings per fortnight for the second child, and ten shillings per fortnight for the third and each subsequent child, and
- (iii.) to the other dependents such rates as are assessed by the Commissioner or the Deputy-Commissioner, as the case may be, but not exceeding in the aggregate the rate specified in column two of the first schedule opposite to the rate of pay of the member plus two pounds per fortnight :

Provided that the maximum rate of pension payable to any one dependent of a member shall not in any case exceed the amount specified in column two of the first schedule opposite to the rate of pay of the member.

(B) In case of the total incapacity of a member of the Forces :—

- (i.) To the member the rate specified in column three of the first schedule, opposite to the rate of pay of the member, and
- (ii.) to the wife of a member fifty per centum of that rate, and
- (iii.) to each child of the member, the rate of twenty shillings per fortnight for the first child, fifteen shillings per fortnight for the second child, and ten shillings per fortnight for the third and each subsequent child, and
- (iv.) to the other dependents such rates as are assessed by the Commissioner, or the Deputy-Commissioner, as the case may be, but not exceeding in the aggregate the rate specified in column two of the first schedule, opposite to the rate of pay to the member, plus two pounds per fortnight. Provided that the maximum rate of pension payable to any one dependent of a member shall not in any case exceed the amount specified in column two of the first schedule, opposite to the rate of pay of the member.

(C) In case of the partial incapacity of a member of the Forces, such less rates than those referred to in paragraph (B) as are assessed by Commissioner, or the Deputy-Commissioner, as the case may be, having regard to the nature and probable duration of the incapacity.

(2) Notwithstanding anything contained in this section, the maximum rate of pension payable to a child, both of whose parents are dead, shall be :—

- (i.) up to ten years of age, one pound per fortnight ;
- (ii.) from ten to fourteen, twenty-five shillings per fortnight ; and
- (iii.) from fourteen to sixteen years of age, thirty shillings per fortnight.

(3) The amount of pension granted and payable to a member of the Forces shall not be reduced within the period of six months from the date of the commencement of the pension.

4) Any member of the Forces who is incapacitated by reason of a disability specified in the second schedule, shall receive the rate of pension shewn opposite to the description of the disability in that schedule.

- (5) If a member of the Forces who is unmarried or whose wife is either dead or a permanent invalid is incapacitated to an extent which necessitates the constant services of an attendant, and the member has not the means to pay for such services, the rate of his pension may be increased by a sum not exceeding one pound per fortnight.

3. **Schedules of Pensions.**—The schedules to which reference has been made in the preceding section are as follows :—

### THE FIRST SCHEDULE.

Scale of pensions payable to widow on death of a member of the Forces, or to a member upon total incapacity:

Rate of Pay of the Member per Day.		Pension Payable to Widow on Death of Member.		Pension Payable to Member upon Total Incapacity.	
s. d.		£ s. d.		£ s. d.	
6 0	and under	2 0 0	per fortnight	3 0 0	per fortnight

		Total ... ..	(a) £1,212,632

(a) Including £647 for South Africa.

The cost of administration was £10,187 in 1915-16, and £38,190 in 1916-17.

## § 7. Local Option.

1. **General.**—The principles of local option as to the sale of fermented and spirituous liquors have been applied in all the States of the Commonwealth. The last State to adopt these principles was Western Australia, where provision was made for a system of local option by the Licensing Act 1911. Since the outbreak of war in 1914, various enactments have been made in several of the States relative to the control of the liquor traffic. While not in any way pertaining to the scheme of local option, these measures are referred to in this section, as possibly, if not probably, affecting future public opinion in regard to this matter.

2. **New South Wales.**—(i.) *Local Option.* The Act in force relating to local option in this State is the Liquor Act 1912, which consolidated the laws relating to publicans, brewers and other persons engaged in the brewing, manufacture or sale of liquor. The local option vote is taken in every electorate on the day fixed for the poll therein at each general election, but special provision was made under The Liquor Amendment Act 1916 to suspend the taking of the local option vote at the general election in 1917. The option with regard to licenses extends to public-houses, wineshops, and clubs, and the persons entitled to vote are those entered on the Parliamentary electoral rolls. The first local option vote under the Liquor (Amendment) Act of 1905 was taken at the general election in 1907, and the second at the election in 1910, while the vote in 1913 was taken under the Liquor Act 1912. In 1907, when the first local option vote was taken, there were 3023 hotels in existence; of this number 293 were ordered to be closed at varying dates. At the election of 1910 there were 2869 hotels, and of these, 28 were ordered to be closed. At the 1913 election there were 2719 hotels, of which 23 were closed before July, 1917. The number of wine licenses at the time of the vote of 1907 was 633, of which 46 were abolished. In 1910, 5 out of 565 were closed, and in 1913, 7 out of 514 were ordered to be closed. The resolutions to be submitted, and the effects of such resolutions, if carried, are given *in extenso* in previous issues of this book. The following statement shews the number of electorates in which each of the resolutions was carried:—

### NEW SOUTH WALES.—EFFECTS OF LOCAL OPTION VOTES, 1907, 1910, and 1913.

Particulars.	General Election, 1907.		General Election, 1910.		General Election, 1913.	
	Elector-ates.	Votes.	Elector-ates.	Votes.	Elector-ates.	Votes.
<i>Results in favour of—</i>

(b) Reduction ...	65	75,706	14	38,856	15	44,453
(c) No license ...	Nil	178,580	Nil	212,889	Nil	245,202

(ii.) *Liquor Referendum Act 1916.* On 17th February, 1916, a proclamation was issued, in terms of the War Precautions Act, by the Minister for Defence, ordering that licensed premises be closed at 6 p.m. in the County of Cumberland, and within a radius of five miles from any military camp; a week later the closing hour was varied from 6 to 8 p.m. Subsequently the Liquor Referendum Act 1916 was passed in the State Parliament to decide by referendum the hour of closing for premises licensed under the Liquor Act 1912. At the referendum the electors were enabled to record votes in order of preference for each hour from 6 to 11 p.m. inclusively. The count of the first preference

votes resulted in a large majority for 6 o'clock, and from 21st July, 1916, all licensed premises and registered clubs in New South Wales have been closed at that hour. This determination prevails during the currency of the war and for a period not exceeding six months thereafter.

3. *Victoria.*—The Acts dealing with the subject of local option as to the sale of fermented and spirituous liquors, and with the compulsory closing of hotels in this State, are the Licensing Act 1915, No. 2683, and the Licensing Act 1916, No. 2855. Other Acts, now repealed, which dealt with the subject, were the Licensing Acts 1876, 1885, 1888, 1890, 1906, and 1907.

Part XIII. of the Act of 1915 relates to the subject of local option. Under this part the local option provisions were to come into operation at the first general election subsequent to 1st January, 1917. The 1916 Act provides that the first local option polls are not to be held till the second general election following on the above date. In the meantime, the Licenses Reduction Board, which by the same Act has been constituted the Licensing Court for the whole State, is empowered to continue the work of closing hotels, which it has carried out since 1906.

The reduction of a statutory number of hotels for each licensing district disappeared with the old provisions relating to closing, and the Court is now authorised to close hotels in any licensing district, as if resolution B (Reduction), under the local option provisions, had been carried in each district. This allows of a reduction proportionate to the existing number, the maximum closing not to exceed one-fourth. Power has also been given to accept the surrender of any victualler's license irrespective of the number otherwise closed. A greater number must not be closed than can be compensated, and the old limitation, that hotels licensed after 1886 were not entitled to compensation, has been removed.

(i.) *The Licenses Reduction Board.* This Board was established by the 1906 Act, with power to reduce the number of licensed victuallers' premises, up to December, 1916, in districts where there were more than the statutory number of licenses. It had also the duty of fixing and awarding compensation to the owners of licenses of the closed hotels. The compensation was provided by an annual percentage fee of 3 per cent. on all liquor purchased by licensed victuallers. The compensation fund obtained in this manner has risen from £48,233 in 1907, to £63,623 in 1916, which was the highest figure reached. In 1916, with the restricted hours of trading, the amount received was £60,396. The licensing fund, which was distinct from the compensation fund, was protected by a provision that the remaining hotels, by a *pro rata* assessment, had to make up annually the amount of the license fees lost by the closing of hotels; the license fees for hotels were of varying amounts, based on the annual municipal value of the premises, ranging from £5 to £50, in four classes, viz., £5, £15, £25, £50. By the 1916 Act, this system of fixed fees was abolished, as was also the *pro rata* assessment of lost fees and the 3 per cent. compensation fees. The two funds referred to above were merged into one, and a system of percentage fees was applied to all licenses for the sale of liquor in the State, whether wholesale or retail, and the amount received is paid into one fund.

Under this system, all vendors of liquor pay in proportion to the benefit they derive from the license. The amount charged the wholesale trade is four per cent. on the cost of all liquors sold to non-licensed persons, no charge being made on sales to other licensed vendors. The retail trade is charged six per cent. on liquor purchases, except the holders of Australian wine licenses, who are charged four per cent.

During 1916, prior to the passing of the above Act, a number of owners and licensees, fearing that no provision would exist for the acceptance of surrenders when Part XIII. came into operation, took advantage of the existing provisions. Consequently, the number closed, 143, was in excess of the average, and the 1917 compensation funds had to be drawn upon to the extent of £18,087. The closings of 1917 had to be

somewhat curtailed for this reason. The maximum compensation payable is still governed by the trading results and the rents of the years 1903-6, though a concession was made in the Amending Act by which licensees are entitled to be compensated on a three years' tenure, if they are in possession of a lease of that extent when deprived of their license. Under the 1916 Act 83 hotels have been closed and £49,608 awarded as compensation. The total number of hotels closed up to the 31st December, 1917, was 1137, and the compensation paid, £590,459, or an average of £520 per hotel. The following table shows particulars of the operations of the Board and Court up to the 31st December, 1917 :—

**VICTORIA.—OPERATIONS OF LICENSES REDUCTION BOARD, 31st DECEMBER, 1917.**

Particulars.	Licenses in December, 1906.			Hotels Deprived of Licenses	Compensation Awarded.		Hotels Surrendered.	Compensation Awarded.	
	Number in Existence.	Statutory Number.	* Number in Excess.		Owner.	Licensee.		Owner.	Licensee.
Metropolitan & Suburban Country ...	1,020 2,428	877 1,622	401 967	291 553	£ 217,913 119,693	£ 42,763 32,580	19 281†	£ 5,973 72,643	£ 1,149 7,746
Total ...	3,448	2,499	1,368	844	337,605	75,343	293	78,616	8,895

\* In some districts the number of hotels was below the statutory number; in these districts the total number of hotels less than the statutory number was 418. † Including 2 Roadside licenses.

(ii.) *Early Closing of Hotels.* Consequent on the war, an Act (No. 2584) was passed, and came into operation on 6th July, 1915, restricting the hours for the sale of intoxicating liquors, the restriction being limited to the duration of the war. Sale was permitted only between the hours of 9 a.m. and 9.30 p.m. By a subsequent Act (No. 2776), tenants of licensed premises were given the right to apply to the Licenses Reduction Board to adjust the rents of their premises. The hours of trading in the evening were further restricted as from 25th October, 1916—six o'clock being fixed as the time of closing.

The provisions of the Rent Adjustment Act were extended so as to enable the Board to deal with applications for reductions of rent arising from fresh restrictions. Between 300 and 400 additional applications were received, the amounts involved being substantial.

Special provision was made in the 1916 Act for the granting of victuallers' licenses in the Mallee. Power was given to proclaim areas containing 500 resident electors, when petitions signed by a majority of the residents were lodged, and where the licensing court, after enquiring, recommended this course.

On the proclamation of an area, a poll of the electors is to be taken at which one-third of those enrolled must vote. A majority of those voting decides whether a license is to issue or not. These hotels must be at least twelve miles apart, except at Mildura, where special provision is made for the issue of three licenses. Under these provisions six areas have been proclaimed, in four of which polls were taken and resulted in favour of license.

4. *Queensland.*—The local option clauses of the Liquor Acts of 1912-1914 provide for the following :—

- (i.) The conditions under which new licenses may be granted until the completion of the business of the Licensing Court in April, 1916.
- (ii.) The continuance of the local option clauses of the Licensing Act of 1885 until the 31st December, 1916.
- (iii.) The institution of a new scheme, under which electors from and after the year 1917 will have the opportunity of voting every three years on the question of reduction or increase of licenses.

(i.) *New Licenses.* With regard to the granting of "new licenses" from the 1st April, 1913, and until the completion of the business of the Licensing Court in April, 1916, it is provided that no new licensed victualler's or wine seller's or provisional licenses shall be granted, unless at a local option vote of the electors of the local option area in which the premises or proposed premises are situated, a resolution "that new licenses shall be granted in this local option area" has been carried.

If the resolution is carried, the Court may, but need not, grant applications; but if the resolution is not carried, the Court shall not grant any application during the said years in the said local option areas.

The Acts of 1912 and 1914 provided that a local option vote following on an application for a license might be taken in any of the years 1913, 1914, 1915, and 1916 in a local option area, but having been taken once should not be taken again during those years in the same local option area. During 1913 a vote was taken in 10 districts on the resolution "that new licenses be granted." In five of these the resolution was carried, the other five districts declaring against any increase in the number of licenses. In 1914, 16 districts voted on the same resolution, in 11 of which it was carried, while in 1915, 16 districts also voted, the resolution being carried in 10 cases.

(ii.) *Continuance of Present System until 1917.* With the exception of the third resolution, viz., "that no new licenses be granted," the local option provisions of the Licensing Act of 1885 remain in full force and effect until the 31st December, 1916, with certain modifications and additions. These will be found fully described in previous issues of the Year Book (see No. 6, p. 1177).

(iii.) *General Local Option.* The first vote may be taken in the year 1917, either on the same day as the election of senators takes place, or if no senate election is held in 1917 before the 30th September, then on a day to be appointed by the Governor-in-Council, and the vote will be by ballot.

The vote will be taken on the request of one-tenth of the number of electors in an area, which is defined in the request, and such area may be:—(a) an electoral district, (b) an electoral division of an electoral district or (c) a group of two or more divisions of an electoral district, provided that the whole of such local option area is wholly comprised within one and the same electoral district.

There must be a separate request for each resolution on which a vote is required to be taken.

The resolutions on which a vote may be taken are:—(a) reduction by one-fourth of the existing number, (b) further reduction by one-fourth of the existing number, (c) further reduction by one-fourth of the existing number, (d) prohibition, and (e) new licenses.

On the 5th May, 1917, 57 polls were taken, 55 being on the question of reduction (resolution a) and 2 being on the question of increase (resolution e). Reduction was carried in only four local option areas—Biggenden, Ipswich, Maryborough, and Toowoong. Increase was carried in both local option areas, i.e., Atherton and Cloncurry.

In previous issues of the Year Book (see No. 6, p. 1178) will be found fuller reference to the effect of the carrying of any of these resolutions.

**5. South Australia.**—In this State the subject of local option is now regulated by Part VIII. of the Licensing Act 1917.

Under this Act, each electoral district for the House of Assembly is constituted a local option district, and each electoral district may be divided into local option districts by proclamation of the Governor. A quorum consisting of 500 electors, or one-tenth of the total number of electors, whichever be the smaller number, in any district may petition to the Governor for a local option poll. The persons entitled to vote at the poll are those whose names appear on the electoral roll and who reside in the local option district.

The resolutions to be submitted, together with the effects such resolutions would have, are set out in detail in previous issues of the Year Book (see No. 6, p. 1179).

(i.) *Local Option Poll.* On the 2nd April, 1910, local option polls were taken under the Act of 1908 in twenty-four districts; the electors in the remaining nine local option districts did not petition for polls. A resolution that the number of licenses be reduced, was carried in only one district, Wallaroo; in the remaining 23 districts a resolution that the number of licenses be not increased or reduced, was carried. At the General Election of the House of Assembly held on the 10th February, 1912, no local option polls were held in any local option district. On the 27th March, 1915, (the same day as the Parliamentary elections), a local option poll was taken in the Flinders Southern (Port Lincoln) local option district, when the resolution "that the number of licenses be not increased or reduced" was carried. There have been no further polls in any of the districts up to the end of 1917.

(ii.) *Early Closing of Hotels.* On the 27th March, 1915, a referendum was held as to the hour for the closing of bar-rooms in licensed premises. Out of a total of 178,362 votes cast, 100,418 were cast in favour of closing bar-rooms at 6 p.m., those in favour of closing at 11 p.m. being 61,362. Electors had the choice of voting for hours other than the two mentioned, but the votes so cast were comparatively few.

(iii.) *Re-proclamation of Districts.* Local option districts were re-proclaimed on the 29th November, 1917, the districts, which number 35, being given in the Government Gazette of the same date.

6. **Western Australia.**—The law relating to local option in Western Australia is contained in Part V. (sections 75 to 86) of the Licensing Act 1911, which was assented to on 16th February, 1911, and came into force on the 7th April following. Prior to the passing of this Act there was no provision for any system of local option in Western Australia.

The resolutions to be submitted under the above-mentioned Act and the effect such resolutions would have, are given in detail in previous issues of the Year Book (see No. 6, p. 1180).

The first vote under the Act of 1911 was taken on 26th April, 1911, the main question being confined (as prescribed by the Act when the vote is taken prior to 1920) to a resolution "that the number of licenses be increased," the only other questions submitted being those of State control of new publicans' general licenses and State management throughout all licensing districts.

The following table shows the result of this local option poll:—

**WESTERN AUSTRALIA.—RETURN SHEWING THE RESULT OF LOCAL OPTION  
POLL OF 26th APRIL, 1911.**

Result of Local Option Poll.		Do you vote that all new Publicans' General Licenses be held by the State.		Are you in favor of State Management throughout all Licensing Districts.	
Votes given in favor of the number of Licenses in the various districts being increased.	Votes given in favor of the number of Licenses in the various districts not being increased.	Yes.	No.	Yes.	No.
4,554	17,623	27,007	14,387	26,631	14,944

Under the 1911 Act a second poll was due on 26th April, 1914, but an amending Act was passed in December, 1913, continuing the present conditions until April, 1915. Subsequently, by an amending Act of 1915, the present conditions were further continued until 1918, and by an Act assented on the 7th August, 1917, the poll was postponed until 30th September, 1918, with a proviso that on a resolution passed by both Houses of Parliament the present conditions shall continue for a further period as may be expressed in such resolution.

(i.) *Regulation of Liquor Traffic during the War.* In 1914, upon the outbreak of war, a special Act was passed in Western Australia which empowered the Government by Proclamation to restrict or prohibit the sale or supply of liquor within any licensing district, or any portion of a licensing district, and rendered it an offence for any person, licensed or unlicensed, to offer for sale or supply liquor contrary to such Proclamation, with a penalty of £200, or imprisonment for twelve months.

Provision was also made to limit and fix the hours during which licensed premises in any district, or portion thereof, might be open for the sale of liquor. The Act also contained the necessary powers to enforce the provisions thereof, including power to search without warrant and seize any liquor where there was reason to believe that such liquor existed in a prohibited area.

The Act was passed solely as an emergency measure, and so far there has been no necessity to issue any Proclamation thereunder.

In 1915, a further Act was passed *regulating the sale of liquors*. That Act divided the State into four districts—Metropolitan, Goldfields, Agricultural, and North-West, the latter being exempt from the provisions of the Act.

The main feature, as regards the Metropolitan and Agricultural districts, was to reduce the period during which licensed premises could be open for the sale of liquor to the hours between 9 a.m. and 9 p.m., the previous period being between the hours of 6 a.m. and 11 p.m.

As regards the Goldfields district, the Act provided that upon receipt of a requisition signed by not less than 2000 electors in the district, a referendum should be held.

In submitting the referendum, each elector had one vote, and the voting paper set out the hours of 6 o'clock, 7 o'clock, 8 o'clock, 9 o'clock, 10 o'clock, and 11 o'clock p.m. as alternative hours of closing. Each elector was to indicate his vote by marking an "X" opposite the hour which he desired to have fixed as the hour of closing. If the majority of votes were cast in favour of any particular hour, that hour was to be certified as being the result of the vote and proclaimed as the hour of closing. If there was no majority, then the votes cast for the earliest hour were to be transferred to the next later hour, and so on until a majority was thus obtained, when such majority would have the same effect as if the votes were originally given in favour of the hour to which they had been transferred, and such hour would be proclaimed the hour of closing.

A petition signed by the necessary number of electors was duly received, and a referendum was taken on the 24th May, 1916, the result of the poll being that the majority of all votes cast was in favour of the hour of 11 o'clock p.m. being fixed as the hour of closing.

The hour of 11 o'clock p.m. was the same as the hour originally fixed in the Licensing Act, and the result of the referendum therefore left the hour of closing the same, in so far as the goldfields district was concerned, as existed prior thereto.

7. *Tasmania.*—In this State the subject of local option is dealt with in Part VI. (sections 72 to 84) of the Licensing Act 1902, as subsequently amended by section 8 of the Licensing Act 1908, which later Act, however, does not come into full operation until the first of January, 1917. Other Acts which formerly dealt with the subject, but are now repealed, are the Licensing Acts 1889-1890, the Inn Keepers Relief Act 1894, and the Licensing Act Amendment Act 1898. Under the Act of 1902, opposition to the grant of a license may be made (i.) by any resident ratepayer, (ii.) by petition of ratepayers resident in the neighbourhood, or (iii.) by local option poll.

The conditions under which applications may be made to the Licensing Bench, opposing the granting of licenses, are set out in detail in previous issues of the Year Book. (See No. 6, p. 1181.)

(i.) *Local Option Poll.* Any number of ratepayers not less than seven, resident in the neighbourhood of the house in respect of which a provisional certificate or an hotel license has been applied for, may require, by petition lodged with the Clerk of Petty Sessions, that a poll of the ratepayers resident in the neighbourhood be taken upon

the question whether such provisional certificate be granted or not. If a majority of the votes taken be against the granting of the certificate the Licensing Bench must refuse to grant it.

Particulars as to operations under Part VI. of the Act are not available.

(ii.) *Early Closing of Licensed Premises.* A referendum on the question of the closing time for the sale and supply of liquor on licensed premises (6 Geo. V., No. 63) was taken on the 25th March, 1916, when 42,713 votes were cast in favour of closing at six o'clock p.m., against 26,153 votes in favour of ten o'clock, and 3951 votes for other hours. The majority in favour of closing at six o'clock over all other hours was 12,609, and the Licensing Act (No. 2) of 1916 gives effect to the wishes of the electors.

## § 8. Preferential Voting.

In previous issues of the Year Book, a description in detail has been given of the systems of preferential voting now in force in the States of Victoria, Queensland, Western Australia and Tasmania. It is not intended to repeat the description in the present issue.

## § 9. Valuation of Commonwealth Production.

The want of uniformity in methods of compilation and presentation of Australian statistics renders it an extremely difficult task to make anything like a satisfactory valuation of the various elements of production. At present there is so little accurate statistical knowledge regarding such industries as forestry, fisheries, poultry, and bee-farming, that any valuation of the production therefrom can only be regarded as the roughest approximation. As a matter of fact, complete information as to value of production in all States is available in regard to the mining industry alone, and even in this case adjustments have to be made before the returns are strictly comparable. Careful estimates have been made in connection with the value of production from the agricultural and pastoral industries, which, it is believed, in the main give fairly accurate results. In the case of manufactures, prior to 1909, five of the States collected statistics of the value of production, while for the sixth State, Tasmania, an estimate has been prepared which it is believed gives a fair approximation. The returns given in the following table are fuller and more approximate than those which have been given previously, and the returns collected in 1909 and subsequent years may be taken as substantially correct. The table hereunder shews the approximate value of the production from all industries during the years 1909 to 1916 :—

ESTIMATED VALUE OF PRODUCTION FROM INDUSTRIES, 1909 to 1916.

Year.	Agriculture.	Pastoral.	Dairy, Poultry, & Bee-farming.	Forestry and Fisheries.	Mining.	Manufacturing.*	Total.
	£1000.	£1000.	£1000.	£1000.	£1000.	£1000.	£1000.
1909 ...	41,056	50,864	15,064	4,462	23,039	39,713	174,198
1910 ...	39,752	56,993	17,387	4,789	23,215	45,598	187,734
1911 ...	38,774	50,725	19,107	5,728	23,480	50,767	188,581
1912 ...	45,754	51,615	20,230	6,432	25,629	57,022	206,732
1913 ...	46,162	57,866	20,341	6,338	25,808	61,586	218,101
1914 ...	36,052	60,265	21,562	6,419	22,265	62,922	209,485
1915 ...	73,769	65,607	21,156	5,777	22,397	62,853	251,589
1916 ...	60,207	89,940	26,949	5,505	23,621	64,205	270,427

\* These amounts differ from those given in Section XIII., Manufacturing Industries, owing to certain products which are there included having been included in Dairy Farming and Forestry in this table.

The total production from all industries during 1916 was £270,427,000, equal to an average of £55 2s. 2d. per inhabitant.

In Year Books Nos. 1 to 5 will be found the value of production in each State at decennial intervals since 1871, and for the year 1909. Details for individual States are not available for subsequent years owing to discontinuance by the Customs Department of the collection of statistics of interstate trade.

## § 10. Norfolk Island.

**1. Area, Location, etc.**—Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude 29° 3' 45" south, longitude 167° 58' 6" east. Its total area is 8528 acres, the island being about 5 miles long and 3 miles wide. From Sydney it is distant 930 miles, and from New Zealand 400 miles. The coast line is 20 miles, and its form that of an irregular ellipse. Except on the south-west, inaccessible cliffs rise from the water's edge. The climate is equable, the temperature ranging between 56° and 82° with a mean of 68°. The average annual rainfall is 53 inches. It has been said that the salubrious climate coupled with the beauty of its land and sea scapes should combine to render Norfolk Island "the Madeira of the Pacific."

**2. Settlement.**—The first colonisation, in 1788, was by Lieutenant King, who in H.M.S. *Sirius* established a small penal station as a branch settlement of that at Port Jackson. The settlement was abandoned in 1806, and thence for 20 years its chief use was as a whaling station and place of call for British warships.

From 1826 to 1855 it was again made a penal station. In 1844 it was annexed to Van Diemen's Land (Tasmania).

The descendants of the *Bounty* mutineers having become too numerous to subsist on Pitcairn Island were removed thence to Norfolk Island in 1856. The new community numbered 193—94 males and 99 females—and were the descendants of British sailors and Tahitian women.

In 1856 the island was severed from Tasmania, and created a distinct and separate settlement under the jurisdiction of New South Wales. In 1897 it was made a dependency under the Governor of that Colony, and was administered by the Chief Secretary's Department through a resident Chief Magistrate, in whom was vested the executive government of the settlement, and the penal supervision of its affairs. In 1913, however, a Bill was passed by the Federal Parliament providing for the taking over of the island as a territory of the Commonwealth. The Act came into force on 1st July, 1914, and the island is now administered by the Department of Home and Territories, Melbourne, through an Administrator and Chief Magistrate.

**3. Population and Live Stock.**—The population on 31st December, 1916, was 927, including 113 Melanesians being trained at the mission station. The latest returns of live stock shew that there are in the island 1735 cattle, 619 horses, 667 sheep, and 306 pigs. In addition there were about 6600 head of poultry.

**4. Production, Trade, etc.**—The soil throughout is rich, and is specially suitable for the cultivation of citrus fruits, bananas and (in parts) coffee. Various other sub-tropical fruits thrive. During 1916 the production of oranges was given as 21,000 bushels; lemons, 226,000 bushels; bananas, 265,000 dozen. About 147,000 bushels of guavas and small quantities of pineapples and passion fruit were also raised, as well as 27,000 lbs. of coffee. The island is visited annually by schools of whales, both of the sperm and hump-backed variety, and whaling was at one time an important industry, but in recent years it has been allowed to languish. In 1916-17 the imports were valued at £16,694. The exports were valued at £8868, the chief items being lemon peel, £3320; lemon juice, £2660;

fish, £1010; hides, £504; and seeds, £298. Nearly all the export trade was with the Commonwealth, only small amounts going to New Zealand and the South Sea Islands. There is little other production. A five-weekly steam service is maintained with Sydney; other communication is irregular. The "all red" cable from Great Britain *via* Vancouver, Fanning Island and Fiji, bifurcates at Norfolk Island, one line connecting with New Zealand, the other with Brisbane.

**5. Social Condition.**—Education is compulsory, but free of cost, and there is a public school under the N.S.W. Department of Public Instruction, with standards corresponding to the State public schools. The number of scholars enrolled on the 30th June, 1917, was 160 (73 boys and 87 girls). A mission station has for many years been in existence for the education and general training of Melanesians, mostly from the Santa Cruz and Solomon Islands.

The magistrate's court has criminal jurisdiction in all crimes except capital offences, civil jurisdiction in all matters, and authority to grant probate and letters of administration.

## § 11. Lord Howe Island.

**1. Area, Location, etc.**—Between Norfolk Island and the Australian coast is Lord Howe Island in latitude  $31^{\circ} 30'$  south; longitude  $159^{\circ} 5'$  east. It was discovered in 1788. The total area is 3220 acres, the island being seven miles in length and from one-half to one and three-quarter miles in width. It is distant 436 miles from Sydney, and in communication therewith by monthly steam service. The flora is varied and the vegetation luxuriant, with shady forests, principally of palms and banyans. The highest point is Mount Gower, 2840 feet. The climate is mild and the rainfall abundant, but on account of the rocky formation only about a tenth of the surface is suitable for cultivation.

**2. Settlement.**—The first settlement was by a small Maori party in 1853; afterwards a colony was settled from Sydney. Constitutionally, it is a dependency of New South Wales, and is included in the King division of the Sydney electorate. A Board of Control manages the affairs of the island and supervises the palm seed industry referred to hereunder.

**3. Population.**—The population at the Census of 3rd April, 1911, was 56 males, 49 females, total 105.

**4. Production, Trade, etc.**—The principal product is the seed of the native or *Kentia* palm. The lands belong to the Crown. The occupants pay no rent, and are tenants on sufferance.

## § 12. Interstate Conferences.

**1.** Reference to the various Interstate Conferences, held in 1914 and 1915, will be found on page 1081, Official Year Book No. 8. Considerations of space preclude their insertion in the present issue.

**2. Premiers' Conference, Adelaide, 1916.**—On the 22nd May, 1916, and following days, a conference of Premiers was held at Adelaide. The following is a summary of the more important resolutions adopted:—

(i.) *Uniform Federal and State Rolls.* The electoral officers having recommended that it is practicable and advisable to have uniformity in regard to the State and Commonwealth Rolls, the respective States be invited to take the necessary steps to give effect to the recommendation.

(ii.) *Employment of Persons of Enemy Origin.* It is not desirable that persons of enemy birth, other than those already in the State service who have given full and satisfactory proof of their loyalty to the British Empire, should be engaged for employment in any Government Department while suitable persons of British origin are available.

(iii.) *Support of Unemployed Persons of Enemy Birth.* The internment or other support of destitute persons of enemy birth should be a Commonwealth responsibility.

(iv.) *Collection of Commonwealth and State Income Tax, Land and Probate Duty by One Authority.* The Commonwealth Government and the Governments of the several States shall direct their leading taxation officers to meet at an early date and prepare a uniform scheme for—Income tax (rates excepted), land tax (rates excepted), probate duties (rates excepted).

The Conference reaffirmed the desirability of uniform valuation for Commonwealth and State purposes being adopted as early as practicable, and that the necessary legislative or administrative steps in that direction be taken by the States.

(v.) *Employment of Returned Soldiers after the War.—Settlement of Returned Soldiers on the Land.—Repatriation Appeal.—Emigration to Australia of ex-Service Men from the United Kingdom.* With the view to meeting and solving the difficulties likely to arise on the return of large bodies of men to Australia, a committee comprising one Minister from each State and one Minister to represent the Commonwealth be established to secure co-ordination in matters connected with the repatriation of soldiers. That it be a recommendation to the respective State Governments—

- (a) To treat (after the war) returned British soldiers in a manner similar to that in which returned Australian soldiers are treated.
- (b) To ask the British authorities to create a suitable organisation to co-operate with the Agents-General of the States in placing before returned British soldiers who contemplate emigrating from Great Britain the advantages accruing to them, and to Imperial interests, from their making their future homes in the Dominions, and to arrange for their immigration to the Australian States in such numbers and at such times as the respective State Governments are of opinion that such immigrants can be satisfactorily absorbed.

(vi.) *Securing Shipping for Overseas and Interstate Trade.*

- (1) *Re Export of Goods from Australia.* It would appear that present arrangements in this connection are satisfactory. If any State finds that cargoes of greater value to that State are being left whilst goods of lesser value are exported, it is suggested that representations might be made to the controlling body set up by the Federal authorities.
- (2) *Re Imports.* Where goods are urgently required by a State, and the freights available are being used for the carrying of other goods less urgently needed, it is submitted that the States might invite the Agents-General to meet and make representations to the authorities in Britain.
- (3) Should this course become necessary, the representations might be made in the first instance to the Commonwealth authorities and the co-operation of the High Commissioner sought.

(vii.) *British Council of Scientists.* The State Governments to have this matter permanently brought under their notice with a view to their—

- (1) Using all the means at their disposal of applying science to the development of their industries and their production.
- (2) Actively co-operating with the organisation being established by the Commonwealth Government.

(vii.) *Strategic Railways.*

- (a) Any proposed railway to be submitted in each State to the Railways Standing Committee, or the Public Works Committee, or such similar authority as any State or States may appoint for the purpose, together with such representatives as the Commonwealth Government may appoint.
- (b) That such committees or authorities in formulating their recommendations be requested to give consideration to the developmental possibilities of the proposed lines, and to make such recommendations as will meet the strategic and developmental needs of the States interested.
- (c) That where the interests of two or more States are concerned, combined meetings of the committees or authorities appointed should be held for the purpose of making a joint recommendation.

(ix.) *Transfer of State Powers to the Commonwealth.* With regard to the proposed transfer of certain powers to the Commonwealth, the States represented at this conference reaffirm the desirableness of giving effect to the agreement entered into between the Premiers and the Prime Minister at the conference held in Melbourne in November, 1915.

(x.) *Bulk Handling of Grain.* It is desirable that the States should co-operate in the adoption of bulk handling of grain.

(xi.) *Centralisation of Statistical Departments.* It is desirable that the statistical bureaux of the States of the Commonwealth should, so far as practicable, be amalgamated, and each State Government to give consideration to this question.

(xii.) *Periodical Conferences of Directors of Education.* It is desirable that periodical conferences of the Directors of Education be held.

(xiii.) *Teaching of Modern Languages.* The State Governments were urged to give greatly increased attention to the teaching of modern languages, particularly the French language, in the public schools of the States.

(xiv.) *Imperial Education Conference.* The Australian States should be well represented at the conference shortly to be held in Great Britain in regard to education and science.

**3. Premiers' Conference, Melbourne, 1916-1917.**—On 12th December, 1916, and following days, and again on 5th January, 1917, and following days, a conference of Premiers (with Ministers of Lands) was held at Melbourne. The following is a summary of the more important resolutions agreed to:—

(i.) *Marriage Facilities for Absent Soldiers.* The Commonwealth Government to be asked to take into consideration the question of marriage facilities for absent soldiers.

(ii.) *Preference to Soldiers.* Other things being equal, preference shall be given by the Governments to returned soldiers for any employment in their services.

(iii.) *Financial Provisions for the Settlement of Returned Soldiers on the Land.* The Commonwealth agreed to make, available for the calendar year 1917 a sum not exceeding £2,000,000, half the amount to be available up to 30th June, 1917.

Allocation: Queensland, £500,000; New South Wales, £500,000; Western Australia, £500,000; South Australia, £250,000; Victoria, £150,000; Tasmania, £100,000.

(iv.) *The Treatment of Soldiers and Sailors and the Dependents of Soldiers and Sailors.* That it be the business of the central Commonwealth authority to devise a substantially uniform system of dealing with returned soldiers and sailors and the dependents of soldiers and sailors on service, or of soldiers and sailors who have died as a result of service in respect of—

- (a) *Immediate Amelioration, i.e.,* the provision of means for meeting immediate cash necessities. This, either by supplementing the military or naval pay before discharge, or by sustenance after discharge until employment or remunerative occupation can be found.
- (b) *Care of the Totally Incapacitated:* To include housing where necessary.
- (c) *Training of the Partially Disabled for a Useful Vocation:* To include the provision and renewal of artificial limbs and other aids.
- (d) *Employment Generally.*
- (e) *Assistance Towards Permanent Re-establishment by:*
  - (1) Sustenance during the initial period of settlement on the land or establishment in other vocations.
  - (2) Small businesses where such deemed a desirable form of provision.
  - (3) Grants for tools of trade.
  - (4) Assistance towards house establishment—(a) loans for house building or purchase (to include the conversion of existing mortgages where terms onerous); (b) grants for furniture to a prescribed amount.
- (f) *Care of Dependents:* (a) of men who die; (b) of men on service.
- (g) The co-ordination of governmental and private efforts for the expansion of existing, and the promotion of new, industries to meet the demand for general and special employment.
- (h) The assembling and administration of funds.

The States to be asked to agree to a uniform scale of advances to soldiers and sailors desiring to build or purchase dwellings in certain areas, or to convert existing mortgages of an onerous character, the Commonwealth authority to advance 25 per cent. of the value, the sum so advanced by the Commonwealth authority not to exceed £75.

The States to be asked to co-operate in the development of large national enterprises calculated to provide employment for men who cannot be otherwise placed.

On all bodies concerned with the repatriation of men under the Commonwealth scheme, the representation of soldiers and sailors who have been on active service is desirable.

### § 13. Interstate Commission.

In accordance with the provisions of the Commonwealth Constitution Act (sections 101 to 104, see pages 31, 32) an Act providing for the appointment of the Commission was assented to on the 24th December, 1912. The personnel of the Commission was, however, not decided until the 11th August, 1913, when Messrs. A. B. Piddington, K.C. (Chief Commissioner), Hon. George Swinburne, and N. Lockyer, I.S.O., were appointed. On the 8th September, 1913, a request was received from the Executive Government of the Commonwealth that the Commission should make an investigation in regard to the Tariff. This investigation was made and in all 70 reports were issued in connection therewith. (*Vide* Official Year Book No. 9, p. 1134, and No. 10, p. 1140.)

In January, 1915, complaints were lodged with the Commission in respect to contravention of the provisions of the Constitution relating to trade and commerce. In this connection, the case of the Commonwealth of Australia v. The State of New South Wales and another was subsequently heard before the Commission, but on an appeal to the High Court against its decision it was held that under section 101 of the Constitution the Interstate Commission had not been given judicial powers.

On the 14th September, 1915, the Minister for Trade and Customs requested the Commission to furnish for the information of Parliament a report as to the new industries which, in its opinion, could with advantage be established in the Commonwealth, and in pursuance of this request such report was prepared and presented.

On the 7th March, 1916, the Commission was entrusted with an inquiry into the subject of British and Australian trade in the South Pacific, with the result that a report was furnished which deals with all factors affecting the progress of the island possessions in which Great Britain and Australia are interested.

On the 19th April, 1916, the Commission was invited by the Postmaster-General, on behalf of the Commonwealth and the several States, to act as arbitrator on the question of charges, etc., by the Railway Commissioners of the States for the carriage of mails. Subsequently sittings were held in this matter and decisions and awards made.

On the 4th August, 1917, the Prime Minister, as the result of complaints made to him, requested the Commission to inquire into the causes of increased prices of food, clothing, house rent, etc. This inquiry is now in progress, and interim reports are being presented as it proceeds. In connection with this investigation a regulation under the War Precautions Act was passed to permit each Commissioner to sit alone, and while so sitting to exercise all the powers of investigation conferred by the Interstate Commission Act of 1912.

The Chief Commissioner (Mr. A. B. Piddington, K.C.) is a member of the Commonwealth Advisory Council of Science and Industry. Mr. Commissioner Swinburne, who is also a member of the Commonwealth Advisory Council, is chairman of the Central Board of the Business Administration in connection with the Department of Defence.

Mr. Commissioner Lockyer was granted six months' leave from 15th October, 1917, for the purpose of complying with the desire of the Government that he should act temporarily as Comptroller and supervise the organisation of the Department which will administer the Australian Soldiers Repatriation Act. Mr. Stephen Mills, Comptroller-General, Department of Trade and Customs, was thereupon appointed a Deputy-Commissioner.

## § 14. Commonwealth Advisory Council of Science and Industry.

**1. General.** An account of the origin of the Advisory Council and the proceedings which led to its formation was given in Year Book No. 9 (p. 1135). The Advisory Council was appointed by order of the Governor-General in Council on the 16th March, 1916. Since that date certain additional appointments have been made, so that the council now consists of thirty-six members representative of both science and industry, and includes members from all the Australian States. It is a temporary body, designed to prepare the ground for a proposed permanent Institute of Science and Industry, and to exercise in a preliminary way the functions that will in future belong to the Institute. The chief of these functions are—

- “(i.) To consider and initiate scientific researches in connection with, or for the promotion of, primary or secondary industries in the Commonwealth”; and
- “(ii.) the collection of industrial scientific information and the formation of a Bureau for its dissemination amongst those engaged in industry.”

The Advisory Council itself has held only three meetings, viz., the inaugural meeting in April, 1916, and meetings in August, 1916, and July, 1917, called to receive reports and at which certain resolutions referred to below were passed. The work of the Council has been done by means of committees.

(i.) *The Executive Committee.* In accordance with instructions given by the then Acting Prime Minister, the Advisory Council at its first meeting elected an Executive committee of six members. Four additional members of the Executive have since been appointed. It was decided that the Prime Minister, or in his absence a Minister representing him, should be chairman of the Executive committee. In addition, it was decided that the chairman of each State committee should be *ex officio* a member of the Executive in order to keep the various committees in touch with one another. Such *ex officio* members were to receive copies of the Executive's minutes, and to keep in touch with it by correspondence, but were not expected to attend its ordinary meetings except when they happened to visit Melbourne. Similarly, the Executive receives copies of the minutes of each State committee. In addition a monthly summary of the work of the Executive is sent to all the members of each of the State committees.

(ii.) *The State Committees.*—At the first meeting of the Advisory Council it was decided that all of its members resident in any one State should form a local committee to co-operate with the Central Executive, especially in relation to questions involving local industries. By arrangement with the Commonwealth Government, certain additional members of the Advisory Council were added to the original list, so as to insure that there should be at least three such members available for the formation of each State committee, and it was decided that the chairman of each of these should be *ex officio* a member of the Executive, as explained above. Further procedure was formulated whereby any State committee could be strengthened by the appointment of associate members, representative of particular branches of science or industry. The associate members of the State committees are not members of the Advisory Council. A State committee has been established in each State.

It is to be noted that these so-called State committees are really local committees of the Federal organisation, their members and associate members being appointed by the Commonwealth Government. They must be clearly distinguished from certain "New Industries" and "Research" committees, which have originated as separate organisations in some of the States.

The chief functions of these State committees are to collect locally such information as may be required by the Executive, and to forward to the Executive such recommendations as local knowledge or local enquiries may suggest. They have no independent executive or financial powers, but they are an extremely important part of the business machinery.

**2. Summary of the Work of the Council.**—An account of the work carried out by the Council is given in the report of the Executive Committee up to the 30th June, 1917, but since that time considerable progress has been made. The work may be summarised under the following heads:—(i.) Preliminary work; (ii.) Systematic enquiries and investigations under the control of special and standing committees; (iii.) Conferences; (iv.) Miscellaneous.

(i.) *Preliminary Work.*—This work has been largely completed and comprises:—

1. A register or census—(a) of Australian industries, their distribution and importance; (b) of problems connected with them; (c) of the equipment and *personnel* of laboratories throughout the Commonwealth available for industrial scientific research; (d) of research work in actual progress in laboratories and at Government experimental farms; (e) of the facilities available for training scientific investigators.

2. The establishment of relations with other authorities, such as State Governments, scientific and technical departments, universities, technical colleges, scientific societies and associations, and committees representing the pastoral, agricultural, manufacturing, and other industries.
3. The encouragement and co-ordination of researches already in progress.

(ii.) *Special Committees.*—After making full enquiries and collecting all available information from reports and experts on any special question, the Executive has adopted the plan of appointing in each approved case a small special committee either to report further or to carry out actual experimental investigations. In forming these committees, special attention has been paid to securing adequate representation on the industrial as well as the scientific side. Twenty-six special committees have been appointed, and most of them have issued either interim or final reports. An account of the work carried out by these committees up to 30th June, 1917, appears in the last report of the Executive committee. In cases where the investigations have been completed or are sufficiently advanced for publication the results have been made available in the form of Bulletins, of which six have been published. Others are in course of preparation.

The following is a list of the special committees established up to April, 1918:—

- |   |  |
|---|--|
| 1. Ferro Alloys (Melbourne).                                | 15. Grass Tree Resin (Adelaide).   |
| 2. Mode of Occurrence of Gold in Quartz (Bendigo).          | 16. Development of Mechanical Cotton Picker (Brisbane).                  |
| 3. Alunite (Melbourne).                                     | 17. Utilisation of Phosphatic Rocks (Melbourne, Sydney and Perth).       |
| 4. Yeasts and Breadmaking (Sydney).                         | 18. Life History of the Cattle Tick (Brisbane).                          |
| 5. Damage by Insects to Grain in Store (Sydney).            | 19. Substitutes for Tin Plate (Melbourne).                               |
| 6. Purification of Damaged Wheat by Lime (Melbourne).       | 20. Commercial Utilisation of Kelp (Hobart).                             |
| 7. Electrical Sterilisation of Milk (Sydney).               | 21. Blow-fly Pest (Brisbane).  |
| 8. Tanning Methods (Sydney).                                | 22. Cold Storage Problems (Melbourne and Sydney).                        |
| 9. Utilisation of Mangrove Bark for Tanning (Brisbane).     | 23. Tuberculosis in Stock (Sydney, Melbourne, Adelaide, Perth & Hobart). |
| 10. Utilisation of Redgum for Tanning (Perth).              | 24. Bye-products of Wool-Scouring Industry (Geelong).                    |
| 11. Means of Transmission of Worm Nodule Parasite (Sydney). | 25. Nitrogen Requirements of Australia (Melbourne).                      |
| 12. Control of Sparrow Pest (Adelaide).                     | 26. Classification of Imports of Chemicals (Melbourne).                  |
| 13. Alcohol Fuel and Engines (Melbourne).                   |  |
| 14. Posidonia Fibre (Sydney).                               |  |

The members of these special committees act in a purely honorary capacity. Grants are made from the funds of the Advisory Council for the purchase of apparatus and equipment, and for the reimbursement of travelling and out-of-pocket expenses of the members of the committees whilst engaged on the work. In a number of cases salaried investigators and assistants are employed to give their whole time to the work under the direction of the several committees.

(iii.) *Standing and other Investigational Committees.*—In cases where the investigational work is of a permanent or prolonged nature, standing committees have been established. These include the Chemicals Committee, the committees inquiring into the marine biological economics of tropical Australia, the committee on the metric system and decimal coinage, the committee on native grasses and fodder plants, and the seed improvement committee which has been established to undertake the examination, comparison and classification of different varieties of cereals.

In addition certain investigations are being conducted in co-operation with committees established by other institutions, such as the Society of Chemical Industry of Victoria, the New South Wales Pastoral Committee for the blow-fly pest, and the Electrical Association of Australia.

In the case of the flax industry a committee has been established under the War Precautions Act to control and develop the industry. It is anticipated that the action taken by the Advisory Council in this matter alone will result during the present season in an increase in wealth produced, which will pay several times over for the total expenditure on the work of the Advisory Council from the day of its inception.

There are a number of other matters of importance under investigation which have not yet reached the stage at which they can be referred for systematic work by committees of experts, or which cannot be dealt with adequately until the permanent institute is established. These include paper-pulp, the prickly-pear pest, the control and eradication of certain weed-pests, destructive distillation of hardwoods, and other problems affecting forest products, ceramics, enamels and glazes, diseases of stock, the introduction of new plants, and cultivation in arid and semi-arid regions.

(iv.) *Conferences.*—An Interstate conference of agricultural scientists was held under the auspices of the Advisory Council towards the end of 1917, and has already been productive of results of much value. A conference was held in Brisbane in January, 1918, to devise a scheme of co-operative action between the Commonwealth and New South Wales and Queensland State Governments for the repression, with a view to the eradication, of the cattle-tick pest. The report of this conference has been published as Commonwealth Parliamentary Paper No. 40, 1917-18. The Advisory Council was represented at the Interstate Forestry Conference held at Perth in 1917, and as a result is taking action for the compilation of data on a uniform basis on the forest products of Australia. This is one of the first steps necessary towards the establishment of a Forest Products Laboratory. Other conferences are projected.

(v.) *Miscellaneous.*—A large number of inquiries and investigations of a varied nature have also been made. Some of these have reached finality, others are still receiving attention. They have arisen largely through inquiries made by persons engaged in industries for advice on scientific and technical matters and by inventors or discoverers of new processes or raw materials. At present they fall into no considered plan, but it is probable that many of those which are still receiving attention will find their place later in some co-ordinated scheme of work under the permanent institute.

**3. Publications and Supply of Information.** The Executive Committee has issued three reports dealing with its work, the last covering the period from its appointment up to 30th June, 1917. It has also begun to publish bulletins on the researches carried out under its auspices, those already issued or about to appear being :—

1. The cattle tick in Australia.
2. Worm nodules in cattle.
3. The alunite deposits of Australia and their utilisation.
4. The factors influencing gold deposition in the Bendigo goldfield.
5. Wheat storage problems (damaged grain and insect pests).
6. Power alcohol: Proposals for its production and utilisation in Australia.
7. Agricultural research in Australia.

Other publications issued by the Advisory Council are:—Memorandum on the Organisation of Scientific Research Institutions in the United States of America, by G. Lightfoot; Recent developments in the organisation of National Industrial Research

Institutions, by G. Lightfoot; The Economics of Trochus niloticus, by C. Hedley; The Physiography of Australian Rains, by Griffith Taylor; and Resolutions passed by the Advisory Council, July, 1917, together with report and recommendations on the organisation and work of the proposed permanent Institute of Science and Industry.

Information is being collected and indexed for the use of the Bureau of Information, which will be one of the sections of the proposed future institute. In connection with this work steps are being taken to prepare a catalogue of the scientific and technical periodicals in all the libraries of Australia.

A considerable amount of information on a great variety of topics has already been supplied to applicants from all parts of Australia.

**4. The Proposed Permanent Institute of Science and Industry.**—At its last meeting in July, 1917, the Advisory Council passed among others the following resolutions:—

1. That the Advisory Council is of the opinion that the immediate establishment of the permanent institute is a matter of urgency, as the financial and executive powers of the temporary organisation are wholly inadequate to the purposes in view.
2. That in the work of the future institute provision be made for co-operation between the Commonwealth and State Governments. It is suggested that this might be effected by arranging for the estimates of expenditure of the institute to be discussed at the Premiers' Annual Conference.

The Council also adopted a report and recommendations which had been drawn up by the Executive Committee, setting out the general features of the organisation and work of the proposed permanent Institute of Science and Industry. The recommendations are substantially the same as those drawn up by the committee of the conference held in January, 1916, which were published in Year Book No. 9. Certain modifications have, however, been introduced in the light of eighteen months' experience.

The principal recommendations are as follows:—

1. There should be established, under Act of Parliament, a Commonwealth Institute of Science and Industry.
2. The functions of the institute should be:—
  - (i.) To consider and initiate scientific researches in connection with, or for the promotion of primary or secondary industries in the Commonwealth.
  - (ii.) The collection of industrial scientific information, and the establishment of a Bureau of Information for the benefit of those engaged in industry.
  - (iii.) The establishment of National Laboratories.
  - (iv.) The general control and administration of such laboratories, when established.
  - (v.) To promote the immediate utilisation of existing institutions, whether Federal or State, for the purposes of industrial scientific research.
  - (vi.) To make recommendations from time to time for the establishment or development of special institutions or departments of existing institutions for the scientific study of problems affecting particular industries and trades.
  - (vii.) The establishment and award of industrial research studentships and fellowships, to include either travelling fellowships or fellowships attached to particular institutions.
  - (viii.) To draw attention to any new industries which might be profitably established in the Commonwealth.

- (ix.) To keep in close touch with, and seek the aid of all Commonwealth and State Government departments, learned and professional societies, and private enterprises concerned with, or interested in scientific industrial research.
- (x.) The co-ordination and direction of scientific investigation and of research and experimental work, with a view to the prevention of undesirable overlapping of effort.
- (xi.) To recommend grants by the Commonwealth Government in aid of pure scientific research in existing institutions.
- (xii.) To seek the co-operation of and to advise the educational authorities and scientific societies in the States, with a view to—
  - (a) Advancing the teaching of science in schools, technical colleges, and universities, where its teaching is determined by those authorities.
  - (b) The training of investigators in pure and applied science and of technical experts.
  - (c) The education of skilled artisans.
- (xiii.) To report annually and from time to time to Parliament.

### 3. *Constitution of Institute.*

- (i.) That for the purpose of controlling and administering the Institute three highly-qualified salaried directors, of whom one should be chairman, shall be appointed by the Governor-General in Council.
- (ii.) That of the three directors one should be an expert business and financial man, with ability in organisation; the other two should be chosen mainly on account of scientific attainments and wide experience.
- (iii.) That the tenure of the directors shall be fixed by the Act.
- (iv.) That an Advisory Council, representing Science and the principal Primary and Secondary Industries, be appointed in each State, who shall advise the directors in respect to the affairs of the Institute. That the directors shall meet each Advisory Council at least once a year.
- (v.) That the members of the Advisory Council in each State be appointed by the Governor-General in Council on the nomination of the State Government, and should receive fees for attendance.
- (vi.) That the staff of the Institute should be appointed by the Governor-General in Council on the recommendation of the directors, and should be exempted from the operation of the Public Service Act.

## § 15. Department of Chemistry, South Australia.\*

In South Australia, a Department of Chemistry was formed in 1916. The Department is largely engaged in the chemical investigation of local products and industries. A series of bulletins is in course of publication. Up to July, 1918, nine had been issued as follows:—

- No. 1.—*Paper Making*: An investigation into the prospects of establishing a paper-making industry in South Australia. A number of local materials have been investigated, and special attention is directed to straw as the most valuable available material, owing to the very large supply obtainable at a low price and near to the principal sea-ports.

---

\* Information supplied by the Director, Dr. W. A. Hargreaves, D.Sc., M.A., F.I.C.

- No. 2.—*Potash*: Its economic sources in South Australia. Many local sources have been investigated, and wool scour is indicated as especially worthy of attention.  
*Lanoline*: A process for obtaining wool fat from locally scoured wool is described.
- No. 3.—*Cream of Tartar*: An examination of local grape products as sources of cream of tartar.
- No. 4.—*Marine Fibre*.—The fibrous portion of the leaf sheath of the sea plant *Posidonia Australis* grows abundantly in the shallow waters around the coasts of South Australia, and on other parts of the Australian Coast. This bulletin has been written to gather together and publish all the available information respecting it. The sum of £220,000 has already been spent in this industry, and a large amount of experimental work has been done in finding methods of collection and purification and market uses.
- No. 5.—*Boiler Waters*: Foaming and priming of boiler waters have been studied with a view to the suggestion of a remedy for these faults.
- No. 6.—*Grass Tree*: An investigation of the economic products of the species *Xanthorrhoea*. The trunk, leaves, and resin were examined. Special attention is drawn to the resin as similar to the high-priced resins, such as dragon's blood, benzoin, etc. It was found that 8 per cent. of para-oxybenzoic acid was readily obtained from the gum.
- No. 7.—*Gypsum and Plaster of Paris*: An investigation of the gypsum deposits in South Australia and their uses, with special reference to the manufacture of plaster of paris.
- No. 8.—*Alcohol as a Source of Power*: This bulletin discusses the use of alcohol as a motor fuel, details tests carried out under practical conditions, and indicates sources from which alcohol can be obtained.
- No. 9.—*Bonedust*: Its adulteration with Phosphate Rock. The results of this particular form of adulteration are dealt with, and a method of detection described.

## § 16. Standard Times in Australia.

Prior to 1895 the official time adopted in the several colonies was for most purposes the mean solar time of the capital city in each.

In November, 1892, an intercolonial conference of surveyors was held in Melbourne to consider, among other things, the advantages of introducing the system of standard time. In this system it was proposed to make the initial meridian that of Greenwich, and to change local standard time by whole hours according to the longitude east or west of that of Greenwich. Thus for every difference of 15° in longitude a change of one hour would be required. The minutes and seconds would then be identical everywhere.

The personnel of the conference was as follows:—New South Wales, Mr. E. Twynam, Chief Surveyor; Mr. R. M'Donald, District Surveyor, on behalf of the Government; Mr. G. H. Knibbs, President of the Institution of Surveyors; Mr. J. F. Furber, Secretary, on behalf of the Institution. Queensland: Mr. A. C. Gregory, M.L.C.; Mr. A. M'Dowall, Surveyor-General, on behalf of Government. South Australia: Mr. G. W. Goyder, Surveyor-General; Sir (then Mr.) C. Todd, Postmaster-General, on behalf of the Government; Mr. William Cummins and Mr. J. L. Packard, Vice-President

and Secretary respectively of the Institute. Victoria: Mr. R. L. J. Ellery, Government Astronomer, and Chairman of Board of Examiners for Land Surveyors; Mr. J. M. Coane, one of the examiners; Mr. T. N. Fowler, President of the Institute; Mr. Stuart Murray, of the Victorian Water Supply Department, on behalf of the Institute. Western Australia: Mr. J. S. Brooking, Deputy Surveyor-General, President of Board of Examiners, and Vice-President of the Institute, on behalf of both Government and Institute; and New Zealand, Mr. A. O. N. O'Donahoo, Surveyor-General. No representative from Tasmania attended the conference, but a report to it was sent by Mr. E. A. Counsell, at that time Deputy Surveyor-General for Tasmania. This report dealt with the general business of the conference, and touched upon the subject of standard time.

To give effect to this proposal it was suggested that Australia should be divided into three zones, the standard times for which should be respectively the mean solar times of the meridians of 120°, 135°, and 150° east longitude, thus giving standard times 8, 9, and 10 hours respectively, ahead of Greenwich time. It was proposed that the 120° zone should comprise Western Australia, that the 135° zone should comprise South Australia and the Northern Territory, and that the 150° zone should comprise Queensland, New South Wales, Victoria, and Tasmania.

The matter was also considered by several intercolonial postal conferences, and eventually in 1894 and 1895 legislation was enacted by each of the colonies in accord with the recommendations of the surveyors' conference of 1892.

In 1899 the South Australian legislature amended its earlier provision, and adopted the mean solar time of the meridian of 142° 30' east longitude as the standard time for that colony, thus reducing the difference between the standard time of Adelaide and those of the capitals of the eastern colonies from an hour to half an hour, and forfeiting the great advantage of the system, viz., that the minutes and seconds should be identical throughout the world.

Particulars concerning these enactments are as follows:—

#### STANDARD TIMES IN AUSTRALIA.

Colony.	Date when Act came into operation.	Meridian selected.	Time ahead of Greenwich.
New South Wales ... ..	1st February, 1895	150° E.	10 hours
Victoria ... ..	"	"	"
Queensland ... ..	1st January, 1895	"	"
South Australia ... ..	1st February, 1895	135° E.	9 hours
" " " " " " " "	1st May, 1899	142° 30' E.	9½ hours
Western Australia ... ..	1st December, 1895	120° E.	8 hours
Tasmania ... ..	1st September, 1895	150° E.	10 hours

Consequent upon the opening of the Trans-Australian Railway an arrangement has been made by which the change of time between South Australia and Western Australia (viz., 1½ hours) is divided into two changes of 45 minutes each. Going east from Kalgoorlie the first change is made at Rawlinna, 235.18 miles out, where the time is put forward by 45 minutes. The second change of the same amount is made at Tarcoola, 794.05 miles out. Thenceforward South Australian standard time is kept. The advantage of standard time has thus been still further sacrificed, as there is not now even a whole half-hour difference; the essential idea of standard zone time has to this extent, therefore, been abandoned.

## § 17. Anthropometrical Measurements of Military Cadets.

1. **General.**—Under the Defence Act of 1910, the principle of compulsory training was brought into operation in Australia on 1st January, 1911. Advantage was taken of this to secure a record of certain measurements and other particulars in respect of the cadets subjected to inspection, and an analysis of the data so obtained concerning height, weight, and minimum chest measurement, according to age, is given hereunder for the year ended 30th June, 1912. These particulars are in respect of urban and rural areas combined and relate to the Commonwealth as a whole.

2. **Height according to Age.**—(i.) *Numerical and Proportionate Distribution.* Leaving out the cases in which height, age, or both were omitted from the record, the number of measurements available for the height analysis was 120,702, of which 98,980 were in the eight half-yearly age periods comprised between the ages of 13 and 17, the remaining six age periods containing but 21,722. The age period most largely represented was that from 13½ to 14. The succeeding tables give the number and proportion in each age and height group, also the proportions shewing the distribution according to height of 10,000 in each age period. Owing to the evident tendency to state measurements in whole and half inches, the figures obtained in respect of records involving half inches have been equally divided between the preceding and succeeding whole inch records, and the other fractions have been carried to the nearest inch, thus giving results approximately true to the nearest inch.

### HEIGHT ACCORDING TO AGE.—DATA FOR THE WHOLE COMMONWEALTH FOR YEAR ENDED 30th JUNE, 1912.

(ii.) *Graphical Representation.* Further facilities for the study of the data in respect of heights are furnished by the graph relative thereto which appears below. In the preparation of this graph the data given in the foregoing table in respect of proportionate distribution were plotted as a series of rectangles on units of abscissæ representing the successive heights in inches. Smooth curves were then drawn through the upper portions of these rectangles, and these after adjustment to accord closely with the data, and after slight graduation, gave the results produced in the graph. As will be seen from the table hereinafter on page 1205, there is a tendency towards symmetry in all the curves, the general trend being that of progress from negative skewness at the lower ages through a range of positive skewness to negative skewness again at the higher ages, the deviations from symmetry being relatively small in all cases. The curve marked A B is that which passes through the maximum points of the curves for successive age periods. Its minimum value corresponds to a height of 62.22 inches and accords fairly closely with the mode for the curve for age 15½, indicating that for the ages under review the scatter of the distribution in respect of height is greatest in the neighbourhood of that age. The curve marked 18 has been obtained from a combination of the numbers recorded for the age periods "17½ to 18" and "18 and over." The portions of the curves corresponding to abscissæ earlier than 50 have been inserted by graphical extrapolation. The mean height of the 120,702 cadets recorded was 60.81 inches, whilst the average of the mean heights for the successive age periods was 60.80 inches.

PROPORTIONATE DISTRIBUTION OF CADETS IN EACH AGE GROUP  
ACCORDING TO HEIGHT.

DESCRIPTION OF GRAPH.—The base of each small rectangle represents two inches, while the vertical height represents a proportionate distribution of .01. The figures written at the base indicate the heights of the Cadets in inches, while those written along the curves indicate the central age of the age group. The number written at the maximum point of each curve is its mode. J

3. Weight According to Age.—(i.) Numerical and Proportionate Distribution.

Exclusive of the cases in which weight, age, or both were unrecorded, the number of cases available for the weight analysis was 119,960, the age distribution being sensibly the same as that in the case of heights. The next table gives the number and proportion in each age and weight group, the proportions shewing the distribution according to weight of 10,000 in each age period.

WEIGHT ACCORDING TO AGE—DATA FOR THE WHOLE COMMONWEALTH FOR YEAR  
ENDED 30th JUNE, 1912.

(ii.) **Graphical Representation.**—The graph given below relative to weights has been constructed on principles similar to those described in the case of the height graph. In this case also there is a marked tendency towards symmetry in all the curves, the general trend being from positive skewness at the earlier ages to negative skewness at the later ages, with relatively small deviation from symmetry in any case. The curve marked CD is that which passes through the maximum points of the

PROPORTIONATE DISTRIBUTION OF CADETS IN EACH AGE GROUP  
ACCORDING TO WEIGHT.

**DESCRIPTION OF GRAPH.**—The base of each small rectangle represents 7 lbs., while the vertical height represents a proportionate distribution of .05. The figures written at the base indicate the weights of the Cadets in lbs., while those written along the curves indicate the central age of the age group. The number written at the maximum point of each curve is its mode.

curves for successive age periods. Its minimum value corresponds to a weight of 103 lbs., and would accord approximately with the mode for a curve for age 15½, indicating that for the ages under review the scatter of distribution in respect of weight is greatest in the neighbourhood of that age. The curve marked "18" has been obtained from a combination of the numbers recorded for the age periods "17½ to 18" and "18 and over." The portions of the curves corresponding to abscissæ earlier than 60 and later than 151 have been inserted by graphical extrapolation. The mean weight of the 119,960 cadets was 96.35 lbs., while the average of the mean weights for the several age periods was 96.98 lbs.

4. Chest Measurement according to Age.—(i.) *Numerical and Proportionate Distribution.* Excluding the cases in which chest measurement, age, or both were unrecorded, the number of cases available for analysis in respect of chest measurement was 120,054, the age distribution being sensibly the same as for heights and weights. The following table gives the number and proportions in each age and minimum chest group, the proportions shewing the distribution according to the minimum chest measurement of 10,000 in each age period. Owing to the evident tendency to state measurements in whole inches, the figures obtained in respect of records involving half inches have been equally divided between the preceding and succeeding whole inch records, thus giving results approximately true to the nearest inch.

(ii.) *Graphical Representation.*—The graph given below relative to minimum chest measurement has been constructed on similar lines to those described in the case of the height graph. In this case the tendency towards symmetry is less marked than with heights or weights. The general trend is from well marked positive skewness at the lower ages to less defined negative skewness or symmetry at the higher ages. The curve for 18, which deviates slightly from this trend by giving positive skewness, is based on relatively meagre data.

PROPORTIONATE DISTRIBUTION OF CADETS IN EACH AGE GROUP ACCORDING  
TO MINIMUM CHEST MEASUREMENT.

DESCRIPTION OF GRAPH.—The base of each small rectangle represents one inch, while the vertical height represents a proportionate distribution of .05. The figures written at the base indicate the minimum chest measurements of the Cadets in inches, while those written along the curves indicate the central age of the age group. The number written at the maximum point of each curve is its mode.

The curve marked E F is that which passes through the maximum points of the curves for the several age periods. Its minimum value corresponds to a chest measurement of 29.12 inches, and would accord with the mode for an age slightly above 15½, indicating that for the ages under review the scatter of distribution in respect of minimum chest measurement is greatest in the neighbourhood of that age. The curve marked "18" has been obtained from a combination of the numbers recorded for the age periods "17½ to 18" and "18 and over." The portions of the curves corresponding to abscissæ earlier than 23 have been inserted by graphical extrapolation. The mean minimum chest measurement of the 120,054 cadets was 27.84 inches, whilst the average of the means for the several age periods was 27.92 inches.

5. **Skewness of Curves.**—The following table, which has been referred to above, furnishes particulars of the means and modes of the several curves and thus indicates the nature and extent of their deviation from symmetry :—

# APPENDIX.

Recent information and returns which have come to hand since the various sections of this book were sent to press, are given hereunder.

## SECTION III.

### PHYSIOGRAPHY.

#### § 5. The Geology of Australia.

3. **The Building Stones of Australia, p. 56.**—In August, 1918, an illustrated pamphlet by H. C. Richards, D.Sc., dealing with "The Building Stones of Queensland," was reprinted from the Proceedings of the Royal Society of Queensland. (Vol. xxx., No. 8.)

## SECTION VII.

### PASTORAL PRODUCTION.

#### § 1. Initiation and Growth of Pastoral Industry.

3. **Increase in Numbers, p. 305.**—The following table shews the estimated number of horses, cattle, sheep, and pigs in the Commonwealth at the latest dates available. The totals shew a satisfactory upward tendency as compared with the previous year's figures:—

#### PRELIMINARY FIGURES.—LIVE STOCK.

States and Territories.	Date.	Horses.	Cattle.	Sheep.	Pigs.
New South Wales ...	30/6/17	732,334	2,757,713	36,086,241	359,504
Victoria ...	1/3/18	514,061	1,371,049	14,760,013	323,159
Queensland ...	31/12/17	733,014	5,316,558	17,204,268	172,699
South Australia...	30/6/17	257,422	288,887	5,091,282	118,542

## SECTION VIII. AGRICULTURAL PRODUCTION.

### § 4. Wheat.

6. (ii.) **Advances and Finance, p. 349.**—Up to the 14th October, 1918, the position as regards the 1916-17 and 1917-18 wheat crops was that 3s. 3d. per bushel had been advanced to farmers up to that date.

6. (iii.) **Results of the Scheme, p. 350.**—Deliveries made on account of each harvest are as follows:—

#### WHEAT DELIVERED IN EACH STATE, 1915-18.

State in which pooled.	1915-16.	1916-17.	1917-18 to 14/10/18.
	Bushels.	Bushels.	Bushels.
New South Wales ...	58,244,000	32,471,000	33,486,000
Victoria ...	59,176,000	50,406,000	36,197,000
South Australia ...	29,894,000	41,990,000	25,792,000
Western Australia ...	14,943,000	13,825,000	7,245,000
Total ...	162,257,000	138,692,000	102,720,000

On 14th October, 1918, the total overdraft on all pools amounted to £12,937,000.

The quantities of wheat disposed of and in hand on that date were as follows:—

#### WHEAT DISPOSED OF AND IN HAND IN EACH STATE, 14th OCTOBER, 1918.

Particulars.	N.S.W.	Vic.	S.A.	W.A.	Total.
1915-16. (In thousands of bushels).					
Shipments ...	28,977	37,742	17,869	10,169	94,757
Local Sales ...	29,597	22,034	7,480	4,835	63,946
Stocks on hand ...	...	30	4,545	...	4,575
Total ...	58,574	59,806	29,894	15,004	163,278
1916-17. (In thousands of bushels).					
Shipments ...	4,245	2,952	5,900	2,271	15,368
Local Sales ...	13,280	14,583	7,864	8,015	43,742
Stocks on hand ...	14,549	32,871	28,232	3,536	79,188
Total ...	32,074	50,406	41,996	13,822	138,298
1917-18. (In thousands of bushels).					
Shipments ...	1,021	...	702	82	1,805

\* Not yet available.

**§ 12. Oil Shale and Mineral Oils.**

3. Shale Oil Bounties, p. 56.—The "Shale Oil Bounty Act 1917" provides for the payment of bounty on crude shale oil in accordance with the schedule hereunder:—

Description of Goods.	Period dating from 1st Sept. 1917, during or in respect of which bounty may be paid.	Rate of Bounty payable in each year to each producer of goods produced by him at each separate deposit as prescribed.	Maximum Amount which may be paid in any one year.	Date of Expiry of Bounty.
Crude Shale Oil, as prescribed, produced in Australia from Mined Kerosene Shale.	Four years.	On each gallon up to 3,500,000 gallons, 2½d. On each gallon exceeding 3,500,000 and not exceeding 5,000,000 gallons, 2d. On each gallon exceeding 5,000,000 gallons and not exceeding 8,000,000 gallons, 1½d. On each additional gallon, 1½d.	£67,500.	31st August, 1921.

## SECTION XVII.

## § 2. Railways.

## (A) General.

6. **Page 658.**—The report of the Board of Commonwealth and States' Railway Engineers was issued late in September, 1918. It gives a list of a large number of devices submitted to it for dealing with the break of gauge question, and states the reasons for such devices failing to satisfy the conditions under which train working must be conducted in order to secure safety and celerity.

## (B) Federal Railways.

4. **Page 662.**—Insert after "at any time" on sixth line from bottom of page, "A further Act was passed providing for lands outside the quarter-mile strip where necessary for the purposes of construction, maintenance and working of the railway, being handed over by the State of South Australia to the Commonwealth Government."

**Page 662.**—On last line but one, for "12th September" read "14th September, 1912."

**Page 663.**—On eleventh line, for "450" read "over 400"; on fourteenth line, for "207" read "205"; on sixteenth line, for "290" read "205"; on seventeenth line, for "no less than 309" read "over 300"; on twenty-sixth line, for "50" read "52."

**Page 664.**—Rate of construction of line.—The following records were made in platelaying :—

			Miles.	Chains.
In any one day	...	...	2	40
„ „ week	...	...	14	50
„ four weeks	...	...	46	62
„ six months	...	...	250	30
„ twelve months	...	...	442	44

Owing to delay on the part of contractors in supplying rails, platelaying on the Western Division was suspended from December 18th, 1915, to July 3rd, 1916, and from December 16th, 1916, to May 28th, 1917.

On nineteenth line from bottom of page for "45" read "40."

**Page 665.**—Reservoirs on Trans-Australian Railway.—A reservoir has also been made at Wynbring, 322 miles ex Port Augusta, with a capacity of 2,000,000 gallons.

The traffic on this line is regulated by the use of electric train staff, there being 20 sections in operation between the terminal stations, the length of the sections averaging 50 miles each.

## SECTION XIX.

## COMMONWEALTH FINANCE.

## § 1. General.

7. **Accounts of Commonwealth Government, p.760.**—(i.) On the 25th September, 1918, Mr. Watt, Commonwealth Treasurer, delivered his Budget speech, bringing forward the statement of accounts for the year 1917-18, and the estimates for the year 1918-19. A summary of these important statements is appended, but in studying them it must be distinctly remembered that the figures for 1917-18 are not yet final, and are subject to slight revision, whilst the figures for 1918-19 are estimates only, and may in some instances prove to be wide of the mark. This is particularly possible in the case of the estimated yield from the different forms of taxation.

Setting aside loan expenditure, and deducting Commonwealth payments to States from both sides of the account, the revenue and expenditure appear as follows:—

	1917-18 (Actual). £	1918-19 (Estimated). £
Revenue ... ..	30,462,594	34,229,250
Expenditure ... ..	28,634,930	38,903,345
Surplus for year ... ..	1,827,664	...
Deficit for year... ..	...	4,674,095

The year 1918-19 opened with a credit balance of £3,905,091, and to this was added £800,000 from London funds. A total of £4,705,091 is thus obtained, which wipes out the deficiency for the year and replaces it by an estimated surplus of £30,996. This, however, is only a temporary expedient, and does not constitute a permanent balance between revenue and expenditure.

(ii.) *Revenue.* Details of the net revenue are given in the table which follows. They are arranged in such a way as to give due prominence to the several items composing Commonwealth taxation, which is becoming so important a factor in Public Finance.

#### FEDERAL CONSOLIDATED REVENUE, 1917-19.

Heading.	1917-18 (Actual).	1918-19 Estimate).
<b>Taxation—</b>	<b>£</b>	<b>£</b>
Customs and Excise ... ..	13,225,295	14,035,000
Land Tax ... ..	2,123,778	2,380,000
Income Tax ... ..	7,385,543	9,600,000
Postage Tax ... ..	...	516,000
Probate and Succession ... ..	945,232	750,000
Entertainments Tax ... ..	245,890	480,000
War Time Profits Tax ... ..	680,008	1,800,000
<b>Total Taxation ... ..</b>	<b>24,603,746</b>	<b>29,561,000</b>
Post Office ... ..	5,755,722	6,000,000
Miscellaneous ... ..	6,443,500	5,109,500
<b>Total Revenue ... ..</b>	<b>36,802,968</b>	<b>40,670,500</b>
Less paid to States ... ..	6,340,374	6,441,250
<b>Net Revenue ... ..</b>	<b>30,462,594</b>	<b>34,229,250</b>

In this table it has been assumed that taxation for 1918-19 will be levied on the new scale foreshadowed by the Commonwealth Treasurer. This new scale provides for an increase of Customs and Excise Revenue from liquors and tobacco, an increase of 30 per cent. in the income tax, and 20 per cent. in the land tax, a broadening of the scale of the entertainments tax, and a new postage war tax. The estimated taxation on the old basis would only be £24,205,000.

(iii.) *Expenditure from Consolidated Revenue.* The expenditure for 1917-18, as compared with the estimate for 1918-19, is given in the following table:—

## EXPENDITURE FROM FEDERAL CONSOLIDATED REVENUE, 1917-19.

Heads of Expenditure.		1917-18 (Actual).	1918-19 (Estimated).
1. Ordinary—		£	£
Interest ... ..		380,808	470,300
Sinking Fund ... ..		36,555	36,555
Invalid and Old Age Pensions ... ..		3,858,990	3,925,000
Maternity Allowance ... ..		634,428	634,000
Defence, Military ... ..		1,281,776	1,783,948
Navy ... ..		1,548,356	1,632,886
Post Office ... ..		5,350,375	5,494,503
New Works ... ..		625,014	454,951
Expenditure ... ..		2,513,643	2,541,600
		16,229,945	16,973,743
2. Interest (States) ... ..		548,750	800,000
3. War (portion only) ... ..		11,856,235	21,129,602
		28,634,930	38,903,345
Total ... ..			

(iv.) *War Expenditure.* The total war expenditure from consolidated revenue and loan respectively, since 1914-15, is set out in the following table:—

## WAR EXPENDITURE FROM REVENUE AND LOAN, 1914-19.

Year.	From Revenue.	From Loan.	Total.
	£	£	£
1914-15 ... ..	640,217	14,471,118	15,111,335
1915-16 ... ..	3,778,378	37,423,568	41,201,946
1916-17 ... ..	8,427,329	53,114,237	61,541,566
1917-18 ... ..	11,856,235	54,886,115	66,742,350
1918-19 (estimated) ... ..	21,129,602	78,914,809	100,044,411

The war expenditure from loans for 1918-19 includes advances to States for construction and erection of silos for wheat storage, (to be recovered) £1,500,000; repatriation, £1,500,000; forestry, £500,000; and contributions under the War Loan Securities Repurchase Act 1918, £1,250,000.

(v.) *Public Debt.* The Public Debt of the Commonwealth as at the 30th June, 1918, was £284,022,072, detailed as follows:—

## FEDERAL PUBLIC DEBT AS AT 30th JUNE, 1918.

Heading.	£
War loans in Australia ... ..	143,194,680
War loans from Imperial Government... ..	49,082,059
War Savings Certificates ... ..	4,535,359
Loans raised for States ... ..	12,000,000
Other loans ... ..	15,352,550
Transferred properties ... ..	11,202,516
Accrued deferred pay, Australian Imperial Forces ... ..	10,309,908
Indebtedness to Imperial Government for maintenance of Australian Imperial Forces ... ..	38,345,000
	284,022,072

## SECTION XXXI.

## COMMONWEALTH SEAT OF GOVERNMENT.

8. Revenue and Expenditure, p. 1079.—The following table shews the particulars of expenditure for the year ended 30th June, 1918, and also the total expenditure on each item since 30th June, 1910:—

## COMMONWEALTH SEAT OF GOVERNMENT, EXPENDITURE TO 30th JUNE, 1918.
